—Owing to the stormy weather the W P L were unable to get all paper collected in and cleared out in time to prepare an extensive tea and bazaar. Several young ladies consented to take charge and were assisted by a number of patriotic ladies donating refreshments, etc. The sum of $31 was realized, also a donation of $5 from Mrs A MacVicar and a cheque for $10 from her daughter, Mrs (Dr) Bowman of Butte City, Montana, the net proceeds amounting to $46. The ladies wish to thank Mr Gibson for the free use of his building, and Mr McNeill for playing the lights.

Holiday Visitors

John and Harry Wagner, of Newton, at the home of their grandmother, Mrs Steele; Mr and Mrs J T Sparrow, of Port Elgin, with Bruce and Greenock friends; Miss Vera George, from Dresden; Pte Herb McDonald, of the C A M S, from Toronto; Mr R Reid of Dresden at T H George's; Mr Dan Brown, of Walkerville at the home of his parents, Mr and Mrs D Brown; Mr and Mrs John Vanner of Ayr at Mrs McInnes', Ross st; Dr Hynes, Toronto, was renewing acquaintances in town for a few days; Mr Norman Sheppard from Brantford; Mrs Flirk and two daughters of Millsbay; Jack Tucker from Toronto; Mr Melvin McArthur from Guelph; Mr Dan McNeill from Owen Sound; Mr Wilfred Brown, from Port Arthur, son of Mr Thos Brown, Paisley; Miss Kate McKinnon, home from Toronto; Miss Stella McKenzie, home from Toronto, accompanied by her friend, Miss Thompson; Miss Agnes Gibson from Guelph; Misses Belle and Gewena McMillan, from Toronto; Mr Peter McLeod, son of Mr and Mrs K McLeod, Elderslie, home from Flint, Mich.

—Miss Grace Brown is visiting friends in Palmerston.

—Sergt. Warner and wife, of Toronto, are guests at the Paphat parsonage.

—Mrs Robt Bell was called to Drew this week by the death of her mother.

—Mr Jas Thompson and Miss Alice Thompson were at London for New Years.

—Miss Kate McInnes went to Toronto this week to take a position on the P S staff.

—Miss Amanda Lowes, of Elderslie, is visiting friends in Mount Forest and Stratford.

—Mr E. C. Elliston, of Caledonia, was visiting in Paisley and Lucknow during the holidays.

—Mr Robt Dickson is down from the West at the home of his sister, Mrs Gordon, of Albert st.

—Miss Stella Sinclair of Toronto, spent New Year's with her parents, Mr and Mrs Archie Sinclair, 10th Bruce.

—Mr Jas Archer, of the 12th Bruce, visited his sister, Mrs. Greensides, at Mount Forest for a few days.

—Mr H A Keyes, of Kindersley Sask, is down from the west on a visit to his old home and friends in Greenock.

—Mrs Robt. Tully, formerly of Elderslie, who has been at Glenside, Sask. for some time, has returned to live at Ripley.

—Mr. Wilfred Tanner, who has been teaching near Napanee, and spent the holidays at his home in Elderslie, left on Tuesday to take charge of a school near Welland.

—Mr D Lyon went to Buffalo last week to buy a supply of coal for his customers, and secured four car loads which are expected to arrive here in a few days. Leave your orders at once.

—Mr Thos Johnston has had a very painful and imprisoned existence since last Thursday, when he fell on the cement steps at his home. Although no bones were broken, he suffered much severe bruises that he was not able to move for several days.

To enable the farmer to secure larger returns for his labour, greater convenience and comfort, such as he should have is the aim of The Farmers' Weekly Sun, the most helpful farm paper published in Ontario. You can do your part by becoming a subscriber. The Sun is essentially the paper of the Ontario Farmer. He will find its market report invaluable.

Obituary

There died at the home of her son, Mr. David McIntosh, of Tiverton, on wednesday last Dec 27th, Mrs Jessie McIntosh, widow of the late Alexander C. McIntosh. The funeral took place on Friday afternoon to the family plot in Port Elgin. Services were conducted by the Rev. Mr. Robinson, of Tiverton. The late Mrs McIntosh was of Scottish parentage; was born in Glengarry, and settled with her late husband, about 46 years ago, in the township of Elderslie, where they spent most of their married life. They were living on the 12th con. Bruce Tp., when Mr McIntosh died. There was to keep pace the death of a son and a daughter. For the past few years Mrs McIntosh was living with her sons and daughters. She was of a retiring disposition. Kindness was in her every act and charity her greatest grace. She was a lifelong Presbyterian and until disease weakened her frame was a regular attendant at the church of her choice. Mrs McIntosh is survived by three sons: Norman, in B.C.; David, Tiverton, Rev W D., of Ailsa Craig; and two daughters, Mrs. John Kirkconnel, Tiverton; Mrs. Somerville, Elderslie Tp.

GOOD NEWS

"Do you mean to say you don't read the papers?" demanded the visitor, amazedly.

"Oh, I glance through them—not that it's worth the trouble!" returned Miss Weddelow sourly.

"But surely the war news——"

"The war doesn't affect me, Alice, I'm glad to say. In fact, I'm sensible enough to try to forget that it's on."

"Julia!"

"My income's hardly reduced at all, thank goodness. People make far too much fuss, in my idea."

"You wouldn't talk like that," objected her friend warmly, "if any of your menfolk were in the Army or the Navy."

Sharp words almost led to an open quarrel. Mrs. Romain left soon afterwards, flushed and indignant.

"To criticize my conduct!" Miss Weddelow muttered. "Impertinence, I call it, even if we were once at school together!"

A thin, sharp-featured spinster, verging upon middle age, she looked particularly unlovable as, with a sneer on her face, she softly descended the stairs to the kitchen.

Outside the door she halted. The housemaid's voice could be heard complaining to the cook.

"Won't let me change my evening out, when I want specially to meet my Tom who's off to the front! But I'll go—you see if I don't! Now, she says this 'ere silver hasn't been properly done, and sets me to clean it all over again! Drat the stuff! What's the good of it to her? She simply hoards it up in the cupboard and never uses it!"

Miss Weddelow coughed, and walked in, setting her lips together. Both servants pretended to be very busy. Her criticizing eye, roaming round the room, noted that the scullery door was ajar, and a disreputable-looking tramp was peering in.

"Who is that man, Maggie? Send him away at once!"

The startled housemaid ran to obey.

"He came begging, ma'am. I really thought he'd gone."

"You're always careless!" Miss Widdelow complained severely. "Why isn't the gardener here?"

"He won't be coming any more—not till the end of the war."

"Why on earth not, pray?"

"He's in the Royal Naval Reserve, and he's been called up."

Miss Widdelow's frown deepened.

"Well, when Jenner arrives tell him I shall want the broughman punctually at 4.30."

It was nearly 5 o'clock, however, by the time the coachman appeared. Miss Widdelow fuming, demanded an instant explanation. He fingered his hat.

"I'm sorry, mum. It took me longer'n I expected it would. You see, I've been turnin' things over in my mind, and seein' as how Britain wants all the men she can get, I want to make inquiries about——"

"You've done what?" Miss Weddelow cried.

"I've enlisted, mum; and I made bold to think you'd approve, candid-erin'——"

"So, you act in this inconsiderate fashion without consulting me? You are dismissed at once! Understand?"

"Thank you, mum! I'd ha' given notice, anyhow, o' course," he answered, with a grin.

Miss Widdelow, left alone, choked with indignation.

"They don't study my convenience a bit, these people! What are things coming to?"

Presently she calmed down a little, remembering the shopping expedition she had arranged. It would be most enjoyable. Mrs. Maverton was always good company.

"Telephone for a taxi-cab, Maggie," instructed Miss Weddelow.

The maid reappeared almost immediately.

"Telegram for you, ma'am. The boy's waiting."

Miss Weddelow tore open the envelope.

"Please excuse me to-day. Just heard Harry has been wounded in action, so am naturally too upset to come. Of course, you will understand.

"Gertrude Maverton."

"Teh!" She made a gesture of annoyance. "No answer!"

She dressed in an ill-humor. Forced to alter her plans, she drove to pay some calls.

Mrs. Pettit, another long-standing acquaintance proved depressing in the extreme. Her husband it appeared, had failed in business, owing to the closing of the Stock Exchange, and the only other topic she wanted to discuss was the war.

"Home!" Miss Weddelow instructed the chauffeur irritably.

Hardly had she reached her house before a suave gentleman arrived, requesting an interview. He was accompanied by a constable.

"Requisition my horses for the Government! Do yo uactually mean to say that I've got to sell them to you whether I like it or not? My horses! But what am I to do when I want to use the carriage?"

"Why, remember that the Army needed them, madam. Please see that they are delivered punctually."

He took his leave, with the policeman in attendance. Miss Weddelow, thoroughly disgusted and angry, paced up and down the room.

"It's outrageous!" she repeated at intervals.

Dinner, by her curt instructions, was served earlier than usual.

"Is the silver all put carefully away, Maggie? Very well; I'll examine it to-morrow. At nine o'clock I shall go to bed."

"Thank goodness!" commented the maid, under her breath.

Just before she fell asleep Miss Widdelow was engaged in making a mental list of the annoyances inflicted upon her during the day in consequence of the war. She had been powerless in the matter, she reflected; that was the worst of it. As a rich woman of property, with a considerable idea of her own importance, she felt doubly aggrieved.

In the middle of the night, being a very light sleeper, she was quickly aroused by suspicious sounds. Slipping on a dressing-gown, she hurried to wake the servants. Together they leaned over the bannisters, listening. Obviously, someone had gained entrance to the house.

Only Miss Weddelock herself would dreamed. She did not lack courage when the loss of any of her cherished belongings was in question.

Purposely she made an unnecessary noise on the stairs, and there followed a scuffling of rapid footsteps along the passage below. The intruder had vanished when she reached the hall. But the sideboard in the dressing-room stood open, and of her extensive collection of plate not a trace was left.

At the sight Miss Widdelow almost gave way to tears; then she clenched her teeth. Her shrill, angry voice brought the frightened servants down to the hall.

"It was that tramp, I'll be bound! You let him hang about by the back door, and no wonder he planned to break in and rob me! Practically speaking, you two are responsible. I shall explain to the police when they arrive. Go and telephone directly, one of you!"

She fidgeted incessantly until an answer was received that the matter should have attending.

"My silver! I'd sooner have lost anything but that!"

"Perhaps the man'll be caught before morning. He's sure to be stopped if he's seen carrying a bundle."

"He's too far away by now," Miss Weddelow retorted.

Slowly she went back to bed, thoroughly convinced that her beloved silver was gone for good.

Jane, the cook, came and rapped on the door.

"Don't worry yourself too much, ma'am—I mean to say, other people have lost far more. If you look at it in that light——"

"What are you talking about, pray?" Miss Weddelow demanded; but her voice was less harsh than usual.

"Why, ma'am, those whose husbands or sons have been killed in the battles."

Miss Weddelow did not answer, but for an hour or more she lay awake, thinking.

She rose in the morning strangely quiet and subdued in manner. The servants decided that she must be ill.

"What d'you think? She couldn't find anything to grumble at when I took up her tea!"

"Never said a word about last night?"

"No; the shock's been too much for her."

"Serve her jolly well right!"

After breakfast Miss Widdelow strolled in the garden, and here, five minutes later, she gave a loud cry of amazement. The servants ran out, to find her struggling with a bulky sack, which rested, half hidden, beneath some shrubs.

"Your silver, ma'am! Good gracious! Why, the man must ha' been so scared that he left it behind, after all. What a bit o' luck!"

Miss Weddelow examined the contents.

"Yes; it's all here!" she announced. "How glad you must be, ma'am!"

"Fetch down that big chest from upstairs. I'll pack this myself. It'll be sent off some time to-day."

"Yes, yes, ma'am. To the bank?"

"Never you mind, Jane!" snapped Miss Weddelow, with something of her old sharpness.

The cook retired, stammering apologies. Her mistress turned to the housemaid.

"I find, Maggie, that it is possible for you to have this evening off, provided that you finish your work in time. You spoke of someone you wished to meet——"

"My young man, ma'am. Thank you ever so much!"

They stared after the disappearing figure.

"What's come over her? Can't make it out at all!" they agreed, in whispers.

That afternoon, when the silver had all been packed, Miss Weddelow went to visit her old friend, Mrs. Romain.

"If I was rude to you yesterday, Alice, please forget it, because I want your advice."

Mrs. Romain listened amazedly.

"Everyone else seems to be doing something," explained Miss Weddelow gruffly, "so I suppose I must follow their example. What a nuisance it is!"

Returning home, she labelled the big box in the hall. Curiosity led the housemaid to tiptoe along the passage and read the address.

"Now, then!" called Miss Weddelow sharply, from the dining-room. "Haven't I often told you before that you're too inquisitive by half? Come in here!"

Maggie obeyed reluctantly. Presently, however, she walked back to the kitchen with wide-open eyes. Her obvious excitement made the cook put an inquiry.

"It—it's going off to be sold for the benefit of the Relief Fund!"

"What is?"

"The silver," stammered the housemaid indistinctly. "Oh, I thought you'd hardly believe it, but it's true. You could have knocked me down with a feather when she'd done talking. Listen! I've got to take some money and a message to Jenner's wife."

"Never!"

"It's a fact! And his place'll be kept for him till after the war. Besides that, she's going to have a family of Belgians living here."

"Gracious!" ejaculated the cook faintly.

"A widow and three children. And our wages are going to be risen, because of the extra work. I'm to let her know if you're agreeable."

The cook recovered her breath with an effort.

"Well, rather! Then she—she isn't half a bad sort, after all!"

"Seems not." Maggie agreed, bewildered.

When she re-entered the dining-room Miss Weddelow was bending over a newspaper.

"Have you seen the latest, Maggie?"

"I—I—what, ma'am, please?"

"Look, girl! Show more interest," snapped Miss Weddelow reprovingly. "I'm surprised at you! Here, take it away and read it. Why, it's good news for the Allies—for our side!"—London Answers.

HUN ZEPP. HYPOCRISY.

Object to French Airmen Dropping Bombs—May Kill Women.

German hypocrisy can go no further than a recent attempt to persuade the French people by means of circulars dropped by airmen that French aviators are engaged in the pastime of murdering German innocents, says London Chronicle.

In a Berlin circular, printed in French, appear the following passages:

"Frenchmen! Your airmen with their bombs have killed, during the last few weeks, a great number of civilians, men, women, and children, far behind the front in Germany. At Karlsruhe, 48 killed, included 30 children. In attacks on Molheim, Freibourg, Kandern, Holzen, Mappach and Heltersheim there were as many killed as wounded. None of these places are of the slightest military importance.

"Frenchmen! We know now without any doubt whatever that these crimes have been committed by the express order of your Government. President Poincare himself has given the order at the base instigation of barbarous attacks of this kind by French aviators, but if there is a ... of the British.

"Germany makes war upon the French armed forces, not on the civil population of women and children. We have that there will be no more petition Germany will be compelled to take similar measures in defence.

"But you will know then, Frenchmen, that that slave of England, M. Poincare, will be responsible for the blood of innocent victims, and that it will be British barbarity, which will have compelled us to plunge your towns, far away from the front, into mourning."

When one recalls the unprovoked Zeppelin attacks upon centres of population both near Paris and in England, which are not of the slightest military value, and the hundreds of non-combatants victims of all ages and sexes, the colossal effrontery of this circular is self-evident.

Austria's Double-headed Eagle.

That two-headed eagle by which we now recognize Austria is one of the frauds in heraldry. It has been pointed out by old-fashioned historians with a passion for truth that when Francis of Austria gave up pretending to be the heir of the Caesars, and laid aside his claim to the Holy Roman Empire and his German kingdom, he ought to have rendered back to Caesar that which was Caesar's. But he stuck to the two-headed eagle, instead of contenting himself with the lion of his unlucky. From the point of view of the Heralds' College, this conduct was as indefensible as if a private British citizen had used the arms of an English see because he claimed to be the descendant of a bishop. There was method, however, in the usurpation. For an "emperor" with an eagle became a more distinguished personage than an archduke with a lion.

Freight Cars for France.

The British Government, it is understood in Paris, has engaged to send immediately to France ten thousand freight cars, taken from British railroad companies. Ten thousand additional cars are to be sent over during the first months in 1917, with a certain number of locomotives. This is to be done, it is understood, because Great Britain's military operations in France have been requiring the use of 20,000 French freight cars.

A Sticker For Pop.

"Pa."

"Well, my son."

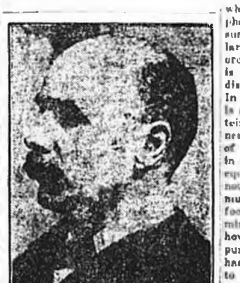
"How can a solid fact leak out?"

THREE LABORITES IN WAR COUNCIL

WORKED AT THEIR TRADES UNTIL ELECTED M.P.'s.

And Have Kept the Working-Classes in Line for Prosecution of War.

Mr. Arthur Henderson is one of the five members of the new British War Cabinet. Mr. G. N. Barnes is Minister of Pensions, and Mr. John Hodge is Minister of Labor. The first named has no portfolio. And the offices of the other two are new ones. Or, rather, between them they constitute the greater part of the offices recently held in the coalition Government by Mr. Henderson. Mr. Henderson in that Government was Paymaster-General and Labor Adviser to the Government. The duties which he performed on Labor Adviser will now be taken over by Mr. Hodge as the head of a separate labor department. The office of Paymaster-General carried with it the supervision of pensions. This part of the duties of that office will now be undertaken by Mr. Barnes.



Rt. Hon. John Hodge.

The fact that three Labor members are in the new Ministry, and one, indeed, in that new "holy of holies," the War Cabinet, shows that labor at last is coming to its own in England in regard to official responsibility and dignity. For all three of these Rt. Hon. working men were genuine bona-fide working men. They were not mere "spouters," such as try to impress the workers with the idea that they are, for some occult reason, working class leaders, although they may never have done a single day's manual work in their lives. They were real manual workers themselves.

Mr. Henderson, who is 53 years old, was a moulder in Newcastle-on-Tyne. Mr. Barnes, who is 57, started as a little lad, to earn his living in a jute mill at the age of 11. Mr. Hodge who is 61, was a steel and iron worker.

Labor Party Chairman.

All three have held the chairmanship of the Labor party in the House of Commons. Mr. Barnes was chairman of the party in 1910. But the

Rt. Hon. G. N. Barnes.

extreme wing of the Labor party becoming too much in the ascendant for his liking, he resigned that post in February of the following year, and Mr. Ramsay Macdonald was appointed in his stead. Mr. Henderson was elected chairman of the Labor party, in the place of Mr. Ramsay Macdonald—who was at variance with the larger section of the Labor party as to the war and its causes—on the outbreak of war. He had previously been chairman of the party from 1908 to 1910. When he joined the coalition Government in May of last year, Mr. Hodge was appointed acting chairman of the Labor party in his place.

The three Labor members of the Government all entered Parliament at the general election of 1906, when the Labor party first became formidable as a Parliament entity. Mr. Henderson and Mr. Hodge both had had previous municipal training—the former as a councillor and Mayor of Darlington, and the latter as a member of the Manchester City Council for three years.

The discovery of Mr. Hodge's abilities was one of the surprises of last year in Parliament. Side-whiskered, with bristling brows, and of burly form, John Hodge looks just what he is—the British workman, capable and aggressive. When the Government started to put the blame for the comparatively slow output of munitions in the early part of last year on the drinking habits of workmen, he talked back to them in a very effective way, contending that they were slandering the working classes to cover up their own slackness. As acting chairman of the Labor party, he has had a big share in keeping the larger section of that party right in line with regard to the war, in spite of Ramsay Macdonald, Snowden, and Company.

THE ORIGINAL CHAUFFEURS

Were the French "Scorchers," Held Up Mes.

More than a hundred years ago, in the Rhenish provinces on the borderland between France and Germany, there flourished a particularly atrocious variety of bandits, says the Cleveland Plaindealer. These desperadoes made a practice of holding the soles of their victims' feet in front of a fierce fire in order to force them to reveal the hiding places of their valuables. So they came to be known as "scorchers," or in French, "chauffeurs."

The most famous of these thugs was called "Schinderhannes," which is being interpreted, John the Scorcher. He was captured near Limburg in 1802 and executed in November the following year. The police had made a general roundup of chauffeurs by that time, and a record was made of the execution. Twenty heads were chopped off in twenty-six minutes. After that the profession languished. Napoleon I was at the helm, and the protagonists of this particular brand of brigandage appeared to be discouraged.

But while it lasted it was a great trade. Bands of these outlaws extended from Holland to the Danube; they had a language of their own—a jargon composed of French, German, Flemish and Hebrew. They had lines of communication through the country districts, and the posts on those lines were country taverns, the landlords of which were in league with the robbers.

After a century had passed the French were in need of a term to apply to the driver of an automobile, and with a certain historic humor they used the old "scorcher." The term was applied in derision, and, of course, it is rarely applicable, but it has stuck. And though it is sometimes whispered that the professional chauffeurs of modern times adhere to the old traditions—that they are in league with the landlords of road houses and country taverns for the detention of passengers—yet, no Schinderhannes has arisen among them and their depredations have not yet demanded wholesale execution. Considering his opportunities as a bandit, we must be grateful to the modern chauffeur for his forbearance.

Milk From a Vegetable Cow.

The milk problem is by way of being solved in Japan where cows are scarce, by an extensive use of artificial milk derived from the soy bean. First, the Japanese soak the beans, then boil them until the liquid turns white, when they add sugar and phosphate of potash. The boiling is resumed until a fluid results very similar in consistency and appearance to ordinary condensed milk. When water is added, soy milk is hardly to be distinguished from fresh cow's milk. In composition also the artificial milk is almost like genuine milk. Its proteins, fats and sugars are in very nearly the same proportion, although, of course, they are wholly vegetable in origin. Whether the substitute is equal to real cow's milk as a form of nourishment is not quite clear, for much of the value of the milk as a food comes from the enzymes or vitamines it contains. The Japanese, however, declare that it serves all the purposes of cow's milk, and that it has the advantage of being less liable to infection when properly and carefully manufactured.

BERLIN GAY NIGHT LIFE.

Disgrace to Fatherland Says a German Novelist.

The German capital is a disgrace to Germany, says Frau Marie Diers, the popular German novelist, whose war pamphlet, quoted by several Berlin papers, says:—

"The German capital is a disgrace to Germany. While millions of our brave German soldiers are giving their lives at the front, Berlin is filled with crowds of callous pleasure-seekers, profit-mongers, ghouls, vultures and adventurers.

"Heedless of human suffering, in which their own countrymen are participating as much as any, they pursue their selfish lives of greed and licentiousness and infamy. Berlin night life, always a scandal and a blot on Germany's honor, is a crying shame in war time."

Arriving At The Top.

"You've got to be pretty smooth to get to the top nowadays."

"Yes, and you usually get smooth on the top before you get there."

GERMAN AVIATORS BEATEN.

Supremacy in the Air Is Very Much With the Allies.

"In aviation the Germans have to exist." This is the unanimous verdict of military experts, says the London Chronicle.

One need only stay at the British front one single day to be convinced that the verdict is right. The allied aviators dominate the air. This is a phrase no longer. It is as much a reality as the British battle fleet or the allied artillery. The allied aeroplanes are everywhere. They guide and direct the artillery fire, make bold reconnaissances, photograph the enemy positions before and after the bombardments, fill the enemy trenches with grenades, and combine with the infantry to attack the German fortifications.

During the first two months of the Somme offensive the British aviators covered more than 100,000 miles in the air, and that in spite of the fact that for a while fortnight there was no flying at all because of the heavy mist and rain. According to careful military statistics, the British airmen covered no less than a million miles over the German lines in the first two years of war.

The history of the struggle for mastery in the air is very instructive. At the beginning of the war the supremacy in aviation undoubtedly belonged to the British and the French. But during the first year of the war the Germans, availing themselves of their superior industrial organization, went ahead of the allies. For a brief period, German aviation surpassed not only the British and French aviation separately, but both combined. That period coincides with the appearance of the Fokkers and the activity of Immelmann and other prominent German pilots.

However, the Germans could not maintain their superiority. Toward the end of the second year, the supremacy passed to the allies once more. By the quantity and quality of their machines, as well as by the quantity and quality of their pilots the British and French now so much surpass the Germans that at present one can speak of the absolute superiority of the allied aviators. It is not yet a complete domination of the air; but the British and the French do now possess an absolutely incontestable domination at the front.

COMMAND OF THE AIR.

Fighting Aeroplanes to the Forefront in Future Wars.

The present war has fully justified the views of the late Admiral Mahan on the value to the nation of command of the sea. The author of a recent article in the Fortnightly Review, entitled "Two Years of Aerial War," predict that in any great war of the future, command of the air will be as important as sea power. Aircraft in this war—that is, the destructive machines—give no more idea of the size, or of the power, of the fighting machines of the future than a rowboat would give of the power of an Atlantic liner. In the wars of the future it will be the great fighting aeroplanes that will be to the forefront. Scouts, of course, will have their value, but instead of being all-important they will be merely a part of the general scheme, as the sea scouts of the navy are. Power in the air will be striking power, as it is on the sea or on the land. It appears from the raids made by the most experimental craft is merely a warning. Any nation that falls behind in the struggle for air power may in years to come be defeated in a campaign that that will last, not a year or a month or even a week, but as the result of an attack delivered and completed within a few hours. With aircraft flying, as they will, at a speed of two hundred miles an hour, it will be possible for an enemy immediately on declaring war, or without waiting to declare it, to strike in the course of an hour or so, and with precision—using fleets of thousands of machines—the very nerve centres and arteries of any opponent that is ill-prepared. He could destroy government buildings, arsenals, factories and railways, paralyse all communications and blot out whole cities. The power of a perfected aeroplane, when in unscrupulous hands, may in the future become as terrible as to appear almost superhuman. Pestilence may be spread by that means; the inhabitants of great cities may be slain in thousands by poisonous or suffocating gases. Sea power may be swift and pitiless, but far more swift and far more pitiless will be the action, ultimately, of air powers. Disaster awaits a nation that ignores the warnings.

Danes Face Food Shortage.

The general scarcity of foodstuffs is beginning to be felt in Denmark. Since December 1, rye bread, the usual bread of Denmark, has been mixed with ten per cent. of barley, and the percentage will soon be raised to twenty per cent. The Home Office has decided to regulate the consumption and price of home-grown sugar and will issue sugar cards. Each person is to be allowed one pound a week.

Some Change.

Mr. Neverwed—Does your wife treat you the same as she did before you were married?

Mr. Peck—Not exactly. Before we were married, when I displeased her she refused to speak to me.

ROYAL BANK GROWS AT UNUSUAL RATE

THE TOTAL DEPOSITS ARE UP 45 MILLIONS

Year's Increase of 55 Millions In Assets More Than Total Assets Nine Years Ago.

Nine years ago the total assets of the Royal Bank of Canada were $46,351,498; the statement for the year ended November 30th last, just issued, shows total assets of $253,261,247. The increase within twelve months had been 55 millions, or considerably more than the total resources of the institution less than a decade ago.

There has been growth from without through the medium of amalgamations, and presently through the same medium 20 odd millions will be added to the bank's assets by the absorption of the Quebec Bank. But a very considerable proportion of the growth can be assigned to the expansion from within that comes primarily, in the case of a banking house, from the development of public confidence in the wisdom and integrity of the management.

Nine years ago the savings funds entrusted to the Royal Bank amounted to 20 millions; they were in excess of 141 millions this year. The bank's ability to render service to the community has grown concurrently; against business advances of less than 26 millions nine years ago the current statement shows 87 millions in Canadian territory and 38 millions abroad.

The 26 per cent. increase in assets within the past year is a remarkable record in a number of ways. A year ago the bank was able to report a 20-million dollar gain, bringing assets close to 200 millions, a new high level. As the bank depends on general rather than special conditions for its growth, and is not the custodian of special funds, government or other, the 20-million expansion on top of a record-breaking year is significant of business activity and prosperity within the territory that it serves.

The year's growth, it may be presumed, has been widely distributed. Although the general lagging of commercial discounts in Canada through the year was downward, the Royal reports an increase of about five millions or six per cent.; the increase, actually and relatively, in current loans abroad, is larger, about 13½ millions, or 55 per cent. The latter, it may safely be conjectured, is a normal sequel to the great activity and prosperity of the sugar industry in the West Indies. That condition was largely responsible for the fact that the Royal was one of the few Canadian banks to report an increase in profits in 1915. The increase that year was a moderate one of $19,434, but the 1916 statement shows the substantial gain of $205,231, bringing profits within about $50,000 of the bank's best earning year, 1913. There was slightly better demand for money in Canada; a much improved demand in the bank's outside territory.

The increased demand abroad, no doubt, has been met, and probably something more, by the rising bank deposits abroad. The breadth of the situation continues important from the shareholders' standpoint; a diminished demand in one section of the bank's territory can be offset by an increased demand in another; and the bank is in a position to direct funds in large amounts to the point of best demand.

With profits of $2,111,307, equal to 17.57 per cent. earned on the average paid-up capital, against 16.48 per cent. the previous year, the bank paid its usual 12 per cent. dividend on a slightly increased amount of stock, set aside $100,000 for pension fund, wrote off $250,000 on bank premises, paid a tax of $118,226 on circulation and contributed $50,000 to the Patriotic Fund. After these deductions $175,874 remained to be added to profit and loss balance. Comparisons of profit and loss figures for three years are given in the following table:

	1916	1915	1914
Profits	$2,111,307	$1,902,676	$1,886,142
Prev. bal.	676,472	814,042	1,018,113
Total	$2,787,779	$2,819,635	$2,901,262
Less—			
Divid.	$1,417,707	$1,387,200	$1,387,200
Pension F.	100,000	100,000	100,000
Premises	250,000	250,000	250,000
War tax	118,226	105,966	
Dom. Exhibition			500,000
Patriotic F.	50,000		50,000
Tot. ded.	$1,935,933	$1,843,166	$2,287,200
Bal. P. & L.	852,846	676,472	614,062

Some of the increases shown in the balance sheet have already been referred to in a general way. Deposits in the aggregate show a gain of about 45 millions, with slightly more than half the increase under the head of savings deposits. Part of the increase, it has been indicated, found employment in current discounts, which were approximately 18 millions higher than a year ago. The bulk of it, however, is represented among assets of a liquid description—cash, call loans, securities, banking balances, etc., all showing increases. Under one of the security heads there is an increase of close to 11 millions, which represents, no doubt, the purchase of British Government securities in connection with munitions credits.

The aggregate of liquid assets is 121 millions, a gain of about 36 millions, and increasing the proportion of such assets to public liabilities to 53.2 per cent. against 49 per cent. the previous year and 46 per cent. in 1914. Cash, including over in the central gold reserve, for excess note circulation, represents 16.2 per cent. of liabilities to the public, against 18.4 per cent. in 1915.

The position in this, as in other respects should be satisfactory to both shareholders and depositors. The bank has been able to find reasonably profitable employment for a large amount of money, while increasing actually and relatively the strength of its liquid reserves. Some leading comparisons of the balance sheets of the past two years follow:

Liabilities	1916	1915
Deposits dem.	$58,365,866	$37,486,097
Do. notice	140,585,196	117,613,530
Do. total	200,351,193	154,978,327

SUGGEST NICKEL COINAGE.

Professor Says Canada Could Make Millions With It.

A proposal whereby the Dominion can make $5,000,000 to $10,000,000 by substituting nickel for silver coins has been submitted to the Federal authorities at Ottawa by Prof. Leacock, of McGill University. The professor, explaining his scheme, points out that silver is only a token to-day, and can be replaced by nickel, or tin, or celluloid, for that matter. He would call in the $20,000,000 of silver coins in circulation and sell the metal in them as bullion. There is about seventy cents worth of silver in a dollar's worth of coins. Nickel is worth fifty cents a pound, and the total coinage could be replaced for $350,000. The cost of coinage would be offset by the saving now and in the future in buying nickel instead of silver. The professor proposes that the banks should act as agencies in exchanging the nickel for the silver coins. He undertakes to carry out the scheme himself without salary. He suggests that the original recoinage should bear the stamp: "War money of Canada, 1917," and it would act as a monument of Canada's national thrift.

Father, Too.

"This is my son Frederick," said Mr. Glanders, proudly, introducing his five-year-old boy to his caller.

"Well Frederick," said the caller, "do you mind your mamma?"

"Yes, sir," replied Frederick promptly, "and so does papa."

Monsieur

For 15 days in the month of January I was suffering with pain of rheumatism in the feet. I tried all kinds of remedies but nothing did me any good, one person told me about MINARD'S LINIMENT. As soon as I tried it the Saturday night, the next morning I was feeling very good. I tell you this remedy is very good. I could give you a good certificate any time that you would like to have one. If at any time I come to hear about any person sick of rheumatism I could tell them about this remedy.

Yours truly,
ERNEST LEVEILLE.
216 Rue Ontario East, Montreal.
Feb. 14, 1916.

Nearly 100,000,000 lb. of tobacco are smoked in the United Kingdom every year.

Minard's Liniment Cures Distemper

BATTLES IN FOG ON THE SOMME

SHELLING GERMAN TRENCHES IN THE DARK.

Tommies Go About Their Duties Oblivious of Danger from Unfriendly Shells.

Low hanging, damp leaden skies have shrouded the land in gloomy darkness, and observation has been almost wholly impossible. For the past seven days there has been a thick mist, while on two occasions the war zone has been completely curtained in by a mantle of heavy fog. But through this gray murk the guns kept hammering away—firing at the unseen enemy — harrassing post roads and railheads or any other "registered" place where he was likely to be busy with the multitudinous affairs of war between the lines, writes a correspondent at the front.

A battle in the fog—and nearly every detached engagement in this struggle on the Somme could be classed as a battle by ordinary standards—is a weirdly mysterious and uncanny affair. A roar, a flash of red flame, and out into the leaden mist shrieks a shell on its well intended mission of death and destruction.

Placing Shells by Map.

"This is where it should fall," remarks the gunner as he points to a map with a pair of compasses. "We will put another just over here," and bang goes the gun again. In the deepness of the fog the battery seems to shoot into a little drab world all its own.

The Germans, however, have been bombarding one of their recently lost positions. It is a favorite occupation of the German gunners—this shelling, a position they know so well after they have been driven from it. And such "strafing" calls for a reply, even if the enveloping fog permits one to see scarcely beyond the grim muzzle of the giant gun itself.

Such fighting as this makes war seem intensely imperial, and in the colorless language of the official communique may appear something like this: "There was considerable hostile shelling to-day against our front on both sides of the Ancre. Our retaliation was prompt and effective."

One knew that if the British shells were truly searching their way through the opaque mist to their charted destination the reply must be all that the communique claimed.

Friendly and Unfriendly Shells.

To one only casually acquainted with the noises of a battlefield there is always bewilderment at first as to which are the "friendly" shells going over toward the enemy and which are the very unfriendly visitors coming over, to burst in a wild destroying fury. In the mystic grayness of the dripping fog the bewilderment was accentuated, the ordinary whistle and "crump" of the various-calibred shells translated into a veritable witches' chorus. So intense was the bombardment at one time, with the shells crashing in opposite directions overhead, that the mingled sounds became like the singing of storm winds.

Each calibre shell has its own particular plaint, sometimes sadly melancholy in the distance and again spitefully fierce in its nearness. It is a great source of satisfaction when, under the tutelage of an experienced officer, one comes to distinguish for one's self the difference between the outgoing screech of the friendly shells and the incoming "whang" of what the "Tommies" call "another present from the Boches."

Visitors to the British front are always impressed by the absolute indifference of the English, Canadian and Australian soldiers to the indiscriminate shelling so frequently indulged in by the Germans.

In Cochin China the inhabitants prefer rotten eggs to fresh ones.

DODD'S KIDNEY PILLS
FOR ALL KIDNEY DISEASES
CURES RHEUMATISM — BRIGHT'S DISEASE — BACKACHE — DIABETES
NUMBER 23 THE PROPRIETORS

For a Quick Pick-Up Luncheon try that most delicious, nourishing, whole wheat food, **Triscuit**, the shredded wheat wafer-toast. It contains all the body-building material in the whole wheat grain, including the bran coat which promotes healthful and natural bowel movement. It is real whole wheat bread without yeast, baking powder or chemicals of any kind—an ideal food for children because it compels thorough mastication and ensures perfect digestion. A crisp, tasty "snack" for picnics or excursions. Toast in the oven and serve with butter, soft cheese or marmalades.
Made in Canada

WILL SIT ON THE LID.

Old Country Liquor Dealers Organize for Protection.

The "lid" is being tilted so often by saloonkeepers in England that the liquor dealers themselves, fearing this continued winking at the closing time, may advance the interests of prohibition, have launched a movement for a more rigid enforcement of the law.

It is proposed that any violations of the regulations will result in the suspension of the license until the end of the war. Another proposal is that a second violation of the law be punished by imprisonment, and that the offender be debarred from further employment in the liquor trade.

In Birmingham the liquor interests have organized a vigilant police service of their own to see that the law is not violated.

He Thinks.

"That young fellow you hired a month ago is a wonder."

"That so? Doing his work well, eh?"

"Yes. Does everything we ask him to, but he actually uses his brains as well."

SPENDING SUB. CAMPAIGN.

Huns Turning Out Three a Week to Destroy Food Ships.

Information has come to the London Mail that Germany is concentrating every ounce of energy and all the resources of her shipbuilding capacity to the construction of submarines. The Huns still have hopes of forcing Britain to consider peace by a strong U-boat campaign which will seriously interfere with Britain's food supply. Large submarines are said to be turned out in Germany at the rate of two or three a week, and they are capable of ocean-wide radius of action and fitted with torpedo tubes of the largest calibre. In general dimensions they are similar to the U-53 which recently visited the American coast.

England's food supply is to be cut off in every direction possible and it is understood that Hindenburg has been given control of the fleet as well as the army, and is of the opinion that he will not have to defeat the British army in France if he can deal a heavy enough blow to the ships carrying England's food supply.

IF FOOD DISAGREES DRINK HOT WATER

When food lies like lead in the stomach and you have that uncomfortable, distended feeling, it is because of insufficient blood supply to the stomach combined with acid and food fermentation. In such cases try the plan now followed in many hospitals and advised by many eminent physicians of taking a teaspoonful of pure bisurated magnesia in half a glass of water, as hot as you can comfortable drink it. The heat water draws the blood to the stomach and the bisurated magnesia, as any physician can tell you, instantly neutralizes the acid and stops the food fermentation. Try this simple plan and you will be astonished at the immediate feeling of relief and comfort that always follows the restoration of the normal process of digestion. People who find it inconvenient at times to secure hot water and travelers who are frequently obliged to take hasty meals pearls prepared, should always take two or three five-grain tablets of Bisurated Magnesia after meals to prevent fermentation and neutralize the acid in the stomach.

BRITISH PROHIBITION.

State Control of Spirit Trade in England is Predicted.

About the first measure of the new British Government for handling food supplies contemplates complete control of the liquor trade, according to well-informed sources.

Absolute prohibition of the consumption of spirits, except medicinally, and restrictions on the beer trade are expected. The whole resources of the spirit trade it is believed, will be put under state control early in the new year, and the accumulated stocks will be diverted to other purposes than drink.

Distillation of whisky and gin will be prohibited.

Minard's Liniment Cures Diphtheria

Not a Good Loser.

We are quite prepared to see Germany collapse with startling rapidity, once destiny has unmistakably declared against her, says the Glasgow Herald. We have no experience of how nations organized for war to the last man will behave under the stress of unavertible defeat and the economic straits induced by isolation. But it is conceivable that the distracted proletariat may count not to the "moral" illusion of its rulers and philosophers, but may yield to the clamorings of its wants and its yearnings for peace. The German has never been what is colloquially called a "good loser."

A Trip By The Royal Mail
A trip by the R.M.S.P. from Halifax to Demerara and return to St. John occupies 39 days.
On the outward voyage you have a delay at Bermuda, Barbados, and Trinidad and you have part of a day at Antigua, Dominica, Montserrat, St. Lucia, St. Vincent and Grenada. At Demerara the ship stays for four days, and on the homeward voyage you have at least as much time at each of the places mentioned as you had on the outward voyage. Please observe that there is never a day for over half the trip when you will not be on shore a portion of the time. Is there any sea voyage in the world that is just like this one? It is hard to believe that there is. Certainly there is none so enjoyable at the price. Ask your Railway Ticket Agent for a booklet, or send us your address and one will be forwarded.

The Paisley Advocate

PAISLEY, JAN. 3rd, 1917

INVENTORY OF OUR MAN POWER

The National Service Board has concluded to utilize the facilities of the Post Office Department for the purpose of obtaining an inventory of the man power of the Dominion for war purposes. Probably within a few days citizens of the villages and surrounding country will receive cards from the post office which each one is required to fill out and return. It is intended to have the returns made in the first week of 1917. The object of this card census is to assist in making investigations and formulating plans that will by a measure provide for those adjustments in our national life necessary for the maintenance of the agricultural and other basic industries of the Dominion at that high point of production so absolutely essential to the successful prosecution of the war, while continuing unimpaired the indispensible public services of the country. To accomplish these results, and insure the maximum production of war material and equipment, the services of all available men and women of Canada must be utilized in such a manner as will, while achieving these purposes, permit of the release from their present employment of men who, physically fit and of suitable age, may desire to serve overseas with our military or naval forces. Paisley village has few young men left who are fit for military service, yet the man and woman power can without doubt be further adjusted so as to release that few as recruits for army or navy, also allow some of the outfits to take up work in the munition factories, which is quite as urgent and important as actual fighting. In the township some adjustment can also be made that would further the organization of our national strength for pushing this great conflict to an early and victorious finish. Paisley has done well, but may even do better. Now is the time to strain ourselves for further efforts.

Municipal Elections

PAISLEY

Reeve, J H Steele. Councillors—Dr Houston, John A Logie, Albert Pearce Dan Sparrow.

The municipal election campaign in Paisley for 1917 was the liveliest for many years, and a large vote was polled. The greatest interest was centered in the contest for the presiding officer's seat at the Board. Below are the returns:

For Reeve	No 1	No 2	Total
Ballachey	39	19	58
Steele	91	65	156
For Councillors			
Sparrow	96	79	175
Houston	103	39	142
Pearce	83	36	124
Logie	79	35	114
Sinclair	56	22	78
Nicholls	19	47	66

Mr J H Steele's majority of 48 over ex-Reeve Ballachey is one of the largest ever rolled up for the reeveship of the village. Mr Steele is not a novice in municipal experience, having before been elected as councillor and as reeve. He is a native of the town, a popular citizen and a successful business man. He is frequently heard as a public speaker, and is delighted with the honor of representing his town in the County Parliament.

Mr S Ballachey, who had served the municipality for four years, had filled the position of reeve and administrate most capably and impartially, during a period when the enforcement of the new and stringent laws such as local option and provincial prohibition demanded a strong hand to secure observance, and he performed his duties without swerving from what he considered was the proper course. There were numerous convictions, and every conviction made him one or more enemies, every one of whom nursed their wrath for "the day," which came on Jan 1st, A D 1917. Other "differences," the outcome of variance of opinion concerning how, when or where a bit of civic improvement should be done—such differences as will occur in the career of any man who competently and conscientiously performs his work as a civic administrator—were scored up and evened off when the time came to mark the ballots. By his defeat a good municipal head has fallen into the basket.

ELDERSLIE

The electors of Elderslie apparently did not approve of a contest for municipal honors this year, as they turned down the two new candidates who came into the field, giving Reeve Cass and his cabinet a strong support.

The Vote for Reeve				
Cass	79	50	76	72—277
Fortune	73	69	48	45—235
For Councillors				
Lewis	46	106	83	80—318
Fraser	53	113	39	84—303
Allen	142	34	24	90—290
Thompson	28	46	98	72—244
Clement	83	23	60	37—203

GREENOCK

Reeve—D Phelan (majority 23). Councillors—Geo Gilchrist, Jas Campbell, Thos Symons, Thos Sawyer.

ARRAN TP.

Reeve, Jos Johnston. Councillors—W Brunton, Chas Thomas, Fred Scarrow, Fred George.

BRANT TP.

Reeve, David Willoughby. Deputy-Reeve, Wm A Rowand. Councillors—Walter Findlay, Jas S Johnston, D W Gregg, Jr.

CHESLEY—Mayor, C J Halliday (acel). Reeve, W H Brown (acel). Councillors—D McDonald, Wilkins, Patchell, Dodsworth, Heiserman and Lustig.

WALKERTON—Mayor, A Johnston (ac)-Reeve, R Russell. Councillors—A McCarter (ac). Other members failed to qualify and another nomination will be held to fill the vacancies.

THE ADVOCATE will be a most welcome gift to absent ones of your family, whether in Canada or away to the fighting front in France.

BRUCE TP. NOMINATION MEETING

At the close of the municipal nominations at Underwood on Dec. 22nd, G J McKay, Tp Clerk, was installed as chairman of the public meeting.

After the chairman's address, Reeve Johnston was called to the platform to give an account of his labors in the county and tp during 1916. He stated that $35,659 had been collected during the year in taxes; $2,215 had been spent for war purposes. $847 of this going as bonuses to recruits from Bruce Tp. He stated that all the boys who received the regular allowance of $15 had to be citizens of the tp at the time of enlisting, with the exception of students or school teachers. $1000 was given to the British Red Cross Society, while the home Red Cross Society was given $385 which went to purchase material for the making of clothing, socks, and such like, the work being done at the different homes of the willing workers of that society. The county granted $7 500 to be divided between the British Red Cross, the Belgium Fund and the 160th Battalion (to be spent for battalion recruiting purposes). This is to be paid quarterly and to be kept up as long as the war lasts. A further discussion of this question comes up at the County Council in January. The Reeve claimed that the county rate was $3000 lower than last year owing to the small number of large bridges that were built during 1916. Deane's bridge had cost $500 to repair. He advocated longer bridges, the advantage being to prevent ice jams and lessen the danger of bridges being carried away. A large bridge was built with very little additional cost. A number of contracts had been let but had not been completed. Scarcity of labor was the main claim of the contractors in not living up to their bargain. On advice from their solicitor the council deemed it unwise to take any action in those cases as nothing would be gained. The Board of Health had cost $300. Placarding of houses for measles had caused a lot of abuse to be heaped on the council, but the reeve explained that they were just acting under instructions from the Provincial Government and were entirely innocent. The good roads system came in for considerable comment, but as it is just in its initial stages in this part of the country a large number of the ratepayers failed to grasp the idea. At the June session of the county council both the reeve and deputy voted against a system of good roads for Bruce Tp, as they saw it was going to be too much one-sided and almost of no special benefit to the majority of the ratepayers of Bruce. At that meeting eight members of council opposed the project. It comes up again in Walkerton in January for its third reading. To judge by the feeling at the nomination the reeve and deputy will still be on the opposing side when it comes up again unless different terms are laid down that would be a real benefit to the tp. The Government offers to pay 66 2/3 per cent of construction, the roads to be constructed and maintained by the county, and are called county roads. A superintendent for these roads was to be chosen from the members of the council at a salary of $1500 a year, the government to pay $600, and the county $900. They would build ordinary gravel roads uniform in width, costing at first outlay about $10,000 for proper machinery to start a good road system in the county.

Peter Dobson said he was a candidate for the reeveship if there was an election, but in the event of acclamation he was content with the deputy's chair. Peter gave a good account of his work for the year.

Councillor Baker came next with a full explanation of his work. He stated that they now put six stringers in all new bridges instead of four as formerly. He was willing to contest the seat for deputy-reeve in the event of an election.

Councillor Jas McKenzie also gave an account of his work in a neat speech and signified his intention of standing for councillor for coming year.

Councillor Murdoch McNeill came next, and gave satisfactory account of his work during the year. He was a candidate for deputy-reeve if there was an election.

The chairman asked the ratepayers of Bruce Tp to pay more attention to registration papers and make more full and prompt returns, which would tend to make the work a good deal more pleasant for him.

Ex-reeve A McLean also spoke on the weed question, telephone debentures and the good road system. He said Bruce tp ratepayers had as many as 50 sugar now with Joe Hyde's included. Somebody said Archie had to shove his own down hill occasionally. But you never can tell, and we would not vouch for this statement.

Ex-warden Mewhinney also spoke. Without doubt he is the silver-tongued orator of Bruce tp. His debating and explanation of any subject is always complete and concise.

Several new candidates nominated all dropped out in favor of the old council with the understanding that the election expenses were to be donated to Red Cross purposes.

The law costs of the tp amounted to $22 for the year, roads and bridges $6039, charity $19, school purposes $1433, sheep killed by dogs $82, wire fence bonus $108, war purposes $2245. The collector's roll called for $33659 21, all of which has been paid in, which is a compliment to our collector, Mr J Kippen. The nomination closed with everybody standing and singing with patriotic vigor "God Save the King."

Red Cross Report

The Red Cross workers of S S No 9 Bruce, received from all sources the sum of $434.56 since Nov 4th, 1915. Of this sum $70 was received from the township council. The shipments were as follows: 13 doz bandages, 62 flannel shirts, 155 pairs of socks, 33 sheets, 5903 mouth wipes, 53 surgical shirts, 936 hospital handkerchiefs, 150 towels, 66 wash cloths, 6 night shirts, 116 pillow slips, 37 pillows, 17 pair surgical socks, 20 pair pyjamas, 56 soldiers' handkerchiefs, 4 bed pan covers, 4 quilts, 6 boxes of Zam-buk salve. Cash on hand $91 68. Officers—Mrs Jas McKinnon, Pres; Mrs Thos Wrightson, Vice-Pres; Mrs Geo Fullerton, Treas; Miss Laura Nelson, Sec'y.

Card of Thanks

TO THE ELECTORS OF PAISLEY:

Ladies and Gentlemen—I wish to thank my friends and supporters for the special honor done me by placing me at the head of the polls in Monday's election. I assure you it is fully appreciated, and I will take special pains to make my ensuing year's work measure up to the flattering expression you have given in my favor. Yours respectfully,

D. SPARROW.

Card of Thanks

To the Electors of Paisley:

Ladies and Gentlemen—I desire to thank all those who supported me at the polls, and express my appreciation of the honor you have done me by electing me to the council. It will be my aim through out the year to be worthy of your confidence.

Yours respectfully,
ALBERT PEARCE

Not the Fault of the Printers

The Teeswater News informs us that the Greenock statistics were printed in plenty of time and delivered to the mail carrier as directed to a party who was to see that they were delivered to the clerk at Chepstowe. The printers did their part and they say "if though their own management, Greenock did not receive the statements in time, we do not hold ourselves to blame."

"The Store with the Stock"

Do You Use His Majesty's Mails

WE CAN SEND IT TO YOU BY PARCEL POST as You Might?

'Phone to us for any of your small requirements and we will send out by rural mail the same day. The coft is small—5c the first pound and 1c each additional pound — and you save half a day. We have both 'phones at your disposal and shall give these orders the best of attention.

We wish to draw your attention to our **reduced prices on Ladies' Cloth Coats**. We still have a good assortment of up-to-date styles, on which we have placed greatly reduced prices. Now is your opportunity.

Give Now to the Patriotic Fund

If ever you would give-give now

"Bear Ye One Another's Burdens"

'Tis an old saying—sometimes a hard one—but worthy of all acceptation.

Take a present-day illustration. British Columbia—out there under the setting sun—is helping to bear Ontario's burdens. She has sent to the front—that shell-torn front in France—a larger proportion of her manhood than has Ontario.

Therefore it comes to pass that we in Ontario are being asked to help in bearing British Columbia's burdens by helping its soldiers' families. It's a fair, a just, request. We all are in the same boat. We must bear one another's burdens. And if one Province, not rich in money, makes heavy calls on the Patriotic Fund, the richer Provinces must help out their poorer neighbor. Under a plan of each Province caring only for its own, the Province sending no men would spend no money. It would neither Fight nor Pay.

Ontario will need about six million dollars in 1917 for the families of its own soldiers. The Canadian Patriotic Fund is asking for that sum as a minimum below which the richest Province in the Dominion will not go. But, as a matter of fact, the Fund hopes Ontario will do still better—will bear another's burdens by helping out gallant British Columbia.

How stands the Western Province? It will require, in 1917, two million dollars for the families of its boys at the front. That is one-third of Ontario's requirements. But Ontario has probably more than seven times the population. British Columbia asks no favors. With only about 350,000 people—not rich in this world's goods, but rich in pluck and good red blood—it is undertaking to raise One Million Dollars for the Canadian Patriotic Fund! That equals $2.86 per head. Ontario, if it raise six million, will be giving about $2.38 per head.

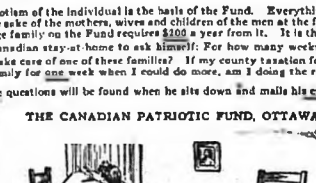
But the Western Province will still be short One Million Dollars. Where is this sum to come from? Eastern Canada. And Ontario, if it wishes to help, can do so only to the extent to which its gifts to the Fund exceed Six Million Dollars.

A lot of money, isn't it? Yet less than British Columbia is giving, if measured on a per capita basis, and far less if measured by ability to pay. There will be no difficulty in securing the Six Millions if three courses are followed:

Three Courses

1. If all County Councils make reasonably large grants to the national Fund.
2. If all towns, whether separated from their counties or not, will undertake campaigns for voluntary subscriptions.
3. If all citizens, in town or country, contribute fairly according to their means.

As to No. 1. The County Councils are beginning well. Simcoe has decided to largely increase its grant. For 1917 it will be the generous sum of $120,000. Victoria, another county patriotic to the core, has doubled its grant, jumping it from $2,500 a month in 1916 to $5,000 in 1917. The majority of the County Councils will decide at the January sessions how large their grants will be. Public opinion will have great influence on the Councils. Every county ratepayer, sympathetic towards the Fund, should write or speak to his representative on the Council; endorsing a liberal grant. The small tax of three mills on the dollar raises a sum that constitutes a handsome contribution.



As to No. 2. Many towns ignore the duty of holding campaigns. This applies particularly to towns which pay a county tax. Yet this tax never represents a fair or just contribution to the Fund from men of moderate or large means. Practically it is based on what the poorer men can afford. The richer should give much more, and they can be reached only through a popular campaign. To relieve anxiety these campaigns should be held in January or February. Will not patriotic men and women in every town take up this duty? They can get all information as to organization and methods by writing to the Canadian Patriotic Fund, Ottawa. And the Fund will assist them also with a campaign of advertising.

As to No. 3. Patriotism of the individual is the basis of the Fund. Everything is built on it. If he will not make some sacrifice for the sake of the mothers, wives and children of the men at the front, the Fund suffers, and they suffer with it. The average family on the Fund requires $100 a year from it. It is the duty—it should be considered the Privilege—of every Canadian stay-at-home to ask himself: For how many weeks, at $2 a week, must I, in self-respect and in gratitude, take care of one of these families? If my county taxation for this purpose means that I am taking care of only one family for one week when I could do more, am I doing the right thing?

The answer to these questions will be found when he sits down and mails his extra gift to the Treasurer of his local Fund, or to

THE CANADIAN PATRIOTIC FUND, OTTAWA.

Ontario is being asked to assure the Canadian Patriotic Fund that it can depend on having six million dollars in 1917 for the families of Ontario's soldiers.

Four million of these dollars must be secured from individual subscriptions. If there is no Branch of the Fund in your town or county send your subscription direct to the Head Office: Canadian Patriotic Fund, Victoria street, Ottawa.

HOW THE SOLDIER BOYS APPRECIATE

Canadian Convalescent Hospital
Monks Horton, Hythe, Kent
December 7, 1916

To the Women's Patriotic League, Paisley:

DEAR LADIES — I have just received your very acceptable parcel, and I wish to thank you for it as best I can. It contained several little articles which will be of the greatest use to me. It has been very thoughtful of you to remember me in this manner as I have been away from dear old Paisley for almost five years, and it sure has made me think of old times again. The boys over here can't possibly express their pride in the work that you women at home are doing for the fellows in the trenches and in hospital. I only wish that I could give you some idea of how much we appreciate it all. I have watched with great satisfaction accounts of your energetic endeavors as accounted in our old friend, THE ADVOCATE, and believe me, they cannot say too much of you. I sincerely hope that all the fellows will be able to return safe and sound so that they may thank you personally for all your kindness. Again thanking you I will now close this short letter, but not before I wish you every success in your patriotic work, a very Merry Christmas and a Happy New Year.

Remain, your friend and well wisher,
PTE I. STANLEY,
No 155009

EIGHTH CON ELDERSLIE

(Intended for last week)

Miss Amanda Lowes is spending holidays visiting friends in Mount Forest.

Miss Mabie Hogeboom, who is teaching near Clifford, spent the holidays at her home here.

Mr A V Tanner has purchased a new Bell piano from Mr F McKinnon, of Paisley.

Mr and Mrs Wm Mitchell and little daughter Jean, of Galt, spent Christmas at the home of his father, Mr H Mitchell.

A number from this line took in the party given by Mr John Rae, Elora road, and all report a pleasant time.

The annual entertainment and Christmas tree in our school was held on Thursday afternoon, and proved to be a decided success. The teacher, Miss McKerracher, and her pupils certainly deserve credit for the artistic manner in which the school was decorated for the occasion. The chair was occupied by one of the pupils, Master Andrew Currie, who before commencing the programme made a neat address. The programme by the children was well rendered and consisted of singing patriotic songs, recitations, readings and drills. Mr Harry Turner also enlivened the proceedings with several selections on his phonograph, also violin selections by Messrs Hammond, Tanner and Mitchell, the strains of which appealed to Mr Dan Pearce to such an extent that he immediately appeared on the platform and gave us about as nice an exhibition of what is termed the light fantastic as we have had the pleasure of witnessing for some time. And last, but by no means least, was a brief but very appropriate address given by Mr Hugh McKerracher, of Paisley, who in a few well chosen words highly complimented the teacher and pupils on the success of their entertainment, and the satisfactory manner in which the children conducted themselves. The programme being over Santa Claus appeared on the scene and was given a royal welcome by the children, and with the assistance of a few of the larger boys soon stripped the beautiful tree of its decorations, each and every child receiving a nice present. All joined in singing the national anthem and giving three cheers for our soldier boys at the front, and everybody went home highly pleased with the afternoon's entertainment.

TRAINING FOR BUSINESS
For 35 years the NORTHERN BUSINESS COLLEGE, Owen Sound, has been a leader among the institutions specialising in training for commercial pursuits. The courses of study embrace every subject of use in conducting business. Actual practice is given in required duties.
Special courses for young ladies who wish to qualify for office positions during the year.
Winter term begins Jan 2nd, but students may enter any time. Write for Catalogue.

Our catalogue will give you all particulars. A post card—one cent—will do the rest. Winter term opens Jan. 2.
W. J. ELLIOTT, Principal

"WHY WOMEN CANNOT SLEEP."

The highly organized, finely strung nervous system of women subjects them to terrors of nervous apprehension which no man can ever appreciate.

The peace of mind, the mental poise and calmness under difficulties, which are necessary for happy womanhood, are only possible when the sensitive organism is in a perfectly healthy condition. If there be any derangement in this respect no remedy in the world so completely restores womanly health as the wonderful "Favorite Prescription" invented by Dr R. V. Pierce.

Chatham, Ont.—"A few years ago I suffered a general break-down and got very weak and thin. I was in an awful state. I was very much discouraged and at times thought I would lose my mind. I knew of Dr. Pierce's medicines so I got his 'Favorite Prescription.' It gave me immediate relief, and completely cured me in a very short time. My sister used it with good results also. She was in a very delicate condition. I got her to take it and two bottles cured her completely.

"I take great pleasure in recommending Dr. Pierce's medicines; they are all that is recommended of them."—MRS. MARGARET BELAIR, 87 Park Ave., Chatham, Ont.

W. H. DAVISON

CANTIRE

(Intended for last week)

Mrs Stewart Muir and her daughter, Miss Edith, spent last week in Toronto.

Mr John Ewing, of Olds, Alta, is paying a visit to his brother-in-law, Mr A D McKay. He formerly lived on lot 10, con 5, but went west twenty-four years ago, and this is his first visit east in that time. Mr Ewing is an enthusiastic westerner.

Christmas festivities seemed to be unusually quiet this year. The gloom and anxiety of war and the vacant chair in many a home, although borne without complaint, is having a sobering effect.

The Christmas tree entertainment held in the schoolhouse here last Friday night was all that could be desired. The whole affair was a local one, as only the parents and children who belong to this S S, were expected to attend and no publicity whatever was given to it. The attendance was splendid both of children and grownups which goes to show that the Sunday school teachers are being supported in their work. The programme was provided by the young people of the school and the manner in which each one played their parts in dialogues, choruses, drills, etc, shows that there is plenty of talent here only awaiting development. Let us hope these annual gatherings may be a means of drawing the young folks of the neighborhood together and leading them into channels of usefulness in the future. Geo. Stewart's grawaphone rendered several choice selections which were much enjoyed. Mr D Reid discharged the duties of chairman. After the programme Santa Claus appeared in arctic costume, amid a jingle of merry bells, and with dancing eyes and beating hearts the little ones came forward to receive their gifts as their names were called. Cantire S S at home was a success, and let us hope it will be repeated.

Mr John A McIntyre had the misfortune to lose a valuable young mare last week. In some unaccountable way the animal contracted blood poisoning which proved fatal.

Give the "Kiddies" All They Want of

CROWN BRAND CORN SYRUP

It is one of the delicious "good things" that has a real food value.
A slice of your good homemade bread, spread with "Crown Brand", forms a perfectly balanced food, that is practically all nourishment.
So—let them have it on biscuits and pancakes, and on their porridge if they want it.
You'll like it, too, on Griddle Cakes—on Blanc Mange and Baked Apples. And you'll find it the most economical sweetener you can use, for Cakes, Cookies, Gingerbread and Pies.
Have your husband get a tin, the next time he is in town—a 5, 10 or 20 pound tin—or a 3 pound glass jar.

THE CANADA STARCH CO. LIMITED
MONTREAL, CARDINAL, BRANTFORD, FORT WILLIAM.
Makers of "Lily White" Corn Starch, Benson's Corn Starch and "Silver Gloss" Starch.

Our new recipe book, "Desserts and Candies", will show you how to make a lot of really delicious dishes with "Crown Brand". Write for a copy to our Montreal Office.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XVIII.—(Cont'd).

"Lovers' quarrels?" interrupted Violet, bitterly. "Do you think it was only that? Oh," she continued, eagerly, "if I could but believe that he did not mean or think all he said! If I could persuade myself that he did not scorn and despise me!"

"Tush! tush!" said the captain, with a gentle smile. "Leicester scorn, despise you? My dear young lady, he loves the very ground upon which you tread! Despise! He worships you!"

"No, no! He hates me!" said Violet, hiding her face. "He has started for —Africa," here she broke down, and sobbed aloud. "Gone—gone, thinking me all that he called me—heartless, vain, wicked—oh, so wicked!"

"Hush! hush!" said the captain, dreading that the girl's unusual excitement would result in a fit of hysterics, which would prove eminently inconvenient to him. "Hush, my dear girl; he has not gone. I saw him climbing the cliffs just now, looking as miserable as a starved jackal. There, let me go and fetch him back—you will thank me afterward; but you will hate yourself—and me, also—if you allow him to go. Africa is a fearful place."

Violet looked up suddenly.

"Yes, yes," she said, "I am a weak, foolish girl, but at least I would not have him go without hearing what I have to say. He—he may, perhaps, think less cruelly of me."

"I will go at once," said the captain, with eagerness. "I will tell him that, and"—he looked at her dress—"can I not take something in the shape of credentials? Ah, give me that rose at your bosom—you wore it when he saw you?"

Violet nodded, and commenced to unfasten it.

"Ah, he will remember it, without doubt," said the captain.

"Give him this," said Violet, in a low voice, taking out a lily from her little bouquet— "it will mean no more than I would have it mean—peace."

"I will," said the captain, snatching up his hat; "and rely upon my haste."

Then, with an affectionate nod, full of refined sympathy, he departed on his mission of peace-making.

The lily he stuck into his buttonhole, ready for use at the proper moment.

As he left the house, the stable clock struck ten.

Now, the captain did not want to see Mr. Leicester for at least an hour and a half.

He was also particularly anxious that the offended lovers should not meet in the meanwhile.

Therefore, he made a slight detour, and comfortably ensconced himself in the shrubbery, which commanded a view of the cliffs, the cedars, the road therefrom, and a part of the beach.

Leicester Dodson could not gain sight or speech of Violet without the captain's knowledge.

With an exercise of restraint and patience highly commendable, the schemer sat and smoked until the clock struck eleven.

Then he rose, and left his post of observation. It was almost dark, and the lights in the village twinkled in the valley like so many fireflies.

Very cautiously, after inspecting Violet's window, and satisfying himself by the light which burned in the window that Violet was still upstairs, he descended the hill, and, keeping close to the hedge, gained the village.

As it was positively necessary to success of his plot that he should be seen by a few people as possible that evening, he diverged from the high street and approached the "Blue Lion" by a back way.

While he was listening and watching impatiently, he saw the star, which Jem had seen shoot up from the sea, and which the captain knew for the signal from the smuggler's vessel, rise into the air.

"They'll come now," he muttered. 'They'll come; and that young idiot not here yet!"

Even as he spoke, and raised his hand to wipe the perspiration which excitement had raised upon his forehead, Martha's shrill voice could be heard.

"Out with you! You've had enough to-night, and more than enough! As for you, Jem Starling, you're a disgrace to the house, and I wish that master o' yours had hunted you out o the village."

And, at that moment, Jem uttered a snarl, and the captain, peering out to ascertain the cause, saw that Leicester Dodson was striding down the path.

CHAPTER XIX.

Leicester came striding down, apparently unconscious of the scene and the actors.

As he passed the group, who drew back to let him go by, he turned his head slightly, and frowned at Jem, who had suddenly become sober, and stood, with hang-dog head, looking upward from the corners of his evil, little eyes.

"Seems cut up about summut," said one of the men.

"Crossed in love," said Job, with a laugh. "But that's no business o' ours, lads."

The men, with Job and Willie at their head, ran down to the beach, and again the captain saw the signal fly out into the night.

"No time to lose," he muttered. "Now, will this drunken fellow get out of the way and let me get to work?"

As if he had heard the unspoken question, Jem stopped suddenly, and, after looking round cunningly, turned off to the right and commenced ascending the steep path which led to the cliffs.

He was following in the immediate wake of Leicester Dodson.

The arch plotter, who had pulled all the wires which had moved the passions of both men, softly and swiftly followed up behind, to make the murderer's task easy and effective!

Panting and breathless, the captain at last descried the thickset figure of Jem crouching on the path. With a stealthy caution, the captain crept up to him, and whispered his name.

With a guilty start, and a smothered oath, the ruffian turned.

"Hush!" said the captain. "I've followed you——"

Before he could proceed, the idea of treachery and capture had taken hold of Jem's mind, and, with a livid face, he sprang upon his late master.

In an instant they were locked in each other's arms, and struggling for dear life, afraid to speak for fear of alarming their joint victim, who stood, or lay, on the grass farther up the cliff, and out of sight.

With a fearful tensity, they rocked to and fro, struggling each to get the upper hand of the other.

Nearer and nearer they approached the edge of the cliff.

The captain's brain grew dizzy—he felt himself falling, but by an effort gigantic overwhelming called up all his strength to play a feint.

With a slight cry, he glared over Jem's shoulder, as if he saw some one or something.

The feint took effect. For half an instant Jem relaxed his hold, and turned his head.

In that stroke of time the captain had freed one arm.

A knife flashed through the night and buried itself in Jem's breast. With a muffled cry and a gasp, he threw up his arms, then fell like a log on the sward.

Instantly the captain bent down, and, opening one thick, clammy hand, pressed into it the white, crushed lily which he wore in his buttonhole.

The dying man's hand closed on the flower, and his eyes opened, with a glare of hate and distrust. Then, as the light died out of them, the captain dragged the body of his accomplice and tool to the edge and hurled it over.

So short, though deadly, had been the struggle for the mastery that nothing, not a coat, or collar, was torn, and, after passing his handkerchief over his brow, he was about to hurry on, when he remembered the knife, which, in the excitement, had slipped from his hand.

He went on his hands and knees and searched carefully, but could not find it.

"It must have gone over with him," he muttered, and he decided, after a still more careful examination of the ground, that it had.

All further search for it was rendered impossible by the sound of footsteps.

Looking up, he saw the stalwart figure of Leicester Dodson coming swiftly down toward him.

Instantly, he called out, and without anxiety:

"Is that you, Mr. Leicester?"

"It is," came back Leicester's deep, stern voice.

"I am so glad," replied the captain. "I have been looking for you everywhere!"

"Where you sent to find me?"

"I should not have come on my own account, much as I esteem your society," said the captain, with a grave laugh. "I have come from the woman to whom you have lost your heart, and whom you have lashed and tortured by your romantic upbraidings and reproaches. Don't be offended with me. I have had my days of romance and sentiment, though I am not much older than you. Why, how much older am I? A few years only, if any.

Leicester moved impatiently.

"For Heaven's sake, do not keep me in suspense!" he cried. "You say that Violet—Miss Mildmay—sent for me? Where is she?"

"Where should she be but in her own house?" said the captain, banteringly. "Come, my dear fellow, you have made yourself and her quite miserable enough for one night, and I have come to make you both happy."

"You came from her?" said Leicester.

"Yes, to tell you that you are mistaken, that your reproaches were groundless, that she is not heartless, and, as from herself, she bade me tell you that she required your forgiveness and good will. The word and the thing needed between you is 'peace'—no more, mind!" he added, as Leicester wiped the perspiration from his brow. "No more! We do not say any warmer word! For the present, it is only peace!"

Leicester held out his hand.

"Captain Murpoint," he said, and his voice struggled for calm, "I have wronged you. You are a good fellow, for no other than an honest, simple-hearted, good-natured gentleman would have taken so much trouble to bring happiness to an obstinate, wooden-headed, conceited young fool——"

"No, no," said the captain, disclaimingly, as he shook the hot hand cordially.

"And she sent for me!" continued Leicester, in a rhapsody of gratitude and love. "Bless her gentle heart! What a brute I must have seemed to her! I said more than I meant, captain. I swear I did; I was mad at the time, mad with jealously and love and wounded vanity. But enough of that. Where is she?"

"I left Violet hiding snugly in the old chapel."

Leicester started, and a slight shadow of suspicion clouded his joy.

"Hiding in the old chapel? Why should she do that?" he asked.

"That she can best tell," said the captain. "Of course, she does not expect to see you, and you are not compelled to come. The fact is, we were out for a walk, and, finding her low-spirited, I drew from her the cause. I left her seated on the old tomb, and there she sits now, depend on it, or I am much out in my estimate of a lover's endurance."

Leicester paused a second.

"You need not come so far," said the captain; "she may have gone on.

"I would go to the end of the world on the chance of seeing her to-night!" said Leicester.

(To be continued).

Why She Wanted It.

"Algy, I want you to buy me a book."

"I am glad you are becoming literary, my dear."

"Fudge! This article says one way to acquire a good carriage is to practise balancing a book on your head."

Contentment a Blessing.

"Do you think contentment is a blessing?"

"It depends on the kind of contentment. If your contentment is due to the fact that you have about everything you want, it is highly desirable."

In China a man pays his doctor only while he is well. As soon as he falls ill the physician's salary stops.

PRACTICAL FARMING

Cooking Hog Feed Unprofitable.

The advisability of cooking or steaming food for swine was for many years the subject of much controversy; many of the most successful feeders both in Canada and in the United States held widely different opinions, and differed quite as widely in their practice. During the past recade, however, the process, unless in the case of potatoes, has fallen very largely into disuse. It has been pretty conclusively proven that, unless under exceptional circumstances, better results are obtained from a given amount of grain or roots given raw than from a similar amount after it has been cooked.

It was formerly believed, and is still by many feeders, that the process of cooking increases the digestibility of the food; but it has been shown that as a rule the contrary is true, especially in the case of food rich in protein. Extensive experiments, conducted both in Germany and in America have been remarkably uniform in their results, and unite to show that protein is less digestible after exposure to high temperature. The digestibility of starch is to some extent increased by cooking, and for this reason potatoes should always be cooked for hog feeding. It must be conceded that some feed stuffs, such as turnips and pumpkins, are made much more acceptable to pigs by cooking, and will therefore in some cases give better results cooked than raw; there is also some advantage in giving feed warm during cold weather, but both German and American investigators are practically unanimous in condemning the practice of cooking feeds, other than potatoes, that are palatable in their raw state, because it reduces the digestibility of the protein; a loss for which in the absence of any increased palatability it offers no compensating advantages. It is now generally conceded by those who have given the feeding of potatoes a fair study that these tubers fed raw have very little nutritive value, but when cooked they are worth about one-quarter as much as mixed grains.—Canadian Countryman.

Study Your Soil.

The soil is the farmer's capital—his workshop. Upon it is founded the whole business of farming, and upon its fertility will depend in large measure the success of the farmer's operations. Too often it is not given the proper care nor is sufficient intelligence exercised in its use.

The plant derives certain substances necessary to its development from the soil; the most important of these are nitrogen, phosphoric acid and potash. The farmer should know whether his soil contains these in sufficient quantities to meet the requirements of a maximum crop providing good cultivation is given, or if he is not getting satisfactory yields, he should find the cause. No two farms have been treated and cropped in past years in exactly the same way, which means that even adjoining farms may be entirely different so far as soil requirements are concerned. To bring it up to a state of profitable productiveness one farm may need a rotation different from the other or a different fertilizing treatment. Bulletins, books, experts and governments help the farmer in many ways, but they cannot be expected to furnish every detail in a manner to fit his every need. The farmer himself should learn what his crops require, learn what his soil contains, learn what is lacking in his soil, learn how to supply the deficiencies, and then he may safely look for increased yields and greater profits. It involves study, but the farmer must work out many of his own problems on his own farm under his own conditions, by trial, by test, and by experiment.

Wild Oats.

The weed problem is one of the most serious confronting Canadian farmers to-day. Some weeds are troublesome in every province, while others cause most loss where grain farming is exclusively practised. Wild oats are a terrible pest in the Prairie Provinces and must be dealt with earnestly in order to keep them under control.

Various methods are advocated for their eradication, but one of the very best is the fallow and fall rye method practised and recommended by one of the oldest and most successful farmers of the Northwest.

The infested field should be ploughed deeply (seven or eight inches if possible) as soon as spring seeding is over, and each day's ploughing harrowed as ploughed. As each crop of oats appears it should be cultivated or disced up to the 10th or 12th of August when the field should be given a final preparation and seeded about Aug. 16th, at the rate of one and one-quarter bushels of fall rye and packed or harrowed after seeding. The oats that germinate with the rye will be winter-killed, and those coming up in the spring will not ripen before the rye is ready to harvest. The better the soil is cultivated and prepared to receive the rye crop the greater will be the number of oats germinated and winter-killed. If necessary this treatment can be repeated. Fall rye is a sure crop, the grain brings a good price, and it is the one crop which will ripen ahead of the wild oats.—F.C.N. in Conservation.

Shortage of Grain World Wide.

Rigid economy throughout the world in the consumption of food, in view of the deficient crops and the extraordinary requirements by the International Institute of Agriculture, which has made the most extensive report it has issued since the war begin. The institute says all nations are confronted with a grave situation.

It is estimated that at least 2,300,000,000 bushels of wheat will be consumed in the year ending July 31, 1917, and that the end of this period the world's surplus supplies of wheat will have decrease to 46,000,000 bushels. The report says it is only on account of the fact that last year's harvest was abundant, leaving a balance of 350,000,000 bushels, that there is available sufficient wheat for the year ending with next July.

The world's surplus of five cereals—wheat, rye, barley, oats, and corn—is placed at 633,000,000 bushels. This includes the unexportable Russian stocks and also the stocks of Rumania and Bulgaria. The surplus of oats is placed at 166,000,000 bushels. A general scarcity of fodder is expected.

The total Russian stocks of wheat now stored, which if military conditions permitted, would be available for export at the next harvest are estimated at 300,000,000 bushels.

CANADA AS AN EXPORTER.

What an American Magazine Has to Say on the Subject.

Yankees are inclined to look on the Canadians, with a total population for their country of less than that of New York City, as of comparatively small consequence in the adjustment of world trade which is expected to take place after the war. Yet Canada is not blind to her opportunities, nor will she neglect them.

Already there is a great deal of Canadian money invested around the Caribbean Sea and in South America, particularly Southern Brazil and the Argentine. Much of this money has been put into public utilities, so that the Canadian exporter has some advantage, in many cases considerable, in having been preceded by Canadian interests which, from the very nature of their enterprises, must make a careful analysis of local conditions and needs.

In natural resources Canada is as well off as the United States. Labor has been more expensive, but this condition is likely to adjust itself, for labor in the United States is advancing in cost constantly, while it is to be expected that immigration to Canada after the war will have a steadying effect on the labor market of that country.

Canada is particularly well fitted for foreign commerce through having two ports which are the closest American ports to Europe and Asia—Halifax and Vancouver respectively. Halifax is also nearer to the ports of Brazil and Argentine than Boston, New York or Philadelphia. Halifax is now in the midst of a great harbor development costing $30,000,000, which will enable the port to handle traffic expeditiously. It is connected with the West by the Canadian Northern and Grand Trunk Pacific transcontinental railways, both of which have auxiliary shipping services on the Great Lakes. Each of these railroads opens up large areas of natural resources, both agricultural and mineral.

Canadian shipping is in the hands of three strong organizations which can be counted on to co-operate with Canadian manufacturers and exporters. These are the Allan Line, Cunard Line and the Canadian Pacific Railway. They have been gradually absorbing the independent lines until the Canadian Atlantic is fairly evenly divided between them, while the Canadian Pacific Railway has held the lead on the Pacific for many years.

The fact that Canadian shipping facilities are being modernized and constantly enlarged means that the Dominion will be an important factor in world trade. It means that the markets which the United States is looking to as the nucleus of future American world-commerce may not be so easily captured as appearances indicate. It means that Canada is right now making plans to become a formidable competitor, and on nearly equal terms, with the United States, and that the whole energy of British Imperial influence will be exerted to further intercourse between Canada, the West Indies and South America.

Canada is a unit in the greatest commercial organization the world has ever seen. Her citizens and her government are in a position to benefit quickly from the experience of other members of that organization. To balance this advantage, the United States is better fitted financially than is the Dominion to go after the trade for which these two will compete. The United States is not lacking in either foresight or ability. It is recognized as the most energetic and persistent of nations. But the exporters of the United States will make a mistake if they think that this country is to have the Western Hemisphere to itself.—The Bush (New York) Magazine.

Accidents Will Happen.

Officer—"Is that soup ready, Jones?"

Officer's Servant—"No, sir, the stove went out, sir."

Officer—"Went out! Then why don't you light it again?"

Officer's Servant—"Cos it went out by the roof, sir."

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

was a favorite name among the long-forgotten food products of half a century ago, just as it is among the live ones of to-day. Only exceptional quality can explain such permanent popularity.

"Let Redpath Sweeten it."

Made in one grade only—the highest!

The Housewife's Corner

Dainty Dishes.

ate Cake.—One pound dates, ned and halved; one pound English lnuts, cut; three eggs, beaten well gether; one cup of granulated sugar and one cup flour. Bake in a shallow pan in a slow oven and cut in small squares while hot.

Prince of Wales Cake.—Two and one-half cups granulated sugar, three-quarters cup shortening (butter and lard mixed), one egg, two cups sour milk, one large teaspoonful soda (dissolved in the sour milk), one teaspoonful cinnamon, one-quarter teaspoonful ginger, one-half teaspoonful allspice, one-quarter teaspoonful cloves, one teaspoonful cocoa, flour enough to make a stiff batter, one-half teaspoonful cream of tartar added to the flour lastly, one cup hot raisins.

Twelfth Night Cookies.—To make delicious cookies beat to a cream ful and a half of sugar and one cupful of butter, add four eggs light, a pinch of salt, the juice ated rind of one lemon and a on of soda, one-half cup of boiler and flour to mix just stiff r for all, but not too stiff. Roll and bake in a hot oven; when treat with white icing, and before it hardens decorate with small candies arranged to form a star the center.

Date Loaf.—Take a breakfast cupful of flour, two ounces of butter, four ounces of sugar, one egg, half a pound of stoned dates and three ounces of stoned raisins. Cream the butter and sugar, add the beaten egg and a quarter of a cupful of boiling water in which has been dissolved a quarter of a teaspoonful of carbonate of soda. Mix in the flour, together with half a teaspoonful of baking powder, and lastly stir in the fruit, cup up small. Bake in a moderate oven in a well-greased loaf tin for one hour and a half, and when baked leave uncut for a day or two.

Ratafia Biscuit.—Take half a pound of sweet almonds and half a pound of bitter almonds and pound them in a mortar, very fine, with whites of eggs; but three pounds of powdered sugar, mix it well with the whites of the eggs to the proper thickness in a basin; put two or three sheets of paper on the plate you bake on; take your knife and spaddle, made of wood, and drop them on the paper; let them be round and about the size of a nutmeg; put them in the oven, which must be quick, and let them have a fine brown and all alike; let them be cold before you take them off the paper.

Sponge Fingers.—Use five eggs, their weight in powdered sugar; half their weight in flour and the grated rind of half a lemon. Set the flour, beat the egg yolks and sugar until stiff and frothing. This takes about 20 minutes. Beat the whites to a stiff froth and add to the yolks and sugar a little at a time, sprinkling in the flour alternately. Mix well, add the lemon rind or a teaspoonful of any preferred flavoring and put into the tins, which should be prepared by greasing with a blend of flour and butter and then dusting with powdered sugar. When the tins are filled with the mixture sift a little sugar over the top and bake in a moderate oven.

Whistles.—Half a pound white sugar. Quarter of a pound of butter and six eggs, the whites and yolks (six) beaten separately. Stir the sugar and butter to a cream, then add the eggs previously beaten, and sifted flour to make a thick batter; flavor with rosewater, if you like. Drop the mixture by the large spoonful onto buttered paper. The mixture should be dropped several inches apart and spread out thin. Bake then until of a light brown, on a board which will not be over five minutes. Lay them on a moulding board that has white sugar sprinkled on it; roll them on a stick while warm. When cold fill them with any kind of jelly that is thick.

Cake Without Eggs.—Boil 1 cup raisins in cup water for 10 minutes, then cool. Add 1 cup brown sugar, 2 of flour, 1 teaspoonful soda in cup of water, ½ teaspoonful cloves, 1 teaspoon cinnamon, pinch salt, 2 tablespoons shortening; mix. Bake one hour in moderate oven. Makes good-sized loaf. Is delicious for dessert, steamed with sauce.

Meat Souffle.—Melt one-third cupful of butter in saucepan; add two tablespoonfuls flour, and when thoroughly blended add gradually, while stirring constantly, two cupfuls of milk; bring to boiling point, one teaspoonful salt, one-quarter teaspoonful pepper and one-half cupful soft, stale bread crumbs, cook minutes. Remove from two cupfuls of finely chopped cooked meat, yolks of three well beaten, and one tablespoonful finely chopped parsley; then fold in whites of three eggs beaten until stiff. Turn into a buttered pudding dish and bake 35 minutes in a slow oven.

Braised Turkey is as fine as a roasted one. Truss and stuff a turkey, the same as for roasting, using a force-meat made of minced chicken, mushrooms and sweetbreads, in addition to the bread; lard the breast with fine square shreds of fat salt pork; place the turkey in a stewpan, with sliced vegetables and sufficient broth to cover. Set it on top of the stove, and as soon as it begins to simmer put it into the oven and cook slowly for an hour and a half. Baste occasionally with the gravy. Garnish the turkey with stoned olives and serve with the gravy which should be slightly thickened.

Flank steak, poultry dressing, bacon fat, stock sauce or ketchup. Spread the steak out on a table as board and cut the fibers crosswise with a sharp knife, being careful, however, not to cut through the entire thickness of the meat. Prepare a dressing such as would be used for roast veal or chicken. Spread this over the meat, roll up and tie in shape with a string or tape. Brown lightly by cooking in a little hot fat—bacon fat would be good. Then thicken the fat in which the meat was cooked with a tablespoonful of flour and a cup and a half of water and a little stock sauce or ketchup and bring the meat to boiling point in this thickened gravy. Cook for ten minutes, so as to heat the entire mass through to the center; then place in the fireless cooker and cook from six to eight hours.

Household Hints.

Skimmed milk and cornbread and butter are a nourishing lunch.

Palms and ferns should be kept away from draughts and gas.

To enrich the soil on your flower beds, empty your tea and coffee grounds there.

A few minced dates added to fudge as it comes from the stove will make a novel and dainty confection.

Blueberry cake cut in squares when hot and served with a strongly flavored thin sauce makes a delicious pudding.

A good dressing for fruit salad is made of a cup of whipped cream with two teaspoonfuls of French dressing added to it.

When making an apple pie, sift a little flour over your apples before putting on the top crust and the juice will not cook out.

The oil left from sardines is a good substitute for butter in fishballs or any kind of minced fish?

To have blooming geraniums in winter, keep them in small pots all summer. When you take them into the house in the fall do not re-pot them.

When making apple pie the flavor is much improved and the apples will keep in good color if a few drops of lemon juice are squeezed over them just before the crust is put on.

Charcoal is a cleansing agent in the kitchen. A lump of charcoal put in any jar keeps the contents sweet and purified, for the charcoal absorbs unpleasant odors and impurities. A lump on each shelf of the icebox is also useful.

Cracks in Plaster.—A good filling is plaster of paris mixed with vinegar, which will not set for twenty or thirty minutes, while water will set very quickly, often before you can use it. The putty-like mass must be pushed into the cracks and can be smoothed off evenly with a table knife.

To clean irons rub them on brown paper over which powdered bath brick has been sprinkled, and if they become rusty, rubbing them with emery powder and a little paraffin will put them right. But, table salt sprinkled on several thicknesses of strong paper, over which you work the heated iron is just as good as anything.

To Freshen Gilt Frames.—Dust gilt frames carefully, then wash with one ounce of soda beaten up with the whites of three eggs. Where scratched, patch up with gold paint. To clean oil paintings use castile soap and water, very carefully applied. Gilt may also be brightened by adding to a pint or two of water sufficient flower of sulphur to give it a golden tinge. In this boil four or five onions or a quantity of garlic. Strain off the liquid, and wash the gilding with a soft brush. When dry it will look like new work.

High Price for Stamp.

The highest price lately paid for a postage stamp was $670, a sum given at a New York auction the other day for a five-cent Hawaiian missionary stamp of the issue of 1851. When the early missionaries went from New England to Hawaii they looked ahead to many things, but hardly to the sale of their postage stamps at prices higher than their salaries for a year.

Japanese Make Dyes.

The quick-witted Japanese do not intend to be caught by another dye famine. Under the patronage of the Government a four-million-dollar company has been organized to manufacture synthetic dyes, says the Cincinnati Times-Star. Japanese dispatches state that such has been the financial rehabilitation of that country that the stock for this dye company has been over-subscribed several hundred per cent.

Dry, All Right.

"You came from a dry town, didn't you?"

"Dry? Why, they won't even allow the carpenters to use spirit levels."

THE SUNDAY SCHOOL

INTERNATIONAL LESSON JANUARY 7.

Lesson I.—Jesus The Life and Light of Men—John 1. 1-18. Golden Text—John 1. 4.

Verse 1. The Word—The Greek Logos is beyond any one English word: it combines speech and the reason that prompts it. "The word of God" (personified in Rev. 19. 13) is generally the gospel. But while logos may mean "sermon," it can also mean "science"; compare "theology." The Evangelist takes up a great term of Greek philosophy, which in seeking for the ultimate element out of which all things were made at last found it in Mind. But he is recalling at last equally the Jewish personification of the creative Word of Gen. 1. The author of Prov. 8 pictures Wisdom as with God at creation; and for Christian thought "Christ the Power of God and the Wisdom of God" more than fulfilled these highest ideals of Jew and Gentile alike.

2. The apparent repetition is intended to open what is really a new paragraph.

3. Through him—This preposition usually marks the action of the Son, the Father being the original Source. Without him—It is the same word as in John 15. 5, "apart from me ye can do nothing." Read here, "Apart from him not even one thing came into being. That which hath come into being was life in him." Note how often life appears where we might expect silver the self-propagating quality of life is always in thought, never stopping with one object, but passing itself on. It is rather attractive to connect in him with the preceding verb, and understand that "all which has been born in him" has this great quality of life. The light—Life and light are the two great words of this Gospel, and the Epistle which accompanies it; they meet in Logos, which is the essence of God.

5. Overcome (margin)—The same phrase in John 12. 35, "lest darkness overtake you"; what possessed our translators to take the other sense of the verb here, and what the meaning may be, are mysteries. Darkness may "overcome" us, but never the Light, which is eternal.

6. These three verses prepare for verse 15, the report of the witness for the sake of which John was born. Note that in this case the Fore-runner was like his Lord, who in John 18. 37 declares that he was born and came into the world that he might "bear witness to the Truth." And He to whom John bore witness was himself the Truth.

8. The negative points to the strong and repeated disclaimers of John, who even long after his death was still believed to have been the Messiah (Acts 19. 3).

9. Coming into the world refers to the light (compare again John 12. 37). The universality of the Light is here expressed most strikingly. Every human being has some glimmer of the True Light, and that Light is the Word.

10. He was—The masculine pronoun in this verse comes in to tell us that the Light, into the Word, is no abstraction, but a Person. Moreover, he was in the world: the statement that he was coming into it does not mean that he then visited it for the first time—it is a new and fuller manifestation of "that which was from the beginning." Knew him not—There are two words for know, one for having knowledge (as in 2 Tim. 1. 12), the other (as here, and in Phil. 3. 10; John 17. 3) for getting it. The world could not be blamed for ignorance: its condemnation was that it would not recognize its Maker.

11. His own—Compare the parable of the wicked husbandmen. As a nation, the Jews rejected their Messiah, and the rule is almost invariable use of "the Jews" as a name for the Lord's enemies is the presentation of the fact as it stood sixty years after the crucifixion. But Isaiah's doctrine of the Remnant still held, and in every place Paul visited he sought first for those true Israelites who could recognize and preach their King.

12. As many as—"They called themselves, both Jews and Greeks" (1 Cor. 1. 24). The right, or privilege, to become children—For the natural sonship (Luke 3. 38) had been forfeited; a second birth must restore it, and on intellectual acceptance is the smaller part of this. His name—Or revelation of himself. A man was never a mere label, as with us: it was a part of the personality and expressed character. The name of the Lord Jesus Christ is a complete Creed in itself, implying everything vital in our religion.

13. Who were begotten—An interesting ancient reading is who was begotten, implying the miraculous birth. But it cannot be right, or it would never have disappeared. John is here anticipating 3. 3-6. Those whom the Lord was "not ashamed to call 'his brothers'" must be born, like him, of God. John's silence about the mystery of the Lord's earthly birth is accounted for by the next verse. The doctrine of the Eternal Sonship has eclipsed any question of the manner of the Incarnation.

14. Flesh—Paul uses this term of humanity as it is; John goes back to Creation, when it was "very good," like all God's work. Hence when Paul declares the Incarnation, he says that God sent "his own Son in the likeness of sinful flesh" (Rom. 8. 3). It is John who uses the strongest phrase to show that he whom he is always depicting as the Very God, was Very Man like ourselves. Tabernacled (margin)—The symbolism of the tabernacle is used by New Testament writers to show that the Real Presence goes about with men, like the tent in the wilderness of the wanderings, never limited to "holy" places or things. We beheld—So 1 John 1. 1. That the writer claims to be an eyewitness is the central datum, without which indeed the psychology of the Gospel is unintelligible. An only begotten from a father (margin)—When there were two or more sons, each inherited a portion: an only son inherited all. The point here then is that the Incarnate Word is no partial revelation; all of God is there, and infinitely more than we can ever see. Full—Referring to glory. The brackets are needless, as our new knowledge of Greek vernacular proves. Grace—Unmerited lovingkindness.

TWO WAYS OF CLEARING LAND.

Relative Cost of Power Machinery and Explosives.

When time is no object, the best way to clear land from timber growth is to let nature and live stock assist. When the growth is removed and the brush burned off clean, which, with most growths, may be made a profitable operation by the sale of the timber and firewood, clover and grass seed may be sown, and, while cattle and sheep are pasturing and eating down the sprouts, the stumps will slowly but surely decay, and their removal becomes an easy operation. This process will require from six to ten years before clearing can be completed.

At the Experimental Station, Fredericton, N.B., where it was desired to bring the land into cultivation at the earliest possible moment, two plans of stump removal have been tried, and herewith are given figures of the relative cost on land from which an average tree growth had been removed.

The two methods employed were: stump pulling by power, and removal by dynamite.

A stump puller of the drum and long lever type was employed, giving a lifting power of 25 tons with an ordinary team. With one hundred and twenty stumps, 10 inches and over, to the acre, and seventy-two smaller stumps, it required an average of twenty minutes with a team and driver and two men to remove each of the large stumps and 5 minutes to remove each of the smaller ones. The 120 stumps required 40 hours, and the smaller ones 6 hours.

The relative cost, therefore, stood as follows: Where power machinery was used, cost per acre was:

46 hours work team and driver at 32c	$ 14 72
92 hours work, helpers at 18c	16 56
230 hours work, handler and pit-line at 15c	34 50
46 hours work, burning at 15c	6 90
	$101 68

Where explosives were used the cost per acre was:

120 lbs stumping powder at $14.90	$ 22 35
150 lbs stumping powder at $14.90	27 93
500 feet fuse at 4½c	3 60
300 caps at $1	3 00
40 hours labor of dynamite operator at 22c	8 80
48 hours, team and driver at 32c	15 36
46 hours, helpers at 15c	13 80
92 hours, labor pulling at 15c	13 80
46 hours labor burning at 15c	7 35
	$112 73

On other areas, where there were heavy boulders and small stones, the cost of clearing ran up to $186 per acre, while, where the land was free from stone, and stumps were small and comparatively few, the land was made ready for the plough at a cost of less than $40 per acre.

THREE MILLION TIES.

For Railways in Rear of Fighting Line, C. N. R. Share.

Vice-President D. B. Hanna, of the Canadian Northern Railway, in discussing the call for the laying of a railway line back of the fighting line in France and Flanders will, he said, involve the cutting of about three million ties.

A large portion of these could be supplied from the territory surveyed by the Canadian Northern Railway north of Lake Superior. It is expected that the operations now under way on behalf of the C.N.R. will result in the production of a substantial local tonnage through that stretch of country between Sudbury and Port Arthur.

The prospect of building up of towns and traffic in what was untamed wilderness five years ago is now considered very promising. Apropos of the present scarcity of paper, it is stated that in the country through which this new line runs there is sufficient of the raw material to satisfy even the hungry press of a metropolitan paper for more than two hundred years.

With the Provincial Government, said Mr. Hanna, the Canadian Northern will undertake to locate settlers in these fertile agricultural lands abounding in mineral and timber wealth. The railway alone will purchase all the railway ties produced each year.

Marriage may be a lottery, but a whole lot of people seem to be satisfied with less than capital prizes.

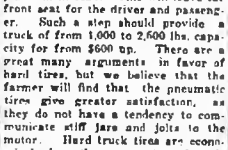
An elephant has more muscles in its trunk than any other creature possesses in its entire body.

The trouble with temptation is that it always makes work seem more disagreeable than it is and pleasure more alluring.

The AUTOMOBILE

Trucks and Trailers.

The old Roman roads, which are constantly referred to in every effort made to effect a general improvement in the highways of this and other countries, are not brought into comparison because they were simply good roads, but rather because they gave an easy means of transportation to build up tremendous savings in the agricultural life of a great people. The Romans were the first to figure that if the city and country could be brought into the closest and easiest communication, that a general prosperity would inevitably accrue. Of course, they always had the idea of war in the back-ground, and knew that when armies could be transported readily, success was always closest at hand. The paramount though, nevertheless, was easy access to outlying districts. This being true, there is now no doubt that a further step is being taken by progressive farmers in the purchase and maintenance of trucks and trailers, in order that the cost of transportation may be brought down to a minimum. A good road is always a well-travelled one, no matter what class of vehicular traffic is popular, but if in Canada we can combine good roads with minimum transportation charges, we have gone a long way towards a money-making era such as never yet has been enjoyed.



Motor Trucks.

Motor trucks are being used, at the present time, by many farmers engaged in the fruit, dairy, creamery, cheese and allied industries. Sometimes these trucks are purchased new, direct from the manufacturers or their agents, at prices ranging all the way from $750 to $5,000, but in most cases the machines are either purchased second hand, after having been replaced by new ones in city work, or a passenger automobile is torn down and a truck body placed upon the chassis. Both systems find many advocates, and both bring varying degrees of satisfaction. If you have never used a truck, it might be well to go slowly at first, but the system that we suggest would be the purchase of an old passenger car with an obsolete body but an engine of standard make and in satisfactory running condition. You can either remove the body intact and place a new truck body on the frame or pursue the simpler method of taking off the seat and building a platform instead. This will leave the front seat for the driver and passenger. Such a step should provide a truck of from 1,000 to 2,000 lbs. capacity for from $600 up. There are a great many arguments in favor of hard tires, but we believe that the farmer will find that the pneumatic tires give greater satisfaction, as they do not have a tendency to communicate stiff jars and jolts to the motor. Hard truck tires are economical where the pavements and roads are very smooth and even, but they do not attain maximum results in country running. If you employ a man to operate your truck, it might be well to have a governor placed on the engine in order that his speed may never be greater than twenty miles an hour. This is going to prevent accidents that would inevitably occur to the truck if it was operated at high speed when carrying a maximum load.

Trailers Useful Invention.

Trailers, as you know, are practically the outcome of the past two years. They are built in two-wheel and four-wheel types. Some of the two-wheel models carry the load directly over the axle, but in the semi-trailer, the load is carried forward and rest partly upon the connecting rod between the trailer and car. The good quality of the trailer, and they are made from ¼ ton to 5-ton capacity, is that they allow the pleasure car, by drawing them, to carry a full complement of passengers and be free from bruises and scratches incident to the actual handling of freight. It can be stated, in a general way, that if a trailer is attached to a truck, it will draw about the same load as it carries itself between the capacity of one ton to five tons, but many trucks of less than one ton capacity, will draw a trailer with a heavier load. Passenger cars are a different proposition, but it will be very easy for you to determine just what sized trailer a passenger car can handle by experimenting a little on the road. It is folly, of course, to draw a trailer with a load that is too heavy for the car, as damage, through strain, may results to the mechanism of the automobile. There are a few points regarding the trailer proposition that are worthy of your attention. On muddy, slippery and sandy roads an automobile must, of necessity, reduce its speed greatly when drawing a trailer. The reduction on good roads can be safely estimated at about 15 per cent. You must remember, however, that a passenger car hauling a trailer, and so lessening its speed, will nevertheless deliver twice the quantity of goods that might otherwise be expected without the trailer. Trailers are attached to passenger cars through a drawbar which in turn is attached to buffer springs that take up jolts and vibration. There is one other point that we must emphasize, and that is the ease with which trailers can be loaded. If you have a great deal of hauling to do, and cannot see your way clear to invest in a truck, it may pay you very well to purchase two trailers, one of which can be in the process of loading while your passenger automobile is delivering the other to any destination. Iron tires are used on trailers where the goods to be transported are in no sense fragile, but if your product is subject to breakage, in going over bumps and rutty places, hard or pneumatic rubber tires must be used in accordance with your requirements.—Auto in Farmer's Advocate.

POULTRY

"Fertile eggs cost the farmer $15,000,000 a year." This statement is made in Farmers' Bulletin 528, Hints to Poultry Raisers, published by The United States Department of Agriculture. The bulletin states further: "Farmers lose $46,000,000 annually from bad methods of producing and handling eggs. One-third of this loss is preventable, because it is due to the partial hatching of fertile eggs which have been allowed to become warm enough to begin to incubate.

The prices of eggs are high and going higher. Therefore, be sure that the fowls get plenty of a variety of food so that they will have the material of which to make eggs.

Plenty of good yellow corn, fed twice or three times a day, all they will eat each time, will make the geese nice and fat for the market.

Make sure that the glass in the henhouse windows is clean so that the sun's rays can fill the building, dry it out, warm it and make it more healthful by destroying disease germs.

If it has not been done, be sure that the hen-house roof is water-tight and the sides windproof so that the house can be kept dry and the fowls protected from drafts, especially when on the roosts at night.

There is no economy in feeding hens less than they need, or in feeding on only one or two grains or kinds of feed. A variety and plenty of it, is necessary to keep the fowls in good condition and provide the material from which to make eggs.

The most important thing in rearing young ducks is the drinking water. It must be kept in vessels in which they can put only their heads. Please note that it is imperative that they should submerge the whole head in water; otherwise the two holes at the base of the bill, through which they breathe, will get filled up with mash food or mud and the poor little creatures will be half suffocated, grow sick and die.

When killing geese for market, the feathers can be removed easily if after killing, the body of the goose is dipped three times in water which is almost at the boiling point, dipping it slowly in and out each time, and then wrapping it in canvas or closely woven cloth to keep in the steam. In a minute or two this will loosen the feathers so that they will come out easily.

MOBILIZING MAN POWER.

What Britain Will Do To Utilize All Service Available.

The London Daily Chronicle gives prominence to an article which purports to outline the Government's scheme for utilizing all the man power resources of the country with a view to the more vigorous prosecution of the war. Men between the ages of seventeen and fifty-six are wanted. They must place themselves at the disposal of the State for the duration of the war and consent to be transferred to occupations or localities where their services are most required in the interest of the country.

The full trade union rate of wages for skilled or unskilled work, as the case may be, will be paid to war workers and in addition to this pay a subsistence allowance at the rate of 2s. 6d. (sixty-two cents) a day for seven days of the week will be paid to men who, owing to the system of transfer, will be under the necessity of maintaining two homes.

There is to be a register in eve y locality, of war, industrial or productive requirements, which, of course, will vary from time to time. A schedule of indispensable and non-essential trades is to be drawn up. Non-essential industries will be shut down without compunction.

To stimulate the mobility of labor is nearly as important as to add to the quantity of labor. It is estimated that at any given time 40 per cent. of the men engaged on war work in Britain are either idle or not occupied to their full capacity owing to the lack of mobility. In order to reduce the housing difficulty to a minimum power will be taken to billet war workers in private houses.

All the Kings of Prussia have been called Frederick or William.

EDEN GROVE

Compliments of the season and a prosperous 1917 to everybody.

Mr Allen, Miss Allen and Miss Campbell are holiday visitors at the home of Mr and Mrs Wm Alexander, King St east.

How about those good resolutions? Have you broken any of them already ?!!

Mr Fred Fair, of Palmerston, holidayed at his home in town.

Do you notice the days growing longer and the young men's evenings getting shorter with the girl since Christmas. Wonder what some of them got.

Mr and Mrs Desmond entertained the following guests at the Simcoe House during the holidays: Pte Dan Desmond of London, Wm Desmond of New York, Miss Desmond (nurse) of Toronto, Misses Ethel and Venetia Doyle of Toronto.

Where is our snowshoeing club? Time they were making their debut or shadow in the snow.

Miss Smith of Hanover, and Miss Fooking of Mildmay, have returned home after enjoying a delightful holiday at the home of Mr and Mrs Sellar, King St.

Our hook and ladder company nearly had a job when fire broke out on the cupola of the brigade's premises last Thursday at Jewsberg.

Mr and Mrs McKeeman and sons were the guests of Mr and Mrs Rousseau at the Mansion House, Clifford, on Christmas Day. Tony is still eating three square meals a day.

Monday was a Waitsome day for a lot of voters.

One of our good resolutions—will not eat any more turkey or drink anything stronger than sloe gin until next Christmas.

Mr Thos Gregg, from the west, is renewing acquaintances in this vicinity at present.

Sunny Jim was shining in London during the holidays.

Some girls turned over a lot of new leaves and chalked the fellow's name down in the back of the book who didn't come around and take her for a cutter ride New Year's.

Mr and Mrs J Seiler and family were gu a nt at the Cormack farm near Paisley on Christmas. There is no place like out on the farm for a good time.

Mrs Teasdale and son of Guelph, are New Year visitors at the home of Mr and Mrs H Samuel.

Mr and Mrs Daniel Campbell, of Brantford, were Christmas visitors at the home of Mr and Mrs Pearson, Quality Hill.

Collies! I ate so much goose I can hardly write.

Mr and Mrs Gordon Perdue, of North Bay, enjoyed the holidays at the homes of Mr and Mrs R Perdue and Mr Emery.

The many friends of Mrs John Killen will be sorry to hear that she is suffering from the effects of a stroke. Nurse Billinger, of Walkerton, is in attendance. We wish her a speedy recovery.

Mr and Mrs Gordon Young and Miss Verna Loughlen, of Woodstock, and Miss Myrtle Elder, of Cargill, were New Year's visitors at the home of Mr and Mrs Pearson.

No, Malinda, that was the preacher, I'm too young to vote.

Mr and Mrs English and son Melvin, from the northwest, are visiting at Mrs J C Taylor's.

Wonder when the fellows will be around again shaking hands.

Mr and Mrs Todd and family spent the Christmas holidays with friends in Wingham.

Nothing blue at the Blue home. Mr and Mrs A Blue, King St, were at home Christmas to the following guests: Mr and Mrs Peter Catto and family of Chesley, Mr and Mrs Stanley Gallinger and family of Paisley, Mrs Catto from the 12th, Mr and Mrs David Cargill and family, Elora road. Regular family re-union.

Glad to see our representative, D W Gregg, jr, elected by acclamation. Still we hope Uncle Dan will not forget to come around and see us sometimes just the same.

Mr and Mrs Mack Scott and family spent Christmas with friends near Paisley.

What did you get? Sunny got a bucksaw, axe, snow shovel, eleven boxes shoelaces, six ties, and one young lady sent him a pair of braces and told him to brace up.

Mr and Mrs Harry Fair and Perry Fair of Palmerston, are spending New Year's in town.

The festival held in the Methodist church was a decided success. Each number on the program was well rendered. The singing by Miss Smith, of Hanover, was exceptionally fine, and was one of the treats of the evening. Grandpa Gregg acted his part as Santa in good style. The members of the different committees as well as those taking part are to be congratulated.

Mr Herb Pearce is enjoying a few holidays with Woodstock friends.

Mr Alex McLean and son John, of Paisley, are visiting friends in town.

Seeing nobody left a list of their visitors we just picked out the best looking ones.

Mrs Tennant's many friends will be pleased to hear that she is recovering from her recent serious illness. We hope she will soon be around again, for the Lord knows we cannot spare any women in this burg.

Miss Gretta Gregg, of Paisley, was a holiday visitor in town. Miss Ruby Gregg accompanied her home.

We didn't express ourselves last week after Christmas dinner. We were too full for utterance.

Rev Alnaick and wife spent Sunday at the home of Mr and Mrs J Seiler.

Misses Lillie Alexander and Frances Seiler rendered a beautiful duet in their usual charming style at the Sunday morning service.

Miss Blanche Powell is spending vacation at her home in Tara.

We have no objection to their cutting "the obey" out of the marriage ceremony — but Willoughby is elected.

Miss Tena Stead is spending the holidays at her home near Walkerton.

Mrs Saunders, of Cargill, called on friends in the Grove last week.

TENTH CON BRUCE

Happy New Year to all.

Messrs McDonald and Irwin bought up quite a few horses in this vicinity last week.

Mr R Atkinson spent the week end with friends in Wingham.

Miss Lillian Brown is spending holidays with friends in Walkerville, Detroit and Windsor.

Mr and Mrs A Atkinson, Mr and Mrs Burt Atkinson, of Wingham, were here over the holidays.

Mr Robt Fullerton, jr, was a visitor at Mr Neil McDonald's last week.

Christmas holidays are over, and the kiddies will have to return to their school duties for another term. We think the Department of Education made a gross mistake in extending the summer holidays to two months for rural schools in a county situated such as Bruce. As far as we can figure out pupils who have to walk two or three miles to school should have the school open a longer period during the summer months. There would be much less hardship for the children to attend school during the last half of August than to wade through snow the distance they have to travel in winter. A good deal better plan would be to have the extra holidays in the winter when the roads are at times almost impassible and the attendance dwindles down to almost nothing.

Mr and Mrs Hugh McDonald are down from the west spending their honeymoon with friends here. The former is a son of Mr Chas McDonald. Your scribe wishes them long life and prosperity. They intend returning to the west in March.

UNDERWOOD

Mr Jas Bruce, of the S S "Huronic," is home again after the season's sailing. Holiday visitors—Clayton Shier, Kincardine, at Hugh McLean's. Mr C D Murray, of Timmins, New Ontario, at the home of his mother. Mr Albert Coleman home from Clifford. Mr and Mrs Burt Berry, from Chatham. Miss Bell Drummond, from Kincardine. Miss Florence McLean, home from Toronto. Mr Sam Richardson, of Palmerston; Mr R Somers, from Blythe; Miss Annie Cairns of Saugeen, guest of the Misses McNaughton.

GLAMIS

The Sunday school entertainment held in the Baptist church on Friday last was a success. A good programme was rendered, and a treat for the children was given at the close.

We are sorry to report the serious illness of Mr Greer. Mrs Greer is also laid aside. On Saturday evening she fell and sustained a fracture of the shoulder blade.

Mr Albert Swalwell, who has been in Guelph hospital for several weeks, returned to his home on Friday.

Mrs W J McKerman and Phyllis Moffat went to Beamsville for New Year's.

Mr Edgar Pickard and Mrs I K McLennan went Monday to Clifford, to have their New Year's dinner at Dr Black's.

Miss Winnie McLennan, of Detroit, is at her home on the Boundary for a few days.

Miss Sarah McIntyre left on Saturday for Toronto.

Mr and Mrs Allen McKinnon, of North Bruce, took in entertainment on Friday last.

Miss Ada Cunningham is spending some time at the home of her uncle, Mr Jos Cunningham.

Mr Duncan Guest, of Armow, is spending vacation with hisuncle, Mr Jas Guest.

Mr J C McLean, of Alberta, arrived on Saturday and will visit at his old home on the Boundary.

Miss Lottie McNally and her brother Jack, of Sarnia, are visiting at Mr Graham's, and will visit other relatives.

Mr and Mrs Fisher, of Alberta, are visiting friends about Glamis and vicinity. Mrs Fisher is a daughter of Mrs McArthur of the Boundary, and had not seen her mother for 14 years.

Miss Margaret Campbell, of Harriston, is spending New Year's at her home here.

Mr Passmore, from the West, is visiting at Mr Ab Smith's on the 2nd.

GRESHAM

Cyclist J F Brown, of Toronto, spent Christmas at his home here. We understand it was his last leave before going overseas. His many Gresham friends join in wishing him a safe return to old Bruce Tp.

The Centre Bruce Christmas tree entertainment came off very successful on Dec 28th.

Mrs Geo Lockieg and two sons returned to Rinn lately after a visit at the home of her father, Mr Geo Brown.

Mr Peter McDougall was home for Christmas.

A Christmas gathering of all the grandchildren of Mr and Mrs McDougall—31 in all—was held at the home of Mr Jas A Pace.

Mr Henry Dent spent Christmas at his old home here.

Mr Robert Parker spent Christmas in Bruce.

ELORA ROAD NORTH

Mr John Ree was the genial host at a dance at his home on Christmas night. A hundred of friends from Vesta, Pinkstane, Queen Hill and other points enjoyed his hospitality till the small hours.

Mr Neil Pollock is leaving for his home in Victoria, B C, this week after spending a month with his friends in this vicinity.

Mr and Mrs John Walker spent Christmas at Mr John Coulter's, Port Elgin.

Mr John Thompson has been threshing clover for farmers along this road lately.

We are sorry to hear of the death of Mrs Fortune of Vesta, mother of Mrs M McMillan.

We understand that Mr Thos Irwin had a fine yield of red clover seed, about fifty bushels in all.

Miss Ruth McDougall spent last week at Ellengowan.

PINKERTON

The Foresters held their annual oyster supper in the hall here on Tuesday night.

Miss Edith Hilsbell of Walkerton spent last week with her friend Miss Aileen Pinkerton.

Mrs N Garland left on Friday to visit friends in Markets, Mich.

Two loads of young people from here drove to Paisley on Saturday night to enjoy an evening's skating.

Miss Aileen Pinkerton entertained a number of friends on Monday evening.

TURNERS

Rev. Mr Thynne of Palmerston preached in St Andrews church Sunday.

We are glad to say that Geo Atkinson is doing nicely after his serious accident.

Miss Ethel Christie and Mrs A Rowand are holidaying with Mrs J Hill of Procida.

Mr Edgar Hillis was holidaying with friends at Hanover.

Mr Dan Meir of Yellow Grass, Sask, is visiting his old home on the 2nd of Saugeen.

Mrs C W Hopper, of Bruce Mines, was visiting her sister, Mrs R D Pollock.

Mr Karl Hyde of the 4th of Bruce spent a few days at Archie Pollock's.

Card of Thanks

The undersigned desires to thank the Electors of Elderslie and all those who were instrumental in re-electing him to the Reeveship for another term. Please accept my assurance that I am truly gratified with this endorsement of my past efforts, also that I shall continue to advance your best interests in all municipal matters. Yours respectfully,

JAS H CASS.

Steele's tor

Horse Collars, Sweat Pads, Rubber Lap Rugs, Whips, Auto Plush Rugs, Star Harness Soap, Bickmore's Gall Cure, Axle Grease

Our Harness includes quality, durability, an elegance and high class workmanship found in no other makes of Harness.

Baggage Trunks, Suit Cases, Club Bags, Grips. Good assortment and close prices.

Harness parts and Repairing our Specialty

J. H. STEELE

Central Business College Stratford, Ont.

WINTER TERM OPENS JAN. 2

We have Commercial, Shorthand and Telegraphy departments and the courses are thorough, up-to-date and practical. The instructors are experienced and we place graduates in positions. We are receiving scores of applications for trained help we can't supply. Write at once for particulars.

D. A. McLACHLAN, Principal

Logs Wanted

HIGHEST cash prices paid for logs delivered at Robt Sinclair's, lot 8, con 1, Elderslie. Custom sawing done at lowest rates. Good work guaranteed. GEO ANDERSON, R R No 1, Chesley. Tel No 914.

Wood Wanted

TENDERS will be received by the undersigned up to Jan 8th, 1917, for 25 cords of green hardy maple wood 30 or 32 inches long 12 in spreferred, cut from live trees, fresh falled. Delivery to be made before spring of 1917. A H ALLEN, Paisley.

Farm for Sale

THE EXECUTORS of the will of Patrick A. Oliphant, deceased, offer for sale the west half of lots 19 and 20, con D, Eldersile—160 acres. This is a desirable grain farm situate about three miles from Paisley. For particulars apply to PATRICK CHAHAN, Executor, Paisley, or D FORRESTER, Barrister Paisley.

AUCTION SALE
— OF VALUABLE —
Farm Stock and Implements

The undersigned has received instructions from Mr Warren McGill, lot 15, con 6, Elderslie Tp, to sell by public auction on the premises

Wednesday, Jan. 10

At 1 o'clock p m sharp, the following:

R. C. PEARCE, Auct.

WILLOW CREEK

Mr and Mrs Geo Baker spent Christmas at Lucknow.

Mr and Mrs Helm, of Kincardine, were visitors at Mr Geo Baker's, Willow Creek over New Year's.

The U Beberch S S entertainment was held on Tuesday night.

Mrs Jos Hyde has been in very poor health lately but is improving again.

(Intended for last week)

Miss Mary Ramsey, of Kincardine, is visiting friends in this neighborhood.

Misses Susan Schwalm, Rosetta and Lena Gierz were in Toronto for Christmas.

Mrs Fred Gottschalk, of the 2nd con, underwent a surgical operation for an internal trouble.

The Evangelical S S entertainment was a grand success. Every person went home happy.

Miss Margaret Rivers and a friend from Carrick spent the holidays at Mr Chas Helwig's.

WILLISCROFT

Happy New Year to all.

Mr and Mrs Rushton spent New Year's with friends in Owen Sound.

Miss Janet Sparrow of Owen Sound, spent holidays at her home here.

Mr and Mrs John Peacock, of Killarney, Man., are down for a month visiting the former's mother.

Mrs Jos Poole visited friends near London for a few days last week.

Mrs H E Crawford of Swan Lake, Man, arrived home on New Year's day to visit her mother, Mrs Wm Robb.

Mr Lawson Poole, of Melfort, Sask, is visiting friends around here.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." Elbert Hubbard.

We take this opportunity to thank our many friends and customers for their business during the past year and to wish them

A Happy and Prosperous New Year

H. PFAFF & SON

Everybody Dances.

DON'T think of the New Edison Diamond Amberola just as a reproducer of topical songs or band selections. Its great value as a home entertainer is its *versatility:*

Take the present popularity of dancing. With a New Edison in your home, you may have a delightful dance as often as you like, with music that a millionaire could not improve.

You can have all the latest dances played by the finest bands and orchestras, with the tempo set by the masters of dancing so that you get the exact rhythm.

Or—if you prefer the regular waltzes and two-steps, you may choose from many when you have the New Edison.

Or—you may have a night at the opera, vaudeville or musical comedy evening—and Sundays enjoy "the hymns that live" as sung by soul inspiring quartettes.

There's a winter's entertainment and a winter's delight in

The People's Popular Store

GIGANTIC SALE

of $25,000 worth of choice, well bought General Merchandise,

commencing

...nesday, Jan. 17th

at 9 a.m.

For 10 Days Only

Owing to the conditions existing in the world for the last two and a half years, we have been contracting for goods long in advance of requirements and now find our stock too large in many departments and have decided to give the people of this county extra inducements in the way of special cut prices to lay in a stock of goons. Even if not needed for a year or so, it will be good buying. If the war should end soon, it will be many months before conditions become normal.

See large bills for particulars of the great meney-saving sale. All goods sold at cut prices must be spot cash or farm produce at cash prices. Bring your boys and girls girls out and get fitted in Coats, Suits, Shoes, etc. Heavy goods not satisfactory must be exchanged during Sale, as we cannot sell goods that are in the country.

F. CARTER & SON

Goods Delivered Both 'Phones

Tom Marks coming here

Tom Marks with his splendid Co. and Kiltie Band will appear in the Town hall, Paisley, Thursday, Jan. 11th, presenting the highclass comedy "Are you a Mason?" with 8 select vaudeville acts. Prices 25c, 35 and 50c. Seats on sale at McArthur's Bookstore.

Hydro Electric

The Hydro Electric power by-law submitted to Walkerton ratepayers on Jan 1st was carried. The big system is gradually extending it's lines north-westward and it will soon be in order for Paisley to invite the Commission to supply the needs of our community. Eighty places in Ontario voted on power and radial by-laws and all voted in favour, except four. Sentiment is growing stronger every day for public ownership of public utilities.

About Coal

Mr D A Lyon, coal dealer, desires to inform the public that in the present state of the coal market he found it utterly impossible to procure quantities for delivery at any lower figures than he is quoting to customers. The dealers of Winnipeg ordered 90,000 tons months ahead, but were only furnished with one third that amount, and the whole west will suffer in consequence. Ontario dealers are meeting with the same difficulties and some towns are without any. Mr Lyon is doing his utmost to meet the requirements of Paisley and vicinity, and it seems very fortunate that he can distribute four cars to his customers this month. Later in the season it is expected the supply will be larger and the prices more normal.

—To relieve freight congestion on the G T R and C P R, both these companies propose to curtail the passenger service so that engines and crews can be released for the handling of freight trains. Official announcement of the new passenger schedule has not yet been made. It has been rumored that we may have only one train each way daily on this line, but it is more likely that the reduction of service will be made elsewhere at this time.

Red Cross Paper Sold

The old paper collected for Red Cross was disposed of last week. The quantity amounted to almost five tons, and was sold for nearly $60. A quantity of old rags brought over $13. The ladies desire to thank all who contributed, and would ask that papers, rags, etc, be saved up for another collection to be made about June next.

Greenock Boy Enlists in Royal Navy

Mr Nathaniel Fitzsimmons, of 12th con. Greenock, enlisted in the Royal Navy at Toronto on New Year's day. He is present taking his preliminary training at Halifax before going overseas to England. Nat is a stout, sturdy, young man, six feet tall, and only eighteen. No doubt he will be missed by all in this vicinity where he was known, but we hope he may safely return along with the rest who have gone to serve their king and country. —Com.

Death of Thos. Pinch

On Wednesday last a message was received here by the secretary of Aldworth Lodge A F & A M intimating the death of a member of the lodge and a former well known business man of this town, Mr Thos Pinch, which occurred at Vancouver, B C, on Jan 2nd. The deceased was in the hardware and tinsmith business here for many years, and after selling out to W. H. Davison in 1907 went to Victoria, B C. He is survived by Mrs Pinch and their daughter Miss Clara. The news of Mr Pinch's death will be received with regret by many old friends in Paisley and vicinity.

BORN

CHRISTIE—In Bruce Tp. on Jan 2nd, to Mr and Mrs Richard Christie, a son.

DIED

VANCE—At Paisley, on Jan 8th, Mary Jane Osborne, beloved wife of Hindle Vance, aged 66 years and 6 months.

PINCH—At Vancouver, B C. on Jan. 2nd, Thomas Pinch, of Victoria, formerly of Paisley, aged 75 years.

MARKING GRAVES OF DEAD HEROES

SYSTEM SOLVES PROBLEM AND RELIEVES BEREAVED.

Last Resting Places of British Soldiers Who Have Fallen on the Battlefields.

In keeping with all other phases of the war, order has come at last in the care of the dead. Where all was topsy-turvy two years ago in the first pell-mell rush to battle, and where there was little time to bury men even where they fell, the British now have evolved an organization and a system of dealing with this ever-growing problem which will at least relieve the bereaved at home of the added torment and anxiety of the unknown grave.

At the beginning of the war men were buried near the trenches only to have their graves blown away by exploding shells the very next day. But many remained, and some have been identified as the allies have fought their way slowly back over part of the ground once occupied by the Germans.

Many Low Crosses.

Where there was hard fighting in France and Belgium, the eye of the traveller along the roads to-day is struck by many low crosses sticking out of the ground in the fields, in cottage gardens, in corners of farmyards and orchards, even on the roadside strips of grass. Where the ground has changed hands a good deal in the course of the war one can see, within a few hundred yards of each other, the gabled and caved cross of the Germans, the "Hier ruht in Gott" and a name painted white on a dark background; the beaded wire wreath of the French with its Requiescat or "Mort pour la France," and the plain lined cross of the English, white or light brown, or just unpainted wood, "In loving memory," of one or more officers and men.

Buried in "No Man's Land."

The very position of some of these isolated memorials is eloquent. Near Fricourt, on what used to be "No Man's Land," until the English won it the past summer, a number of English crosses stand to the memory of unknown French soldiers. This was part of the line turned over to the English by the French. "We leave you our trenches and our dead," they said. When the English offensive began last July and the first line German trenches were carried by storm, it was one of the first cares of the British Tommies to bury the bodies of their French comrades, some having lain in the fireswept zone since late in the winter.

To some officers the idea of being buried where they fell, and have there erected even the modest little memorial of a roughly hewn cross, is an honor greater than the shelter of Westminster Abbey. A few such graves, and some part of the trenches near them, probably will be preserved forever by village communes or private owners of land.

But as the war has lingered, and there still is much stubborn fighting ahead—some say for years—the care of the dead has become a most important branch of war work—important alike in sentiment and sanitation. The British have organized a Commission of Graves Registration and Inquiries, and under its direction registration units and sections have been sent to the front, and back of the front. Much of the work is done by non-combatants, but many of these tasks must be carried out under fire and some have been killed and others wounded.

Graves Identified.

When an officer or man is killed at the front, or dies of wounds, his burial is now at once reported to the registration units. If killed in action he may still be buried in the old way somewhere near the trench. If so, the chaplain or officer who buries him, reports the position of the grave, which, as soon as possible, is marked with a durable cross and an identification plate stamped in aluminum. But this mode is becoming much less common. The army has been quick to realize the desirability of burying its dead in the nearest of the 300 or more recognized cemeteries behind the line. The bodies are carried back by road or light railway to one of the little wooden, iron or canvas mortuaries which the registration units have set up in the cemeteries. There is nothing perfunctory about the funerals. Everything is done as tenderly and reverently as if the dead were in an English churchyard.

Some of the cemeteries are great extensions of little village graveyards. Some were begun by special corps or divisions, which wished to bury their dead all together. In one is found separate plots, each with its special entrance, for Gurkhas, Sikhs and Punjabs. Under the great trees of another, where many of those who fell at Festubert lie, some Indian soldiers have followed the custom of their country and built brick tombs of extraordinary massiveness.

Died at Vimy Ridge.

At Villers aux Bois the French buried 2,600 of those who were killed in winning the Vimy Ridge. On each grave, at the foot of its wooden cross, there is still stuck in the earth, neck downward, the bottle in which the first hasty record of the interment was placed.

A few days ago a woman in deep mourning visited one of the French cemeteries with a handful of white flowers. She was arranging these on one of the French graves when one of the usual little bareheaded processions with an English chaplain in front, passed by. On the stretcher was a body sewn up in a brown army blanket, a big Union Jack lying over it. The woman rose and shyly, with some of the flowers still in her hand, fell in at the rear of the procession. As the chaplain was reading "dust to dust," and "ashes to ashes," the little French woman was kneeling on the ground. The service over, and the rest turning away, she came close to the grave, dropped the white flowers in, and returned to the other graves empty handed.

THE RIVER OF THE BRIDGES.

Some of the Miracles Performed to Save Verdun.

The United Press correspondent at the headquarters of the French armies uncovers another interesting view of the death struggle before Verdun in the following:

As a result of the Crown Prince's protracted and costly assault on Verdun, the Meuse in the immediate vicinity could to-day very consistently change its name into that of "The River of the Bridges." The construction of these bridges is another of the veritable miracles of genius and organization which the French army performed to save Verdun. Several of the French rivers, and notably the Meuse and the Somme, consist of an endless chain of marshes, connected by a number of small streams extending over the entire valley for a width of never less than a mile and from this to a mile and a half and two miles. Each one of the Verdun bridges, therefore, instead of being a flimsy structure of a few hundred feet in length, is obliged to span the entire valley of the Meuse.

Half of the miracle of these bridges is found in the almost incredible circumstances and conditions in which their construction took place. The object aimed at by the Crown Prince in attacking on both sides of the Meuse was to cut the French army in two by a wide marshy river that was utterly impassable except over the two or three bridges then in existence. This was one of the defects in the defence of Verdun which the French at once set themselves to remedy. The first bridge was built in reasonable tranquility, with the result that the army of French engineers employed on it completed their task in just 15 days. The sudden appearance of this structure, however, revealed to the Germans what the French were doing, and from that moment every foot of the Meuse, north and south of Verdun was kept under a terrific bombardment. Coupled with this unending hail of shells came also the frequent inundations to which the Meuse is subject, especially in the spring. Day after day spans of the bridge would be washed out before they could be anchored firmly enough to ensure their permanency; bursting shells likewise carried away span after span, sometimes just at the moment of completion, sometimes while the work was still progressing, and sometimes long after the entire bridge had been completed and was in use. Yet never for an instant did the French engineers relinquish their work. The bridges promise to remain for a long time as a lasting tribute and monument to the genius and perseverance of the French army engineers.

CAPTURE DYE TRADE.

British Dye Makers Reap Harvest From War.

Many a struggling company has been set on its legs by the war, but there is perhaps no more remarkable instance than that of Levinstein, Limited, the dye and color manufacturers of Blackley, Manchester, says the London Chronicle. This company was formed in 1899, with a capital of £90,000.

Not by any stretch of imagination could the company's pre-war record be called successful. The disappearance of German competition, however, brought about a great change, and for the year ended June 30, 1915, the company made a net profit, after meeting all charges, including £21,200 for depreciation and wiping out the goodwill and patent items in the balance sheet, of £80,000. Fourteen and a half years' arrears of preference dividend were discharged, and 10 per cent. was paid on the ordinary share capital.

There has been delay over the issue of the accounts for 1915-1916 owing to difficulties with the authorities over the amount of excess profits tax payable by the company. But the profits are believed to have been prodigious. Already, ordinary shareholders have received 30 per cent. in dividend in respect of the 1915-16 operations, and a further distribution is confidently expected when the accounts make their appearance for the £10 ordinary shares, which at the outbreak of war stood at a very low figure, and, indeed, were practically unsaleable, are now quoted in Manchester at £76 apiece!

It is normal for a man to breathe eighteen times a minute.

HUN PROPHET HEDGES.

Major Moraht, Military Expert, Busy Changing Viewpoints.

Major Moraht, the military expert of the Berliner Tageblatt, has not been much in evidence lately, says the London Chronicle. About three months ago he declared that the possession of Verdun was a life and death affair for the German armies in the west. Nearly two years ago he said the same thing about Calais. Once a fortnight since the Somme offensive began he declares that the British and French advance has fizzled out. He has prophesied about Egypt, about the Caucasus, about Saloniki, and none of his prophecies have been fulfilled. Merely as a prophet he is not worth his wages.

He has now taken to lecturing, after excursions to the eastern and western fronts, and the first fruits of his tour he presented to Hamburg in the shape of a lecture on "Our Victorious War of Defence." He spoke of the aims and objects of Germany's enemies, pointing out that these aims and objects have never varied from the beginning of the war. He expressed astonishment at this, "for these aims have not yet been attained, nor are they likely to be." It is the evident impossibility of Germany's enemies realizing their aims which has filled the German nation with "the healthy feeling" that their enemies really desire peace.

Major Moraht naturally devotes most of his remarks to the campaign against Rumania, and compares the number of square miles of Rumanian territory occupied by the Central monarchies with that won from Germany on the Somme and Ancre. As to the ultimate destiny of Rumania Moraht has no doubts, but with regard to the Somme he thinks that "even if Bapaume and Peronne are lost we can maintain our front intact." He tells his Hamburg audience that they are to wait "until the time comes," and that then "the western front will assume an entirely different shape." It is safe soothsaying with which all of us may agree.

About Italy Major Moraht is doubtful. He does not like the advance on the Carso, and asserts that "it will only cease until Austria-Hungary is able to resume the offensive." "There is no force ready to give Italy the knock-out blow."

The lecturer is very confident about the German reserves. "Our youth, which has not been put too early into service, constitutes a powerful reserve. It is important when discussing peace to show our enemies that we have a reserve army ready to strike." In conclusion, he rejoices at the failure of England's starvation war, and hopes that before long a German victory will secure what he calls a German peace.

BRITAIN IN THE SOUDAN.

Population Have Proved More Loyal Than Ever.

In spite of frequent reports that the native population of Egypt and the Soudan are on the point of rising against their British rulers, they have proved themselves more loyal than ever, says Herbert Adams Gibbons, author of "The New Map of Europe," who recently spent some time in the various North African countries gathering material for his new book. Mr. Gibbons describes, in confirmation of this opinion, a visit which he paid to Omdurman on the occasion of the prophet's birthday. His host was Sir Reginald Wingate, Kitchener's successor as Sirdar of the Soudan. "When Sir Reginald explained to the chiefs who I was and what I had come for," writes Mr. Gibbons, "they nodded their heads with satisfaction and laughed.

"'Tell him to write what he sees,' they declared. 'We are glad that he came to our feast, for he can give London a good report of us.'

"The last tent we visited was the most important, and around it were gathered all the people of Omdurman and of the tribes who had come into the city for the festivities. Thousands of white-robed howling dervishes were dancing and barking, and had reached the point of frenzy. We sat sipping coffee in the midst of a crowd of sixty thousand Moslems who had been followers of the Mahdi and believers in the Khalifa. The Sirdar's guard of honor was four mounted Soudanese lancers. There were no troops, Egyptian or British. None of our party was armed. The people of Omdurman, at the moment of the greatest religious exaltation of the year, had in their power the Governor-General and the chief representatives of British military and civil authority in the Soudan.

"I know the feeling of Moslem fanaticism in an Oriental crowd. I have experienced it more than once when I knew that I was facing death. That feeling was not here. There was real love for the Sirdar, and no hostility to the rest of us.

"As we were leaving the tent, one of the turbaned dervish chieftains who had followed the Sirdar to the entrance, put his left hand on my shoulder as he shook hands and said:

"'I hope you have enjoyed the feast at Omdurman and will come again.'

"'Who is that sheik?' I asked Sir Reginald.

"'One of the Mahdi's sons,' he answered."

Russia is over forty times the size of Germany.

CANADIAN CAMPS GROWING.

Spreading All Over England—Wonderful Organization.

The Canadian army is gradually spreading itself over the face of England. The comparatively small force which made history at Salisbury has grown into a tremendous army. On every street of every city in the United Kingdom and along the highways throughout all parts of the country soldiers of the Dominion are to be seen.

There are now three great training camps in England; the training division at Shorncliffe, which is well known to the people of Canada; the training area at Bramshott, which we have occupied for over a year, and a new command at Brighton, which has just recently been established. Concerning the latter, although it is probably our finest camp, the people in Canada know very little. The Brighton command consists of four main camps, located at Crowborough, Hastings, Shoreham and Seaford.

The average person in Canada does not realize what it means to handle troops in camps which, compared with Camp Borden, are twice its size. Occasionally 5,000 or 10,000 people are seen gathered at some function, but there are very few places in the Dominion that can muster a crowd of these proportions. If one stops to think, it will be readily realized that to handle expeditiously and without confusion an army of this size perfect system is required. As a matter of fact, it is no small task to keep a body of men of this size in a perfect state of discipline and health in ordinary camp routine.

The capacity for work of headquarters staff can be judged from the fact that they average eleven hours a day for seven days a week, and are frequently called up at night when circumstances demand.

BATTLES IN AIR.

Aviator Dead, But Plane Sailed On As Usual.

Replete with dramatic incidents are the reports just published of the late Captain Boelke, the famous German aviator, who brought down forty aeroplanes during his service ended by his death on October 29.

One of the most striking incidents is included in an Overseas Agency summary, as follows:

"I wondered at the stubbornness of the enemy," wrote Boelke, "considering that he must have been finished a long time ago; but he continued to circle in the same fashion. Reason told me the man must be dead and that the machine was being maintained in its right position only by the rudder bar of the helm. Therefore I approached closely and saw the occupant of the machine leaning forward the right side, dead. The aeroplane bore the number 7495. The horrible picture left me unshaken. I let the man alone and attacked the next one."

An example of chivalry reported in Boelke's book is to the effect that after having encountered an adversary Boelke made several "rounds of honor" over the place where his enemy had fallen. "A round of honor" among aviators is a mark of courtesy to a fallen brave enemy. Boelke himself decorated the place where the enemy aviator had been buried with military honors with a bunch of red, white and blue flowers. One of Boelke's most remarkable qualities was his respect for an enemy and he repeatedly used phrases like the following:

"A British aviator really flew home at a height of 100 meters above our trenches. He was a smart chap. This is not likely to be done by another."

TRANSPORTATION ROMANCE.

How Great Engineering Problems Are Mastered.

The transportation romance of the 450-mile mountain front of the Italian army, set down in cold, hard figures, reads thus: 2,248 miles of railroads built or repaired, 150 miles of new railroad built, 150 miles of aerial cables stretched for the teleferica system, 30,000 miles of telephone wire put up, 10,000 new troop, hospital, and freight buildings erected; 200 miles of narrow-gauge railroad laid in or behind the trenches, 110 new bridges thrown across rivers and precipices to accommodate 2,040 miles of operating road.

The work is credited to 120 civil engineers of the Government Department of Public Works, aided by army engineers proper; likewise by 300,000 workmen and 100,000 army mules, hitched to 50,000 wagons.

The foregoing is the official record of the exact extent of the construction work on this front, carried on steadily for 18 months despite enemy artillery, avalanches, snow falls, rains, floods, frost, lack of material, and all the other ills by which engineers are beset.

Realism.

The Author—Well, how did you like my play? Didn't you think the church scene realistic?"

The Critic—Intensely so. Why, a great many of us actually went to sleep while it was on.

Financial.

He—How did you come out financially with your entertainment for the Old Ladies' Home?

She—The old ladies owe us $50.

ITEMS OF INTEREST.

Readable Paragraphs About a Little of Everything.

Switzerland has 706,809 cows.

Oaxaca is pronounced Wah-ha-ca.

Baiza wood is the lightest of all lumber.

Switzerland imposes a tariff on auto imports.

Turkey has put bakeries under Government rule.

China will teach paper making in a Government school.

The United States in 1915 produced 550,055 tons of lead.

The United States coast guard in 1915 saved 1,507 lives.

Argentina has 528 waterworks systems, costing $123,000,000.

Australia boasts of the tallest trees grown on British soil.

In Cuba tobacco is planted, grown and gathered in ninety days.

Superior, Wis., for the first time in sixty years is without saloons.

The United States yearly spends $100,000,000 in building public schools.

English colonies total 13,002,321 square miles in area, with a population of 330,085,035.

Telescopic spectacles have been invented for persons who are so extremely nearsighted that ordinary lenses do not affect the defect.

Boats passing through the hydraulic lift lock at Peterboro, Canada, are lifted a total distance of sixty-five feet in one and one-half minutes.

One of the most beautiful of the early lighthouses, and the first tower in a sea-swept position, was Cordouan light, on the coast of France at the entrance to the River Gironde. It was built (1584-1611), although it has been remodelled, some of the original structure is still there, more than 200 feet high.

Salonica contains a large number of Spanish-speaking inhabitants, not very surprising, perhaps, in a mongrel city of the Near East, but explained by the fact that large numbers of Spanish Jews, exiled some centuries ago, took refuge there and carried their language. Another part of the world in which the Spanish Jew is outstanding is the high plateau of Columbia. Its inhabitants are a vigorous people, noticeably of Semitic stamp, and successful commercially.

The author of the "History of Brazil" tells of a species of monkey called "preachers." Every morning and evening these monkeys assemble in the woods. One takes a higher position than the rest and makes a signal with his forepaw. At this signal the others sit round him and listen. When they are all seated he begins to utter a series of sounds. When he stops these cries he makes another signal with his paw, and the others cry out until he makes a third signal, on which they become silent again. This author, Mr. Margrove, asserts that he was a witness to these preachings.

The first attempt of government by the people began in America was in 1619, when Sir George Yeardley was sent from England as Governor of the Jamestown colony. His charter provided that he should call a few chosen men, two from each of the eleven boroughs that constituted the colony. The meeting, which was known as the assembly, was held at the church, with the Governor and his Council presiding. Those who came from the boroughs were called burgesses, and the assembly, which met every year, was styled the House of Burgesses. At this period this was the only English colony in America.

INDUSTRIES IN TRENCHES.

Making of Amateur Jewelry a Passion With Soldiers.

The monotony of life in the French, as in the British, trenches is varied by a number of small industries, turning to account bits of stone or wood or empty cartridge cases and spent bullets in ingenious trifles for use or for mementoes, says the Manchester Guardian.

Quite the most popular manufacture is that of finger rings from the aluminum used in German shells—"les bagues boches" they are called. These are of many kinds, from roughly hollowed out circlets to highly polished rings decorated with delicately-shaped fern leaves and hearts or inlaid with pieces of polished French copper, on the top of the German metal. The French soldiers carry this passion for making amateur jewelry into hospitals. The British nurses at L'Abbaye Royaumont tell us that most of their patients who can use their hands are busy making "les bagues boches" at every available moment after the surgeon's morning visit. They all have their little stores of German aluminum in their musettes of pockets and many have brought with them a complete outfit of files, vise, emery paper and finger-blocks cut from bits of sticks. When the time comes for the "sortie" to bid good-bye to comrades and staff there is an interchange of souvenirs. Then it is that "les bagues boches" fulfil a pleasant destiny of further strengthening the entente cordiale as gifts for the fingers of British ward sisters and nurses.

Possible Value.

A curious possible source of value in unconsidered waste is revealed by a British chemist's thought that tobacco ash contains 20 per cent. of potash. He estimates that the ash of a cigar contains 6.5 grains of potash; that of a cigarette 1.75 grains, and that of an ordinary pipe of tobacco 1.6 grains.

MICROBE PLOTTING LAID TO GERMANS

PLANS TO POISON RUMANIAN CATTLE.

Bottles of Deadly Germs Found Buried in Yard in Bucharest.

Henry Barby, Le Journal's (Paris) special correspondent in Rumania, has written the most detailed account received here of the discovery of deadly microbes sent by Germany to Bucharest to spread disease among cattle, if not among the population. He writes:

M. G. Corbeaux, prefect of police at Bucharest, has learned of the existence of certain mysterious packages at the German Legation. He went there on October 5, accompanied by Mr. Andrevesu, the secretary of the United States Legation, which is charged with the protection of German subjects. [illegible] found the wrong Chicago Adv. servant, Matthouse after these.

man on being questioned said the existence of the calculoyer.

besco's request went on, and and began to dig by the wall on side of Cosma Street, between the eighth and ninth trees.

They very soon reached the cases, buried about half a yard deep. They contained fifty glass tubes labelled Bickford cord and fifty tin boxes. These boxes were inscribed "Douarch L. Kvalerie Spring Patronnen, sprengstoff A. 6. Carbonid Hambourg Schlebusch."

"Very Secret."

The prefect of police having asked if any other cases were hidden, Marcus went to the end of the court and dug up a small wooden box covered with paper and bearing the seal of the Brashov Consulate, with the following inscription in French: "By courier, very secret, to his Excellency, the military attache of Bulgaria at Bucharest, Col. Samardjieff, for M. Kostoff."

Kostoff was known to the Rumanian police as a Bulgarian spy, but was covered by being appointed attache to the Bulgarian Legation. Under the first envelope was a second, on which was written in red pencil: "Very secret. To his Excellency, Col. von Hammerstein, military attache of Germany."

Below was a sheet of paper with the following directions in German: "Herewith four bottles for horses and four for cattle. To be employed as agreed. Each bottle is sufficient for 200 head. If possible have it absorbed directly or else place it in the fodder. Please report results, and if other instructions are needed, K's (Kostoff's) presence would be desirable for a day."

Anthrax and Glanders.

The explosives, as analyzed by the army's experts, showed that they were very powerful. The bottle of microbe culture contained, according to the first examinations, half microbes of glanders and half microbes of anthrax.

The two men were examined at the United States Legation, at Mr. Andrew's desire. They said the explosives had been brought from the German Consulate to the Legation, where they were kept some days in the cellar. The day before mobilization Mr. Rheinbaden ordered Marcus to bury them, which he did with the help of Maftei and M. Kruger, chancellor of the Legation.

As for the microbe bottles, Marcus said he did not know what they contained. He buried them on the orders of the assistant military attache, who placed them with his own hands in the hole dug by the watchman the latter having been called at the moment to help in packing up. Marcus and Maftei were then kept under arrest.

FOOD SHORT IN HOLLAND.

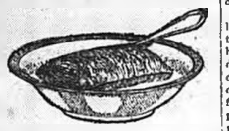
Flour and Necessaries Scarce—None for Germany.

The Holland-American Line announce that about 75 per cent. of the cargo holds of their steamers have been requisitioned by the Netherlands Government to carry foodstuffs. Unless goods offered for shipment on these steamers are accompanied by a cabled permit from the Dutch Government they cannot be received.

It is the opinion in shipping circles that there is a serious food shortage in Holland. All consignments to Holland are received by the Overseas Trust, which posts a cash bond with the British Government for every shipment as a guarantee it will not reach German hands.

There is a great need for flour and various foodstuffs.

He Was Short.



Early one evening a frail little girl entered a candy store and asked for a cake of chocolate. After she had the candy she put four pennies on the counter and started out.

The storekeeper, thought averse to frightening the little thing, called after her, in a gentle voice:

"You're a penny short."

"No, you're a penny short," she called back as she disappeared.

Putting Punch in Preparedness is not a question of guns and shells alone—it is a question of men—and you have to build men out of food. Be prepared for the critical moments in life by eating **Shredded Wheat**, a food that supplies the greatest amount of muscle-building material with the least tax on the digestive organs. For breakfast with milk or cream or fruits.

Made in Canada.

MILLIONS TO CANADA.

Cost of Fifty Branch Plants Estimated at Over $150,000,000.

Since the outbreak of the European war, American industrial corporations have opened branch establishments in Canada. Most of these have gone to Ontario, several to Quebec Province, and a few to western cities of the Dominion. It is conservatively estimated that these fifty plants represent an investment of $15,000,000. Prior to the war there were about 450 such companies in Canada, so that the total investment of the 500 concerns must at least amount to $150,000,000.

For years prior to the war a number of American industrial corporations, such as the International Harvester Company, the Singer Sewing Machine Company, and the Westinghouse Electric established plants in various parts of Europe, including Russia. Since the war, however, the extension has been largely in the direction of Canada. Many concerns have found it advantageous to have plants in Canada because of the saving in the cost of distributing their product and also for tariff reasons.

Following is a partial list of the articles manufactured by American companies that have recently located in Canada:

Railway accessories, overalls, chemicals, silverware and flatware, automobiles, horseshoes, steel goods, patent medicines, spices, soaps, perfumes, glue, beet sugar, pumps, greenhouses, railway signals, fuses, boxes, spreaders, silk gloves, stockings, tires, steel, steel products, canned goods, automobile varnishes, belting, store counters, explosives, pulp and paper, sewing machines, alexite and other abrasives and electric furnace products, grain and elevator machinery, silk and chamoisette gloves, refined nickel, and cottonseed oil products.

The total of American investments in Canada, according to The Monetary Times of Toronto, is $978,000,000, of which $150,000,000 represents the branch factories.

Discussing what it calls "the United States commercial invasion," The Monetary Times says:

Since informal discussion in various quarters has been heard as to the possibility of favorable tariffs among the Allies and the Dominions after the war, there has been an impetus given to the movement of United States branch plants to Canada, and a number of inquiries continue to be made by United States firms with a view to their establishment in the Dominion. In the event of favorable tariff treatment as between the Allies and the Dominions, these United States manufacturers in Canada expect to be regarded as Canadian manufacturers, and thus entitled to the benefits of any such favorable tariff legislation. These firms are now in a position to cater at close range to the demands of the Canadian market, and hope also to be in a position to handle some or all of their export trade from their Canadian factories under present or revised tariffs of various countries.

Industrial commissioners throughout Canada are receiving numerous inquiries in connection with sites in their industrial districts from United States firms contemplating the establishment of a new industry here. The outstanding feature in connection with the inquiries of these United States concerns seems to be that they are all awaiting the much-discussed preferential tariff of the Allies.

Probably 90 per cent. of the correspondents desire no publicity regarding their inquiries, apparently not desiring their competitors in the United States to be advised of any intention of establishing in Canada.

Prior to the war there were established in Canada branch factories for the production of asbestos, barrels, buttons, carpet sweepers, corsets, condensed milk, bags, corks, carriages, couches, brass goods, billiard tables, cash registers, disinfectants, fly paper, files, fire extinguishers, fountain pens, phonographs, hardware, pickles, presses, pulleys, razors, rubbers, shoes, scales, typewriters, watch cases, tobacco, &c.

A CAUSE OF INDIGESTION

People Who Complain of This Trouble Usually Are Thin Blooded.

Thin blooded people usually have stomach trouble. They seldom recognize the fact that thin blood is the cause of the trouble, but it is. In fact thin, impure blood is the most common cause of stomach trouble; it affects the digestion very quickly. The glands that furnish the digestive fluid are diminished in their activity; the stomach muscles are weakened, and there is a loss of nerve force. In this state of health nothing will more quickly restore the appetite, the digestion and normal nutrition than good, rich, red blood. Dr. Williams' Pink Pills act directly on the blood, making it rich and red, and this enriched blood strengthens weak nerves, stimulates tired muscles and awakens the normal activity of the glands that supply the digestive fluids. The first sign of improving health is an improved appetite, and soon the effect of these blood-making pills is evident throughout the system. You find that what you eat does not distress you, and that you are strong and vigorous instead of irritable and listless. This is proved by the case of Mrs. J. Harris, Gerrard St., Toronto, who says: "About three years ago I was seized with a severe attack of indigestion and vomiting. My food seemed to turn sour as soon as I ate it, and I would turn so deathly sick that sometimes I would fall on the floor after vomiting. I tried a lot of home remedies, but they did not help me. Then I went to a doctor who gave me some powders, but they seemed actually to make me worse instead of better. This went on for nearly two months and by that time my stomach was in such a weak state that I could not keep down a drink of water, and I was wasted to a skeleton and felt that life was not worth living. I was not married at this time and one Sunday evening on the way to church with my intended husband I was taken with a bad spell on the street. He took me to a drug store where the clerk fixed up something to take, and my intended got me a box of Dr. Williams' Pink Pills. By the end of the first week I could feel some improvement from the use of the Pills; and I gladly continued taking them until every symptom of the trouble was gone, and I was again enjoying the best of health. These Pills are now my standby and I tell all my friends what they did for me."

You can get Dr. Williams' Pink Pills from any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

JAP KNIT GOODS HIT HARD.

Britain's Ban on Imports Effects a Growing Eastern Trade.

Great Britain's war ban on importation of knitted goods will probably prove to be a great blow to the Japanese knitting industry. During the ten months ending October 31 the total value of this line of goods exported to Great Britain reached $5,000,000. In addition, contracts entered into call for delivery of additional goods up to next June, amounting to $6,000,000.

Exporters have held conferences urging the Japanese Government to strive for the rescinding of the order. It is claimed that the order is not a friendly measure of an allied nation and that it will injure the friendship between the two countries. It is also feared here that similar bans will affect other lines of Japanese manufacture.

The immediate effort of the British order will be the suspension of many factories and the throwing out of employment of thousands of workmen.

As a result of the Japanese representations the British Government has announced that the enforcement of the prohibition order would be postponed until January 1. The press is expressing hope that the authorities will further be persuaded to take into consideration the situation facing the manufacturers and workers in Japan and see whether there is not some way of permanently modifying the order prohibition.

DEVONPORT ONCE VERY UNPOPULAR

WORKINGMEN PRAYED GOD TO STRIKE HIM DEAD.

Organization of Port of London Was a Remarkable Accomplishment.

A strong man—strong physically as well as mentally—with a capacious head firmly set on sturdy shoulders, a decisive mouth, and a determined, clean-lined chin—that is Lord Devonport, Food Controller in the Lloyd George Government. The First Lord of the Larder, as he has been aptly termed, is already making himself felt in the Old Country. He is likely to do so with increasing stringency. For that is Lord Devonport's little way. You may admire him, or you may dread him. But you can scarcely be unaware of him.

Four years ago Lord Devonport's name was anathema to a large section of the British working classes. So also was that of Lord Rhondda, also a member of the present Government, as president of the Local Government Board. In all great strikes there is some one employer whom public opinion fixes on as the quintessence of the employing type. In the coal strike of 1912 it was Lord Rhondda, then Mr. D. A. Thomas, and at that time all unaware of what the future held in store for him in the way of acquaintance with Canadian munition methods.

Later in 1912, the dock strike coming along, Lord Devonport, in the capacity of chairman of the Port of London Authority, took Mr. Thomas' place in the public view as the typical stern, unbending employer. But he came in for a larger amount of abuse than usual. For it has not happened to many men (or had not until we knew the Kaiser) for thousands to pray for their death. Yet that was what happened to Lord Dev-

Lord Devonport.

onport in 1912. Ben Tillet, the Socialist orator, publicly supplicated the Almighty, at a huge meeting on Tower Hill, that he would strike Lord Devonport dead. "And all the people said 'Amen.'" However, the devout supplication was not answered. And Lord Devonport is to-day very much alive.

Great Business Head.

At once masterly and masterful is Lord Devonport. "I know how a business must be conducted if it is to be successful." That was what he said when he started in to organize the Port of London. It is on business lines, we may be certain, that he will organize and control Great Britain's food supply.

For he is a great business head. No man living knows better than he how to make a great business succeed. It was no successful, sensational speculation that built up his enormous fortune. It was industry, integrity, and efficiency—willing hands, a stout heart, and a clear, capable head—that in seven years raised him from a lad of seventeen in service at a tea dealers at $6 a week to a successful man of business earning $15,000 a year by the time he was twenty-four. To-day, at the age of sixty, his income is estimated at anything between $500,000 and $1,000,000.

The son of a small farmer, young Hudson Kearley having learnt the tea business in all its various ramifications at two different tea dealers, at the age of twenty founded a tea firm of his own without any employes and with no capital. He was principal, manager, cashier, salesman, traveller, and all. In four years he had made a success of this business, and was drawing $15,000 a year from it. Then it occurred to him to start the International Stores (grocers' shops all over the country). At the present these stores number between two and three hundred.

His Active Life.

That, in briefest outline, is the story of Hudson Kearley's successful business career. To-day Lord Devonport, Peer of the Realm, landowner, and millionaire, declares that there is no romance about it—nothing in it which cannot be emulated by others. For he attributes his success to his possession, not of exceptional talent, or exceptional good fortune, but of exceptional industry.

His early energy is still unimpaired—like so many of the men Mr. Lloyd George has gathered around him he is a tiger for work—and to it he has added large stores of business experience and experience of public life. A Liberal, he represented Devonport in Parliament for eighteen years, and from 1905 to 1909 he was a very useful member of the Liberal Ministry. He saw the Port of London Act safely into law, and then became head of the public body which was to be run as a public utility. The salary of $20,000 a year is attached to the post. But Lord Devonport refused to touch a cent of it. The honor of serving the country was enough, he said, for him. As has been said, that service brought him into almost unparalleled unpopularity, though it gained him the respect of those who like to see a man stand through thick and thin by what he believes to be right.

Lord Devonport, in spite of all his hard work, is great at outdoor pursuits. He loves a tramp through the stubble after the partridg . . . he is a great gardener, and yachting and boating are also among his hobbies.

FARMS FOR VETERANS.

What the C. P. R. Is Doing For Returned Soldiers.

The decision of Lord Shaughnessy to provide, through the department of Natural Resources of the C. P. R., farm homes for many of the returned soldiers, is a further proof of his desire that those who take part in the war will have recognition of their services. This subject received much attention during the past year. The extent and magnitude of the work of preparing 1,000 farms will be realized when it is noted that it involves: Building 1,000 houses, building 1,000 barns, constructing 1,300 miles of fence, digging 1,000 wells, breaking and cultivating 50,000 acres; the buildings will require about 20,000,000 feet of lumber to erect. The preparation of the farms will entail an expenditure of about $2,500,000. One thousand for will of course provide for an extr small proportion of returned who will want to obtain farm homes, and the Dominion Government must adopt some general policy of providing these homes. However the Canadian Pacific Railway has led the way in trying to solve the pressing and troublesome question and no doubt the Dominion Government will announce its general scheme. An examining committee will select the prospective farmers. There will be inspectors and advisors to help the soldiers from the time they get on the land. Under the improved farm scheme 160 acres may be allowed to a settler and under the assisted colonization scheme as much as 320 acres may be allowed. The terms of payment for the land are very easy.

WOMEN AS BANKERS.

Are Most Successful, Say London Women.

In the recently published Government scheme for a British trade bank occurred the phrase: "It is fair to assume that women will in future take a share in purely clerical work. The Federation of Women Workers, however, thinks they should not be confined to clerical work, and brings out the following facts:

A woman has been appointed manager of a branch of the London City and Midland Bank.

Others are being trained for similar posts.

At the exams. following the Gilbart lectures on banking at King's College four of the 22 candidates gaining over 80 per cent. of marks were women.

One, Miss Rosa Kingston, of the head office of the London and South Western Bank, gained the first place with a note of approbation from the examiner, Sir John Paget.

Seven women from the same bank gained prizes or certificates.

RUN SPY SYSTEM BLOCKED.

Disguised German Desperadoes Sent to England.

That spies of Germany have been very active among us for the past ten years cannot be denied, but in this, the third year of war, Great Britain may certainly congratulate herself upon the possession of a very adequate and effective system of counter-espionage and, indeed, upon having secured a veritable stranglehold upon the enemy's spies, writes Wm. LeQueux in the Weekly Scotsman.

To the average man or woman the working of the Intelligence Department of both branches of the service is shrouded in mystery, as it must obviously be.

The discovery of the "Espy post office" in the Caledonian road, London, in 1912, was a most fortunate incident, because letters sent there from Germany to be re-forwarded to spies were intercepted and copied. They gave us the clue to the existence of a very remarkable state of affairs, and revealed the identity not only of the spies amongst us, but also showed that German military desperadoes had been despatched to England in humble guises, but with special instructions to carry on certain sinister work, quite distinct from espionage. These Huns were raiders whose hope it was to strike, on the outbreak of war, sudden and deadly blows with explosives and by other means, with the object of crippling our naval and military organization. For a time they constituted a very grave menace to our country. What blows they actually struck cannot here be revealed. Certain disasters were, rightly or wrongly, attributed to them.

Minard's Liniment Cures Diphtheria.

Didn't Feaze Him.

"Bang!" went the rifles at the manoeuvres.

"Oo-oo!" screamed the pretty girl, a nice, decorous, surprised little scream. She stepped backward into the arms of a young man.

"Oh!" said she, blushing. "I was frightened by the rifles. I beg your pardon."

"Not at all," said the young man. "Let's go over and watch the artillery."

TAKE NOTICE

We publish simple, straight testimonials, not press agents' interviews, from well-known people.

From all over America they testify to the merits of MINARD'S LINIMENT, the best of Household Remedies.

MINARD'S LINIMENT CO., LTD.

His Weather Eye?

Two ladies were hurrying down the street in the rain, carrying their umbrellas low for protection. In turning the corner sharply the point of one umbrella struck a passerby in the forehead.

"Goodness!" gasped the woman "I'll keep an eye out in the future."

"Goodness!" exclaimed the man, "you nearly had one out in the present."

Minard's Liniment Cures Distemper.

Properly Charged.

Two women were discussing their marital troubles, when one asked, "By the way, what is your husband doing now?"

"Oh," said the other, "he's a-settin' 'round tellin' what's goin' to happen next election."

"Then he's a prophet?"

"No, he ain't. So far as this family is concerned, he's a dead loss."

Minard's Liniment Cures Colds, Etc.

The real knocker doesn't drop his hammer the moment the whistle blows

Rheumatism Is My Weather Prophet.

I can tell stormy weather days off by the twinges in my shoulders and knees. But here's an old friend that soon drives out the pains and aches.

Sloan's Liniment is so easy to apply, no rubbing at all, it sinks right in and fixes the pain. Cleaner than musty plasters and ointments. Try it for gout, lumbago, neuralgia, bruises and sprains.

At your druggist, 25c. 50c. and $1.00.

The Paisley Advocate

PAISLEY, JAN. 10th, 1917

An Open Letter to My Friends

Having to-day handed the reins of office over to my successor I have pleasure in thanking you who rallied to my standard and supported me in my contest for the reeveship of Paisley. I would speak to you individually, as it were, and express my full appreciation of your adherence to consistent rectitude. It is such characters as you who hold the steadying influence in every community. You with myself stand for law and order. I congratulate you that not one of the contrary class is among you. Of this I am very proud. I would rather be defeated with a few good clean voters at my back than be elected by a Tammany multitude. I do not say that all those who did not support me were of that class, for many, no doubt, like the foolish virgins were sleepy and allowed their vision and judgment to be clouded or warped by one sophistry or another. Some would perhaps be told that a ditch was too deep, or that it was on the wrong street; that a load of gravel was put into the wrong mudhole; that the team drawing the gravel was not the best in the county; that it rained too much on the streets sometimes and not enough other times; that certain streets had no hydrants; that I caused the burning of my own summer house; that I objected to the soldiers being in the village; that I did not work for the Red Cross; that I caused all the convictions that were recorded; that I did not support the passage of the Local Option By-law and then had those who broke it fined; that I was responsible for the old smokestack falling because there were two guages of iron in it and the riveting was improperly done; that saving the village $35 by buying the new stack out of town was an act of rank disloyalty; that getting the Willow Creek bridge and 200 feet of roadway off the village was of no consequence; that the saving to the village of thousands of dollars by working hard and getting the school debentures all sold was a matter of ridicule and those who helped in the good work were fools; that continuation schools were of no benefit to the corporation where situated, and getting the grants to them increased so as to make them self-supporting was an act of doubtful financing; that the conversion of the old "white elephant" named carpet factory, into taxable property was a sad affair, as he was the only zoo we had in the town; that we should have raised several hundred thousand dollars to put in a munition plant; that I was a rank Tory and that the whole Grit party would be annihilated if I were elected. (Notwithstanding there is a fine lot of splendid Liberals among you, but it worked well with some weaklings). And thus I could go on with page after page in the same strain and could answer all the ridiculous accusations, but the game is not worth the powder. You understand the truth, your brains are bright and clear.

In retiring from municipal life I feel relieved of much work and great responsibility which every conscientious reeve must feel, and I step out with a consciousness of having done my whole duty, even to the last ditch. Again I thank you.

S BALLACHEY.

Rev. John MacNeill with the Canadians in England

In a letter to Miss McCallum from Witley Camp, Dec 19th, "our own" John MacNeill speaks of his work among the soldiers. "I wish I had time and space to write you fully about this privilege I have of speaking to the men. My first five weeks were spent in the Shorncliffe area, where there are, roughly speaking, six different camps of men, and in each camp is a Y.M.C.A hut. These camps I visited in turn, speaking in the Y.M.C.A. huts, which, according to size, will accommodate from 400 to 600 men. As a rule our meetings have been packed to standing, with the interest very deep and, so far as one can judge, the results have been far-reaching and most gratifying. It is a wonderful privilege to bring these men any moral uplift or word of cheer. And how splendidly they answer the challenge of the christian life! Let me give you a little glimpse into one of our meetings. Before six o'clock the men, having had their supper, begin to gather at the Y.M.C.A., but in their locality to write letters or supplement their army rations with a cup of coffee or tea and a bun. Generally they like to congregate just for the good fellowship they find. At all events they are there. In most cases the Y.M.C.A. hut is a long, low building with a platform and piano at one end and the canteen and writing tables at the other. There is no partition between, and the place swarms with men standing, sitting, working, smoking, eating and drinking. It is that motley mob we must reduce to order and from them get a hearing. At 6.30 we begin. I have a song leader who travels with me everywhere, a sort of "Alexander" in song, and a genius at getting men to sing. We have a good man, generally found in the audience, at the piano. We start out to "Hang the old Kaiser on a Sour Apple Tree," to the tune of "John Brown's Body." Then "Pack Up Your Troubles in Your Old Kit Bag," and "Keep the Home Fires Burning." Sometimes my song leader has them whistle it. Now he swings the right hand side of the house against the left, or the men under 20 years against the men over, or he may call on the "choir" to sing the verse, and as the choir consists of myself I stand up manfully to sing my solo, amid "thunders of applause," though there is no encore, at which my pride is laid in the dust. The spirit of good-fellowship grows. It is an easy slip to the old home songs that moisten the eyes and bring the lump into the throat, and not a far slip then to the good old hymns. Then comes the time to speak. You must hit them. The place is buzzing. A storm of coughing sweeps over the men from the desperate colds with which so many suffer. The clatter of cups goes on in the canteen. The hut is blue with cigarette smoke, so that I cannot see the men at the back. It is a fair challenge to a man to win a foothold, and all the wit and wisdom one has must be called into play. You can announce no text nor confide to your congregation at the beginning your firstly, secondly, thirdly. The supreme business of the moment is a point of contact—any point that seems nearest and easiest, and if you win out in the first three minutes you have them with comparative security for the next twenty minutes, though every moment is precarious till the end. But every night almost brings something one can turn to account. King "Tino" plays the traitor, and we all agree we would wind up "that show" if we were in Athens; or another night Jellicoe is announced as first sea lord, and they join me in standing on the seats to sing "Rule Britannia" to the glory of the navy; or Lloyd George takes the helm, and we pledge ourselves afresh to follow him "through terror to triumph;" or Germany offers peace, which we scorn, and pass on to speak of the true basis of peace in the soul. Last night came the "great news" from the front of the French thrust at Verdun, and the capture of 12,000 prisoners, at which we gave three cheers and a "tiger" for wonderful, chivalrous France, and whistled the Marseillaise, and it was an easy slip to the "great news" I had from the front in my "arm of the service," the good news of the Kingdom. So it goes. It is a great game, and never did I so appreciate Cromwell's words to his men, to "trust in God, but keep your powder dry." For it is little use to pray if you don't wake your wits to the utmost. Once you get their ear and prove to them that you have something to say they will listen with the greatest respect. I have seen again and again the cups come off quietly, the cigarettes die out, the hush of an unseen spirit fall upon the men, and it's a [illegible] then to talk to them. You may guess how busy I am when I tell you that in 28 [illegible] I spoke 33 times, passing on from hut to hut, from hospital to hospital, in the latter case speaking to convalescents, but generally speaking in the huts for three or four [illegible] in succession. What a great body of men they are, the flower of Canada! What full grown men these boys have already become! What fibre of citizenship we shall have in them when they return if they stand the strain in their moral life! After my work here, which closes next Friday night, I go on to Bramshott, Ramsgate, Crowborough, Seaford, Shoreham camps. That will occupy my time fully all the early January, and on Feb. 1st I expect to cross to France for three months. That will be at "close quarters," and I am eager to get there.

SCHOOL REPORTS

PAISLEY CONTINUATION SCHOOL

Below is given the standing obtained by the students in their respective classes for the fall term of 1916. No bonus was allowed in Forms II or III but in determining the averages optional subjects have been treated as obligatory. Names are in order of merit, the percentage of the maximum number of marks obtainable being given.

Form I—Irene Moffat 79, Inez Bell 77, Bessie Fullerton 75, Fred Shoemaker 75, Reta Cormack 75, Daisy Foster 74, Irvine Gage 74, Arthur Kincaid 73, Irene McKelvey 73, Blanche Collins 73, Mac Laidlaw 72, Janie Luttrell 72, Jean Fullerton 70, Ruby Porter 68, Ida Manley 65, Grace McMorran 65, Irene Marshall 64, Anabel Blue 63, Ruth McDougall 62, Jean Shaw 55, Annie Kincaid 52, John Fitzsimmons 49, Jack Little (not classified having missed 6 exams)

Form II or Entrance to Model—Job Brown 78, Winnifred Megraw 76, Robert Stark 76, Lorne Cargill 75, Katie McGillivray 74, Marguerite McLeod 74, Alan Shoemaker 74, Beulah Ruthven 73, Velma Winch 73 (absent during 2 exams), Geo Neilson 72, Wilmer Burnett 67, Jean Compton 66, Willie Tanner 66, Agnes Pearce 62, David McGregor 61, Lauchena Blue 57.

Form III or Entrance to Normal—Gertrude Brown 84, Margaret McKay 77, Isabel McKay 74, Robert McBride 73, Gladys McCallum 72, Wallace Tanner 72, Beulah Rudolph and Nellie McBride attended part of the term only.

Matriculation Class — The following students of Form III are in addition to Entrance to Normal students, matriculants—Robert McBride, Ina Allen, Gertrude Brown.

"The Store with the Stock"

Stock-Taking

This Means a Great Increase in Our Remnant Table

Short ends of goods of every description are priced by the piece at prices which mean a good saving to the thrifty housewife who can use them.

¶ **It also means** a windowful of **Wrapperettes**, in a dozen different patterns, at only 12½c per yd.

¶ **It means** reduced prices on **Ladies' Coats, Small Furs** and many other heavy winter goods.

¶ **It means**, in short, that many of your wants can now be supplied at a considerable saving to yourself, and in this year of constantly advancing pricees such a chance is well worth taking.

BALLACHEY, LAIDLAW & CO.

Both 'Phones — Top Prices for All Produce

Good-bye, Mother, Don't Worry!

Good-bye—trusting in God to bring him home to her safely—if that be His will.

Good-bye—trusting in you and me to see his Mother through while he, her natural support and defender, is somewhere in France, facing shot and shell for God, for right, and for native land.

In the name of Christendom, men and women, what sacrifice is this! What consecration to duty! What response to the call of the Motherland! What clarion challenge to the world to "Watch Canada!"

He goes—joy of his Mother's heart—idol of all her dreams from the day she bore him—hope and bulwark of her declining years.

He goes—and, Heaven bless his belief in us, his people, he goes, leaving his most beloved possession to our care and protection.

He trusts us. Who will fail him? What man or woman, rich with the possession of the memory of a Mother, will fail his Mother as a reward for her sacrifice?

This trust of our soldiers is a holy legacy.

Give to the Mothers of our soldiers in the name of your mother—as your testimonial to Canadian Motherhood. Give to the Canadian Patriotic Fund. $6,000,000 must be raised in Ontario for this Fund for 1917.

Mothers, wives, and children of Canadian soldiers shall never say that their own people neglected them after their men went forward to suffer and to die.

Every case helped by the Patriotic Fund is carefully investigated. Only where assistance is really needed is assistance given. Everything humanly possible is done to avoid waste and prevent imposition.

Give as Your Own Heart Prompts You to the Patriotic Fund

Ontario is being asked to assure the Canadian Patriotic Fund that it can depend on having six million dollars in 1917 for the families of Ontario's soldiers.

Four million of these dollars must be secured from individual subscriptions. If there is no Branch of the Fund in your town or county send your subscription direct to the Head Office, Canadian Patriotic Fund, Victoria street, Ottawa.

IF GERMANY SHOULD WIN

I have never seen it very clearly stated what would happen. I have been trying to figure what it would mean to the inhabitants of the British possession in North America and I think it would be something like this:

The British flag would be hauled down and replaced by the German;

The whole of the British possessions would be declared to be the property of Germany.

The individual owners of part of the territories, whether on the farm, in the cities, towns or villages, would be ordered to vacate their holdings to make way for Germans.

All the personal chattels, goods and effects of such owners would be confiscated for the benefit of the German Government for their new settlers.

Of course, the Dominion and Provincial Governments would be swept out of existence, and German Government officials installed.

All the Government arsenals, dock yards railway, canals and other public works would be taken possession by the Germans.

The Canadian Pacific Railway, the Grand Trunk Railway, the Grand Trunk Pacific, and all others railways and public works would be run by the Germans and the shareholders would lose all their investments in shares and stock in these enterprises.

The telephone lines, the telegraph lines and the Hydro Electric lines, fire and life insurance companies, loan and savings and all other stock companies would follow suit.

The money in the banks would also be confiscated and their bills put into the furnace to be followed later on by the bills of a Deutsche Bank. It would not make any difference whether one had $5 or $10,000 on deposit in the bank, not one cent could be got. Bank stock would be wiped out of existence, and the only man who would benefit would be the man who was a debtor to a bank, either for a small or large amount, the larger the better.

What little cash, in gold, silver or copper we owned might pass until replaced by German coins, but the bills we like to handle now would not be worth a cent.

Our big stores and little stores, big factories and workshops, and little ones would be taken possession of and the employees would be replaced by Germans. If shorthanded, some Canadians might be employed on sufferance.

There would be no elections needed, Dominion, Provincial or Municipal. We would be governed by the Germans in proper German style.

Nothing but the German language would be allowed to be spoken and this would settle our bilingual question.

The teachers in our schools of course would have to make room for German teachers, and then we would have "Kultur" wholesale.

Every young man, physically fit would have to serve three or four years of his life in the army, and after that be in the Landsturm or reserves. How will carpet-flat friends or those who are saying "I did not raise my boy to be a soldier" like the prospect?—Letter in Mailand Empire.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XIX.—(Cont'd).

"Come along, then!" exclaimed the captain. "Take my arm."

Leicester raised his arm; the captain at the same moment raised his, and, happening to stumble at the moment over a loose stone, his hand struck Leicester's hat off.

"Tut, tut!" he exclaimed, with annoyance. "How stupid and clumsy of me! I thought you were going to take my arm, and I stumbled over a stone. I wonder whether I can get it?" and he neared the edge.

"No, no!" exclaimed Leicester, impatiently. "Confound the hat! What does it matter? Come away, or you'll stumble again, perhaps, and pop over. It's death if you do."

"Ah, well, I am afraid it has gone over," said the captain, apparently much vexed at his own carelessness. "I wish it had been my hat instead of yours."

"No matter," said Leicester. "Come on; remember that she is waiting there all alone."

Arm in arm, Captain Howard Murpoint and Leicester Dodson descended the cliff.

The heart of the latter was beating fast with joy born of hope.

In a few minutes he should be near his sweet Violet; should, perhaps, clasp her in his arms—for might she not in the excitement of the moment be won to confess that she returned him love for love?

"Come along!" he said. "Every moment——"

"Gently!" replied the captain, cheerily. "Remember this path is narrow and somewhat dangerous; a false step, and over we should be."

"Nonsense!" exclaimed Leicester, who felt fit for any mad thing. "I could run down it blindfolded."

Thus exhorted, the captain quickened his pace.

While going through the village, Leicester nodded toward the "Blue Lion."

"All quiet now," he said. "As I passed this evening they were just coming out. By the way, your old servant still remains at Penruddie; he was drunk, as usual, to-night, and noisy."

"Oh, he is quiet now—I dare say asleep," said the captain, with a sardonic grin in the darkness.

Leicester made some rejoinder, and he walked on until the chapel came in sight.

"Strange," mused Leicester; "an hour ago I was longing for Africa; now I would not exchange England for ten undiscovered worlds."

"The wind shifts rapidly," said the captain, with his soft, treacherous laugh, "and the weathercock obeys it with all cheerfulness."

Leicester was too happy to resent the sneer, and the next moment they entered the chapel.

"Dark as pitch," he said. "Here is the torch. I do not see—where are you?" he broke off to ask, for the captain had suddenly left his side.

"Here," said the captain.

Leicester turned, but before he could utter another word he felt his arms pinned to his sides, and a bandage thrown over his mouth.

He struggled hard and furiously to free his arms and mouth, but his unseen assailants were four to one, and, after a few moments, he gave up the ineffectual resistance, and knelt, for he had been forced on to his knees at last, nevertheless glaring impotently round him.

He could see dark figures flitting about, but a dead silence reigned.

It was broken at last by a voice, which he knew well.

It was Job.

"Maester Leicester, it be of no use to struggle agen too many. Do you give in quietly?"

Leicester thought a moment, then nodded, pointing to the gag.

"If we take it off, will 'a promise not to shout?" asked Job.

Again Leicester hesitated, and again made a motion in the affirmative.

"Take it off; he'll not break his word," said Job, and some one from behind slipped off the gag.

"Now, Maester Leicester," said Job, "we've got your word. Mind ye, you're not to speak till ye get permission."

Leicester nodded.

"Do you know me?" asked Job.

"I do," said Leicester. "You are Job, the carrier, and a scoundrel! Why am I decoyed here and treated thus?"

"For a good reason, to be sure," said Job. "Maester Leicester, you've been prying about too much lately, prying into what don't concern you, and you've discovered summut as you shouldn't a knowed anything of. Don't I speak the truth?"

"I have discovered nothing," said Leicester. "But, trust me, I will unmask the villian who lured me here and the scoundrels in his pay!"

There was a threatening movement behind him, but Leicester's courage did not flinch.

Job shook his head.

"D'ye mean to threaten us, Maester Leicester?" he said. "I'm sorry for it. I'd hoped we'd come to some terms. Suppose you discovered this little game—and you've done it, for a certainty—I puts it to you as a gentleman, what harm can it do to you and yours? Do it matter to you gentlefolk if a cask o' wine and a bundle o' cigars is run in now and then without the customs knowing it?"

"Ah!" said Leicester, the whole secret breaking in upon him. "That's the villainy, is it? So you honest fishermen are a parcel of thieves,with a scoundrel at your head! That's the key to the mystery, is it? What! and you dare to ask me to connive at your rascality! Job, you know me better! You waste time and words; you should know me better. If there are any others round me who can hear me, they, too, should know me better than to hope I would make a paltry villain of myself, even to save myself from their trickery. I repeat it, if I live through to-night, I will bring you to justice, Job, and all your gang."

"Bah! Waste of time, indeed!" said a smooth voice behind Job.

"You still here!" said Leicester. "I knew you for a villain when I first saw your vile face and heard your false voice. You triumph to-night, Captain Murpoint, if that is your name; but have a care! A rogue's day is a short one! The gallows lies in your path, and every little such paltry triumph as this draws you more swiftly down to it!"

"Bah!" said the soft voice, contemptuously. "Fine words, boys. Better waste no more time. The fool is raving mad with fear, and doesn't know what he says."

Two or three hands slipped the gag over the captive's mouth, and he was raised on two pairs of stout shoulders.

"Good-night," said the captain, "I leave you in good hands, Mr. Leicester Dodson. They'll take care of you. Good-night. I will make your excuse to the person whom you should have met," and, with another mocking grin, the captain, having waited until the crowd of figures were lost in the gloom, turned on his heel and walked rapidly away.

So quietly had the capture and removal of Leicester Dodson been effected that not a dog about the Park had been roused, and the captain, standing on the lawn, waited until he saw the signal which announced the success of the undertaking, then entered the house, and stepped quietly upstairs.

Not so quietly but that a pair of ears heard him.

As he passed Violet's door, it opened, and Violet stepped across the threshold.

"I had hoped that you would not have waited," he said.

Violet knew by his words that he had been unsuccessful in his mission of peace, and a grayer tint came over her face.

"You have seen him?" she said, in a low, strained voice.

The captain inclined his head.

"Yes," he said, "I have seen Mr. Leicester."

"And you gave him the message? Oh, tell me, please!" and she clasped her hands, with a gesture of despair.

"I know not how to tell you," said the captain, brokenly. "At least, I can assure you this, that Mr. Dodson is not worth another thought of yours. You—and I, also—are utterly mistaken in him. He is neither generous, noble, nor forgiving."

Violet interrupted by a gesture.

"Will you tell me what he said?"

"When I left you," said the captain, "I walked up to the Cedars, hoping to find him at home, but a servant told me he had gone for his walk. I went down to the village, and waited there for some time, and at last looked for him on the beach. I could not find him there, and, as I was determined not to return to you until I had seen him, I made my way back to the village, and waited by the cliff road."

He paused a moment to snuff the candle and to glance at her face.

He could see she was listening attentively, and he wished her to do so.

"I waited some time, and then walked up the hill. There I met him, and—and—oh, that I could spare you the indignity of this moment!—and gave him your message. At first he treated me with a specimen of his incredulity. He was suspicious of I know not what, and it was not until I took your flower and put it in his hand that he considered I had any authority to speak to him concerning you."

"He took the flower?" said Violet, faintly.

"Yes; he thrust it in his coat, with a cynical, mocking laugh. 'Tell her,' said, he, 'that I will keep her flower, but will have none of her love.' You would have me tell you," he added, hurriedly as Violet staggered slightly and flushed a hot crimson of shame and indignation.

"I did not give you any such message!" she burst forth, with a wail of wounded pride.

"Nor did I say a word which should call forth such an insult," replied the captain. "Do not think of it. He was mad at the time, I fully believe. Mad, raving mad! What could I say or od when he uttered that insult? I turned and left him. I could have felled him to the ground, but my mission was one of peace."

"And he said no more?" asked Violet, huskily.

"No more," said the captain. "I watched him as he went down the street and past the Inn. The men were coming out, and I feared that, perhaps, in his mad, ill-tempered state, he should be so indiscreet as to run against my man, Starling, for he was among the group. But Mr. Dodson passed on, and the men dispersed, Starling alone going in the direction of the cliff."

He paused, to let his words, slowly spoken, carry their full weight, and make their due impression, then continued:

"Then I came on home, but I could not find heart to see you. I determined to wait until you had gone to bed; you would be stronger in the morning to bear the insult."

CHAPTER XX.

The captain slept the sleep of the innocent and just.

He did not even dream of a white, mangled face lying on the jagged rocks.

In the morning he came down, dressed with his usual care, smiling and serene.

The breakfast threatened to go off as quietly and uneventfully as usual.

But suddenly the sound of many voices broke the monotony, and the captain, looking through the window, saw a small crowd approaching up the lane.

Presently, after the lapse of a few moments, the footman entered.

"You are wanted, sir," he said, addressing the captain.

(To be continued).

LORD CURZON A TIRELESS WORKER

HE IS A MAN OF MOST IMPOSING APPEARANCE.

Monumental Industry and Wonderful Driving Power—His Rule In India.

Two important announcements with regard to Lord Curzon were made on the same day this week: One was that he had been appointed a member of the War Council and leader in the House of Lords of the Lloyd George Government. The other was that he had become engaged to be married. He is a widower, and he will be 58 years old on the 11th of next month. His first wife, who died in 1906, after 11 years of married life, was the beautiful daughter of the late Mr. Levi Leiter, of Washington.

His bride to be is, like his first wife, an American. She is, moreover, a widow, being Mrs. Grace Duggan,

Lord Curzon.

widow of Alfred Duggan, of Buenos Aires, and daughter of the late Mr. Munro Hinde, formerly American Minister to Brazil. Lord Curzon has no present heir to his earldom. But (in the absence of any male heir being born to him) his eldest daughter Alfred from a painful spinal malady, but he never allowed his ill-health to interfere with his devotion to work.

Works Like a Demon.

For it is his industry—industry of the most effective kind—which is Lord Curzon's outstanding characteristic. It transcends even his ambition, even his ability, even his arrogance. On all with whom he has been brought in contact he has made the same impression—in the House of Commons, in the Foreign Office, in India, in the Cabinet—an impression of tireless industry which is almost stupefying. Particularly was this the case with him in India. No doubt the life of every Indian Viceroy must be one of ceaseless toil. But no Viceroy, in love of work and power of getting through it rapidly, has ever been his equal.

It is not too much to say of him that all his life long his interest in all kinds of political questions has been literally insatiable. Politics is with him a passion. And all through his life he has been closely in touch with history in the making. Yet, surprising as it must seem, in view of the vast number of political topics—ranging from the partition of Bengal to the Welsh disestablishment bill—over which his interest has ranged, the last charge which could ever be justly brought against Lord Curzon would be that of superficiality.

And not only does Lord Curzon work like a demon, but he makes others work like demons, too. Impatient of stupidity, he reserves his bitterest scorn for indolence. "If there is any work in him, I will undertake to get it out of him," he once grimly remarked of one of his subordinates who was supposed to have more aptly inherit his barony of Ravensdale, and his brother Alfred, his junior by one year, his viscounty of Scarsdale.

Lord Curzon is a man of most imposing appearance, and one who would attract attention anywhere. He is over six feet in height and finely proportioned, with a brisk and masterful walk characteristic of the man. But, in spite of what looks like a superb physique, his health has never been good. For many years he suffuse than liking for work. Combined with his monumental industry he possesses driving power not less exceptional. From early manhood he ruled himself with an iron hand. He trained himself to be absolutely methodical in everything he undertook. It is safe to say that no public man of his standing ever wrote so many letters with his own hand. "His papers," says one who knows him, "are always a miracle of orderliness. Some one has said that his capacity for work is inhuman, and certainly to unmethodical men he seems to toil with the unswerving certitude of a machine."

The Real Ruler.

I have often been struck with the erroneous idea that many people interested in India have formed of Lord Curzon as a ruler there. Those who want to know something of the real nature of his rule ought to read Lovat Fraser's "India Under Curzon and After." If they expect to find Curzon as Indian Viceroy an autocratic ruler, striving for the maintenance of "Imperial" pomp and power, and out of sympathy with the aspirations of the common people, they will find their expectations strangely falsified. Zealous for the welfare of his subordinates of the lowest class, ever ready to investigate and redress the grievances of the humblest, resolute to ensure justice to all India's teeming and toiling millions—that was Curzon in India. "We are here," he said once, "to give justice, and one single act of injustice in India is, in my opinion, a greater strain upon our rule than much larger errors of policy or judgment."

He had a genuine sympathy of the deepest kind with the patient, humble, silent millions" of India, and his labors on their behalf were unceasing. Those who delight to associate his rule in India mainly with the strife in which it closed are strangely oblivious of the fact that India had never previously known a rule so benevolent, so humane, and so progressive as his. The great series of reforms which he introduced into the land revenue policy of the government of India, the establishment of co-operative credit societies, the promotion of scientific agriculture, all testify to the sincerity of his declaration that the peasant has been in the background of every policy for which I have been responsible." It is by his work for the land and the people—for the Tory in England was the out-and-out reformer in India—that his rule in the East will be enduringly remembered.

FRANCE ENROLLING WOMEN

Many Are Now Replacing Men Near Firing Line.

A woman's committee presided over by Mme. Emile Boutroux, wife of the celebrated philosopher, has been organized to enroll women volunteers in the service of the country. It is appealing to all women to inscribe their names, with a statement of their aptitudes, and the time they will be able to devote to work in different categories when their services may be needed.

Enrolling offices will be opened soon and a comprehensive effort will be made to enlist all the women of France in the services of the nation.

French women are playing a vastly more important rule in the great war than a casual observer might imagine. The activities of the fair sex are not confined to Red Cross work and operating street cars and a few similar ones. They are creeping into every department of the nation, except, perhaps, into the actual firing line, although there have been cases where supposed "poilus" have proved to be young women masquerading as men.

In the hospitals the women are not only nurses, they are frequently doctors and surgeons, and very often dentists. Mme. Giraud Mangin is Aide Major of the second class at Verdun, and has remained there during all that nine months' battle. Mme. Thys Monod is a doctor in charge of a hospital in Verdun.

Of course, in all the departments—war, munitions, interior—there are thousands of women doing the work formerly done by men who are now in the army, but it is at the depots, or the barrack bases of the various army corps that the women are engaged in their most picturesque work.

Behind the lines, but not always safe from shell fire, the women act as camp cooks, bikers and waitresses and handle many regimental messes entirely. They peel potatoes and clean carrots and wash dishes and perform all the other duties that the soldier hates.

It is not permitted to estimate the number of women engaged directly helping the army, as the figures would indicate to the enemy the number of men thus released for the front, but the figure is very large and is growing daily.

If you bring up your boy in the way he should go, it won't be your fault if he takes some other path after he grows up.

PRACTICAL FARMING

Raising a Calf on Skim-Milk.

There is no getting away from the fact that whole milk is the ideal feed for young animals. It is rich in protein and ash, in fact every nutrient required to build up a strong, healthy body is contained in correct proportions. Whole-milk calves usually are fleshier and look smoother at weaning time than calves forced to subsist on milk from which the fat has been removed. Six months after weaning the difference is not so marked if the calves have been properly fed. Those fed on whole milk make most rapid gains at first, but it is at greater cost. In a trial at the Kansas Experiment Station the average daily gain for a number of calves fed skim-milk was 1.6 pounds at a cost of $2.26 per hundred pounds gain. Whole milk calves made an average gain of 1.8 pounds at a cost of $7.06 per hundred pounds of gain. At the present price of whole milk the cost is greater. These same calves were turned in the feeding lot after weaning and those fed skim-milk made an average daily gain of 2.1 pounds and required 439 pounds of concentrates to make 100 pounds gain. The calves raised on whole milk averaged 1.9 pounds per day, and required 470 pounds of gain. This is an argument in favor of raising calves on skim-milk except the fat. This ingredient can be substituted by various feeds. However, many feeders make a dismal failure of rearing calves, unless they have a liberal supply of whole milk. In most cases the fault is in the feeder, not the feed. No hard and fast rules of feeding can be given, as the success of raising calves depends a good deal upon the skill and judgment of the feeder. It has been demonstrated time and again that heifer calves carefully fed on skim-milk and some fat substitute develop into a large framed, heavy producing cows as do those reared on whole milk.

Minimum Cost For Feed.

Dairymen shipping cream have a splendid opportunity to raise calves at a minimum cost for feed, but there are certain requirements which must be met if the greatest success would be obtained. A calf should always be given milk of its own mother for a few days. The first milk is not normal, but is prepared by Nature to stimulate the calf's digestive organs. It pays to feed whole milk for the first two or three weeks at least, and then change gradually to skim-milk. The fatal mistake of changing too rapidly is oftentimes made. It must ever be kept in mind that whole milk is the natural feed and that the calf's stomach is so constituted that it can digest it readily. The digestive tract must undergo a change with the change of feed. Ten pounds or four or five quarts of new milk per day, fed in two feeds for a strong calf, and three for a weakling, is sufficient for a start. When changing to skim-milk best results have been obtained by substituting one pound at each feed until the calf is entirely on its new diet. At four weeks of age 12 pounds of skim-milk can be safely fed, and as the calf grows this should be gradually increased to 15 or 18 pounds; the latter amount is sufficient for a five-months-old calf.

Scours is the common ailment of the skim-milk-fed calf. This can largely be controlled by paying attention to the cleanliness and temperature of the milk. It should always be fed sweet and at a temperature as near that of blood heat as possible. Too many fail to realize that milk will cool several degrees from the time it is drawn until it comes from the separator, even under the most ideal conditions. Sometimes the milk is allowed to stand for some time before it is fed; cold milk chills the stomach so that the digestive processes are checked and disturbances are bound to follow. Cool milk, or failing to feed it at a constant temperature from day to day, is a direct cause of many unthrifty, skim-milk calves. Over feeding may cause trouble. It is not kindness to the calf to give it all it will drink, as a calf's appetite for milk is hard to satisfy. The scales should be used frequently, if not all the time, in order to be sure that the calf gets the proper amount. Pails cannot be kept sweet unless they are scalded regularly. The condition of some calf pails is enough to put the young animal off its feed. Sweet skim-milk in the right quantities, at uniform temperature, fed in clean pails at regular intervals, in conjunction with some concentrates to furnish fat, will produce thrifty calves, provided they are kept in a clean, well-ventilated stall or yard. The feeder must watch the young animals and rectify any disorders the moment they are noticed. Prevention of calf ailments is easier than effecting a cure.

To Replace Fat Removed.

Some feed must be given in conjunction with skim-milk to take the place of the fat removed. The nutritive ratio of whole milk is 1:4.4 and for skim-milk 1:2.1. This shows the latter to be richer in protein than the former and requires a carbonaceous food rather than one rich in protein to make a suitable ration. It is the heat and energy-producing factors that have been removed, and fat or carbohydrates are required to replace the fat removed from the milk. Whole oats have been used successfully; oat chop gives good results. A mixture of two parts ground corn and two parts crushed oats gives as good results as any grain that can be supplied. The calf can be allowed all it will eat of this mixture up to about 8 pounds, which should be the limit until it is weaned. It is not necessary nor advisable to feed high-priced nitrogenous feeds to skim-milk calves. A calf commences to pick at hay when quite young, and as it grows its first stomach or paunch develops and considerable roughage is required. Well cured clover or alfalfa hay is preferred for growing calves, and at five months of age about 5 pounds will be consumed daily. The manger or rack should be cleaned before each feeding, as leaving the hay to accumulate from day to day soon turns the calf against its feed. Pulped roots are relished by the youngsters and can safely be fed. Silage can also be fed in limited quantities; some calves are very fond of it. A calf requires water to drink besides skim-milk. Many dairymen find that it pays to have water accessible to the calf at all times. It requires salt as well as the grown animal.

The following ration should give fairly good results for a calf from three to six months of age. Skim-milk about 15 lbs. a mixture of two parts corn and one part oats, feeding 2.5 lbs. per day; clover or alfalfa hay, 4 or 5 lbs., and a couple of handfuls of pulped roots or silage. A thrifty calf should gain from 1.5 to 2 lbs. daily up to six months of age. To make the calf fat should not be the aim, but it is necessary to keep it vigorous and in a growing condition. Strong bone and muscle is required. At six months of age the calf should be ready for weaning, and 2 lbs. daily of a mixture of 75 lbs. corn chop and 25 lbs. oats or bran, together with all the clover hay the calf will eat should keep it in good growing condition. Good pasture without concentrates will keep it thrifty. From six to twelve months of age the gains will not be quite so rapid.

Good Food Necessary.

A calf born in the fall usually gets a better start in life than one born in the spring and at less cost. By spring it is large enough to turn on pasture with the rest of the stock. The spring calf will require very much the same treatment as outlined for the fall calf. To get the best results it must be kept in a paddock or stable throughout the summer where it has protection from the sun and flies. It is not advisable to turn it with the older stock. The first winter it will require some high-priced feed in the stable. The calf must be fed well and kept growing at all times. A poorly-fed calf will not make as good a cow as it would have, had it received proper attention. While badly stunted calves may recover somewhat from the effects, if well fed in later life, it is poor practice to try to raise calves on a limited amount of feed. The second year the heifer is able to rough it, and can be brought through the winter in good condition on a liberal supply of clover hay and silage or roots. The first year is the most critical time of the calf's life and the time which exerts the greatest influence on the size and capacity of the mature animal.—Farmer's Advocate.

THE CIGARETTE IN WAR.

Both French And English Soldiers Are Fond of Them.

Those among us who believe that the cigarette is one of those factors that lead a man to perdition, will say that their contention is verified after reading reports from the various battle fronts and viewing pictures from the trenches.

The one ruling desire of all, officers and men, is to obtain the baneful "fag." From the moment a man becomes a recruit until he is put away either under the earth or in the hospital, he is after cigarettes. He is depicted in the field hospital having a wound dressed, and the surgeon hands him a smoke to puff while the painful job is being done. While awaiting attacks from the enemy, or prior to an offensive movement, provided it is daytime, the troops, both French and English, are always smoking cigarettes.

Those privileged visitors to the front have always recognized the magic of the weed, and have taken a large stock in their auto and have found that a packet has brought cheer and grateful thanks from the recipient. The English and French always give the German prisoners cigarettes, and this is regarded by both giver and receiver as the best gift that can be bestowed.

Altogether, cigarette smoking appears to have more potency to boost the fighting man's comfort than anything else.

Courageous Tommy.

Mother—Tommy, if you eat any more of that pudding you will see the bogie man to-night.

Tommy (after a moment's reflection)—Well, give me some more, anyhow. I might as well set my mind at rest about that story, once 'ad for all.

Useful Recipes.

Curried Potatoes.—Slice a large onion and brown in two tablespoonfuls of butter. Cut up two cupfuls of (boiled) potatoes and put into a frying pan with the onion; dredge with curry powder, add half a cup of water, a little salt and a squeeze of lemon. Cook ten minutes and serve hot. Owing to potatoes being so dear now suggestions as to substitutes are welcome. One such to serve with meat is mashed hybrid turnips. These, properly cooked and mixed with a little oatmeal and a sprinkling of salt and pepper, will be found to answer the purpose very well.

Nursery Suet Pudding.—Roll the paste out thinly and line it three-quarters with sliced apples. Sprinkle with moist sugar and spice. Now roll the paste up; the part which has not been spread with apples will form a double cover. The pudding is then cooked in the usual way. Of course, all kinds of fruit can be used in this recipe. Plums must be stoned and dried fruit soaked, when excellent results are got.

Cocoanut Rocks.—Three ounces cocoanut, two ounces butter, two ounces sugar, six ounces flour, pinch of salt, one teaspoonful cream of tartar, one-half teaspoonful bicarbonate of soda; one egg, two tablespoonsful milk. Sift the flour, soda, cream of tartar and salt together, beat up the egg and add the milk. Cream the butter and sugar together, add a little flour and grated cocoanut, then a little egg and milk, and so on alternately, beating between each addition until all are well mixed. Put in little heaps on a buttered baking sheet and bake ten or fifteen minutes in a quick oven.

Roast Pork in Vinegar.—Remove the skin from a leg of pork and do not leave on it too much fat. Pour some vinegar into a large earthenware pot together with cloves and onions. Rub the pork well with a handful of salt and place in the vinegar, where it must remain three or four days and be frequently turned. Place the pork in the oven in the same vessel it has lain in and with the vinegar about it.

Lemon Biscuit.—One-half pound flour, pinch of salt, four ounces butter, lemon essence, one-half pound sugar, one egg. Rub the flour and salt through the sifter two or three times, rub in the butter with the tips of the fingers and add the flavoring and sugar. Mix in the egg and then make into little balls and dip in powdered sugar. Bake on a butter baking sheet until a good even brown.

Cornstarch Biscuit.—Three ounces flour, pinch of salt, one-half teaspoonful baking powder, three ounces cornstarch, three ounces butter, three ounces sugar, two eggs, ten drops of essence of vanilla.

Sift the flour, cornstarch, salt and baking powder together, cream the butter and sugar and then add the eggs, one by one, with a little of the flour beaten well in between each. Add the flavoring and the rest of the flour, beat well and put into small greased tins. Bake in a very quick oven for seven minutes.

Old-Fashioned Gingerbread.—One cup brown sugar, one cup syrup, one cup butter, one cup sour milk, one-half cup cornstarch, two and one-half cups flour, one teaspoon cloves, one teaspoon soda.

French Toast.—One loaf bread, two eggs, one cup milk, one teaspoon sugar. Cut into thin slices. Beat eggs well. Add milk and sugar. Dip bread in the mixture and fry in butter or dripping. Serve with syrup. The feast makes an excellent breakfast dish.

Sour milk raisin cake.—One pint sour milk, one cup sugar, one cup molasses, one cup shortening, one quart flour, one heaping teaspoonful soda, one teaspoonful cinnamon, one-half teaspoonful cloves, one-half nutmeg and two cups raisins, chopped. This will make two loaves.

Soft ginger cake.—One cup cooking molasses, four tablespoonfuls melted shortening, two cups flour, one teaspoonful soda and one-half teaspoonful ginger. Add one cup hot water.

Eggless Recipes.

Crabapple Butter.—Crabapple butter is slightly inferior to cider apple butter but as crabapples are nearly always abundant and cheap it makes a welcome substitute in some years. Wash the crabapples well, cut them up without peeling or coring them; place them in a granite kettle, add enough water almost to cover them and boil them slowly until they fall to pieces. Then press the crabapples through a granite colander. Add the pulp to the water in which the crabapples were cooked, and allow it to simmer until it is thick. Add enough sugar to sweeten the butter, and if desired a little spice. Continue the boiling, with constant stirring, until the butter is perfectly smooth and of the right consistency; or, if preferred, the cooking may be done in a stone crock in a slow oven.

Nut and Raisin Bread.—In bread mixer put two teaspoonfuls of salt, two tablespoonfuls of lard, three tablespoonfuls of molasses and one cupful each of scalded milk and boiling water. When lukewarm add one yeast cake dissolved in one-fourth cupful of lukewarm water, one cupful bread flour and about five cupfuls entire wheat flour, or enough to knead. Knead thoroughly, let rise until double in bulk (about three hours), and again knead, working in three fourths cupful each of walnut meats and raisins cut in halves. Put in buttered pans, let rise again until double in bulk, and bake one hour in a moderate oven.

Chocolate Cake.—One cup of sugar, one tablespoon butter, one cup sweet milk, one-half teaspoon soda dissolved in milk, one teaspoon baking powder, one and one-half cups flour, three tablespoons cocoa, one teaspoon vanilla. Mix thoroughly and bake in a hot oven for thirty minutes. For frosting and filling take one cup powdered sugar, moisten with warm water and flavor with vanilla.

Useful Hints.

It is wasteful to buy cakes of soap to be used in a washing machine.

After clothes are soaped and rubbed they should first be rinsed in hot water.

Potatoes for baking should always be well scrubbed.

Mock cherry pie can be made with cranberries and raisins.

Always save the bits of soap, they can be used in the shaker.

There is no light easier for the strained eyes than that of the kerosene lamp.

Fuchsias are strictly summer blooming. Their place in winter is in the cellar.

To renovate household brushes of any kind, put a teaspoonful of soda in a basin of hot water and swish the brushes up and down in it, then dry in hot sun.

Toast is much more delicate if the crusts are cut off. There is no waste in this, because the crusts can be dried and rolled or made into croutons.

Unless the chicken is young it should not be fried. Young chicken is known by the tender breastbone and the clean, yellow feet.

Be careful when buying a sirloin steak to select a cut that has little tallow with it. The fat weighs heavy and cannot be eaten.

To have dumplings light they should not be uncovered from the time they are put into the pot until they are dished up to serve.

Buttons instead of being sewed on lace or net should be tied on. Using a needle with a double thread, bring the ends through to the wrong side and tie them. If tied carefully, the thread can be easily untied.

PHOTOGRAPHY IN WARFARE.

Bulgars Carry Picture as a Sort of Safe Conduct.

Another use for photography in war has been found by the Serbians in connection with their prisoners. The Bulgars, with the remembrance of their own cruelties to the Serbs weighing on their minds, at first feared to surrender to the Serbian army, their impression being that the Serbs would not take prisoners.

Such as did give themselves up were, of course, treated as well by the Serbians as by any other section of the allied army, and to show other Bulgarians that they incurred no danger by surrendering, the Serbs had a photograph taken of long files of Bulgarian prisoners drawing rations, each man holding a loaf of bread and a bowl for soup.

Two thousand copies of this photograph were printed, and the Bulgarians who had surrendered were invited to write messages on them to their comrades saying how they had been received. The 2,000 picture postcards were then dropped by aeroplanes into the Bulgarian lines.

Since then surrenders have been much more frequent, and the men who give themselves up always try to bring with them a copy of the photograph, which they regard as a sort of safe conduct. One man said that he had paid fifteen francs for his, and that he carried it always with him in case he should be captured.—London Tit-Bits.

Why Rain Follows Thunder and Lightning.

Why does a heavy downpour of rain often follow a clap of thunder? Not, as is popularly believed, because the thunder jostles the cloud particles together into raindrops. In the violent turmoil between the positive and negative electricity in a thundercloud there will be places where the production of drops, by condensation, and their subsequent breaking up proceeds more rapidly than elsewhere. Hence in those places, there will be more drops to fall as rain, and also more electrification, the rainfall occurring about the same time as the flash. We have, then, starting toward the earth at the same time, light, sound, and raindrops. The light, travelling at a speed of about 186,000 miles per second, reaches us almost instantly. The sound travels far more slowly—about 1,090 feet per second—but the rain falls much slower still. Thus we observe, first, the lightning, then the thunder, and then rain.

SUPPLANTING HORSES.

Mules and Motors Principally Used for Transportation.

Captain Harry H. Holmes, polo manager at Meadow Brook in 1913, and more recently the manager of a trench mortar battery "somewhere in France," is in New York on leave of absence, following some terrible experiences at the front. He confirms the statement recently made by the New York Herald that the modern style of warfare, with its vastly increased use of artillery and its few opportunities for cavalry operations, is tending toward the partial elimination of horses.

"Cavalry cannot operate in a country cut up with trenches," he said the other day. "I have seen only one cavalry charge in a year, and that was so disastrous it is not likely to be repeated.

"The principal use for horses at the front is in moving the big guns, but these are often a month or two in the same place. Motor trucks do most of the transport work which formerly fell to the lot of the horse, and it is only in the ammunition columns that horses find constant work. Even there the mule is supplanting the horse. He has shown himself to be hardier and less likely to go sick or lame. But it takes six mules to do the work of one good four horse team. Of course, the mules weigh only about 900 pounds, while the horses will average 1,400, so the difference in their capacity to pull weight is more apparent than real.

"The transportation of ammunition is a tremendous undertaking nowadays. In our sector we kept 220 horses and mules busy hauling shells for sixteen guns. Except when a big push is on the horses and mules get pretty good care and treatment, and they last a long time.

"The French are using mules almost exclusively for transport work in the difficult mountainous region of the Vosges, but the habit of bringing had to be overcome before the mules were fit for service there. This was accomplished, so I am told, by a slight surgical operation on the nostril, which has given them the brayless mule."

THE NORTH SEA BLOCKADE.

Police Chiefs Mainly Royal Naval Reserve Men.

"The North Sea blockade centres chiefly in an area to the east and north of Scotland, stopping all trade to and from Norway, Sweden and Denmark. Month by month our police force grew till a mixed armada of a thousand ships parcelled out the sea in cruising networks," writes Walter G. Ford in the Windsor Magazine. "It was soon impossible for any vessel, great or small—steamer, sailer, or fisherman—to pass without sharp challenge and direct investigation.

"Patrolling squadrons are strategically placed in units which command every lane of traffic. They may be out of sight of each other, but are always within easy steaming distance. Say they are twenty miles apart and that each has 'eye-way' of fifteen miles to the horizon. This ensures that no blockade runner can pass between without being seen by one or both.

"Naval officers there are in the force, but only a sprinkling to direct and command. In the main our police chiefs are Royal Naval Reserve men, with splendid records in the merchant service. They are peculiarly fitted for blockade work, knowing these waters as the taxi-man does the London streets or the Grimsby trawler the shoals and banks where herring and halibut swarm. Our sea police are, moreover, accustomed to ships' manifests and papers. They scent a 'fake,' and woe to the skipper who tries tricks with these alert and silent sentinels of Britain's power.

"Quick, comprehensive, and judicial inspection is made of cargoes. Where fair doubt exists we are lenient and soon release the suspect. In the case of travelers—the North Sea is alive with these—the cargo can be examined at once. But it is impossible properly to inspect a big steamer with a large cargo in mid-ocean, especially in heavy weather. Contraband is often concealed in bales of hay, in casks and cases, in passengers' baggage, even in the mails of neutral nations.

"Blockade runners have been found with hollow masts and trick decks for smuggling petrol and rubber. Great sheets of copper have been detected far under water, clamped to the keel."

Intends to See.

He—Why do you refuse me when I say I can't live without you?

She—You have aroused my curiosity.

Envious.

Young Doctor—I haven't lost a patient since I hung out my shingle.

Second Ditto—I wish I had your luck. All mine get well.

The late Professor Lounsbury of Yale was a foe to the purist and pedant. On his summer holiday the professor gazed out across the lake one gray and sultry afternoon, and remarked: "It looks like rain." A pedant was seated in a rocking-chair near by. "What looks like rain, professor?" he chuckled. "Ha, ha! I've got you there. What looks like rain?" "Water." Professor Lounsbury answered coldly.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON JANUARY 14.

Lesson II.—John The Baptist and Jesus—John 1. 19-31. Golden Text John 1. 29.

Verse 19. We must distinguish two deputations, arranged in collusion, like that to Jesus in Mark 12. 13. Priests and Levites would be Sadducees, conservatives in religion, who could not believe that God had anything new to say to his people.

23. This absolute sinking of the personality in the message is characteristic of Scripture. More than half the books of the Old Testament are anonymous. The writer of this Gospel never mentions his own name. Of the Epistle to the Hebrews Origen says only God knows who wrote it. Nothing but the message mattered to these inspired men, lifted above desire for human fame. Isaiah—The great Prophecy (Isa. 40. 3) is in the book of Isaiah, but it was written five generations after Isaiah by another "Great Unknown." The way of the Lord was originally the highway along which the prophet foresaw the captive Israelites returning from Babylon: the fulfilment—as always in true prophecy—went far beyond the original idea.

24. Read And some Pharisees had been sent, with the margin, which, however, rather overdoes the effort to be literal. It is most unlikely that the priests and Levites would come as a deputation from the Pharisees.

25. Baptism implied that its subjects, though children of Israel, needed moral cleansing. For such a daring novelty very special warrant was demanded. Hence the Lord's own question to them in Mark 11. 30. Elijah—As foretold in Malachi (4. 5). The prophet—"Like unto" Moses, as promised in Deut. 18. 15-18.

26. With water—The implied contrast is not expressed till verse 33.

27. Latchet—The leather strap passing over the foot, to hold the sandal on. It was the work of the slaves to "take off" (so read in Matt. 3. 11) the guests' sandals as they entered the house; other slaves would then wash their feet. He of whom John thus spoke—and Jesus called John the greatest yet born—deigned to do the slave's work for his own disciples (John 13).

28. Bethany—Unknown. In later days the site was fixed by guesswork at Bethabarah (margin).

29. The Lamb—In Rev. 5. 6 the Lamb is figured with the emblems of omnipotence ("seven horns") and omniscience ("seven eyes"): we must not think of a sheep according to our associations, of helplessness and stupidity! He is Lamb as a Sacrifice (Gen. 22. 8, etc.). Taketh away—Compare the symbolism of the scapegoat.

30. Both this and verse 15 refer back to an earlier witness, of which Mark tells us (1. 7, 8). Before me—In rank: the Greek of the next before me (in time) is different. The margin there is wrong, we now know.

31. I knew him not—Best taken literally. John was brought up in the south, and the fact that Mary and Elisabeth were related (Luke 1. 36)—which incidentally makes it highly improbable that Mary was of the House of David—does not prove that their families met again. Ecclesiastical tradition, often embodied in art, is too late to count. Israel—As always, the name of privilege.

32. This is very characteristic of John's writing: the Synoptic Gospels had recorded the baptism of Jesus, and he need not tell the story. Just so he does not tell of the institution of the Lord's Supper. As a dove—Milton addresses the Spirit in his great opening words, "Dovelike satst brooding (Gen. 1. 2, margin) o'er the vast abyss." In the flood story, the dove symbolizes peace. Abode—This is the essence of the Manhood of Christ: imperfect men have the Spirit fitfully, and often "grieve" him—Jesus has him unchangingly.

34. The Synoptic Gospels very clearly show that Jesus kept the secret of his divine origin and Messiahship till the end of his ministry, even from the apostles. The discrepancy is explained by the fact that John is interpreting, and not merely reporting, the sayings he gives. He is not concerned with the chronological development: he thinks only of the permanent significance of what he relates.

War Eggs?

Breakfast on the Continent of Europe has gone its way in peace for many years with nothing more than coffee and rolls. Even in heavy-eating England a rasher of bacon and a bit of tea is quite all right, without eggs, for breakfast. Samuel Pepys seems to have gotten along without any breakfast, could do half a day's work without a bite. In fact, breakfast, as a regular meal, is a recent institution. It's the two or three soft-boiled eggs that are here objected to as particularly tautologic. One's enough and the second is mere absent-mindedness. There are a lot of little things that go to make up the high cost.

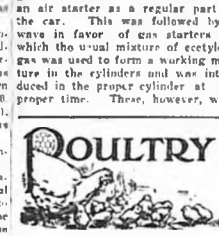
Gasoline Conserved.

The gasoline consumed in the United States this year has been estimated as equivalent to a stream six feet wide and a foot deep flowing at a speed of a mile an hour.

History of Self-Starter.

The perfection and rapid rise of the self starter is partly responsible for the present popularity of the automobile. It has made the gas car perfectly adapted to the use of the ladies and so has almost doubled the possible market.

One of the officials of the New York Show gives this history of starter development:



The spring starter was proposed as early as 1893, but no cars worth mentioning existed and no buyers were in sight. A three cylinder compressed air motor was advertised in the early part of the century, but again lack of buyers allowed it to die. Many devices began to be tried as the number of automobiles increased, and some of these were very curious. Revolvers for firing blank cartridges into the cylinders starting plugs with powder charges in them, hand pumps for forcing in the proper amount of explosive mixture, igniting cocks through which a big-headed match could be introduced and which contained means for igniting the match were among the things tried.

One genius used carbonic acid gas capsules, which can be bought in many places for carbonating beverages. From the medley of methods order began to come when one maker fitted an air starter as a regular part of the car. This was followed by a wave in favor of gas starters in which the usual mixture of acetylene gas was used to form a working mixture in the cylinders and was introduced in the proper cylinder at the proper time. These, however, were short lived. Finally the electric device began to come to the front. At first the battery was charged at the garage, but it was found to be lighter and more reliable if a charging dynamo was carried on the car in addition to the small electric motor used for turning the engine. This completed the development of the two-unit starting system, but the progress did not stop there. Attempts at simplification soon showed that one electrict machine could be made to serve as both motor and dynamo and a wave of single unit starters swept over the trade. But doing two jobs was rather difficult and sometimes swung the other way, and the two-unit outfit again seemed to be favored.

Inventors did not quit, however, and many improvements have been made in the various parts until it is a question as to which will be the final form or whether both will be used.

Farmers Buy Autos.

It is said that sixty per cent. of the automobiles made in America last year were sold to farmers. Roughly, a million cars costing eight hundred million dollars, were purchased by Canadian and American farmers in the automobile year ending the 31st, of July, 1916. Manufacturers estimate that about the same percentage of cars made in 1917 will go to the farms, and as the number of cars made is expected to show an increase of about 25 per cent. over the output of 1916, the money spent on this continent by farmers for motor cars in the automobile year of 1916-17 will come very close to a billion dollars.

Why Hens Don't Lay.

Why don't hens lay at this time of the year? They do, if their owner is on to his job.

It is about as natural for a hen to lay in the fall and winter as it is for roses to bloom at the same season.

But the expert poultryman nowadays with his modern methods of breeding, of feeding, of housing and of handling has his hens to lay 200 or more eggs per year and to lay a goodly number of these in the fall and winter.

Can an ordinary farmer or small poultry keeper get a good fall and winter yield of eggs? He can if he will have a properly built house—not meaning an expensive one, but a house that poultry use and live in and can't be kept out of. He can if he will feed the modern way or feed all grain in litter; feed beef-scrap, fish scraps or milk—animal protein—heavily; feed dry mashes, and perhaps wet mashes.

Questions like the above are now flooding the Pennsylvania Department of Agriculture and the replies are broadly like the above. The outstanding feature of most of these letters is the fact that these writers mistakenly believe that if they can learn what to feed their hens they must lay. That feed, good feed, or plenty of feed, will make hens lay is a great if popular fallacy.

The department wishes to especially emphasize that fecundity and persistency in laying are inherited factors and that usually, if a flock is to lay well it must be out of a flock ahead of it that has laid well. And that this is the factor that means the difference between hens not laying at all and laying well at this season.

Disease Affecting Chickens.

Thousands of chickens die annually of gapes, and it is very evident that fowl runs, continually rearing on the same ground, and sun-heated water from dirty troughs are all accountable for such outbreaks. It is caused by the presence in the windpipe of small red worms, as many as fifteen having been found in the windpipe of one chicken. The young birds are usually attacked when they are between three and eight weeks old. When first affected they make a slight coughing noise. As the disease gains ground they gasp, or "gape" for breath, so that the symptoms are easily recognized. Various remedies are suggested the object being to kill, or expel, the worms, without destroying the chickens. A simple way of treating gapes is, directly a chicken begins to sneeze, to puff tobacco smoke down the bird's throat. Give a second dose after a few hours' interval. An old remedy much used when young pheasants have the gapes, is to take a feather, dip it in turpentine, then opening the bird's mouth, pass it into the windpipe, giving it a sharp twist with the fingers. If the feather is then withdrawn, one or more of the worms will come away with it. The treatment is repeated till all the worms have been removed.

An excellent and sure cure is the old-fashioned one. It is as follows: Take a good-sized box, or turn up a coop on its back, put some slaked powdered lime in it, place the chickens, inside, and either shake the box or blow in it with a pair of bellows. The lime will rise in a cloud, and as the chickens gasp for breath they inhale it, and the worms are killed. The chickens must not be left in the box or coop too long, or the lime will kill them.

Two or three daily applications of lime in this way will free the chickens entirely from any further trouble.

Poultry News.

Clean and disinfect the chickens house frequently; never allow accumulations; change the bedding on the floor and material in the nests frequently.

Never make a quick move about horses, cows or other animals, and this applies also to chickens. Move carefully among the birds so as not to frighten them.

A pint of crude carbolic acid mixed with a gallon of kerosene makes an excellent spray for poultry houses.

KANGAROO A TREE CLIMBER.

Upsets the Family Tradition of "Safety First."

To the average mind a kangaroo is a sort of underalung animal having a pouch for carrying young 'uns, and a big, dangerous tail. But Mike, the latest orphan to find a home in the New York Zoological Park, has upset all the notions. In the first place, Mike hasn't any pouch worth mentioning, for he isn't that kind of a kangaroo. In the second place—if you get what I mean—his tail isn't at all dangerous, for the keeper has already taught him that a tail is only meant for wagging purposes.

There's only one thing that Mike insists upon retaining in the repertoire which he brought from Australia, and that is a strongly developed penchant for tree climbing. Now, in the best of kangaroo families tree climbing simply isn't done, but Mike simply can't resist the temptation. In Australia he won the amateur and professional tree climbing championship for three years, and then came to this country because he heard there were taller trees here.

The keeper explains this little idiosyncrasy of his pet by saying that in Australia Mike belonged to a private family that kept a fox terrier, and it was to escape the dog that Mike learned to dig his toes into the bark and go up a tree.

FRENCH FAT.

One of the Great Discoveries of the War.

To all of us who realize vividly the hardships to which our men are exposed in the trenches it is pleasant to hear (Sir W. Robertson Nicoll writes) that one of the discoveries of the war is the efficacy of trench grease. It appears that when the feet and legs are well rubbed with the grease that is liberally supplied to the men the cold and damp are robbed of a good deal of their terror. A young soldier who has had 15 months in the trenches, and is at the present moment on his way back to them, tells that on one occasion, on his way to his trench near Festubert, he got bogged in a swamp, and had to be pulled out by four of his comrades, who succeeded in extricating him, but at the expense of leaving his rubbers in the mud. As a result he had to put in four days in the wet trenches in his stockings. Thanks, however, to trench grease he was able to keep himself tolerably warm, and suffered no evil effects from the exposure.

EDEN GROVE

Pte Dan Desmond was home on last leave over Sunday. The 118th expect soon to go overseas. Dan has been in Kitchener long enough to be able to tell the Kaiser in his own language where to get off at.

Mr and Mrs McKeeman called on Paisley friends Wednesday evening.

The Grand Trunk presented Mr Herb Pearson and Sunny Jim each with an annual pass over the entire system in recognition of their long and faithful service Sunny will have to get married now, as the pass is no good for two

The residents of the village were greatly shocked and grieved Friday morning upon learning of the sudden death of Erma Loreen, the youngest daughter, aged 18 months, of Mr and Mrs Angus Hue, who had peacefully passed away Thursday evening. The child had been as well as usual up to the afternoon when she became ill Dr Bricker was called, and all that human skill could do was of no avail. On 9 30 dear little Erma fell asleep to awake in a better world. The deceased was an exceptionally bright child for her age, and was a general favorite with all who knew her. The sorrowing parents and sisters have the sincere sympathy of their friends in their sad hour of bereavement. The funeral took place on Saturday afternoon and was largely attended. Rev W Allmack officiated at the house and at the burial

At the annual school board meeting Mr Kerry retired after serving his term faithfully, and Mr Robert Alexander was elected trustee for the coming term.

Mr and Mrs Robert Gallinger, of Hanover, were the guests of Mrs Alfred Stewart, Chicken Ave, for New Year's.

Miss Mewhinney, graduate nurse of Detroit, was in town a few days last week.

Epworth League Thursday evening. Miss Clara Stinson, president of the League, will handle the topic. We forget the title, but come out and you will hear it.

Mrs Todd and family are visiting at her home in Paris for a few weeks

No, Ellis Jane, [illegible] sorry. The G T R hasn't cut [illegible] train off this line yet.

Mr Alex Maxwell, from near Walkerton, called on friends in town Saturday.

It was pretty cool to sit out on the back porch on Sunday night and wait for the eclipse of the moun, but guess some people saw it alright.

The following were the guests of Mr and Mrs Desmond at the Simcoe House over Sunday: Pte Desmond of London, Mrs Scanlon and two daughters and Mrs D Connors of Walkerton, and Miss Florence Connely of Toronto.

Senator Bailey expects to leave for Ottawa on Monday next.

Mr David Thompson, of Paisley, called on friends in the Grove Tuesday.

After all those good resolutions we expected to see the church filled on Sunday, but it wasn't.

PINKERTON

At the weekly meeting of the Red Cross Society here last Thursday an event of interest was the presentation of $105 55 to the society by the members of S S No 7 Greenock. This amount was realized at a box social given on the 8th of Dec, at which Miss McCurdy, the teacher, with the assistance of others, presented a very enjoyable program.

That the Christmas boxes sent to the boys overseas were much appreciated was evidenced by the letters which have been coming in to the secretary of the Red Cross. These were all read at the meeting last week. The boys have lost none of their old time appreciation for homemade cookery, and the ladies decided to send them boxes of "eats" frequently.

The annual oyster supper held by the local lodge of the C O F on Tuesday evening last was the usual success. Mr J B Campbell, of Chesley, occupied the chair.

Mr B Donnelly went to Toronto on Saturday on business.

Miss Merrils and Masters Frank and Clare Donnelly, Mr Jas Gale, Mr Russel Birrell with his friends Messrs Leslie and Kenneth Kilburn, all returned to Toronto this week, after spending the holidays at their respective homes here.

Mrs Elliott and daughter Miss Grace returned to their home here on Saturday. They spent the holidays in Molesworth.

GLAMIS

A good many of our people around the burg are suffering from bad colds at present.

The ladies of St Paul's Guild held their monthly meeting at Mr Thos Gamble's on Wednesday of last week.

Miss Minnie Howson, who was visiting friends in Paisley, returned on Friday last.

Miss Davidson, of Roseaville, is the guest of Miss Jennie McKeeman.

W H McNalley are having more than their share of trouble lately. Their son John took suddenly sick on Thursday last with pneumonia, and is in a critical condition.

Clyde McKeeman has been unable to return to London on account of suffering from lagrippe.

Mrs Jackson has gone to the 2nd of Bruce to be the guest of Mrs Wm Gilchrist for some time.

NARVA

Mrs Robt Keyes' many friends will be pleased to hear that she is recovering from her recent illness

Mr Hocking, our teacher, has resumed his duties after spending the holidays at his home in Tavistock.

Mr Jas Cameron, of Walkerton, called on friends in the burg.

Nathaniel Fitzsimmons has enlisted in the Royal Naval Corps, and left for England where he will train His many friends wish him a safe return.

Miss Alexia Moffatt returned to her school on Wednesday.

TENTH CON BRUCE

Mr Ira Vennard, of Underwood, has been engaged with R J Caldwell for the past week.

We are pleased to notice that Mr Neil McDonald, jr, is home from Walkerton hospital, where he had undergone an operation on his tonsils.

Mr S Haney has been in Kilsyth for the past week.

Mr [illegible] Hue is returning this week to the west after spending a short holiday under the parental roof.

Mr Alex McDonald is at time of writing under the weather with an attack of la grippe.

Mr G R Brown spent Sunday with friends in Kilsyth.

Taking as his text the first two verses of the 121st Psalm, Rev Mr Beachborough, of Port Elgin, preached a very interesting and instructive sermon last Sabbath to the congregation in North Bruce Baptist church. The ordinance of the Lord's Supper was administered at the close of the service.

Mr Bolton, of Dolton village, was a guest at the home of Mr K Annese for the week end.

If our Canadian winter behaves as well for the rest of the season as it has for the past two we will have no cause for complaint. With an abundance of snow hay and a fair amount of straw the stock should come through in good shape for the grass. Very few farmers are feeding heavy rations on account of the scarcity of grain. Hogs are also scarce in this locality, as the farmers have not got the grain to put them on the market, and it is almost impossible to procure it at any price.

TWELFTH CON BRUCE

Mrs Alex McGillivray and daughters Alma and Olive, of Port Elgin, spent Christmas week at their home here.

Mr Lewis McGillivray spent Christmas visiting friends in Toronto.

Mr Donald McArthur sold two of his fine stocks of cows last to Mr Chas Cottrill, of Paisley. Mr Cottrill is now taking advantage of the good roads to get it hauled home.

Mr and Mrs Jas Scott and daughter Hazel visited at the home of his brother, Mr George Scott, last week.

Messrs Eli and Ed Barnes are employed with Jas Turnbull cutting wood.

Mr and Mrs Colin McGillivray spent Christmas with their daughter, Mrs D A Campbell, Bentinck

Mr Wm Morrison is getting his implements and such like moved to his future home in Paisley.

Miss Edna Cumming has commenced school duties again in Paisley

Mr Jas Archer spent Christmas week with his sister, Mr Chas Greenside, Mount Forest.

Mr Russell Cumming spent Christmas under the parental roof

Mr Wm Morrison sold his saleable team of grey horses to Mr Jack McArthur for the sum of $400.

FOR FLETCHER'S
CASTORIA

Is the Flag Flying on Our Public Schools?

Editor Paisley ADVOCATE—Under the above heading I desire to say a few words. While on a visit during Christmas holidays in Brant Township, near Dunkeld, I noticed the school flag was unfurled to the breeze all the time I was there. Upon inquiring why the flag was flying I was told that a public-spirited ratepayer had approached the trustees and others of the school and suggested, nay insisted, that the flag should be kept flying even at blower expense during the war. Now, Mr Editor, upon how many schools in this township or in this county is the flag kept flying? Surely they would be as well worn out by the winds of heaven as lying in some musty room. The British flag is an inspiration to all free peoples the world around, the champion of freedom and liberty. It to gaze on it excites and stimulates the senses then it is a silent recruiting agent which we should call to our aid the beginning of this year 1917, the year of victory. By all means keep the flag flying during the period of the war. I will conclude by asking a question of all school trustees in the county of Bruce and the township of Bruce in particular: Have you a flag? Is it being flown? If not, why not?

ROBT PARKER, R R No 3, Tiverton

CASTORIA

The Canny Scot

There had been a special preacher at the village kirk, and he had delivered a powerful sermon on behalf of charity.

As the congregation dispersed two old farmers walked off home side by side.

"Weel, weel," said one slowly, "it was a graun' discourse—a graun' discourse!"

"Ay, was it," replied the other sadly, "it's a fine preacher. Mon, he's got a the siller ah had in me pocket. It's terrible expensive tae gang tae hear a preacher like thon."

"Deed an' a', it is!" agreed the first old farmer. "But ah've heerd him afore, an e'er I set oot this mornn for the kirk, ah took a' the money oot o' mah Sunda breeks."

SUCCESS OF A NEW REMEDY FOR BACKACHE, KIDNEYS, RHEUMATISM.

Dear Mr. Editor—I suffered for years with backache. Last March I tried "Anuric" and have used this new kidney medicine recently discovered by Dr. Pierce, and it was wonderful the way it eased the pain and gave me relief in such a short time. I have tried several medicines, but "Anuric" is the only one that gave satisfaction. I feel it my duty to recommend "Anuric Tablets" to any one who suffers as I did.

(Signed) MRS. MARGARET E. SNIDER.

NOTE: Folks in town and adjoining counties are delighted with the results they have obtained by using "ANURIC," the newest discovery of Dr. Pierce, who is head of the INVALIDS' HOTEL and SURGICAL INSTITUTE, in Buffalo, N. Y. Those who started the day with a backache, stiff legs, sore and muscles, and an aching head, soon cut out before the day began because they were in and out of bed half a dozen times at night) are appreciating the perfect rest, comfort and new strength they obtained from Dr. Pierce's Anuric Tablets. To prove that this is a certain uric acid solvent and conquers headache, kidney and bladder diseases and rheumatism, if you've never used the "Anuric," cut this out and send ten cents to Doctor Pierce for a large sample package. This will prove to you that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid—and the most perfect kidney and bladder corrector. If you are a sufferer, go to your best druggist and ask for a 50-cent box of "Anuric." You run no risk for Dr. Pierce's good name stands behind this wonderful new discovery as it has for the past half century for his "Golden Medical Discovery," a general tonic made from roots and contains glycerine which makes the blood pure, his "Favorite Prescription" for weak women and "Pleasant Pellets" for liver ills.

Your Winter's Entertainment

WHEN you rely on the New Edison Diamond Amberola for your winter's entertainment, you are not confined to Grand Opera Singers or Tango Dancing.

For instance; there are more than seventy Quartette Records; from the frivolous "Pussy Cat Rag" and tender melodies like "Old Black Joe" to the magnificent quartette from "Rigoletto," the "Gloria" from Mozart's Twelfth Mass and beautiful sacred hymns as "Jesus, Lover of My Soul" and "Abide With Me."

The NEW EDISON DIAMOND AMBEROLA

If you like music that thrills—that makes you *feel* as well as hear—just come in and let us play some of the rousing selections made expressly for the Edison Diamond Amberola by the British Male Quartette—Knickerbocker Quartette—and Metropolitan Quartette.

Then, you'll be able to examine the Edison for yourself—the diamond reproducing point, unbreakable and long playing records, superior motors and construction, concealed horns, and cabinets made in true period styles, in perfect harmony with the finest furniture.

The People's Popular Store

GIGANTIC SALE

of $25,000 worth of choice, well bought General Merchandise,

commencing

Wednesday, Jan. 17th

at 9 a.m.

For 10 Days Only

Owing to the conditions existing in the world for the last two and a half years, we have been contracting for goods long in advance of requirements and now find our stock too large in many departments and have decided to give the people of this county extra inducements in the way of special cut prices to lay in a stock of goons. Even if not needed for a year or so, it will be good buying. If the war should end soon, it will be many months before conditions become normal.

See large bills for particulars of the great meney-saving sale. All goods sold at cut prices must be spot cash or farm produce at cash prices. Bring your boys and girls girls out and get fitted in Coats, Suits, Shoes, etc. Heavy goods not satisfactory must be exchanged during Sale, as we cannot sell goods that are in the country.

CARD OF THANKS

The undersigned desires to thank the people of Paisley and other friends for the great kindness and sympathy extended to them in their recent bereavement.

Hendle Vance and Family.

—Save yourself some money by going into Spofford's store this week.

—Miss Bessie Dryden arrived home on Friday from Duluth, to visit her mother

—Mr Wm McGrath, of New Ontario, was here last week visiting his cousin, Mrs J Trelford.

—Mr Laurence Hopper, of the Standard Bank staff at Victoria Harbor, was home last week on vacation.

—Mr and Mrs John Peacock, of Killarney, Man, are visiting his mother and friends at Mount Hope.

—Oddfellows —A full attendance of members of Ahiram Lodge is requested for next Tuesday evening.

—All 1916 accounts must be paid on or before the 20th of this month as we need the money. L C. Spofford.

— Mrs Andrew Watson, of Hartney, Man, is visiting at the home of her sister, Mrs John Hutchart, Eden Grove.

—Mrs John A Logie will receive next Wednesday (Jan 24th), for the first time since coming to Paisley, afternoon and evening.

—We were misinformed last week in regard to the injury sustained by our aged citizen, Mr Jas Hay. The doctor, when called, found the hip was fractured.

—Mr and Mrs White, of Owen Sound, are visitors at the home of the latter's brothers, Messrs Harry and Geo Jackson, Greenock.

Women's Patriotic League

A meeting of the Women's Patriotic League will be held on Friday, Jan 19 h, at 3 o'clock, in Putnam's hall.

Recruiting for the Navy

Lieut McLeod, of Toronto, was in town on Thursday for a few hours, endeavoring to create an interest in recruiting for the navy.

Victoria Tea

The first of a series of house entertainments that are to be given in aid of the Bruce Country Hospital was held at the home of Mrs. A. Sinclair on Tuesday afternoon of last week. This was a "Victoria Tea," and was a most successful affair, both socially and financially. The proceeds amounted to $18.

I.O.O.F. Officers

The following officers of Ahiram Lodge were installed at the regular meeting on Tuesday evening by Bro F J Koepke, of Southampton: J P G, B A Lyon; N G, J M Harper; V G, G Hepburn; R S, W R Barnett; P S, T Muir; Treas, P C Kennedy; In G, Dwight Potts; War, W H Davison; Con, W McKelvey; V G, W T Harper; R S S, J B McKee; L S S, J G McKay; R S N G, P Purdy; L S N G, D Parrock; R S V G, N McArthur; L S V G, J Pace; Chap, J T Richardson.

A Woman Director

Miss Miller has been appointed a member of the Public Library Board, a post she is eminently qualified to fill. In numerous municipalities the ladies are beginning to take a place in conducting public affairs, and as there are in our little town quite a number who are capable and willing to exercise their right to the franchise by taking a hand in managing our community affairs, it is not unlikely that in the near future there will be more of the mesdames or misses occupying seats on the executive boards which hitherto only men have been chosen to fill.

The Late Mrs Fortune

The sudden death of Mrs Evelyn Fortune of Vesta, on Dec. 30th, came as a shock to her family and many friends. Although not in her usual health for the past year or so, at the Christmas home gathering she was bright and cheerful, but sank rapidly on the following days until Friday night at midnight when her spirit passed peacefully away to the realm of the great beyond. The funeral on the following Tuesday was attended by a long concourse of her old friends and neighbors. In the absence of her pastor, the Rev. Dr. McTavish of Erskine St. Church, Toronto, conducted the services at the home. She is survived by two brothers, Rev. C. Barltrop of Toronto, and Henry G. of Hanover now in Paisley and four sisters; Mrs. D O. Campbell of North Bay; Mrs. F. W. Crosle and Mrs. (Dr.) Campbell of Hepworth, also Miss Emma at home. She leaves two sons and six daughters to mourn her loss: Albert at Vesta, George at Weston, Mrs McRorie and Mrs McCaw of Manitoba; Mrs Mac McMillan, of Paisley; Mrs Norkus, of Toronto; Mrs H Rudolph, of Weston; Miss Edith, West Toronto. Mrs Fortune was the second daughter of Mr C R Barltrop, late of Hanover, and was married in October, 1871, to Mr. John Fortune of Vesta. She was gentle of spirit, a kind and true friend, an indulgent mother, a faithful wife and a sincere Christian. The sad death of her young son John in 1907 and of her husband a year later were severe shocks to her. She died surrounded by many members of her family, deeply regretted and sincerely mourned.

F. CARTER & SON

Goods Delivered Both 'Phones

From Bramshott Camp

Corp Flo Hepburn, of the 170th Batt, writing on Dec 24th to his mother, said that a special dinner was being prepared for the soldiers. "I was up to see the boys of the 160th this morning, and was surprised to find the huts decorated and everything fixed up fine. I didn't know at first whether I was in a soldier's hut or somebody's parlor. So the Boys here will be spending a very nice Christmas under the circumstances. Old Fritz is getting tired of fighting now. I was talking to a young chap who had just come across from France to be decorated by the King with the military cross, and he was telling us that Fritz was getting back all and more than he was able to give when the war began. Perhaps you will think me foolish for saying it, but I hope that the war goes on for a while yet, so that the boys can give them more than they want. We may be training in mud, sleeping on boards and eating anything at all, but the happiest and best boys in the world are in the army to day."

Paisley Soldier at Oban, Scotland

The Gaelic tongued khaki-clothed visitor referred to in the following item from the Oban Times is a son of Mr Neil McArthur, Flora Road north, and is with the 79th Grey Battalion in England: "A Canadian soldier visitor to Oban this week was Private John MacArthur, who has crossed the Atlantic with one of the infantry battalions from the Dominion to fight for King and Empire. McArthur's grandparents on both sides were natives of Colonsay, and after being only three weeks in this country he obtained leave in order to visit the land of his forebears. He travelled to Oban from London, and though in the short time at his disposal he could not go to Colonsay, he was much gratified to see something of the Highland countryside, the beauties of which he was not slow to admire. Though born in Paisley, Ontario, Private MacArthur speaks fluent Gaelic—indeed he knew no English when he went to school in Canada. Like all descendants of Highland settlers abroad, this gallant young Canadian regards the land of his fathers with warm affection and pride".

The Late Mrs Vance

Mary Jane Osborne, beloved wife of Mr Hindle Vance, of Paisley, passed away at her home on Cambridge st. on Jan 8th, after being ill only from the previous day. Her sudden and unexpected death could not be explained until a post mortem examination was held by the doctors when it was found to be due to an internal cancerous growth, the bursting of a cyst being the immediate cause. The deceased was a daughter of the late Albert Osborne of Greenock. She was born in Halton county and came up to Greenock in 1868. She was married to Mr Vance in 1870. Besides her sorrowing husband she is survived by a family of four sons and two daughters—Samuel, John and Alexander in Bruce Tp; Ernest at home; Mrs Geo Smith, 16th con Greenock; Mrs Geo Bird of Port Elgin. There are also four brothers living—Albert Osborne, Port Elgin; Thos. and James Osborne, at Front Creek, and Chas. Osborne, of Greenock. Mrs Vance was a kindly and friendly person well liked by neighbors and friends during her long residence in this locality. The husband and family have the sympathy of all in their bereavement. The funeral took place on Wednesday afternoon to Purdy's cemetery, the services being conducted by Rev Mr Crighton, of the Methodist church.

Assessor and Collector Wanted, Elderslie Tp

APPLICATIONS will be received by the undersigned up till 4 o'clock on Monday, Feb 5th, for the office of assessor and collector for 1917. R C PEARCE, Tp Clerk, R R No 2, Paisley.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XX.—(Cont'd).

"Very well," said the captain, airily. "I will come out."

After a few minutes, the captain re-entered.

His face was very grave, almost solemn.

Mrs. Mildmay, looking at it, felt a vague alarm.

"What is the matter?" she asked.

"Oh—not much," hesitated the captain, glancing at Violet. "An accident has happened."

"An accident?" repeated Violet, looking up with her white face. "To whom?"

"To my man, Starling," he said, gravely. "He has fallen over the cliffs."

"Fallen over the cliffs!" echoed Mrs. Mildmay. "How dreadful!"

"Is it not?" he exclaimed. "Terrible! Poor fellow! I saw him last night," and here he glanced at Violet.

"And he has fallen over!" exclaimed Mrs. Mildmay. "And where did they find him?"

"That I have scarcely learned," said the captain. "It seems that they have taken the body to the coastguard station, and that they require me to identify it."

"You will go at once?" said Mrs. Mildmay.

"At once," he said, and rang the bell for his hat.

Violet sat quite alone, her head leaning upon her hand.

The captain gravely sipped his coffee until his hat came; then he put it on, and prepared to accompany the men.

"There is great excitement," he said. "This sort of men rush to a conclusion directly."

"What conclusion have they rushed to?" asked Mrs. Mildmay.

"They think he met his death by foul play," replied the captain. "But," he added, quickly, "that is only ignorant fishermen's supposition. I will go down to the coastguard station and see him," and he left the room.

Outside the house was a small knot of men.

The captain went out to them, and touched his hat.

"Which is the nearest way?" he asked.

A dozen voices answered him; and, thus guided and accompanied, he set off.

In silence, followed by the crowd, he made his way to the coastguard station.

The door was closed, and another small crowd surrounded them.

The captain knocked, and a coastguardian opened the door, admitted him, and closed it upon the crowd.

Upon the table lay stretched out the mangled form of the escaped convict, Jem Starling.

The captain approached, and uncovered his head.

"Dreadful!" he said, turning away. "Dreadful!"

"You recognize him?" asked the coastguard.

"Oh, yes," replied the captain. "It is Starling, my old servant. I recognized him at once.

The coastguard nodded.

"Where did you find him?" asked the captain, gravely.

"In the cliff—about a quarter of a mile before you come to the village. Ben Bolt found him."

"Where is Ben Bolt?" asked the captain.

The coastguard opened a side door, and called the man by name.

A short, weather-beaten figure entered, and, seeing the captain, touched his hat.

"The captain wants to know where you found this unfortunate body, Ben."

"On the rocks below the cliff," replied the man.

"Ah," said the captain, "just where the path is narrowest. The poor fellow fell over, no doubt. I saw him last night, and he was very intoxicated."

The two coastguards exchanged glances.

"What course do you intend taking?" asked the captain.

"We've telegraphed to the inspector of police at Tenby," said the coastguard. "He'll be over here directly, and we can tell him what we know, and give the things we've found."

"What things?" inquired the captain.

"Fetch 'em here, Ben," said the man, and Ben Bolt, touching his hat, went to a cupboard, from which he brought a light felt hat and a withered lily.

"There!" said the captain. "This is his hat, is it not?"

"No," said Ben Bolt; "it hean't, and everybody knows it. There be his hat," and he pointed to the hat which lay beside the body. "There be his hat, which he allus used to wear. This 'un was found near him—close beside him, as you may say, just as if it had fell off with him."

"And the flower?" asked the captain.

"Was tight in his hand—tight as if a vise held it," replied Ben Bolt.

"Let me see the hat," said the captain.

The coastguard handed the hat, and the captain examined it.

"I have seen this hat before," he said, looking at it with a puzzled air. "I am sure I have seen it before. Ah!" he exclaimed, suddenly.

"What's the matter?" inquired the coastguard.

"N—nothing," said the captain, who seemed visibly affected.

"I know what's took you so sudden like," said the coastguard. "You caught sight o' these two letters," and he turned up the hat and pointed to "L.D.," which were marked in the inside brim.

The captain nodded gravely.

"I confess it," he said. "I did see them."

And he turned to leave the station.

Presently he turned back again, suddenly.

"Has Mr. Leicester Dodson been to identify the body?" he asked.

The two men looked at each other.

"No, he haven't," said the coastguard.

And the captain, after a moment's pause, left the station, and walked down the cliffs, with the small crowd at his heels again.

Very slowly he walked home.

When he came to the lawn wicket, he hesitated a moment, and turned back again.

He ascended the path leading to the Cedars, and rang the bell at the lodge.

The lodge-keeper came out to him.

"Is Mr. Dodson at home?" he asked.

"I believe he be, sir," said the man, opening the gate.

The captain passed through, and reached the house.

A footman ushered him into the drawing-room.

"Will you tell Mr. Dodson I wish to see him?" he asked. "And, if you see Mr. Leicester, say that I am here," he added.

The man bowed, and left the room.

Presently, Mrs. Dodson entered.

"Oh, good-morning, captain," she said, holding out her hand. "Neither Mr. Dodson nor my son is at home. Mr. Dodson has gone to London, with Mr. Lennox, and Leicester I have not seen yet."

"Oh, it is of no consequence," said the captain. "I stepped up to tell them of an accident which has occurred in the village."

"An accident? I am sorry for that! What is it?"

"A man fell over the cliff," said the captain.

"One of the fishermen?" asked Mrs. Dodson.

"No," said the captain, rising, and he told her who it was.

She looked very much shocked, but certainly displayed no extraordinary feminine alarm; and the captain, being convinced that neither Mr. Dodson nor Leicester was at home, took his leave.

When he entered the breakfast-room at the Park, he did not notice, or pretended that he did not notice, Violet, who was sitting at the window, half hidden by the curtain; but, advancing to Mrs. Mildmay, he said, in a tone of grave concern:

"It is as I feared, my dear madam. The man is Starling, my late valet."

"Dear me!" said Mrs. Mildmay.

"And he was found lying on the rocks below the cliffs. He had suddenly fallen over, or been thrown over."

"Thrown over!" repeated Mrs. Mildmay, with a look of horror. "Oh, who could be guilty of such a horrible crime?"

"I do not know—I cannot say," said the captain, who seemed much agitated. "Has Mr. Leicester Dodson been here this morning?"

"No," said Mrs. Mildmay. "Did you expect him?"

"Oh, no," said the captain. "I should like to see him; indeed, I went up to the Cedars, hoping to see him, but I could not find either him or Mr. Dodson at home."

"Why did you want to see him?" asked the simple lady.

"I should have liked him to see the body, and to ask him a few questions," said the captain, who knew that the white-muslined figure in the window seat was listening attentively.

"But why?" asked Mrs. Mildmay. "You identified the poor fellow sufficiently, I should think, and what questions could you have to ask?"

The captain drew nearer, with an expression of troubled perplexity.

Suddenly he laid his hand upon Mrs. Mildmay's arm, and, with a grave look, said:

"I had better tell you. I had better tell you, so that you may be on your guard, and keep the news from Violet. I have seen the man, and something else—a hat which was found lying beside him."

Mrs. Mildmay glanced at the window, but the captain did not seem to notice.

"The hat was Leicester Dodson's—I knew it by the initials marked inside it—and the flower was one which I gave him late last night."

Mrs. Mildmay uttered a cry of horror, and it was echoed by a voice behind the curtain.

The next moment Violet confronted him.

"What!" she breather, her eyes distended and her face white.

"You here!" exclaimed the captain, in a tone of self-reproach. "Nothing, my dear young lady!"

"You say his hat and the flower were lying beside the dead man?" she breathed. "What do you mean? What do they all mean? They do not say he killed him," and, with a faint cry, she fell back.

The captain caught her, with a cry of alarm.

Mrs. Mildmay rushed to the bell.

The door opened, and the footman appeared.

"Did you ring, ma'am? Mr. Thaxton has arrived."

At his name, Violet seemed relieved. She drew herself upright from the captain's arms, and, pushing her hair from her white forehead, said, with unnatural calm:

"Mr. Thaxton, the lawyer? Show him in!"

There entered a short, wiry, old gentleman, with a pleasant, but shrewd, face, crowned by smoothly parted white hair.

It was Mr. Thaxton, the lawyer. He looked from one to the other, with inquiring and acute attention.

Mrs. Mildmay came forward, and held out her hand.

"Oh, Mr. Thaxton," she exclaimed, with agitated, earnestness ,"I am so glad you have come!"

"So am I, if I am needed," said Mr. Thaxton, bowing over her hand and glancing at the captain.

"This is Captain Murpoint."

The captain bowed, but, as he was pouring some eau de cologne upon Violet's handkerchief he could not shake hands.

"Something dreadful has happened," continued Mrs Mildmay, hurriedly; "we have only just heard of it; we did not know that Violet was in the room, and—and—oh, dear, oh dear!"

And the simple, good-hearted lady burst into tears.

Violet rose, calm and terribly quiet.

"Do not cry, aunt," she said. "Mr. Thaxton, I am glad you have come; some terrible accident has happened."

Then she turned to the captain, and, with a gesture almost of command, said:

"Will you tell Mr. Thaxton?"

Mr. Thaxton took her hand.

"Wait a while," he said. "You distress yourself, Miss Violet, perhaps without adequate cause. What has happened? Come, come!"

(To be continued).

French Poilu Ready for Winter Campaign.

This typical "poilu" as the French private is known among his countrymen, is shown in full winter equipment. The photograph was made on the Verdun front where thousands and thousands of this type are battling with the Germans despite the inclement weather.

GIGANTIC ORDERS.

Russia Takes Eleven Hundred Miles of Khaki for Uniforms.

Russia recently placed an order with the manufacturers of the West Riding for two million yards, or over eleven hundred miles, of khaki cloth for uniforms. The goods are to be delivered next Spring, says London Tit-Bits.

Russia is never niggardly in the way of Government orders. During her war with Japan she gave one Chicago firm a contract for six million pounds of beef. On another occasion, when there was a coal strike in this country, and Russia could not get her accustomed supplies of steam coal for her navy, she cabled to a firm in the United States an order for three million tons. This was the largest export order ever received.

Compared with such mammoth demands as these, the Australian order of 1913 for three hundred and seven miles of cloth for military uniforms seems a small matter. Yet, considering the comparative populations of the two countries, it was not so bad.

After the South African War the British Government contracted for forty miles of ribbon for South African War Medals. These were issued to about 300,000 men, each getting a nine-inch strip.

One wonders how many hundred miles will be required for the Empire troops at the end of the present appalling struggle.

A Grouch.

"He's a chronic grouch."

"Nothing suits him, eh?"

"No. He's never as well as he might be, and his neighbors are never as sick as they ought to be."

No Hairpins in Britain.

According to the Parliamentary correspondent of the London Daily News, the Government's orders for checking the use of metal in non-war manufactures include the prohibition of the further making of women's hair pins.

Redpath SUGAR

When you pay the price of first quality sugar, why not be sure that you get it? There is one brand in Canada which has no second quality—that's the old reliable Redpath.

"Let Redpath Sweeten it."

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

Made in one grade only—the highest!

Paying for Milk and Cream on a Quality Basis.

Many phases of dairying have increased by leaps and bounds during the past few years, but none has been more marked than the butter industry. This growth is attended with new problems which must be solved if Canadian cheese and butter are to be held in as high esteem in the future as they have been in the past. In 1907 about 6,000,000 pounds of creamery butter were manufactured in Western Ontario. The home market consumed the major portion of it, but in 1915 20,000,000 pounds were manufactured and the home demand was lessened by the Western Provinces being able to supply their local trade. Ontario butter must cater to a foreign market in competition with butter from other countries, and there markets will be a little more exacting as to flavor, texture, etc., than our own people.

The other Provinces of the Dominion have led Ontario in the matter of cream grading. In 1915, 96 per cent. of butter manufactured in Alberta was made from graded cream and 59 per cent. graded specials, with only 7 per cent. seconds, which is a tribute to the high-quality cream delivered by the producer. In Saskatchewan 98 per cent. was graded and in Manitoba 61 per cent. In Quebec cream grading is compulsory, and dairymen in the Maritime Provinces are strong supporters of the system. Ontario lags behind, and the effect was noticed by the failure to win prizes with butter when in competition with other Provinces. However, the new Dairy Act which comes into force in March provides for the grading of all cream. Such legislation should be welcomed by producer and manufacturer alike. First-quality butter cannot be made from second-grade cream, nor can the best butter be made from the mixture of a first and second-grade cream. The dairyman who through carelessness in handling his cream, delivers a second quality, not only hurts his neighbor, who endeavors to keep his cream in the most approved manner, but he tends to cripple the whole industry for the Province. On the market one pound of low-grade butter will disparage 100 pounds of the finest quality. More free advertising, is given the poor stuff than the good. It is the case with everything; consequently, as competition becomes keener, more care must be taken to manufacture goods of the best quality.

Cream Grading.

Cream grading was started when creameries were first established in the West, so that dairymen were not familiar with any other system. The high quality product manufactured has given them an enviable position. In Ontario it has been different. For years creamerymen have taken the cream whether it was of the best quality or not. If they didn't take it they knew their nearby competitor would; the dairyman also knew it, and was aware that the same price would be paid if it had a good flavor. Pasteurizing the cream at the creamery overcame much of the difficulty and gives a uniformity of quality of butter, but that quality cannot be so good as if made from only first-grade cream. Besides, the careful dairyman suffered by the carelessness of his neighbor. The point has been reached where something has to be done to hold the best markets of Ontario butter. Second-grade cream is not worth as much as first-grade for butter making. To pay the same price puts a premium on carelessness, and discourages the careful man. The Legislature has put an Act on the statute books, which comes into force in March, compelling cream grading. This will offset the competition for cream regardless of quality and cream will be paid for on a quality basis, thus giving an incentive to dairymen to take precautions to look after the cream properly. It is in the dairymen's interests to aid in facilitating the working out of the new regulations. If cream is graded No. 2, there is a cause for it, and the cause is usually to be found in the handling of the cream from the time it leaves the separator until it is delivered at the creamery. Few dairymen would intentionally injure the industry which means so much to them, but so long as good butter was manufactured and a fair price paid for butter-fat, they did not concern themselves particularly about the condition the cream was in when it left their hands so long as it was accepted.

When cream is bought on a graded basis, every dairyman will endeavor to have his product in the first grade. It will pay him to care for the cream in the most approved manner. First-grade cream will make make first-grade butter, which will tend to change the verdict on the Ontario product from "good" to "extra good", thus keeping it in demand on the most exclusive markets. It is anticipated that the producers will do their part towards facilitating the working out of the grading system in Ontario. It has proved a good thing for the other Provinces and will do likewise for Ontario dairymen.

Quality at Cheese Factories.

Evidence shows that the average quality of milk delivered at the cheese factories has decreased rather than increased during the past twenty years. In the report of G. G. Publow's work twenty years ago, as Chief Dairy Instructors for Eastern Ontario the average per cent. of fat contained in 6,000 samples of milk, gathered in several counties is given as 4.0. In 1914 the report from the same territory shows the average test to be 3.5 per cent., or a decrease of over .5 per cent. in twenty years. As the fat decreases in the milk, the quantity of cheese per 100 pounds of milk becomes less. The system of "pooling" the milk, so commonly practiced, put a premium on poor milk, or at least encouraged dairymen to increase the quantity at the expense of quality and is largely responsible for the decrease in quality. When payment is made on a quality basis, it will be an incentive to select and breed the herd to improve the test, which in turn will give more of a richer cheese from 100 pounds of milk than is secured at present.

Grading of cream at creameries and paying for milk at cheese factories according to quality would have been to the best interest of Ontario dairymen years ago. The loss caused by lack of these systems for so long a time can be partly retrieved, by every producer of dairy products aiding in their working out now that they are to be adopted throughout the Province. There is no question but that the Dairy Act to be enforced this coming spring is to the best interests of the man behind the cow, as well as of the whole industry.—Farmer's Advocate.

Horses Will Be In Demand.

Speaking at one of the Winter Fair luncheons Dominion Live Stock Commissioner John Bright, had the following to say regarding the future of the horse market: "Although horse question differs a little from other lines of stock, yet it is relatively in the same position as far as future prospects are concerned. Good horses are absolutely scarce in Canada to-day. I doubt whether real good draft horses were ever as scarce as they are now.

"Horses differ from other lines of stock in that they cannot be converted into beef and they, therefore, do not find the same ready sale as beef cattle. Depend on it, gentlemen, that there is no live stock that you can keep on your farm with more profit for the future market or that you can breed to give better returns than a good horse. You will not have to wait very long to find that out. Horses are going to be alarmingly scarce in the near future.

"We have a number of horses in every province, and a very large number in some provinces that are ill-bred and poorly fed. These horses are of no use for anything. They are not good enough for the purposes of the war. We cannot blame the French and British buyers for not taking these horses.

"The farmer is safe in breeding a good heavy carriage horse and a fair sized roadster. There will always be a sale in Canada for a good horse of that breed, notwithstanding the automobile and the tractor. It will take some time before the tractor will take the place of a good horse. The farmer can always produce his motive power on his own farm by breeding good horses. I am speaking of mixed farming in Ontario, and I do not want to be misunderstood, but this certainly applies to the Province of Ontario.

The winter of the first year of the calf or colt's life is generally the hardest one on it. Many farmers seem to think that straw and roots is about all these young animals should receive. This is a sad mistake, for at no period of their life should they receive better care or better food.

CHILDREN IN WARTIME.

Drawings by German Children Full of Blood and Slaughter.

As illustrative of the evil influence of the great war on the minds of even very young children, the Vienna Arbeiter-Zeitung recently printed excerpts from a book called "Children and the War," by Floerke, and from Rothe's work, with a similar title. The following passages are from the exercises of children between 8 and 13 years old attending elementary schools:

"Should the Kaiser send me to the front, I would take a rifle and hammer the Russians to a pulp. I would kill many of them, and stab many."

"Soldiers at the front must bear many privations, but all is forgotten when the order for storming comes. Cut them down! Wherever Germans go, only blows. The French know this, and run like hares."

"The Russians built mighty fortresses, and then we fell on them with hearty cannon thunder, which was our greeting."

"In the west the French and the British grocers are in a desperate situation, the remnants of the Belgian army have broken down, and in a short time German armies will be in England."

A seven-year-old girl wrote: "Shoot dead many wicked French for me."

A nine-year-old boy wrote: "All we boys say it would be splendid if the French, English, Russians and Serbs came. We would give them a dressing. I have a sword and helmet already—all I want now is a rifle."

A boy writes to Hindenburg: "Dear, good Hindenburg, knock the Russians hard and drive them again into the lakes. They will then yell and implore mercy. Drive them into the mud that the Czar may be miserable."

A child from the Palatinate wrote: "O dear Hindenburg, beat the Russians until the bits fly and we get another holiday."

Referring to the war drawings of German children, one of the authors declares that the children know no limits in their goriness. The drawings, so to say, dripped blood. It is not battle they depict, but slaughter. One of the writers states, according to the London Chronicle's translation, that he visited a school where he noticed a boy at a war picture. It was an obscure work, all lines and broken fragmentary things. The author could make nothing of it, and asked the boy for an explanation. The answer was, "A Russian hacked to pieces." The author's comment is:

"It is nonsense to say that the child who drew this did it with childish spontaneity. It had been suggested to him by the moral atmosphere in which he lived."

Work for Russian Army.

The Department of Rural Economy and Statistics of the Russian Ministry of Agriculture has compiled from Zemstvo reports a statement of the activities of the koustar or peasant workers in the making of products for the use of the army. Thus there were made in the Government of Vinka alone 167,467 short fur coats, costing 1,643,890 rubles; 92,615 pairs of felt boots, at 428,684 rubles; 11,030 pairs of stockings, at 5,294 rubles; knitted gloves, socks and mittens to the value of 1,952 rubles; 57,400 earth-carrying bags. Large quantities of material are being sent from all the Governments of the empire, and the nature of the product varies with the local industry. Thus in the sections where shoes are manufactured almost the entire output is being devoted to military purposes.

Debtor: "I want to pay that little bill of yours." **Creditor:** "Thank you, sir; thank you!" **Debtor:** "But I can't!"

About the House

Useful Hints and General Information for the Busy Housewife

Useful Recipes

A delicious pudding is made with cooked and stoned prunes spread over the bottom of a baking dish and covered with a rich biscuit dough. Serve hot with cream and sugar or hard sauce.

Ginger Snaps—One cup lard, one cup sugar, one cup syrup, half cup boiling water, one teaspoonful baking soda dissolved in the water, one tablespoonful ginger, one tablespoonful cinnamon, one teaspoonful vanilla, half teaspoonful salt, a little grated nutmeg and flour for a pretty stiff dough. Cut with cookie cutter and bake quickly.

Codfish Balls.—1 pound codfish, 1 ounce butterine, 3½ pounds potatoes (pared), 3 eggs, few grains cayenne. Soak fish several hours. Cook in fresh water until it flakes easily. Drain and put through food chopper. Add to potatoes which have been cooked and mashed. Add butterine, seasoning and eggs slightly beaten. Cool and shape into balls and fry in deep fat.

Ginger Fudge.—Sugar, two cups; milk, one cup; butter, two tablespoonfuls; vanilla, one-half teaspoonful; salt, a pinch; ginger (crystallized), one-half cup, chopped fine. Put sugar, butter, milk and salt in saucepan together and allow to boil 10 minutes, or until it hardens when dropped into cold water; remove from the stove and add vanilla; beat until creamy, add ginger and pour into buttered pans or plates. Cut into squares with a buttered knife.

Emergency Apple Pudding.—One cup of flour (prepared wheat pancake), one cup brown sugar, one egg, one-half cup milk, a little nutmeg, four large apples, peeled and sliced. Butter a pudding dish, lay in the apples and pour the batter over them. This takes only about as long as the ordinary apple pie, and yet it is not heavy or indigestible. It may be eaten with cream or a hard sauce.

To Cook Rice.—After washing rice, put it on in just enough cold water to prevent it burning at the bottom of the pot, which should have a close fitting cover, and with a moderate fire the rice is steamed rather than boiled until nearly done; then the cover is removed, the surplus steam and moisture allowed to escape and the rice turns out a mass of snow-white kernels, each separate from the other and as much superior to the usual soggy mass as a fine, mealy potato is superior to the water-soaked article.

White Cake Like China Dishes.—Take the yolks of two eggs and a spoonful of salt and as much rosewater, some carraway seeds and as much flour as will make it a paste stiff enough to roll out very thin; if you would have them like dishes you must bake them on dishes buttered. Cut them out into what work you please to candy them. Take a pound of perfumed sugar and the white of an egg and three or four spoonfuls of rosewater, stir until it looks white; and when that paste is cold do it with a feather on one side. This candied, let it dry, and do the other side and also dry it.

Almond Cakes.—Take a pound of Jordan almonds, blanch them, beat them very fine with a little orange flower water to keep them from oiling; then take a pound and a quarter of fine sugar, boil to a high candy, then put in your almonds; then take two fresh lemons, grate off the rind very thin and put in as much juice as to make of it a quick taste, then put it into your glasses and set it in your stove, stirring often that they do not candy; so when it is a little dry put it into little cakes upon sheets of glass to dry.

Fondant.—To one pound of granulated sugar add a gill and a half of boiling water and stir in a saucepan over the fire only until the sugar is dissolved; then allow the mixture to boil without stirring for about six minutes, or until the syrup spins a thread when held on a fork. When it can be made into a very soft ball between the fingers turn on to a large buttered platter. Do not scrape off the sugar which adheres to the side of the pan. When it is only blood warm stir it with a wooden paddle or spoon until it begins to crumble; then it should be kneaded in the hands like dough. Pack it into a bowl, cover with a thin cloth slightly moistened and set it away until needed.

Fruit Deserts.

Whenever you peel oranges save the peel and parboil it, then preserve in a rich syrup and it is ready for a dozen uses in cookery.

Banana Puffs.—After peeling some fairly ripe bananas, sprinkle the fruit with sugar. Prepare a nice short paste, roll it out thinly and cut into strips rather longer and more than double the width of a banana. Inclose the banana neatly, and, after moistening and fastening the edges of the paste, bake the puffs lightly, and after they are a faint brown color they will be ready for serving when cold.

Orange Cream.—One-half cupful orange juice; one-half cupful sugar; a small amount of gelatin; one-fourth cupful cold water; one and a half cupfuls cream; orange rind. Heat the orange juice and one-half cupful of sugar, over the hot water. Beat the yolks of eggs, add the rest of the sugar, stir and cook in the hot mixture, until the spoon is coated with custard. Add the gelatin, softened in cold water, a grating of orange rind, and stir over ice water, until the mixture begins to stiffen.

Orange Snow.—Take six fine oranges, the whites of four eggs, one pint whipped cream, half cup powdered sugar. Slice the oranges after peeling, remove seeds, sprinkle sugar over them before adding the snow cream, which is made thus: Beat the whites of the eggs until foaming, then add by degrees the sifted sugar. Whip the cream, which must be very cold from standing on ice. When very stiff beat in the orange slices and juice, adding as much as the cream and the meringue will hold without becoming soft. Place in glasses and serve very cold.

Cider Apple Butter.—Use sweet cider of good quantity and apples that cook easily. Boil the cider down one-half. Wash, peel, quarter and core the apples, carefully cutting out all decayed spots. Boil together equal quantities of apples and boiled-down cider. Boil the apples rapidly until they become so tender as to be mushy, otherwise they will sink to the bottom and scorch. Continue the cooking more slowly. If the quantity is small, run the aples through the colander, place the pulp in a stone crock and cook it in a slow oven, stirring it at intervals of fifteen minutes; otherwise stir it constantly from time to prevent it scorching and to make it smooth. If the butter is not smooth when it has the right consistency, add a little cider and continue the boiling and stirring. Add sugar at any time if butter is not sweet enough to suit the taste.

Useful Hints.

An hour should elapse after a meal before taking a bath.

A linen case to hold a pair of rubbers is an excellent gift.

Earthly roots should be well scrubbed before peeling.

Green vegetables should always be cooked in salted water.

There is no use telling a boy to stop doing something he ought not to do, unless you show him better to do in its place.

To clean plaster-of-paris figures, sprinkle them with a thick coating of starch and water. When this is dry the dirt will brush off with the dry powder.

Clean your sewing machine frequently if you would have good service. Kerosene oil and absorbent cotton are admirable for the purpose; follow with a good lubricator.

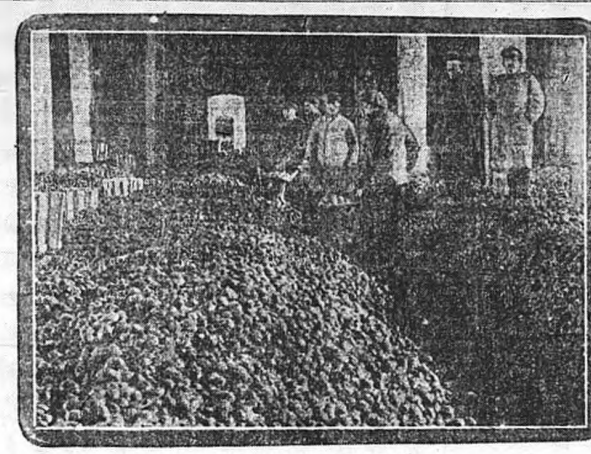
"I haven't enough suit hangers to hang my clothes." Roll up a thick section of the newspaper, and tie a string around the middle with a loop. That will do just as well.

To soften brown sugar that has become lumpy place it in a cloth sack and hold the sack over the steam from a boiling tea-kettle. This is easier than rolling it on the breadboard, and takes less time.

To do away with the smell of fresh paint, put a pail of water into which an onion has been cut up in the newly painted room over night. If windows and doors are closed the odor will be absorbed by morning.

Belts made of colored calf leather become shiny in places. To remedy this, get a piece of fine glass-paper, hold the belt taut, and lightly rub in one direction with the glass-paper, when the "bloom" will be restored.

Buy from the stationer's a package of strong manila envelopes, size about 4 x 6 inches, and start a collection of clippings. Use one envelope for each subjects, and you will soon have a valuable depository of information. It is much more convenient than pasting clippings in a book.



HIGH PRICES AND WAGES.

Increase of Wages Does Not Necessarily Mean Jump in Prices.

The notion is somewhat widely current that the raising of wages in a period of rising prices simply keeps up the action of a vicious economic circle[1] that you make wages higher to meet the high prices, and that then you have to make the prices still higher to meet the high wages, says New York Post. In some particular instances, the highest wages do cause the rising of prices; but broadly speaking, the idea is quite false. The process is one of readjustment to a new scale of prices; those who carry on various business enterprises reap an abnormal profit through the rise of prices, and when they have yielded up some of this to the workers, things have simply gone back to a condition of equilibrium.

When wages are raised in the steel industry, for example, in such conditions as exist to-day, that is not in the least a factor tending to raise prices; it merely affects the distribution of the surplus (over normal returned), which existing prices yield.

When it comes to solid comfort there there is very little to choose between an easy conscience and an easy pair of boots.

A Potato Day for the Belgian People.

One of the central potato depots in Belgium established by the Germans. From here the people of the country are fed just so much a day—usually a potato has to suffice twenty-four hours. In this way the food supply is being kept track of. Even for a potato a ticket has to be shown. The Belgians have to dig the potatoes and then turn them over to the Germans, who dole them out.

ITALIAN DESTROYERS FOOLED AUSTRIANS

SECRECY IN FORMATION, FIRED TORPEDOES, ESCAPED.

Sleepy Enemy Cheered Boats and Did Not Discover Mistake Till Too Late.

Three Italian torpedo boats have succeeded in breaking the boom at Pola, the best defined and most fortified naval harbor in the world. They spent two hours "exploring the harbor a few hundreds of yards from the forts and came out safely after they had accomplished their most difficult and delicate mission, when numerous powerful searchlights vainly illuminated sky and sea and the batteries fired wildly and inefficiently," writes a Rome correspondent.

The most difficult and delicate mission consisted in torpedoing a man-o'-war. In fact, when the torpedo boats reached the "customary anchorage of part of the Austrian fleet," possibly the good condition in the channel of Fasana, the entrance of which they had successfully forced, torpedoes were fired against a large enemy war vessel, but it was ascertained that both remained entangled in the nets protecting the ship and as they failed to strike a hard substance their charges were not ignited and the torpedoes did not explode.

Had the torpedoes exploded the Italian warships would not have been able to come out of Pola and probably would have been lost. In fact, they owed their safety to the non-explosion of the torpedoes.

Principal Naval Harbor.

Pola is the principal naval harbor and arsenal of the Austro-Hungarian Empire. It is situated near the southern extremity of the peninsula of Istria, at the head of a bay of the same name, and is almost completely landlocked. An extensive system of fortifications on the surrounding hills enclosing the harbor defends its entrance and protects the good roadstead in the large channel of Fasna. This channel separates the mainland from the Brioniun Islands, which dominate the entrance to the bay. The harbor has an area of over three square miles and is divided into two basins by a chain of three small islands.

Three Italian torpedo boats left port on the evening of November 1, and toward midnight they were off Pola. The distance between Pola and Venice is about eighty miles, and as presumably they started from Venice they must have steamed at half speed, with lights out, as silently as possible.

The sea was very calm and the night dark. Pola is surrounded with extensive mine fields, which the three torpedo boats successfully crossed. Evidently the exhibition had been carefully planned and the exact location of the extensive mine fields ascertained beforehand.

Shortly after midnight the warships were near the entrance of the Fasana channel, closed by means of iron chains, steel cables, enormous beams and nets extending across the mouth of the channel as a protection against submarines. The barrier is formidable, and its removal seems impossible. A patrol boat is moored alongside the boom. The men on board are supposed to be on watch; instead, they are asleep.

Lowered the Boom.

Two out of the three torpedo boats silently approached the barrier and their crews got to work. In less than twenty minutes the boom was lowered sufficiently to allow their passage. How the boom is lowered is naturally a secret. It is known, however, that a special mechanical contrivance was used with success. The small passage opened across the barrier where the boom was "broken" or lowered is, however, invisible, and consequently it is indispensable to have it marked, as it were, in order that the torpedo boats, once they crossed it and entered the harbor, should find the way out.

A sailor in a small boat lowered from one of the torpedo boats was accordingly left to mark the passage after the others had gone inside. This man knew that he was risking his life, since in case of an alarm he had absolutely no chance of escaping, but when the expedition to Pola was planned and the officer in command of the flotilla said he needed one man for this job all the crew volunteered and added that they were all willing to sacrifice their lives if necessary.

One of the torpedo boats entered the harbor of Pola and came out after two hours. There was absolutely no sign of life inside the port and few lights were to be seen on shore. The Austrians relied so much on their mine fields, barriers and batteries that they were quite convinced an attack was impossible either by day or by night, and they slept soundly without watching.

Results Not Known.

The results of the torpedo boats exploration inside Pola are of course not known. Undoubtedly they must have been very valuable, judging by the fact that no attempt was made to torpedo any of the enemy ships before two hours, and it is to be presumed that all this time was not lost. Besides, had not dawn been so near the torpedo boat would have surely prolonged her exploration inside Pola. It was about 5 o'clock in the morning when the two torpedoes were fired against the Austrian battleship in the Fasana channel, almost simultaneously and at a very close range. They both got entangled in the nets protecting the ship. Evidently three nets protected the ship, because two were out, but the third prevented the torpedoes from striking the hull, and their propellers kept going outside the water with a loud noise resembling that made by the propellers of an aeroplane.

In fact, the Austrians on board the battleship as well as those on board other ships and on shore mistook the noise and took it for granted that Pola had been attacked by hostile air craft. The alarm was raised at once with the rapidity of lightning. Searchlights were put on and illuminated the sky, while all the guns of the aerial defence on the hills and on the islands, as well as all those on the ships and of the shore batteries, opened fire simultaneously, wildly and inefficiently.

Picked Up Sailor.

The Italian torpedo boat headed straight for the small boat with the sailor left to mark the place where the boom had been lowered. She slowed down until the man was picked aboard, and the Austrians in the patrol boat watching the entrance of the channel who were not quite awake assumed that she was one of their torpedo boats going out to sea in search of the Italian aeroplanes that were raiding Pola.

While the torpedo boat steamed out the Austrians shouted encouragingly "Gut!" to the crew and the Italians shouted back "Gut!" So the Austrians cheered and the Italians cheered, too, as they joined the two other torpedo boats waiting outside, and the three of them started full speed ahead toward their base.

Meanwhile Pola's searchlights vainly illuminated sky and sea and the batteries fired wildly and inefficiently," and it was only when the three torpedo boats were well out at sea and safely out of range that their nationality was discovered. Until dawn the Austrian fire continued, mainly directed skyward.

In the Indian Army all orders are given in English.

Teacher (during geometry lesson) —Why are these angles corresponding? Pupil—Because they are friends.

QUEEN THINKS OF POOR.

Her Majesty's Interest in Question of Food Supply.

Queen Mary, in view of her interest in the question of food supply, recently summoned Walter Runciman, president of the Board of Trade, to an audience at Buckingham Palace. It is very unusual for the Queen to send for a Cabinet Minister.

The conference was a long one, the Queen being particularly interested in definite details as to how the proposed new food regulations would affect the poor, especially the working women and women belonging to the so-called professional classes. From the very beginning of the war, the Queen has shown particular interest in the position of middle-class women, women of education and breeding, who have moved for years in one groove, and who were no longer young enough to be able to benefit by new openings when their old occupations or incomes gradually became insufficient.

The subject of food economy, also, is one that has engaged the heartiest attention of the Queen. "The Queen is herself a remarkably good housekeeper," writes one of the newspapers in commenting on the audience with Mr. Runciman, "and if she belonged to the middle classes she would be extolled as a wonder among her peers. Years ago, before war with Germany was thought of, she used to be quoted as an example of thrifty management and sound common sense. In those days, thrifty management and sound common sense were neither popular nor fashionable, and it was considered the smart thing to be wasteful and frivolous, and completely ignorant of what went on in the kitchen and the store room. Even yet, not everybody has come around to the Queen's point of view, although they will in time, even if they have to be forced into it. A vast deal of unnecessary spending still goes on, especially among the so-called smart set, which is still lunching and dining and going to the theatres and buying expensive furs, and going in for extremes in evening dress. Only an act of parliament will stop them."

THE SUPREME HONOR.

Victoria Crosses Dealt Out With Great Caution.

Victoria Crosses are dealt out as grudgingly as though they were composed of radium. This is because the honor is the greatest that can be won by a British subject, and also because in the present war all previous standards of gallantry have been surpassed, or rather what one man did in the Crimea and three in South Africa, a hundred are doing in the present war. To give a V.C. to every heroic soldier in the British army would be to make the cross as common as corporals' stripes. So it is bestowed as cautiously as though the candidate for it were applying for canonization. Not only must the deed that wins the cross be of exquisite heroism; it must be as duly witnessed and attested as a signature to a will. A veritable court of enquiry sits on each case, and unless it presents some features far out of the ordinary even among heroic deeds, the supreme honor is withheld and a Military Cross or medal given instead. That is why only about 200 Victoria Crosses have been awarded in the British army and navy since the beginning of the war.

Predictions and Facts.

The British Empire, according to the German Minister of Finance, will go down like Belshazzar's empire. He also said that food is cheaper in Germany than in England or France. If his predictions are no more accurate than his statements of fact, British need not worry.—New York Evening Post.

Necessity is the mother of invention; promotion is the step-father.

It's easy for a woman to understand why a man can't understand her.

From Erin's Green Isle

NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irishmen.

The King has approved of the appointment of Lieut.-Gen. Sir Bryan Mahon, R.C.V.O., C.B., D.S.O., to be General Officer Commanding-in-Chief of the Forces in Ireland, in succession to Lieut.-Gen. Sir John Maxwell.

A public meeting of the citizens of Limerick was held in the town hall in support of the application of the Association of Irish postal officials for an increased war bonus.

The strike of Carrick-on-Suir boatmen, and the consequent complete suspension of the barque traffic between Waterford, Carrick-on-Suir and Clonmel has now entered upon its eighth week.

When a passenger train from Cork to Dublin was just near Mallon Station, a pipe of the boiler of the engine burst. The fireman, Michael Stafford, was killed, and the driver, Patrick Dunlea, badly scalded.

It is understood that Lord Chief Justice Cherry is about to relinquish his office as head of the King's Bench Division in Ireland, and that he will be succeeded by the Attorney-General, Mr. J. H. Campbell, K.C., M.P.

At the meeting of the Thurles Urban Council a crowd of women from the poorer quarters of the town attended and asked the assistance of the council to secure a reduction in the price of potatoes.

CANNOT TRUST GERMANY.

Russia Resents Underhand Approaches of Huns for Peace.

Russia resents Germany's insidious and repeated attempts to negotiate a separate peace with her, says the Providence Journal. She realizes that the greatest menace to her ambitions is embodied in the sanguinary schemings of Berlin. She is bitterly hostile to the German desire to dominate the Slavonic peoples of the Balkans. She remembers that Teutonic aggression in Serbia was the immediate cause of the continental war. Moreover, she distrusts Teutonic diplomacy. Like the rest of the world she appreciates the difficulty of binding faithless Germany to the faithful performance of her future engagements.

This sentiment of suspicion crops out in the comment of the President of the Duma, who says: "We cannot trust our adversary. He is a worn-out felon." An official of the Foreign Office declares that the lack of sincerity in the German proposal is evident. A Duma resolution, unanimously adopted, characterizes the offer as hypocritical. The Foreign Minister, addressing the Duma, brands Germany as deceitful. The German Government cannot ignore the extraordinary —the worldwide—emphasis put upon its duplicity.

Russia's sturdy opposition to Germany's desire to control the Balkans is a reminder that in the final settlement of the present conflict it will be futile to ignore racial and religious lines. So far as possible nationality and tradition must be respected. Trieste and the Trentino must go to Italy because they are, by every test except that of government, Italian. The national ambitions of the Southern Slavs cannot be evaded. Bohemia's age-long aspirations for liberty must be given fuller play—or else peace will be but a travesty on the world.

MANY FATHERLESS BABES.

Fourteen Thousand Left in Poland by German Scourge.

Fourteen thousand Polish babies, all of them less than three years of age, whose parents are lost and cannot be traced, are now in charitable Russian hands. These infants are the most pathetic victims of the German invasion of Russian Poland.

When the German hordes, massacring, burning, plundering, broke into Poland in the summer of 1915, many men and women of the civilian population were butchered; others were seized and sent to Germany; others fled to the forests and marshes. In the general confusion thousands of small children were separated from their mothers. Many were butchered or lost (to die of neglect).

In retreating Russians succeeded in saving some 20,000, who were placed in safe custody in different parts of Russia. In the cases of some 6,000 the parents have been traced. But 14,000 babies now remain lost to father and mother. It has now been decided to give them all new names, and to place them in good homes, to be brought up by Russian foster-parents.

Quite The Reverse.

"I hate to play poker with Hobbs."

"A hard loser, is he?"

"No; an easy winner."

A small child who was the youngest member of a very hard-up family was told one day by her father that she had a new baby sister. "Isn't that nice?" he asked. But hard lessons of domestic economy had already taken hold of the young lady, and she answered severely: "We'll daddy, I s'pose it's all right, but it seems to me there's a lot of things we need more."

The Paisley Advocate

PAISLEY, JAN. 17th, 1917

COUNTY COUNCIL FOR 1917

Following are the members of Bruce County Council for 1917, who will assemble in Walkerton on Tuesday next for the first session of the year:

Amabel—I G Craig.
Arran—J J Johnston.
Brant—D Willoughby and W A Rowand
Bruce—J Johnston and P Dobson.
Carrick—M Finlayson and Dr L Doering.
Caiross—Wm Case.
Eastnor—H Scott.
Elderslie—J E Cass.
Greenock—D Phelan.
Huron—J Wilkinson.
Kincardine Tp—W H Rutledge.
Lindsay—F Forbes.
Kinloss—D A McDonald.
St Edmunds—A Munn.
Saugeen—G Christie.
Hepworth—Jas Douglas.
Lucknow—R Johnston.
Paisley—J H Steele.
Port Elgin—D J Izzard.
Tara—J Morrow.
Teeswater—D Ferguson.
Tiverton—D B McDonald.
Chesley—W H Brown.
Southampton—C W Bell.
Kincardine Town—Wm Hunter.
Walkerton—R Russell.

VILLAGE COUNCIL

Council met as per statute, on Monday, January 8th, composed of James H Steele, reeve, and councillors Dr Houston, Daniel Sparrow and Albert Pearce, and having subscribed and taken declarations of office took their seats; Mr John A Logie being absent.

Houston — Pearce — That the regular meetings of this council be held on the first Thursday of every month instead of Wednesday as formerly.—Carried.

Sparrow — Pearce — That this council now adjourn to meet on Thursday, 11th inst, at 8 p m.—Carried.

Council met as per adjournment, all its members in attendance. Mr Logie, having filed his declaration of office took his seat.

Communications read from various charities, requesting financial support.

The clerk reported that two only of the required three public school trustees were elected at the recent municipal elections and that another nomination meeting was necessary.

Correspondence read re Miss Sinclair's income tax, her solicitor agreeing to pay and paid $4 50.

Sergeant McLeod, of the Royal Naval Canadian Volunteer Reserve, overseas division, addressed the council.

By-law No 664 for the appointment of W R Teeple as member of Board of Health: Miss Elizabeth Miller as member of Paisley Public Library Board for 1917, 1918, and 1919; Messrs Putnam and Carter auditors, Alexander Jack assessor, and Frank Purdy poundkeeper, was read a first time.

By-law No 665, providing for nominations and election of one public school trustee, was read a first time.

By-laws 664 and 665 received the required readings, was passed and executed.

Houston — Pearce — That a grant of $5 be made to the Hospital for Sick Children, Toronto.—Carried.

On motion of Councillors Houston and Logie, payments were authorized as follows: Tax collector, re Sinclair, $56 65; H Reed, $3 70; P Carter two Sons, $1 10; returning officer, $10; Alex Jack, $4; G L Carter, $2; R F Boyle, $4; G H Flood, $2; D Bell, $4; T Shoemaker, $2; Hospital for Sick Children, $5.

Council adjourned.

BRUCE TP COUNCIL

Jan 8th, 1917

Pursuant to statute Bruce Tp council met in the Town hall on the above date. After subscribing to and making the requisite declarations of qualification and office the council met for the transaction of business. Minutes of previous meeting read and adopted. A number of communications were then read and dealt with.

Baker—McKenzie—That this council grant the Sick Children's Hospital, Toronto, the sum of $5.—Carried.

McNeill—Dobson—That the clerk order six copies of the Municipal World and all necessary supplies for 1917.—Carried.

McNeill—McKenzie—That J B Struthers and J B Richardson be appointed auditors for the year 1917.—Carried.

McNeill—Baker—That the following orders be paid for 1917, viz: Assessor $150, collector $10, to include phone tax, treasurer $150, to pay for bond; clerk $300 for ordinary work and time; $7 each council meetings $2 50 and its per mile one way committee work $2 50 a day or taker $1 25 per day, up to foreman wood.—Carried.

Dobson—McKenzie—That the following committees be appointed: B w div, Johnson and McNeill; a div, McNeill and Baker; Underfelt road, Dobson and McKenzie; n w div, Johnson and McKenzie; s e div, Dobson and McKenzie.—Carried.

Dobson—McKenzie—That this council pay N A McGillivray $15 on bridge 39-12.—Carried.

McNeill—McKenzie—That the above valuators for 1916 be re-appointed for 1917, duties and salaries the same as in 1916.—Carried.

Baker—Dobson—That J H Hunter be appointed member of the Board of Health, John Nuttall and Jas Farrell sanitary inspectors for Bruce Tp for 1917.—Carried.

McKenzie—Baker—That this council appoint Alex McGillivray, 16 15, assessor, and Jas Kinpson collector for 1917.—Carried.

McKenzie—Baker—That the reeve buy six cords of 4 ft wood and one cord of kindling for the hall.—Carried.

McNeill—Dobson—That we pay John Cole more $2 50 for wood on hand.—Carried.

Dobson—Baker—That this council make a grant of $35 to each Red Cross Society in the township, each society to submit a full report of their work.—Carried.

McNeill—McKenzie—That the clerk invite tenders asking for tenders for telephone debentures of $2000, and that tenders be opened next council day, Feb 12th, at 8 o'clock p m.—Carried.

Baker—McKenzie—That the reeve be a committee to meet Mr N McKay to make arrangements about the hall for the meetings he is to hold.—Carried.

McNeill—Dobson—That we accept Mr Steinkamp's tender for privies for 1917-18.—Carried.

Baker—McNeill—That we accept the tender of C H Wood for tile for 1917.—Carried.

By-laws 233, 234, 235 and 236 read and finally passed.

A number of accounts were then passed and council adjourned to meet Saturday, Feb 10th, for general business.

D J McKAY, Clerk

ELDERSLIE COUNCIL

Glisten Hill, Jan 8th, 1917.

Council met as per statute and was called to the declarations of qualification and office, and took their seats as the Board as follows: Reeve, Jas K Cowan; Councillors—Jas Lawrie, Clarence Fraser, W J Allen, James Thomson. Minutes of last regular and special meetings read and adopted.

Thomson—Allen—That this board do now adjourn to meet again the first Monday in February at 1 o'clock p m for general business.—Carried.

H C PEARCE, Tp Clerk

THE BLESSING OF A HEALTHY BODY

Has Not Had An Hour's Sickness Since Taking "FRUIT-A-TIVES".

MR. MARRIOTT
78 Less Ave., Ottawa, Ont.,
August 9th, 1915.

"I think it my duty to tell you what "Fruit-a-tives" has done for me. Three years ago, I began to feel run-down and tired, and suffered very much from *Liver and Kidney Trouble*. Having read of "Fruit-a-tives", I thought I would try them. The result was surprising. During the 2½ years past, I have taken them regularly and would not change for anything. *I have not had an hour's sickness* since I commenced using "Fruit-a-tives", and I know now what I haven't known for a good many years—that is, the blessing of a healthy body and clear thinking brain".

WALTER J. MARRIOTT.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

She hath done what she could

Every married man in the ranks of Canada's soldiers means that his wife gave her consent.

His the sacrifice, the danger, yes—but his also the interest of a new experience, the companionship of comrades, the inspiration of action, the thrill of the advance, and the glory of victory.

Her's the pitiful part ing, the weary waiting, the fevered watching for the dreaded message, the gruelling grind of daily responsibility for those dependent upon her—and her alone.

No, No; not alone! Not alone, as long as the people whose battles her husband is fighting have a heart in their bosoms or a dollar in their pockets.

Not alone—as long as Canadian manhood and womanhood knows the meaning of the word "trust." Not alone, as long as Generosity is the handmaiden of Duty and Privilege.

Only an appreciation of the need is required by those of us who here at home keep the hearth fires burning. Not for some of us the supreme sacrifice, but for one and all of us at least that whole-hearted answer to the cry of patriotism that never yet has failed to go ringing around the world when the call has come.

GIVE — GIVE — GIVE as your own heart prompts you, give to the Canadian Patriotic Fund. $6,000,000 must be raised in Ontario for the vital necessities of the great work of caring for the needy families of Ontario's men at the front.

Every case is carefully investigated, everything humanly possible is done to eliminate mistakes and prevent imposition—but to the needy is held out a helping hand, without lavishness, but with the determination to see no real want unsupplied.

You are again offered the great privilege, not of charity, but of recognition of the magnificence of Canadian Wifehood.

Remember, if the Man is a Hero, the Woman is a Martyr.

"She hath done what she could"

Ontario is being asked to assure the Canadian Patriotic Fund that it can depend on having six million dollars in 1917 for the families of Ontario's soldiers.

Four million of these dollars must be secured from individual subscriptions. If there is no Branch of the Fund in your town or county send your subscription direct to the Head Office, Canadian Patriotic Fund, Victoria street, Ottawa. 13

MACLEAN'S MAGAZINE
FOR JANUARY

GET better acquainted with Canada and Canadian writers. Read about Canada and Canadians in MACLEAN'S MAGAZINE. Let the best known Canadian writers entertain you, and interpret to you the land, life, thought and spirit of Canada and the Canadian people.

MACLEAN'S MAGAZINE for January (and every month) is truly a Canadian national magazine. Here is a condensed summary of the principal contents of January number. now on sale everywhere—price 15c.

Sir Gilbert Parker The opening chapters of a new serial, "Jordan is a Hard Road"—a story of the Canadian North-West, introducing some old friends.

Stephen Leacock "Is Dry Toronto"—rich humor, combined with a latent seriousness. Leacock is always good.

Agnes C. Laut "The Cost of the War"—an international business article by this brilliant Canadian writer, whose intimate friends are bankers and financiers and others with inside knowledge.

Betty Thornley Another Canadian woman writer with a mind of a business man and with a burning love for her Western homeland. Her contribution, "Putting the Yardstick on Canada," is the story of a journey she made last summer to the Okanagan region of British Columbia—a part of that Province seldom visited and about which most of us know little.

Main Johnson Mr W W Rowell's secretary, and who accompanied Sir Rowell on his recent trip abroad, and VISITED THE FRONT with him. Mr Johnson contributes a vivid story of what he saw and learned on the Western Front.

W. Arnot Craik writes of the New Shipbuilding Industry in Canada—a timely article on a matter of the first importance.

Stories by the following distinguished Canadian short-story writers: Alan Sullivan, A. C. Allenson, Peter McArthur and H. M. Tandy.

Departments Review of Reviews, where are condensed for busy readers the best things in current Literature; The Business Outlook, a well-informed survey of Canadian business conditions, and information for investors, a valuable department for those with money invested or looking for investment.

So you see how truly Canadian MACLEAN'S MAGAZINE is, and how much worth-while reading it gives. It is big value for money to every Canadian desirous of knowing his own country better, and its makers and interpreters. Get the January number from your bookseller or news agent.

MacLEAN'S as a Gift

You can make no more acceptable gift to your friends than MACLEAN'S MAGAZINE for a year—$1.50 in Canada. Make up a list to whom you will send this tangible expression of your regard or good-will, and remit $1.50 for each. Make remittance payable to The MacLean Publishing Co., Ltd., University Avenue, Toronto.

ARRAN COUNCIL

Council met as per statute, in town hall, Tara. All present. New Council composed of Jos Johnston, Reeve; Wm Bruce, Fred Scarrow, C A Thomas and Fred George, Councillors. All took the declarations of office and qualification. Minutes read and adopted. The following appointments were made: Auditors—F H King and Alex Vance; members of B of H, A M King re-appointed; sheep valuators the same as 1916. The election expenses, $63 10, were ordered to be paid over to the clerk to distribute to the officials as per statement submitted. C A Speer was appointed assessor. By-laws passed confirming the several appointments; By-law passed empowering the Reeve and Treasurer to borrow any money required for current expenses. Account from Dr Armstrong, M O H, of $100 for salary in 1916. The council fixed the salary a year ago at $75, which the Medical Health Officer declined to accept. At December meeting Mr Sinclair took it to the M O H, which he refused. Moved by Scarrow and Thomas, That the Clerk ask the M O H to be kind enough to give a detailed statement of his work in connection with his position as M O H, giving the visits made, the distance travelled and the time involved, and if after examining such statement by this Council, we find that the Medical Officer of Health is underpaid at $75 we will reconsider the matter.—Carried unanimously. Also another account from Dr Armstrong for examining a person as to his insanity—$5 and $2 mileage. Council thought that this Could better be sent to the County Clerk, as County is responsible for such payments. George Neil was re-appointed a representative from the Tp of Arran to the Board of Agriculture for North Bruce. Treasurer's statement showed $340 59 to the credit of the municipality. H A Vandusen & Son get the printing at the same figure as 1916, $105. Adjourned until Feb 10th. H T POTTS, Clerk.

APPRECIATIVE ACKNOWLEDGEMENTS

TO THE WOMEN'S PATRIOTIC LEAGUE, PAISLEY:

Dear Friends—I wish to thank you all very much for the parcel you so kindly sent, all the little gifts being so useful. It seems a long time since I saw dear old Paisley, but hope the time will not be so long until I am back again. I expect to go to France early in January, as I am one of the number chosen as physically fit, and will not shrink from doing my duty, as we hear from the boys who have returned that every man will be needed. It will be a lean some Christmas for us this year, as we will all be on duty. There is very little leave being granted on account of congesting the traffic. Again thanking you, one and all, and wishing you every success in your good work, with a happy and prosperous New Year, I remain yours faithfully, BANDSMAN L H PUTNAM, No 21 167, 16th Reserve Band.

The following was received by Mrs Geo Geo Brown, of 8th Bruce, in reply to a parcel sent with a pair of sox:

DEAR MADAM—In acknowledgement of your gift. I was very pleased to receive the socks, as I was in the trenches at the time, and my feet were wet all the time. We were up to our knees in mud and water in places, so that you will see that a pair of dry socks would be very comfortable. They were a long time on the way, but they came in at the right moment. I was very pleased to read the note, wishing me a safe return. This is my second time in France. I was in the lines all last winter, and got wounded on the 13th June, 1916, so I had four good months in England in Birmingham hospital and the Convalescent Home. And believe me, they were kind to me. We are getting it very cold just now, and I guess you are the same, but I would sooner be in Canada than France. The old C P R "safety first," 4 Sqn Fus J Corps(1), Opposite Cpl 1st Can Inft., 1st Divi-ion B E F, France.

Benford, Russell, England

SAUGEEN COUNCIL

The Saugeen Council met on Jan 8th, and organized for the year's work. The following appointments were made: Auditors—Geo Webb and J W McKinley; member Board of Health—Wm Howe; sanitary inspectors—Alex Bell and A J Howard; sheep inspectors—John Cook, H J Scott, Alex Beech, Neil Mc. J H Lyons. The various bridge inspectors were re-appointed. Accounts amounting to $1,000 were passed, among the largest being Bruce Tp Bondes account, $21 15; Times, printing, $11 25; F W Elliott, supplies, $5. A grant of $10 was made in aid of the patriotic Societies in the Township. The Clerk was instructed to advertise for an assessor and for cedar rails on timber. The councillors' mileage allowance was raised to $2 50 per day and mileage. Council will meet again Feb 10th.
F W ELLIOTT, Clerk.

Underwood Red Cross

The Underwood Red Cross Society's report to Bruce T p Council for term extending from April 1st to Dec 31st, 1916, shows that the total receipts amounted to $531.20. The expenditures for purchasing yarn, flannel and other material to be made up into articles needed for Red Cross work, were $412 49, and there is a balance of $118.85 in the Society's treasury.

—In the West Simcoe bye-election on Monday the Conservative candidate was elected by a reduced majority for the riding.

Tenders Wanted, Elderslie Tp

TENDERS will be received by the undersigned up to 1st o'clock on Monday, Feb 5th, for the supply of 18,000 ft of good sound cedar 4 in. thick and 16 ft long, to be delivered at Tp Hall, Ollifee Hill, not later than May 1st, 1918. No tender necessarily accepted. H C PEARTH, Tp Clerk, R R No 3, Paisley.

—Arran Tp ratepayers are still in favor of statute labor for the roads. A vote was taken at the municipal elections, when 178 ballots were marked for abolition of the system and 330 to retain it.

—At the second nomination held Walkerton ratepayers completed the selection of their council for 1917, which is comprised as follows: Mayor—A P Johnston; Reeve—Robt Rumel; Councillors—Harry Truax, Rev. J W Sanderson, Alex McCarter, J E McGregor, John McKinnon, Sam Vogan.

Fire in Walkerton Hotel

Fire which started early on Monday in the furnace room of the Walker Hotel, caused a loss of $5,000. W J Ward, the proprietor, was carried out unconscious, and is in the hospital in a serious condition. He was rescued by Alex Deorge, who rushed through smoke and flames to the second floor and carried Mr Ward to safety. As Ward weighs 250 pounds and the fire was making great headway, George's feat was heroic. The flames had a good hold on the building before being discovered.

J. M. HOWSE, N.G.
W. E. BARRETT, R.S.

"HIS LUCK."

With a rasping, whining snarl a bullet smashed over the parapet. For once Private William Binks had been incautious. From somewhere two hundred yards away a German sniper had caught a glimpse of a khaki cap. Bill stooped to picked it up, grinning with white-mouthed appreciation at the hole in it.

"Guess I'll get a new cap from the blightin' quartermaster now!" he continued. "Frits's done me a good turn."

The other man lovingly cuddling the stock of his rifle peered through a loophole, took steady aim, and pressed the trigger.

Having thus evened up things with the enemy over the way, he surveyed his companion with an answering grin.

"You for luck, Bill. "If that'd been me, Frits would have spoiled me napper as well as me 'at!"

Bill puffed a cloud of blue smoke from his pipe, and watched the everlasting drizzle that Flanders sometimes adds to the discomforts of war. He had known Jim Slater a matter of four years—from the time they had become neighbors "somewhere in London." They had worked together, played together, and when the time came they had together left their wives and kiddies, joined the Army, and fought the Hun together.

"I'm lucky! I own it freely," said Bill. "Reckon you don't grudge it me, do'y'e?"

Jim brought a grimy, hairy paw down with a smack on his friend's back.

"Grudge it y'! Lummo, old pal, I 'ope you git all the luck that's comin' to yer. It's only a bloomin' yob like me that misses the old gal Good Fortune when she's 'anding out samples! Not been to Blighty once, an' me a casualty four times! First me leg, then me arm, then the rheumatics, then me 'and! Say, wouldn't it give yer the 'ump?" He took another glimpse out through the loophole over the sodden landscape. "An' you, lucky blighter, 'ave been out 'ere all the time and never had a scratch! All the same, Bill, I 'ope yer luck sticks, I do!"

"Luck," was, in fact, at that moment striding through the mud and slush of the trenches towards them, wearing for once the puttees and sword-belt of an officer. Moreover, for once Slater was included with his friend in her favors.

They came to attention as he halted near them, and he took a couple of papers from his pocket.

"Ah, just the men I've been looking for! The C.O. has granted you both six days' leave. You'll report at railhead at 6 a.m. to-morrow morning. That's all. Hope you have a good time!"

Five seconds later, over in the German trenches, they stood nervously to arms as a wild yell from the British lines went up. Jim had kept down his excitement for the length of time as a matter of discipline, but once the officer was out of sight he could no longer be restrained.

"Let her rip, lads! Lummo, Bill, I've got a bit of yer luck at last! Six days' leave together. So long as I don't stop a whiz-bang or a pip-squeak by 6 a.m. to-morrow, I'll see dear old Blighty again! And there'll be some time with the missus and the kids, ol' sport! Talk about luck!"

Bill laid a hand on his arm

"I've got it, Jim," he said seriously. "Of all the luck—and I'll own I've had a bit—this takes the biscuit! It's too good. Strike me lucky, if I don't think somethin's goin' to 'appen! I got a pre—a pre—whatjercallit?"

"A premernition!" said Jim scornfully. "Come off it, cully! It's you and me for old Blighty in the mornin', and don't you go kiddin' yourself that we ain't! Why, nothin' couldn't hurt us lucky a bloke as you are! You're good as a piece of four-leaved clover! Come an' let's git our kit together!"

Longer even than the historic route to Tipperary is the journey from Flanders to home, if you happen to have spent many months of a mole-like existence, amid battle, murder, and sudden death. And a leave-train in France has to give way to everything that crawls.

Nevertheless, two muddy and impatient privates of the Line at last reached the base, at last transferred themselves and their belongings to a steamer, from whose decks, after an interval, they beheld the white cliffs of old England. They strained their eyes in silence for a few moments, and neither was ashamed of the lump that arose in his throat.

"Funny little devils kids are!" said Bill suddenly, apropos of nothing. "Y' know, Jim, I've bin thinkin' o' them—them an' the missus. I'll bet it'll be a proper surprise when they see me walkin' in on them, just like as if I'd bin on a stroll round the corner instead of socking it to Brother Hun for Lord knows 'ow long! Rare old beano there'll be in one 'appy little home this week, I give you my word!"

"Same here!" growled Jim.

Certain passengers on the boat train up from Folkestone observed with good-humored toleration the exuberance of two war-stained soldiers, who told of the gaudy times they intended to have when they reached home, and made excited comments on familiar objects as the train drew into London.

It was sheer waste of time to wait till the train came to a standstill at Victoria. One could save some seconds of precious leave by jumping out as the platform became available.

"What a surprise the old girl'll 'ave!" cried Bill, and, with rifle and kit-bag, made straight for an electric car.

So at last they reached Deptford. Hurriedly turning into Romer Road, where their homes were situated, they were attracted by the presence of a silent, staring crowd.

"Say, Jim, 'ere's the Lord Mayor and Alderman to welcome us 'ome!" laughed Bill. Then suddenly a cold chill of apprehension gripped him. "That's my 'ome!" he said, in a hoarse whisper.

Beneath the bronze and grime of the trenches his face had gone the color of paper. Kit and rifle smashed with a thud in the roadway, and he fiercely thrust his way through the crowd till he got a clear view of the object of interest.

A heap of ruins alone showed where once his little house had stood. As he stood stock still, dazed and broken, he caught a phrase from one of the bystanders.

"Zepps it was as done it!"

Private William Binks had faced death and agony in many forms. He was very much of a man, as those who had fought with him could testify. But now for a second he had lost his nerve. His lips moved.

"My Nell!" he moaned. "My poor little kiddies!"

"No bodies have been found," volunteered one of the crowd. "The place was shattered to pieces."

His friend touched his arm.

"Come along with me, old son!" he said. "We'll put you up, and you can get all about it from my missus."

Bill whirled upon him fiercely.

"Keep your hands off me!" he snarled in a sudden access of passion. Then he softened. "Sorry, ol' pal! Them murderin' Huns 'ave driven me barmy. And you"—he laughed in bitter misery—"was talking about my luck!"

"Come' ome with me," repeated Jim.

Bill shook his head.

"Thanks, all the same. I've got my Nell and the kiddies to think of. I'm goin' back out there!" He jerked his thumb vaguely over his shoulder. "Somebody's got to be paid. By Gawd, Jim, I'm goin' to kill, and kill, and keep on killin'—the bay'net for choice. The murderin' ——"

. . . . . .

It was a sullen, embittered man who returned to the battalion in the trenches. No philosopher can tell how a man suddenly brought face to face with intimate tragedy will behave. Bill had been an ordinary Cockney soldier, alert, good-tempered, popular, well disciplined, but no more gallant than the average of men with whom he served. He fought the Germans because it was his duty, and when he shot or bayonetted an enemy he felt no personal malice.

But now it was different. His soul was filled with a raging hatred of the Germans—of each German soldier individually. His wife and children had been gone; he was no longer fighting for his country, but with the savage determination of an avenger.

"We're going over the top to-morrow, Binks," said the company's sergeant-major. "The bloomin' officer's one or two men short. Says he'd like you to join his suicide club."

Bill shook his head in peremptory refusal.

"Bombs ain't no good to me, sir," just gimme a chanst at 'em with the bay'net! I want to feel that I'm getting some o' me own back. By Gawd, sir, I sha'n't sleep to-night! All I ask is to get at 'alf a dozen of 'em before they put my light out. I want to 'ave somethin' to tell Nell when I see 'er again!"

The sergeant-major—a wise and diplomatic man—nodded assent and moved on.

So the night passed. Long before "stand-to" had dawned Bill was waiting in marching order, a dozen times he made sure that his magazine was full and assured himself that his bayonet was firmly fixed.

A young officer passed along the trench.

"Ready, men?" he cried. "Over you go!"

Bill and the officer scrabbled over the parapet together, a mere matter of seconds before the rest of the company.

The officer dropped with a scream—another wounded man raved in delirium for "Mother."

But Bill went on heedless.

In that battalion they still talk in awestruck tones of that day. Neither barbed wire, machine-gun, nor rifle-fire could keep the little man, fired as he was with a new dynamic hatred, back from handgrips with the man he believed had murdered his wife and children. He fought like a madman, and with a madman's luck, for when the roll was called and the rolls arrived to take over the captured German trenches he had no hurt but a superficial bomb-splinter wound.

As the battalion reached the rear lines a post corporal handed him a letter.

"Hadn't time to give it to you this morning, Bill," he explained.

Bill took it in trembling fingers, for he recognised his wife's handwriting. She had usually written to him every other day.

"Her last!" he said. "Must 'ave written it before—that 'appened."

He tore it open.

"Rose Cottage!" he repeated aloud. "Why, man, it's dated yesterday! She must ——"

He drank in the words of the letter with fierce eagerness.

"I've taken the children down to mother in the country for a week, as I've not been feeling very well——"

The letter fluttered from his hand.

"Strewth!" he gasped. "Then Nell and the kids are all right! Thank God above me!"

An officer passed and, stopping, nodded to Bill.

"You've done very well to-day, Binks. The C.O. intends to recommend you for the D.C.M."

"Oh, to blazes with the D.C.M.!" said Bill insubordinately. "Beg pardon, sir! I'm a bit upset, sir. Y'see, my wife and kids—— Oh, it's my bloomin' luck all over! An' to think I've wasted six days' leave! My bloomin' luck!"—London Answers.

ROME'S CITIES OF THE DEAD.

Vaults, Galleries and Chapels Fifty Feet Below the Surface.

Natora has been kind to the Palatine, that hill where dwelt the shepherd kings and where later rose the tremendous palaces of emperor after emperor, clothing its scanty ruins with lavish verdure. The silence of oblivion broods over the fragments of the halls where Domitian played with the flees and Caligula bathed in shimmering seas of mixed coins. The most competent thing upon the whole hill is the little stone altar chiseled:

"Sei Deo. Sei Deivae—to the Unknown God."

This was really the shrine of the protecting deity of the city, the patron god of Rome, and only the priests knew the dread spirit's name. It was never written, but handed down verbally from generation to generation, because if the common people knew whom they worshipped, any traitor could reveal the sacred name to an enemy, who might bribe the deity to forget Rome.

What a contrast!—the home of the unknown god on the pleasant hillside, in the sun-sweetened air, and far underground, past in the damp chill of the catacombs, the altars—often the sarcophagi of martyrs—of the stout-hearted who worshipped the "known god."

Originally cemeteries, perfectly well known to the pagan authorities, these remarkable vaults and galleries and chapels, twenty to fifty feet below the surface, became hiding places for the faithful in time of persecution. More than forty of these cities of the dead which extend around Rome in a great subterranean circle, have been explored, and it has been estimated by an Italian investigator that between 6,000,000 and 8,000,000 bodies were interred in them.

YOUR INSURANCE POLICY.

A Clause In It Which Should Be Read Carefully.

The following, or a similar clause, appears in all policies of fire insurance:

"The company is not liable for losses following, that is to say: Where the insurance is upon buildings or their contents for loss caused by the want of good and substantial brick or stone or cement chimneys; or by ashes or embers being deposited, with the knowledge and consent of the assured, in wooden vessels; or by stoves or stove-pipes being, to the knowledge of the assured, in an unsafe condition, or improperly secured."

Notwithstanding this, in 1915, there were 61 fires from defective and overheated stoves and furnaces; 62 from defective and overheated pipes, chimneys, etc., and 18 by live coals and hot ashes.

Should the insurance companies take advantage of this clause, many victims of their own carelessness would find themselves without any recompense for their losses.

Good Prospects.

Officer—And what are you going to do when you get there?

Emigrant—Take up land.

Officer—Much?

Emigrant—A shovelful at a time.

HELPS TO LARGER BETTER CROPS.

No. I.—By Henry G. Bell, Agronomist.

Henry G. Bell.

If the austere poet of the 16th century were living to-day he might have said: "He also serves who farms the best."

There is a call to-day for every acre to do its best. Over two billion bus. shortage in food cereals over last year's production is the latest figure given out from the International Bureau of Agriculture at Rome. Canada was over 100,000,000 bushels short as last harvest. United States, according to the last crop report, shows only a little over nine million bushels in excess of its own needs against a possible export last year of over four hundred million bushels.

Surely there is need of thoughtful efficient farming if there is to be food for the gallant sons of Britain and her allies, and if the people at home are to be fed.

What can be done?

Here are five suggestions:—

I. Use high yielding varieties of cereals. Canada has probably lead the world in developing high yielding varieties of wheat, oats and barley. The experimental farms, under the direction of the Dominion Department of Agriculture, have demonstrated that suitable varieties of grain far out yield common seed. Prof. Zavitz of the Ontario Agricultural College last year reported three varieties of wheat that yielded over 30 bushels per acre in actual farm tests against an average yield of 20 bushels per acre for Ontario.

II.—Sow Good Sound Seed.

Ontario Agricultural College has shown that plump sound seed of the common cereals out-yields shrunken and broken seed by 23.9. Now is the time to use the farming mill. Clean out the light shrunken and broken grain now, so that seed time will find none but the best for your next spring's seeding. Every weak, poor grain next spring will produce a weak, poor plant—will take up soil moisture and plant food and will cut down your final yields.

III. As far as possible help the great quintette of the soil, make conditions right for plant growth.

The Soil Quintette—Humus, Drainage, Lime, Tillage, Plant Food.

Humus acts like a sponge, catching and holding the rains and snows of autumn, winter and spring for the time when the crops need moisture.

In the semi-arid areas of Western Canada moisture is the great control limit factor. Humus is the home and food of soil life. You can increase the humus of your soils by manuring with strawy manure, and by plowing under clover, grass and stubble.

As a true Canadian farmers, especially those of Ontario, are recognizing the importance of drainage.

Grain roots will not develop in water-logged soils. The way to make your soil "early" and in the best condition for crop production is to drain off the standing water. It is deadly to crops.

If the soil is sour, if the soil is thin and sheep sorrel and moss is abundant, and if there is no sign of clover, your land is in need of lime. General farm crops thrive best on sweet soils. Many a good crop is prevented by the soil being sour. Acid soil is deadly to soil life. The cure is lime in any form. If limestone is used it should be finely ground and applied at the rate of not less than 2?3 tons per acre. This may be done any time before seeding. The longer lime has to act in the soil the more thoroughly will it correct soil sourness.

Good soil tillage means good soil working—good seed bed preparation—good conditions for the young crop to start out. Remember that high grade seed cannot make up for poorly prepared land. If your wheat land has not been fall plowed, turn it over as soon as the soil will work well in spring. If the soil is heavy do not plow it "all at once." Best clay seedbeds are prepared by plowing no more each day than you can disk and harrow down before sunset. If clay furrows are allowed to bake they never work down to mellow seed-beds. The writer has seen hundreds of acres of clay soils practically ruined by bad tillage.

The soil is the great storehouse of food. Virgin soils produce big crops for simply the working and seeding. Soils in older sections of the Dominion, however, have not that great supply of crop food. They must be helped. Be sure to carefully protect the great farm source of plant food in the manure heap. Every rain that washes down it in brown streams carries off crop possibilities in plant food farm profits. If the fall wheat went into winter a little weak, help it with a light top-dressing of manure, or fertilizers. You can greatly increase your grain yield by proper management of plant food.

"But", you say "this all takes labor," and labor is scarce and high priced.

This is quite true, however, there maybe some "short cuts" in the matter of farm labor management that you can make use of. Possibly you are attempting to work too much land for the labor at your disposal. Would it not be wiser to cut down the area and give the smaller area the advantage of better working.

Time can be saved by using wider disks and harrows—wider seed drills—and more capacious crop handling machinery. It requires more horse power, but this is likely to be the cheapest farm power at your disposal. If you are growing a considerable area of roots, potatoes or corn, remember that two row cultivators will save considerable time.

Finally in these days when the call for service is so strong, every farmer of the Empire should study to make his acres do double, and even triple duty.

WORLD NOT CROWDED.

Plenty of Room for Comfortable Living Left Yet.

There are on this globe about 1,500,000,000 inhabitants, declares a writer in Scribner's. Most of us, who lack the sense of proportion, at the mention of this big number, are apt to speak of the "over-population" of the world. Yet, if we spare a few moments' thought, we shall better know what this represents.

There is in my study room a geographic globe about 15 inches in diameter. On that sphere there is marked a little spot about the size of a point of a pencil—at any rate, so small as to make it impossible to write the initials of its name—Lake Champlain—upon it. Yet whenever Lake Champlain freezes over there is good standing room for every one of all the inhabitants of the earth. Indeed, strange as it may sound, everyone, young and old, would find about one square yard to stand upon.

Sketching this picture is like visualizing the great tragedy of the human race—the few people of this earth do not begin to realize their immense opportunities and their unused resources; meanwhile, they have the insane feeling that the world is "over-populated." All our science, our religion, our art have not given us common sense enough to learn how to use them to live comfortably and happily—we, this mere handful of inhabitants on this immense world of ours.

Nor does it look as if we were going to get to our senses before many generations to come as long as we keep on muddling and blundering; as long as greed and vanity, lust for power, the main inheritance of the aims and thoughts of the past, together with some of our time-honored traditions, keep us in the cold, relentless grip of bygone ages.

On the other hand, there is that undeniable possibility that those of the nations which may feel peacefully inclined and trust to luck by remaining unharmed are liable at the most unexpected time to be at the mercy of the wild beast which lurks around, as the atavism of the primitive instincts of our race.

LOSSES IN HEATING.

Value of Storm Windows in the Saving of Fuel.

Owing to the rising price of coal and the need for heating our dwellings in winter, the cost of fuel is a large item of expense to the householder. Anything that can be done to reduce this cost without suffering inconvenience from the cold should be welcomed by all. The average house holder has but little knowledge of the principles and application of heating, and there are many portions of Canada where the saving of fuel by the use of storm windows (commonly known as double windows) is not fully appreciated.

Heat is lost from a building in two ways, by (1) radiation, i.e., that transferred through walls, windows and other exposed surfaces by conduction and lost, and (2) convection currents, or leakage, namely the losses through the openings around windows, doors, etc.

By the opening of outside doors much heat is lost. This, to a great extent, can be overcome by the use of storm or outside doors. Better still is the storm porch, which allows of one door being closed before the other is opened. This porch may be removable, to permit of the use of all verandah space in summer.

The radiation losses are usually of greater importance than the convection. As losses due to radiation from walls, floor, ceiling and doors are determined by the structural features of the house, they are largely unavoidable. The most serious radiation losses are from windows and the saving of heat resulting from the use of storm windows is largely due to the layer of dead air—one of the best non-conductors—between the inner and the storm sashes. Storm windows also prevent uncomfortable drafts.

The great heat loss from single windows is demonstrable. A square foot of window surface radiates as much heat as 2½ square feet of an 8 inch brick wall surface. Storm windows reduce the loss to nearly one half of this amount. In addition, they reduce the loss due to leakage and save from 10 to 15 per cent. of the fuel bill.—W.L.D. in Conservation.

A Careful Queen.

The Queen of Norway dresses economically to the point of shabbiness, spending only $1,000 a year for her clothes. The Queen of Spain is the most extravagant of European royalties for her wardrobe, which costs more than $16,000 annually. Both are English princesses and first cousins.

COLONIES READY.

Prepared for Two Years' War, Says Well-Known American.

Norman Dodge, general manager and second vice-president of the United States Mergenthaler Linotype Company, who recently returned to New York from a business trip to Canada, Australia and Great Britain, says that every person he had met abroad was expecting the war to last another two years at the least. In England and the colonies he found the people all determined to carry on the struggle until German militarism had been crushed, no matter what the cost might be.

"Australia has already sent 300,000 troops to the front," Mr. Dodge said, "and the Government is sending 16,000 a month to make up for the wastage. I do not know how long Australia will be able to keep that rate up, for she has only a population as large as New York to cover an area the size of the United States.

"I had a very interesting voyage of 15,000 miles from Sydney to London, via the Cape of Good Hope, on the Orient liner Osterley, which was armed with a four-inch gun at Cape Town, and carried about a thousand passengers. I had intended to sail by the P. & O. liner Arabia, via the Suez Canal, but fortunately could not get away in time, as I escaped the experience of being torpedoed. The seamen gunners who were in charge of the gun mounted on the stern proved themselves to be expert marksmen. They dropped a small buoy overboard and hit it at a distance of one mile while the liner was steaming seventeen knots, and again at a roll and a half.

"We started at 5 o'clock in the afternoon, and next morning at daylight the captain sent word to us to dress and go on deck, which we did. At that time the Osterley must have been nearing the Isle of Wight. There was a destroyer close up on the starboard bow, and another on the port quarter, while a dirigible hovered over the bow. Sometimes the aviator would rise to an elevation of 5,000 feet and then swoop down like an albatross to the level of the hurricane deck. The dirigible also made frequent circles around the ship and zigzagged over the bows to see that no submarine was lurking in the green waters of the Channel below. This escort remained with us until the liner reached Dungeness, and from there to Tilbury we were protected by aeroplanes, destroyers, patrol boats and mine sweepers in endless numbers.

"The spectacle at the Downs, where we had to anchor for two hours for the nets to be opened to let us through, did not look as if Germany had done much harm to British commerce. There were more than 500 steamships of all sizes when we arrived, and that number was doubled when the Osterley started in the long procession through the nets which are spread across the Goodwin Sands to keep the submarines out of the Channel."

Mr. Dodge said that Americans in England now had excellent opportunity to get acquainted with the police, because they had to report at a station every time they entered or left a city. He did not believe that the cutting down of the dinner to three courses would cause many one in London hotels or restaurants to go hungry, because soup and fish were counted only as half a course each, and pastry, cheese and celery were not counted at all.

THE JOYS OF A HUNTER.

Zest of An Early Start in the Frosty Mornings.

Jesse Lynch Williams, in Scribner's, writing of hunting, says:

But, oh, the fun of those early morning starts! The horrid dressing by candlelight, the dark, stark silence of the sentient old house; the startling creak of the stairs, the surprising unconcern of the pre-occupied cook in the hall, taking loudly, tooking deliberately. And then the dazzling light and the welcome roar of the crackling fire in the dining-room; the even more welcome smell of the coffee bubbling on the old black crane; the hurried breakfast devoured with boy-like talk and laughter. And finally, lighting a pipe, "sweetest at dawn," and taking up our glistening guns, we carefully tiptoe out of the side door—having by this time to be sure, thoroughly awakened the rest of the household.

But wake off at last! The long-awaited moment! Across the frosted lawn comes the cool, sweet breath of the woods. Above the clear-cut rim of the sea comes the inquiring sun. And from far out on the bay comes a muffled "thrump!"—someone is shooting ducks. We slip shells into our guns. We close the breech with a low clang that is music to our ears and to the dogs. They are unleashed now, they race like mad across the whitened grass, then back again to us to make sure that it is all true—we are really going shooting together again? We are! We are! They bark and whine and bump their silly old heads against our gun barrels. For they, too, have been waiting and longing for this moment, understanding all the preparations, crying for joy at the sight of faded shooting coats, springing to their feet at every movement of their gods.

Occasionally the test of true courage is in being able to keep out of a fight.

Beware of the Cold Storage Egg! In his work on food and dietetics Doctor Robert Hutchison says, "the absence of carbohydrates prevents eggs from being in any sense a complete food." This refers to the fresh egg—the egg with a clean bill of health. What would Doctor Hutchison say of the modern cold storage egg? At present prices two eggs cost ten cents—and the egg is not a complete food! Something must be eaten with it to supply the needed carbohydrates. **Two Shredded Wheat Biscuits**, with cream or milk, make a complete, perfect meal at a cost of four or five cents. Made in Canada.

GERMANY'S PEACE PROPOSAL.

By Chas. M. Bice, Denver, Colo.

The peace proposal emanating through Germany's Chancellor, Holweg, has not the true ring, and will never be the basis, much less the terms upon which hostilities shall cease. Great Britain's reply thereto was admirably presented by the new prime minister, Lloyd George, and which seems to have the consensus of the allies opinion of the situation.

In the first place, the proposal for peace is based on the falsehood that Germany is victorious so far in the war, when as a fact, she has lost nearly all of her colonial possessions, has been beaten on the most important front—the western, and has only possession of a couple of small states and a small part of France which she occupied almost without resistance at the start.

Since that time, she has gained nothing important, but has lost strategic ground, and has about exhausted her resources of both means and men. Under these circumstances her peace proposal have been rightly denounced by the allies as insincere and put forth for the sole purpose of gaining time to recuperate her almost depleted resources.

The world waited for the word of David Lloyd George, as from an oracular divinity of Delphi, backed by the dignity and authority of an empire. It came forth with no uncertain sound, and characterized the German tender of peace as an offensive act, a play to the neutral galleries, and an effort to deceive the German people and to bolster their cause in the Teuton mind.

We are all thankful that the nations fighting with Great Britain also rejected the German proposal with equal emphasis as dishonest, and not even fit to form the basis for a settlement for further negotiations.

Mr. George quoted the memorable utterances of Abraham Lincoln with fine effect, and cited the attitude of that great patriot who stood so firmly and grandly against compromise on the great central issue of the conflict.

We must never forget that there are three first-class powers along with Britain in this supreme struggle; and that any concession from one would be extremely dangerous at this time, from its aptitude of playing directly into the hands of the enemy.

The allies are joined by a solemn compact respecting proposals and terms of peace, and it is suspected that they regard this agreement as being something more than a mere "scrap of paper."

Naturally it is not the so-called "humanity" of the war that appeals to them first, as it would to neutral nations.

They must stand together or go down to disaster. This they have agreed to do, so the epochal struggle will go on, until militarism is crushed and wiped from the face of the earth.

Don't Rub It On Bruises or Sore Muscles

Sloan's Liniment quickly penetrates and soothes *without rubbing*. Cleaner than mussy plasters or ointments, does not stain the skin.

Have a bottle handy for emergency, rheumatic aches and pains, neuralgia, lumbago, gout, strains, sprains and lame back, yield to Sloan's Liniment.

At all druggists, 25c. 50c. and $1.00.

Sloan's Liniment KILLS PAIN

SHORTAGE OF FEED.

Farmers Sell Off Stock Rather Than Carry Them Through Winter.

Unless the present tendency of farmers to sell off their breeding stock rather than carry them through the Winter is not checked there is likely to be a serious shortage of cattle and particularly hogs in the coming Spring and Summer. From all parts of the province reports are reaching the Department of Agriculture that the shortage and high cost of feed is causing farmers to get rid of their stock. The situation has become so disturbing that special steps are being taken to counteract the prevailing tendency. As a result of negotiations between the department here and the Dominion Live Stock branch at Ottawa, a special lecturer on stock raising is to be attached to the "Better Farming" special, touring the province during the next two months.

The department is also enlisting the assistance of its district representatives in order to carry on an educational campaign. It is felt that the farmers will serve their own interests best by keeping their stock even if carrying them over the Winter is costly.

A TALK ON RHEUMATISM

Telling How to Actually Cure This Painful Malady.

This article is for the man or woman who suffers from rheumatism who wants to be cured, not merely relieved—but actually cured. The most the rheumatic sufferer can hope for in rubbing something on the tender, aching joint, is a little relief. No lotion or liniment ever did or can make a cure. The rheumatic poison is rooted in the blood. Therefore rheumatism can only be cured when this poisonous acid is driven out of the blood. Any doctor will tell you this is true. If you want something that will go right to the root of the blood take Dr. Williams Pink Pills. They make new, rich blood which drives out the poisonous acid and cures rheumatism to stay cured. The truth of these statements has been proved in thousands of cases throughout Canada, and the following cure is a striking instance. Mrs. F. M. Simpson, R.R. No. 1, Blenheim, Ont., says: "For a long time I was confined to my bed, and actually crippled with rheumatism. The trouble first located in my ankle—which was much swollen. I thought it might be a sprain, but the doctor said it was rheumatism and advised me to go to bed as that the trouble would not be aggravated. I did as directed, but instead of getting better it spread first to my right knee, then to my left knee, and then to my arms. The limbs were much swollen, and if I moved them caused me considerable pain. I seemed to get weak in other respects and fell off in weight from 160 to 140 pounds. I had no appetite and seemed to lose interest in everything. One day while reading a paper I came across the case of a rheumatic sufferer cured by using Dr. Williams Pink Pills. I decided to try them and sent for three boxes. By the time these were gone I had certainly begun to improve, and with help was able to get up. Continuing the use of the pills I was first able to go about with the use of a crutch, which later I discarded for a cane, and then through the use of the pills I was able to throw aside the cane as well, and go about as briskly as I had ever done. I feel that Dr. Williams Pink Pills have been a blessing to me, and I strongly recommend them to other similar sufferers."

You can procure these pills through any dealer in medicine or get them by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

COMBING OUT ELIGIBLES.

Unskilled Munition Workers Called to Colors.

It was officially announced that the Admiralty, the Ministry of Munitions, and the Army Council have agreed to release for military service, at an early date, all semi-skilled and unskilled men of military age in munition factories who can be spared without prejudicially affecting the output of munitions, says London Mail.

For the time being the military authorities propose to call to the colors such of these men up to 31 years of age as may be fit for general service. To avoid dislocation they will be called up in consultation and agreement with representatives of the Government Departments concerned.

These proposals do not involve the calling up of skilled men, and in order further to secure the retention of skilled men on work of national importance the Army Council will issue trade cards through a number of trade unions to their members who were registered as journeymen and apprenticed before August 15, 1915.

This big romb-out follows upon the Order under the Defence of the Realm Act giving power to call on any exempted man to undergo a Medical Board examination. It is to be followed by a comb-out of Government Departments, beginning with the Board of Trade and the Foreign Office.

The application of the combing-out order to all controlled factories will release tens of thousands of men for the army, it is said.

Blouses and Skirts

Basque blouses, though they are being favored more and more day by day, have not succeeded in ousting the blouse that is worn inside the skirt. The model with a frill of fine lace in front or of the soft material of the blouse still holds its own. Some very attractive new blouses are of tan or sand-colored Georgette decorated with shadow embroidery in fine wool. Motifs worked in old blue, old rose and tan enhance the artistic beauty of these waists. Bright yellow and deep rose are among the newest colors that have been seen in separate blouses. Some have collars of the same material, while others are trimmed with a white collar.

No matter what rumors may be circulated to the contrary from time to time, the separate waist and skirt are always with us. Separate skirts are

7549-7531

Jabot Blouse and Pocketed Skirt

offered in plain and pleated models, some with pockets and yokes and some without. A yoke which extends in points over the hips is exceptionally smart. Over the points are placed little pockets with flaps that are buttoned down.

Scotch plaids and checked materials in two colors are used for the serviceable tailored skirts, as well as the other popular woolen fabrics of the season.

These patterns may be obtained from your local McCall dealer or from the McCall Company, 70 Bond street, Toronto, Ontario. "Dept. W."

Minard's Liniment Cures Garget in Cows.

Like Father, Like Son.

"Willie, do you like your teacher?"

"Naw! she's an old crab."

"Willie, how dare you speak about your teacher that way? Don't you know that is disrespectful?"

"What's wrong with it? Isn't that what you tell Ma your boss is?"

Profiting by Experience.

A well-known naval dignitary has a beautiful daughter. A young ensign, with no resources but his salary, fell in love with her, and asked the old gentleman for her hand.

The father at once taxed him with the fact that he had only his salary—hardly enough to keep him in white gloves and to burnish his brass buttons.

"Well, admiral, what you say is true. But when you married you were only a midshipman, with even a smaller salary than mine. How did you get along?" asked the ensign, who believed he had made the most diplomatic of defences.

But not so. The crafty old sea-dog thundered forth:

"I lived on my father-in-law for the first ten years, but I'll be hanged if you are going to do it!"

DODD'S KIDNEY PILLS

Guard Your Baby's Health

Cheerful, Chubby Children Make the Home Happy

Weak, puny babies are a constant care to tired mothers and are subject to many diseases that do not affect healthy children.

Keep your children in good health. See that their bowels move regularly, especially during the teething period. This is a distressing time in the life of every child and the utmost precaution should be taken to keep them well and strong.

By the consistent use of

Mrs. Winslow's Soothing Syrup

it is possible to avoid many childish ills now so prevalent.

It is a corrective for diarrhœa, colic and other infantile ailments. It soothes the fretting baby and permits the child to sleep well and grow healthy. It brings comfort and relief to both child and mother.

Mrs. Winslow's Soothing Syrup

Makes Cheerful, Chubby Children

Is absolutely non-narcotic. It contains no opium, morphine nor any of their derivatives. It is soothing, pleasant and harmless. For generations mothers in all parts of the world have used it and millions of babies have been benefited by it.

"IDIOTIC DISTINCTIONS."

War Great Leveller of Class and Democracy Promoter.

In the proclamation issued by the German Government the other day, half appealing and half commanding the German women of every rank to enter the public service as actual workers, there was one curious and significant phrase, says the New York Times. As translated, it characterized as "idiotic class distinctions" those lines which, more rigidly in Germany than in any other European country, except perhaps in Austria, have divided the population into little less than separate species.

If these distinctions have come to seem "idiotic" to the rulers of Germany, then it would be impossible to exaggerate the influence toward democracy which the war has exerted, for certainly, before the war, the dividing line between class and class were held to be natural, immovable and commendable—in short, necessary for the existence of society as in Germany it ought to be.

There a man or woman was "born" or was not, and that ended the matter for him or her, and it also decided the things he or she could and could not do. All that is ended if class distinctions really were called idiotic in an official proclamation of high provenience.

The change would be so enormous, however, that one is almost forced to doubt the accuracy of the translation.

The Athletic Girl.

"So she's gone in for athletics."

"I should say so. I found that out when I tried to kiss her."

"But she hollered for help, didn't she?"

"No, that was me you heard hollering for help."

Minard's Liniment Cures Colds, Etc.

Very Fine.

A country gentleman in Ireland, having a small sporting estate to sell, advertised it, and soon afterward a gentleman called to see about it.

"Well, sir," said he, "I have been over that estate you advertised, and find it all right except that fine trout stream you mentioned."

"It runs through the wood in the lower part of the meadow," said the land owner.

"What! That little brook? Why, it doesn't hold much more than a spoonful. I am sure if you were to empty a pail of water into it it would overflow. You don't call that a fine stream, do you?"

"Faith," said the owner, blandly, "if it were much finer you couldn't see it all!"

FROM OLD SCOTLAND

NOTES OF INTEREST FROM HER BANKS AND BRAES.

What Is Going On in the Highlands and Lowlands of Auld Scotia.

The price of the 4 lb. loaf in Crieff has been raised from 20 cents to twenty-one cents.

The military authorities are hoping to obtain from 250 to 300 farm servants in Berwickshire.

Col.-C. W.-Scott, of Dumfries, has assumed the post of Assistant Director of Artillery in France.

Rothesay streets have become so dangerous owing to the darkness that many accidents have occurred.

In two years the valuation of the Duke of Atholl's property in the Highland district has fallen $16,075.

An outbreak of anthrax is reported from West Lothian, and a large number of bullocks have had to be cremated.

The Edinburgh Chamber of Commerce urges the necessity on the University of establishing a degree in Commerce.

Dr. A. R. Turnbull, formerly medical superintendent of the Fife and Kinross Asylum, has just died in Edinburgh.

Summons warnings on lampposts, etc., are being experimented with in Kincardineshire, and promise to be successful.

A suggestion was made for utilizing German prisoners on a mid-Scotland ship canal at a meeting of the Edinburgh Town Council.

Criticism of War Office methods in calling up farm workers was made at the annual meeting of the Scottish Chamber of Agriculture.

David Lawson, stationmaster at Shettleston, has retired, after nearly 52 years' service with the North British Railway Company.

At a meeting in Edinburgh attended by Lord Rosebery a civil advisory committe was formed to deal with war allowance difficulties.

The valuation of Perthshire during the past year shows a decrease of $83,596.40, chiefly due to the lessened demand for the shootings.

Second Lieut. John Steel Ralston, Cameronians, younger son of Col. T. H. Ralston, Hastoun, Bothwell, has been awarded the Military Cross.

The death has occurred at Burntisland of Mr. William C. Arnott, formerly district superintendent of the North British Railway at Burntisland.

Lord Salvesen protested at the annual meeting of the Association of Lowland Scots against the treatment of Lowland regiments by the War Office.

WINTER WEATHER HARD ON LITTLE ONES

Our Canadian winters are extremely hard on the health of little ones. The weather is often so severe that the mother cannot take the little one out for an airing. The consequence is that baby is confined to overheated, badly ventilated rooms; takes colds and becomes cross and peevish. Baby's Own Tablets should be given to keep the little one healthy. They regulate the stomach and bowels and prevent or cure colds. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

An Old Quotation.

Mabel—Did that painter who stained your front door to look like mahogany do a good job?

Edith—He shall never darken my door again.

Minard's Liniment Co., Limited.

Gentlemen—Theodore Dorais, a customer of mine, was completely cured of rheumatism after five years of suffering, by the judicious use of MINARD'S LINIMENT.

The above facts can be verified by writing to him, to the Parish Priest or any of his neighbors.

A. COTE, Merchant.

St. Isidore, Que., 12 May, '98.

In The Years To Come.

"Father, what did you do in the Great War?"

"I nursed you while your mother was selling flags."

Minard's Liniment Cures Diphtheria.

And There He stops.

"Bluffem poses as a hustler, doesn't he?"

"Well, yes; he's always energetic in reaching a conclusion that something ought to be done."

PILES.

TWELFTH CON BRUCE

Clover threshing is the order of the day.

Mr Eli Barnes has retired from cutting wood and is now working in the Port Elgin brush factory while the stormy winds do blow.

A number of fat cattle were delivered from the line last week.

Mrs Donald McDougall has rented Mrs D.A. McKinnon's farm and is now pulling fit bay down.

Gee, wasn't it frosty? You would need a suit with the fur side inside and the fur side outside, and then your nose would suffer from exposure.

Mrs D A Campbell and daughter Effie, of Bentinck, are holidaying at the home of her parents, Mr and Mrs Colin McGillivray.

A number of the young folks of this line took in Tom Marks' concert and report a good time. Don't forget who Santa Claus' father was.

Mr Will Fleming, of Regina, visited his cousins, Mrs John Cumming and Mrs John Dunlop over Sunday.

Leap year is past. Boys, don't forget to take the ladies to the social.

Miss Hattie Barnes returned to Guelph after visiting her home here.

Foxes are very plentiful at present. Hunters are also plentiful. The game seem to be more wily than their enemy.

Mr Elgin Cumming is breaking in his fine team of blacks.

PINKERTON

Lieut Harold Pinkerton left on Monday for London, where he has been granted a commission in the 149th Battalion.

A number of our young people went to Paisley on Saturday to the skating rink.

The Presbyterian church here held their annual meeting on Thursday last. The report for the year shows the church to be in a very flourishing condition, the congregation having raised $600 more than in the previous year.

We are glad to know that Mr Thos Birrell, who has been quite ill, is improving, and will soon be able to be out again.

The Tp Council met here last Monday and started the year right by giving a grant of $60 to our local Red Cross Society. The members are very grateful. Thos Birrell and Mrs Gibb have donated a beautiful quilt which will be sold by ticket.

Mrs (Rev) Gale went to Alma this week, where she will remain for some time visiting her son.

Children Cry
FOR FLETCHER'S
CASTORIA

—In the Maritime Provinces there were 6500,000 tons of coal mined in the year ending Sept. 30th, 1916, which is 100,000 tons more than in the preceding year.

SECOND CON ELDERSLIE

Mrs W Marwood and Miss Amy, of Toronto, visited the former's mother, Mrs D Allen, for a couple of weeks.

Blain Fortune had a very successful sale last week.

Hughie Campbell is engaged with Mr Jacklin, of Brant, for the coming year.

La grippe is prevalent in this section, in almost every home it has a grip on someone.

Mr and Mrs Schilling, who are selling out, intend to move to Port Elgin.

A prayer meeting will be held in No 8 school on Tuesday evening.

Mrs D Allen has been laid up for the past few weeks with a very severe attack of neuralgia.

Alex Campbell is busy getting material home preparatory to building a fine new red brick residence next summer.

Little Jean Hope, daughter of Mr and Mrs Geo Hope, is recovering from a severe attack of mumps.

The sympathy of this community is extended to Mrs Blain Fortune, in the loss she has sustained by the death of her brother, Mr Chris Wagner, who died on Saturday last from an attack of typhoid fever. Mr Wagner was well and favorably known here, and his demise is lamented by all.

Mr John McEorie, of Manitoba, a former resident of this concession, is visiting friends here for a few weeks. He is accompanied by Mrs McEorie, who is a daughter of the late Mrs John Fortune, of Veals.

TENTH CON BRUCE

Wood bees are the order of the day.

Mr Earl Nice, of Tiverton, was a guest at Mr A McDonald's on Sunday.

Mr Alfred Thompson, of Hepworth, was also a visitor there this week.

We are sorry to hear that our old friend, Charlie McDonald, is under the weather. We hope to soon see him able to be out and around again.

Mr R Christie is now wearing the Quaker Oats smile. No wonder. It's a boy.

A number from this vicinity attended W McGill's sale in Elderslie on Wednesday of last week. Aunt Pearce realized good prices on everything.

GLAMIS

The box social that was held in the school on the 6th con Bruce on Friday last was a great success. Quite a number from our village attended.

We are glad to report that the sick are improving. John McNally, who was so very low, is much better.

Mr John Currie made a business trip to Ripley on Friday last.

Mr Hector McLean and brother John C spent Sunday afternoon at Mrs Catherine McKinnon's, 10th Kincardine.

Mr Robt Jackson left for Niagara, where he expects to find employment for the winter.

EDEN GROVE

Winter has arrived. Better look up your winter underwear, boys.

Mr and Mrs Campbell and Mrs S Gallinger visited friends in Brussels.

Looks as if our neighboring scribes were going to have a little tit for tat on paper. Why not get out into a ten-acre field? We will hold the stakes.

Mr Craig, from the west, returned last week. He thinks there is no place like the west, but this is hoot snuff for mine, thanks.

Mr Mack Scott has a gang of men busy loading logs for the Knechtel Furniture Co. Walkerton.

Mrs Cameron and Miss Tracy Desmond visited Walkerton friends last week.

On Friday Mrs Killen was moved to the hospital at Walkerton suffering from a stroke. We wish her a speedy recovery.

When Sammy Jim received the gentle of West Simcoe election on Monday evening he got an old tin pan and shaved "It's a long, long way to Toronto for the Grits," and started a bonfire, and now some people are wondering if he really is a Grit.

Miss Frances Seller called on Paisley friends on Monday.

The only change in time of trains on this division is that the late train is timed to arrive at 5.45 p.m. It's well named the late train, as it's always late.

Mr and Mrs Showaldice, of Calgary, Alta, were the guests of Mr and Mrs Robt Perdue, at the Model Farm, this week.

Do you notice the days growing longer and your supply of black diamonds growing shorter?

Mr Lawrence Stansel went to London on Monday for a short time.

The minister didn't preach the missionary sermon on Sunday. Guess the heathen and fair weather christians didn't show up.

Mr Orne Stansel is home from the west visiting friends.

There seem to be a few old Duffers left in West Simcoe yet.

Mr McCutcheon and son from the west visited at the home of Mr and Mrs Pearson, quality Hill, this week.

Quite a number of our young people enjoyed a skate to the Paisley rink Saturday. Must be some attraction, boys.

Between sleigh riding, skating and practising for the box social, the liddies are working overtime these days.

Mr and Mrs McKeeman and sons took in the Marks show in Walkerton on Monday evening.

Owing to the stormy weather the Red Cross Society met at the home of Mrs Pearson last week.

Mrs T Desmond received a letter on Monday written at Springfield, N S, from her son Dan, of the 118th, who expected to remain a few days at that town en route to Halifax.

Miss Jennie Killen is spending a week with Walkerton friends.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

WILLISCROFT

Mr J D Foole, who was laid up last week with an attack of la grippe, is going around again.

Quite a few are laid up with chicken pox. Be careful who you skate with.

Miss M Greenslad, of Tara, is visiting her cousin, Miss Jennie George.

There was a large turnout to the social at Ebenezer skating rink last Friday night. The Ladies' Aid are to be complimented on their success, as proceeds amounted to nearly $35.

Mr Fred George has sold his driver to Robt Wolfe. Last year Robert was looked upon as an auto victim, but times change, and it looks as if Councillor George was in for free rides this summer.

Watch for the doings of the Ebenezer puck chasers this winter. In the game last Friday night with Paisley the score stood 7-6 in favor of the visitors.

There was a good turnout at the I.O.L. Saugeen District meeting held here on Jan 9th. The members did not forget the brethren who had enlisted and gone overseas. By a unanimous vote it was decided to send to each member a present as a token of remembrance from the district I.O.L. At the close of the meeting the following officers were installed by P C M Calvin Crawford, refreshments being served at the close: W Master, C H Green, Southampton; D Master, T S Peacock, Williscroft; Rec Sec, A Rushton, Williscroft; Chaplain, G Watten, Southampton; Treas, F Grant, Williscroft; Fin Sec, H McFadden, Williscroft; D of Ceremonies, M Robinson, Port Elgin; Lecturer, E H McArtney, Williscroft; Dep Sec, C Crawford, Williscroft.

PERFECT HEALTH IS EVERY WOMAN'S BIRTHRIGHT.

A Prescription That From Girlhood to Old Age Has Been a Blessing to Womankind.

When a girl becomes a woman, when a woman becomes a mother, when a woman passes through middle life, are the three periods of life when health and strength are most needed to withstand the pain and distress often caused by severe organic disturbances.

At these critical times women are best fortified by the use of Dr. Pierce's Favorite Prescription, an old remedy of proved worth that keeps the entire womanly system in excellent condition.

Mothers, if your daughters are weak, lack ambition, are troubled with headaches, lassitude and are pale and sickly, Dr. Pierce's Favorite Prescription is just what they need to surely bring the bloom of health to their cheeks and make them strong and healthy.

For all ailing women Dr. Pierce's Favorite Prescription is just the right medicine. During the last fifty years it has banished from the lives of tens of thousands of women pain, misery and distress. It makes weak women strong, sick women well.

If you are a sufferer, if your daughter, mother, sister, need help, get Dr. Pierce's Favorite Prescription in liquid or tablet form from any medicine dealer to-day. Then address Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.

Every woman should be careful that the liver is active and the poisons are not allowed to clog the system—get rid of these poisons by taking Dr. Pierce's Pellets, which regulate and invigorate stomach, liver and bowels. Keep the body clean inside as well as outside!

How to preserve health and beauty is told in Dr. Pierce's Common Sense Medical Adviser. It is *free*. Send Doctor Pierce, Buffalo, N.Y., fifty cents or stamps to cover wrapping and mailing only.

ORESHAM

The Red Cross box social held in No 10 school on Friday evening last is conceded to have been about the best and most successful entertainment held in this section, the receipts amounting to $165. Auctioneer Pearce wielded the hammer, and seemed to have no trouble in inducing the young men to come out with their best bids for the boxes. The programme rendered was first-class. The performance of the school children, under the direction of their teacher, Miss McLennan, is specially worthy of mention. Mr D A McLennan, of Glamis, was accompanist. Others assisting in the programme were Miss McIntyre, Miss Reta McKinnon, Mrs J K McLennan, Mr Hector McLean, of Glamis; Miss Jean Fullerton, of Paisley; Miss Reta McKay, Messrs J Thornburn, R McKay and L McLean Young; instrumental music by Mr J Rose, of Glamis, and the McKays. The chair was ably occupied by ex-warden A P Mewhinney.

Mr Mills and Mrs McGillivray, of Penne, Sask. were visiting at the home of Mr and Mrs Jos Irwin.

Mr Wm Parker made a business trip to Walkerton again this week.

Miss McKenzie arrived home last week after a month's vacation in Toronto, Guelph and other points.

Mr J G Brown, of Paisley Continuation School, spent the week end at his home here.

Pte H McDonald, of Toronto, visited at the home of Mr and Mrs Wm Rose last week.

Miss Edith Rose, of Toronto, spent holiday at her home here.

Irwin, of Elderslie, is visiting at the home of Mr and Mrs Jos Irwin 8th con.

Mrs McKenzie, 10th con, who was ill last week, is now improving nicely.

Messrs. L. McLeod, Young and W M Parker made business trips to Kincardine this week.

Children Cry
FOR FLETCHER'S
CASTORIA

TURNER'S

Some nice cattle were shipped from here on Saturday.

Mrs J Hill, of Proton, is visiting her parents, Mr and Mrs O Christie.

Mr John Durward, of Kincardine, was visiting with his friends here.

The congregations of North Bruce and St Andrew's have extended a call to Rev P M Currie, of Blackstock, Ont. If the call is accepted Mr Currie will be here the beginning of February.

A lot of pressed hay was shipped from here last week by Mr L S McClure.

Miss Susan Davidson left last week for Calgary to visit her sister, Mrs McKenzie, who is seriously ill with pneumonia.

It is hoped that the Grand Trunk will make some improvement to the station and yards here, as they need it badly. Another new siding with a neat little freight shed is what is required to fill the bill.

Born—In Saugeen Tp, on Jan 18th, to Mr and Mrs Wm Thede, a son.

As You Listen to the Band

in your own home, you realize that the New Edison Diamond Amberola is giving you music more perfect than can be heard in opera house, theatre or concert hall.

Remember that all *Edison Records* are made under ideal conditions—in a specially constructed concert room—far from the noises of the street, where there are no late comers and the inevitable chatter of the concert audience.

The NEW EDISON DIAMOND AMBEROLA

And such Bands as you may enjoy, too!

Highlanders Bagpipe Band
Artillery Band of Mexico
Sousa's Band
Police Band of Mexico
United States Marine Band
Garde Republicaine Band
National Military Band
New York Military Band
and Creatore's Band

The New Edison has the diamond reproducing point, unbreakable and long playing records, superior motors and construction, concealed horns, and the cabinets are made in true period styles, in perfect harmony with the finest furniture.

As usual, Edison owners have everything worth while in the new melodies, the old favorites, selections from the classics, and the popular dance and song hits of the day. Come in and listen to the bands. Get the complete list of Edison Records and tell us just what you want to hear. We'll gladly play your favorite selections—and thank you for the opportunity of letting us demonstrate the manifold superiority of the New Edison. 57

BORN

ROBINSON—In Elderslie, on Jan 22nd, to Mr and Mrs Alf Robinson, a daughter.

DIED

GORDON—At Paisley, on Jan 17th, Mrs Annie Gordon, in her 59th year.

—Miss Carol Goode, of Brantford, is a guest at Mr S Ballachey's.

—Mr and Mrs James Shoultice of Calgary visited at the home of Mrs W. Walker last week.

—There are over 100 cases of mumps among the men of the 160th Bruce Batt. at Bramshott Camp.

—Rev Mr Mann, of Port Elgin, preached at preparatory communion services in Knox church on Friday.

—Mr John Thomson, of Brandon, is spending a few weeks in town visiting his father, Mr D Thomson.

—Rev J E Hogg, B D, of Southampton, has received a unanimous call from Willis Presbyterian congregation at Clinton.

—Mr Alex H Morland, who has been working in a Toronto munition factory for a couple of months, was home for the week end.

—Malcolm McAllister, of Earl Grey, Sask, who has been visiting Elderslie friends for the past month, left on Saturday for the West.

—Hockey match, Chesley vs Paisley, in Paisley rink, on Friday evening, Jan. 26th, at 8 o'clock, sharp. Admission, 25c. Skating after the match.

—Mr and Mrs David Stewart, of Gilbert Plains, Man., and Mrs Chas Seigiano of L'Istowel, were visitors last week at the home of the ladies' sister, Mrs R Petrie, Ross St.

—Mrs Jas Irwin, of Elderslie, has bought Mr John Armstrong's house on Queen st. North, and is moving to town. Mr Armstrong intends going on his farm in Greenock in a few weeks.

—Mr John Nelson, managing editor of the Vancouver World, made a flying visit to his old home in Greenock on Thursday, and gave THE ADVOCATE a call. He was one of a delegation to Ottawa in connection with telegraphic news service.

—Geo T Brown, of the Royal Bank staff, has returned from Walkerton hospital, where he recently underwent an operation for appendicitis. He is now at the home of his parents, Mr and Mrs Thos Brown, 2nd con Elderslie, and making good recovery.

—Rev Mr Crighton, pastor of Paisley Methodist church, has been confined to the house with a severe cold since driving a distance for a funeral on a cold day, and no services were held in the church on the last two Sundays. The endurance test is sometimes as severe for the pastor ministering to his flock in a peaceful Canadian community as for the soldier going to the trenches.

Red Cross Sewing

Parties having Red Cross sewing on hand from 1916 will please leave at the library by end of January.

The New Warden

At the opening of County Council on Tuesday, Reeve D J Izard, of Port Elgin, was elected Warden.

School Board

The School Board held their first meeting of the year on Wednesday evening of last week. Mr D Forrester was appointed chairman for 1917.

School Trustee Nomination

There will be no difficulty in filling the vacancy on the School Board. Dr Gage has signified his willingness to become a candidate.

Sale of Cows Postponed

Mr McDonald's sale of cows, advertised to be held on Saturday next at the Central hotel yards, Paisley, is postponed to Saturday, Feb 3rd. Owing to the freight congestion and change of train service Mr McDonald is unable to get the cows shipped to Paisley this week. Watch for further announcements.

Ebenezer Lost

Six Ebenezer puck-chasers drove to Paisley on Monday evening to play their return game with the locals, the score at the end of the battle being 8-5 in Paisley's favour. The phenomenal work of Dick Grant in goal for the visitors, was one of the features of the game, he evidently being covered with horseshoes at times.

Red Cross Shipment

The following is the January shipment from The Women's Patriotic League to Toronto Headquarters:—21 flannel shirts, 93 pairs of socks, 16 comfort bags, 3 personal property bags, 1 doz house wives, 1 doz. trench towels, 6½ doz Turkish towels, 6 pr knee caps, 2½ doz pillow covers. A donation was given from Knox Church Patriotic Society of 10 pair socks, 1 doz furnished house wives, 1 doz comfort bags, 1 doz Turkish towels.

L. C. SPOFFORD

BUTTER, 35c Both 'Phones EGGS, 45c

—A well-known young farmer from Ashfield Township applied here the other evening for information on reaching the United States. He was surprised to know that there was no law prohibiting him from crossing the line. He told the story of how the boys in his neighborhood evaded the officers at the Border, and reached the United States two weeks ago. He could not understand that the "National Service Card" was not a conscription card, and appeared very much excited over the war. He declared the United States was "good enough for him" as he had no intentions of enlisting, and did not propose to take a chance on being taken a prisoner, and forced into the army. He left on the early train for Detroit, where he said his chums had secured him a good position. To judge from present indications, help on the farms will be scarce when spring opens up.—Ripley Express.

CARD OF THANKS

The brothers and sisters of the late Mrs Annie Gordon desire to thank neighbors, friends and townspeople for kindness shown to deceased in her illness.

"DRIFT"

At the sound of approaching footsteps Anne Sinclair put down the photograph she had been studying so thoughtfully and turned towards the partly-open door.

She listened expectantly. The footsteps passed. Then another door, quite near, closed quietly, and at the sound her face changed. She was exquisitely beautiful, with the beauty youthfulness alone can give, and the lovely, oval face, framed in a mass of soft, cloudy hair, might have belonged to a girl of nineteen rather than to a woman of twenty-five.

She gave an odd little laugh. Twenty-five! And she had been just eighteen when she married John Sinclair. Even in those days his career had given promise of great success; now he was one of the leading physicians of his time.

Anne's deep grey eyes wandered towards the door that separated her husband's "den" from her own. In the early days of their married life it had seldom, if ever, been closed. She stepped softly across the room and noiselessly turned the handle. But it did not yield. The door was locked on the other side.

"Hallo, Anne!"

So absorbed had she been that the further opening of the door had escaped her attention, and it was not until Pat Winterton spoke that she became aware of his presence.

"Nothing unusually wrong, Anne?"

"Why should there be?" she asked lightly, one hand momentarily brushing Pat's thick, brown curls.

"Well you seemed so preoccupied when I came in. I was half a mind to turn tail again."

"I'm very glad you didn't," Anne said stoutly. "I've lots of things I want to talk to you about."

Pat's eyes followed her as she crossed to a small escritoire that stood in one corner and put out his hand for the two letters she held towards him. A long silence fell between them, broken only by the rustling of the thin foreign paper as Pat perused the letters.

He looked up at last, his boyish face unusually grave.

"Poor old Anne!"

With an impulsive movement he flung out his hand so that it rested for a moment on her softly-rounded shoulder.

"I don't know what I'd do without you, Pat," was Anne's swift answer, her grey eyes lifted gratefully to his. "You've been the salvation of these last dreary months!"

Neither knew that the door leading to John Sinclair's room had opened, to be quietly closed again.

The small silver clock on the mantel chimed the hour. With a sigh John Sinclair let the pen slip from his fingers and stood up.

It had been a trying day, full of disappointments, but they were not wholly responsible for the weary lines that had crept round the firm, strong mouth, the tired expression in his eyes.

"Anne no longer cares," it seemed to mock at him. "You were a fool to marry her!"

Had he been a fool? He reviewed the years that were gone. First, his meeting with Anne—young and beautiful, little more than a schoolgirl; his deep passion for her; their short engagement, and a speedy marriage.

What next? The coming of little Peter—Sinclair shaded his eyes then—the little one's sudden death, and then—drift!

Anne had gone her way, he his. Perhaps he was to blame. His work had seemed the only panacea for the dragging ache at his heart when he thought of their little dead son, Peter, in whom they had both taken such a pride.

And Anne? What of Anne? Sinclair told himself that she had grown tired—and with little wonder! She was young, he was old—no, not old, but his hair was tinged with grey, and his arduous work left little time for pleasure and frivolity.

He got up and opened the door dividing their rooms. Hers was in darkness, but the silver-framed photographs on the small rosewood table caught the light.

One of them had been in her hand as he had passed her room that afternoon. A queer smile curved his lips as he picked it up. The photograph was Pat's—young Pat Winterton, who, with his youth and high spirits, had captured Anne's heart.

And was it any wonder? Youth called to youth. And he had left his beautiful young wife to drift into this.

He set down the photograph and returned to his room, a terrible thought fast taking shape in his mind. His life stood between Anne and happiness!

"Anne and happiness!" the clock on the mantelpiece ticked out relentlessly.

Opening a drawer, he touched a small steel object that seemed to twinkle up at him with a hundred evil eyes.

His hand closed mechanically over it. Surely that was the answer to the question! "Anne's happiness!"—the clock still ticked louder than ever in his ears.

But first of all he would have to satisfy himself as to Anne's whereabouts. He had dined alone, so probably she was out. At any rate, he would make sure.

His finger touched the bell-push, and a trim maid appeared. Yes; her mistress was out, and had said she would not be back till late.

Once more John Sinclair passed into his wife's room, but this time he switched on the lights. A morbid desire to see her special possessions for the last time took hold of him. In fancy he pictured her as he had seen her a hundred times before—sitting in the lamplight, just where he could catch a glimpse of the exquisite girlish face through the open door.

He was about to switch off the light, when something white by the foot of the Chesterfield caught his eye. He stooped and picked it up. It was a crumpled note. He smoothed it out, and read the few brief lines.

"Dearest Anne," it commenced, in Pat Winterton's scrawling hand,—"It wasn't until I'd left you this afternoon that I remembered I'd booked seats at the Frivolity. Of course you'll come. The play is nothing very special, but at least it will give us a chance for further talk.—Always yours—Pat."

The veins stood out like purple cords on John Sinclair's brow, and for a moment he felt a wild desire to kill this man—this boy, he told himself contemptuously, who had stolen Anne's love.

But the desire swiftly passed, giving place to another. He must see Anne—must look upon her face once more before——. He did not finish the ugly thought.

Back in his room he turned down the light, and, after slipping into his outdoor clothes, left the house.

The Frivolity was packed, but it was not a difficult matter to find the two he sought. From a sheltered spot John Sinclair watched them unobserved—watched Pat's handsome head bent close against Anne's, watched the eager animation in her sweet face as they talked.

He slipped out again then, satisfied. The course he meant to take was the right one, since it meant Anne's happiness. Heaven, he had never known how much he loved her until then!

Returned to the house, he sat down at his desk, writing swiftly.

An hour passed, and the last letter was addressed and sealed, the one directed to Anne placed against the lamp, rose-pink in its rays.

With a jerk he opened the drawer and drew out the little weapon that was to give the woman he loved her liberty. His finger crooked itself round the trigger, and he raised the glinting barrel to his head.

"For Anne's sake!" The little clock ticked now.

A sharp report, a spurt of flame, then darkness.

The lamp shivered to fragments over the desk.

"John!"

The soft rustle of her gown, the firm pressure of her hand on his wrist, told him that it was Anne.

The flashlight touched her hair, turning it to gold, and in the dusk her face gleamed, pitifully white.

"John, were you mad that you contemplated such an awful thing!"

He stared at her dully, as though she were some ghastly visitant, and his lips voiced the one word:

"Anne!"

They stood a little apart now, and still the woman waited, a prayer of thankfulness in her heart that she had been in time.

"What made you come?" he asked suddenly.

She shook her head.

"I don't quite know, except that just over an hour ago, as I sat in the theater, I seemed to see your eyes upon me. The presentiment was so strong that I felt I must come home. Pat laughed at my fears, but I'm glad I came."

"Glad?" He echoed the word meaningly, and in a flash of womanly intuition she understood.

"You meant to do this awful thing for me?"

She read the truth in his eyes.

"You cared so little as that, John?"

"So much!" he answered quietly.

She slipped to her knees by his chair, her face softly outlined in the ruddy firelight.

"I don't yet understand, John!"

"It's simple enough," came back the low reply. "I wanted to give you back your happiness. But that letter explains everything," he added wearily, nodding in the direction of his desk.

"Go on!" she pleaded. "I'd rather hear it from your lips."

Her head leant heavily against his knee, and her eyes were wet with unshed tears.

"Things haven't been the same between us for some time now, Anne—not since little Peter died. I blame myself. I neglected you, and it was no wonder that we should drift apart. Then this afternoon, I learnt the truth. I saw you with young Winterton. I had seen the handle of my door turn. I thought perhaps you wanted me. After a while I quietly opened it. You and Pat——"

"Were standing together!" she broke in swiftly. "Oh, I remember now! We had been discussing a most important subject. You must know that Pat was my brother's dearest friend. Bob went abroad, and met with nothing but ill-luck. He wrote to me some months ago, but begged me to say nothing to you of his misfortune. I took Pat into my confidence, and through him sent what I could, knowing Bob's pride. That's why Pat came so often of late—to see Bob's letters and discuss the affair with me. Oh, John, my husband, you surely never thought that I——"

Her face flooded with crimson as she raised it questioningly.

"I must have thought a lot of foolish things, Anne," said John gravely. "You see, as I passed your room you had Pat's photo in your hand, and——"

She laughed then for the first time.

"Not Pat's, but yours," she answered softly. "It stands on the table, and the frames are identical. I was wondering if—if little Peter's successor would be at all like you, and——"

"Anne!"

He caught her in his arms and held her close, breathing a question in her ear.

She nodded.

"And I was hoping you would come into my room as you passed, so that I might tell you the wonderful secret," she added, with a happy smile.

He stooped and kissed her warm red lips.

"No more drifting," he said. "From now we move together."—London Answers.

WAR WORK IN RURAL ENGLAND.

Many Small Industries Giving Their Quota Towards Ending War.

While our farmers are hard at work attending to the food supplies of the nation many little industries are giving their quota towards the effort which is to win the war, says London Answers.

Thus, when the war started, country blacksmiths were given orders to supply so many horseshoes for the Army, according to their capacity, while quantities of tent-pegs are being made in the villages.

Trench warfare in winter led to the revival of the charcoal-burning in the woods, as the troops were supplied with braziers to keep themselves warm. Wooden soles for clogs have been made in great numbers owing to the high price of leather and boots brought about by the demand for military purposes. Clogs are made in the woods, and now a few clog-makers' camps can be seen in the South of England, though formerly confined to the North.

Owing to the falling-off of imports the country basket-makers have been busy—a special branch of the industry being baskets to carry shells—and at one village in Cambridgeshire, where osiers for the making of fascines are grown by the War Office, the workers have plenty to do. In a few woodland districts, where firs and pines are plentiful, pitprops for the mines are being made, in one or two places large forests being cut down so that the scene resembles a Canadian loggers' camp.

WAR AND INSANITY.

Statistics Show Marked Reduction Since War Began.

Probably the average man is under the impression that war has a tendency to increase lunacy. It is indeed generally considered that anything so destructive of life and property, so appalling in its nature, would have an exceedingly perturbating effect upon the human mind and cause innumerable cases of mental derangement.

Paradoxical, however, as it may seem, war has just an opposite result. According to the returns issued by the various asylum authorities since the war began, there has been a marked reduction in insanity.

It might, of course, be suggested that this is due to the fact of so many men being drawn away from the distracting competition of the industrial world into the Army, where life, if more precarious, is more varied and interesting. This no doubt is a contributory cause. But recent returns show a reduction amongst women as well as men.

What, then, are the general reasons adduced by the experts for this satisfactory state of things? Well, in times of peace they tell us that life is dreary and monotonous, and, in order to vary their existence, people resort to forms of amusement which, instead of affording them genuine recreation or gratification, only produce languidness and ennui.

When, however, a great war breaks out it dispels the monotony of our lives, and gives us serious and practical things to consider. Hence, instead of causing intellectual breakdown, it rather generates new intellectual energies.

GEN. NIVELLE, WHO SAYS YEAR OF VICTORY'S BEGUN
Gen. Nivelle, the new commander-in-chief of the allied forces, is here shown greeting Miss Kathleen Burke at Verdun. She is an Irish woman and secretary of the Scottish Women's Hospital. Gen. Nivelle, whom she describes as "a modern D'Artagnan," is scrupulous to a fault about the appearance of his own uniform and the uniform of every Poilu.

THE JAPANESE HUSBANDMAN.

Agriculture Suffering From Scarcity of Labor.

Japanese farmers live in the little hamlets and villages, instead of on their separate farms, as in Canada. If you watch them early in the morning you will see them going to the fields, spades on shoulders, like soldiers with their rifles. Occasionally some of them look up toward heaven and the sun and begin clapping their big hands, breathing deeply the refreshing morning air and saying prayers. They are worshipping the sun.

The majority of the farmers are Buddhists and the young ones materialists. Old ones inherit their religion as their duty to the departed members of the family; and the young ones, with the modern education of New Japan, revolted against anything brought a grave condition in the rural community. Hands are getting scarce. Farmers' boys get out to the cities and daughters go to the factories. They have gotten just enough false knowledge of the world to think they would be better off in the cities than at their homes. Most of the teachers in the rural schools are those who revolt against the business of tilling the land, or those who come from the cities, pale faced. They constitute some of the causes for the depreciation of the rural communities.

"Agriculture is the foundation of the nation" is an old Japanese maxim, and it ought to apply everywhere. But Japan is suffering at present because the farmers are not satisfied on the fields."

VEGITABLES THAT WRITE.

A Curious Invention of an Indian Scientist.

Since the price of meat has risen, we have paid increased attention to vegetables. But how many of us realize what truly wonderful things vegetables are?

Did you know, for instance, that vegetables can write?

An Indian scientist, who has made a very close study of vegetables, has invented an elaborate instrument, through which vegetables record their emotions in visible marks and dots. As, in the ordinary course of events, it would take too long to wait for the emotions to occur—for vegetables do not pass through such rapid emotions as human beings—the scientist induces the emotion, "reading" subsequently the vegetable's remarks upon the subject.

He excites the vegetable, and its excitement is plainly shown by the manner in which it writes its dots. He benumbs it with potassium cyanide. The "pen" writes nothing. He makes it drunk by administering intoxicating vapors. Lo and behold, the dots are as straggling as a toper's footsteps!

Finally, he kills the vegetable by heat. The dots descend as the temperature rises. At 110 degrees Fahrenheit the dots bound suddenly upwards. This is the final spasm—the vegetable is dead.

Astonishing as this may appear, it is less astonishing when we realize what a fine line divides the animal and vegetable kingdom. Six people out of every dozen will call a sponge vegetable. But it is an animal—just!

BRITAIN BUSY IN MEXICO.

Capitalists Secure Control of Raw Materials.

That Great Britain is being kept busy attending to its share in the European war goes without saying; that the industrial interests of the country are being neglected, however, is a conclusion far from the truth. Its capitalists are not overlooking any opportunities, especially opportunities to secure control of raw materials needed in their industries. They realize that it is just about as important to secure raw materials for their manufacturers as it is to secure markets for the finished products. Acting on this principle, they are preparing for the great commercial and industrial war that is destined to follow the present terrible conflict by getting control of large supplies of raw material wherever they may be found, regardless of distance or immediate accessibility. As an evidence of this the following item from the September number of the Bulletin of the Pan-American Union is of interest:—

"El Dia, a daily newspaper of Monterey, State of Nuevo Leon, Mexico, is authority for the statement that a company of English capitalists with available funds of several hundred thousands pounds sterling has been organized in London to work the Mercado Hill Iron Mines, near Durango. This iron hill is one of the richest and most extensive deposits of iron ore in the world, and has heretofore been largely used for fluxing purposes in the principal smelters of the republic. The company is reported to be negotiating with the Mexican government concerning the granting of the necessary concessions; plans have been made for excavating work, smelters are to be erected and the necessary machinery is to be installed as soon as practicable. The company has placed a practical mining engineer and metallurgist in charge of the work and a number of laborers have already been engaged to carry on active operations in the development of the mine."

GERMAN POST-WAR TRADE

Business Experts Work Day and Night Preparing for Peace.

Details of Germany's far-reaching plans for conducting a world-trade campaign after the war were made public recently in a lecture in His Majesty's Theatre, London, England, by Frederic William Wile, for many years a Berlin correspondent.

Mr. Wile declared there were countless indications that German finance, commerce and industry hope to be better organized for the post-bellum campaign all over the globe than any other of the great trading nations including the United States, as the German manufacturing system and distribution systems are the only ones of the first magnitude which have not been abnormally preoccupied during the last two-and-half years. The speaker said that German agents in recent time had been particularly active in China and South America.

"What few people outside of Germany seem to realize," said Mr. Wile, "is that the Kaiser's Government recently established what is virtually a separate Government for the exclusive purposes of paving the way for the new trade war. They have set up a so-called Imperial Board for Translation Economics consisting of nine of the finest business experts in the country, who are working day and night to transfer German commerce from a war to a peace basis with the least possible delay.

"Their main concern is to arrange for the earliest and largest possible supply of raw material, especially from the United States. The fleet of thirty to forty old German liners tied up in New York harbor are to make their first homeward-bound journey after the war packed to the rails with American cotton, copper, petroleum, lead, zinc and all other manufacturing staples of which Germany will stand in such urgent need."

Wile said there is hardly an industry in Germany to-day, from banking to dyes, which is not girding up itself in new syndicates in order to present more united front than ever the moment peace comes.

Hitting Back.

Uncle Silas (visiting city relatives who use electrical appliances for cooking at the table)—"Well, I swan! You make fun of us for eatin' in the kitchen. I don't see as it makes much difference whether you eat in the kitchen or cook in the dining-room."

TEUTON FORCES TOTAL 6,516,000

RUSSIA TO BE ANVIL FOR GERMAN HAMMER.

Hindenburg Has Now 2,760,000 Men Opposed to the Czar's Forces.

The London Times military correspondent, commenting on the German plans, writes: "In mid-December there were, not counting cavalry, 128 German divisions (2,560,000 men) on the west front; 104 divisions (2,180,000 men) on the Russian front, of which 65 are German and 39 Austrian, and two Turkish; 29 divisions (580,000 men) on the Rumanian front including 12 German, 11 Austrian, 4 Bulgarian and 2 Turkish divisions; 12 divisions (240,000 men) on the Macedonian front, of which 8 or 9 are Bulgarian, 2 or 3 German, and one Turkish; 33 Austrian divisions (660,000 men) in the Italian theatre. Now that the Rumanians have joined the Russians, we must admit that there are 125 enemy divisions (2,700,000 men) opposed to Russia.

Hindenburg's Next Move.

"It takes two to make peace. The writer is only concerned as to what Hindenburg will do if the war continues." We can put the west out of account. First, because the Germans had such a gruelling in France, and, secondly, because a German offensive in this quarter would suit us so well we cannot dare to hope for it. Verdun and the Somme have given the enemy no desire whatsoever to recommence his experiences against the armies of France and Britain. Meanwhile his plan is to amass heavy guns, shells and men, so that his inferiority in the west may be less sensible in 1917 than in 1916.

"We cannot exclude Italy as the destination of Hindenburg's floating balance of reserves, because 20 divisions added to the 33 Austrian divisions facing Italy would give the enemy a good chance of doing something. The situation in Switzerland also needs attention.

A Vigorous Campaign.

"We well believe Hindenburg, who always affirmed the greatest danger threatens from Russia, wishes to continue the campaign broken off in the Autumn of 1915. With 185 divisions on the Russian front he has the power necessary for conducting a fresh campaign with vigor. Germans declare the Russian armies are exhausted and short of war material, and the Austro-German railway system is far superior to the Russian. Russia must certainly be prepared to find herself in 1917 the anvil for the German hammer."

SERVICE TO ALASKA.

C.P.R. Steamer Will Make Three Trips for Tourists.

As was the case during the past season the C.P.R. steamship Princess Charlotte will make three round trips in the Alaska tourist service next year, which becomes effective June 8, 1917.

The list of tourist sailings between Victoria, Vancouver and Skagway, which has just been announced by the B.C. Coast Service, provides for three round trip sailings for the Princess Charlotte, seven for the Princess Alice and seven for the Princess Sophia, making 17 round trip sailings all told for the summer season of 1917.

The advent of the palatial steamship Princess Charlotte in the Alaskan tourist trade last summer was such a pronounced success that the company had no alternative but to arrange for her return to the northern run next year, when it is expected tourist travel north will break all records. The schedule has been arranged earlier with a view to giving plenty of time for the arrangement of advance bookings.

If when frying fish the pieces are put in the hot fat with the skin side uppermost and allowed to brown before turning they will not break.

Using coarse threads for stitching does not insure longer service, as the thread stands out on the surface of the cloth, causing it to receive constant rubbing and thereby wearing away before the garment.

Are You Intoxicated? The question is not as impertinent as it sounds. You may be a real teetotaler and yet be "intoxicated"—that is, poisoned by the gases that come from imperfect digestion. The products of food putrefaction are taken up by the blood and often poison the entire system. Cut out meats and starchy foods for a while. Eat Shredded Wheat with milk or cream for breakfast; eat it with stewed fruits and green vegetables for dinner or supper. It will cure auto-intoxication and make a new man of you. All the meat of the whole wheat in a digestible form. A perfect meal at lowest cost. Made in Canada

THE IRON OF LORRAINE.

May Incite Another War Between France and Germany.

It is unfortunate for the future peace of Europe that by far the best iron fields that are accessible either to France or to Germany lie exactly on the present frontier of the two countries. A good many Frenchmen believe that the Germans' hope of seizing permanently the part of these fields that lies in French Lorraine was one of the root causes of the present war, and the reason that last winter determined them to attack at Verdun, instead of at some point nearer Paris. Certainly, thoughtful writers, both French and German, discuss the subject very frankly, and point out to their respective countries how fatal the final surrender of any part of this disputed territory would be to the prosperity of their nation.

In this age of machinery a plentiful supply of both coal and iron is essential to any country that hopes to maintain itself as an industrial power; and the last ten years have proved that such a supply is even more necessary in war than in peace. The Germans admit that without the iron of the Metz and Thionville regions (which they thriftily took from France after the war of 1870) they would have been unable to supply their armies with the incredible quantity of guns and ammunition that modern fighting requires. France has kept up only because the British navy has kept the seas open for the import of iron; its own mines in the basins of Briey and Longwy have been in the hands of the Germans ever since the war began.

Now, neither France nor Germany is rich in iron outside the Lorraine fields. The year before the war France produced nearly 22,000,000 metric tons of iron, and Germany dug more than 28,500,000 tons from its mines. If Lorraine were all French, the figures would have been 43,000,000 tons for France and 7,500,000 tons for Germany. If Lorraine were all German, that country would have had 48,500,000 tons to 2,000,000 tons for France. The figures explain why the two nations will fight to exhaustion rather than surrender any territory that they now hold in Lorraine.

The question of coal is less critical, for the coal fields of the Saar—part of which was French until the fall of Napoleon—are farther from the border, and are not essential to Germany, although they would be very useful to France, which has very little coal of its own, and which has, largely for that reason, seen itself outstripped in the industrial race by Germany.

It begins to appear, however, that neither power is likely to gain any territorial advantage in Lorraine as a result of this war. Peace is likely to leave the frontier still cutting the precious fields of iron very nearly in half. But unless Europe is wise enough to find a way out of its national envies and jealousies, the time may come in the not far distant future when the prize will seem rich enough to one country or the other to justify another war of aggression and conquest.

BELGIAN ARMY CAME BACK.

Now Well Equipped, Horse, Foot and Artillery.

The Belgian army has been completely organized, says Henry Wood, United Press correspondent with King Albert's army. Horse, foot and artillery, the army is now well equipped and busy holding their part of the line from the Hun. The soldiers are comfortably clothed and well armed, the cavalry supplied with horses and the artillery satisfactory. The Belgians are in charge of the inundated country, which affords splendid protection against the enemy and renders infantry attacks impossible. The Belgians are separated from the Germans by a mile of water, including the River Yser and the Yser Canal.

The Belgian artillery includes modern guns made in Portugal, contributions from France and England, and guns captured from the Germans in the original inundation when the sluices were opened and the Huns had to hustle out to escape drowning, without waiting to try and extricate the guns, which were recovered by the Belgians, who drew off the water from that section when it was convenient.

RICH RED BLOOD MEANS GOOD HEALTH

Just a Little More Rich, Red Blood Cures Most Ailments.

The lack of sufficient red health-giving blood does not end merely in a pale complexion. It is much more serious. Bloodless people are the tired, languid, run down folk who never have a bit of enjoyment in life. Food does not nourish, there's indigestion, heart palpitation, headache, backache, sometimes fainting spells and always nervousness. If anaemia or bloodlessness be neglected too long a decline is sure to follow. Just a little more blood cures all these troubles. Just more rich, red blood, then absounding health, vitality and pleasure in life. To make the blood rich, red and pure, use Dr. Williams' Pink Pills. No other medicine increases the pure blood supply so quickly or so surely. The cure actually begins with the first dose, though naturally it is not noticeable. This is not a mere claim. Dr. Williams' Pink Pills have been doing this over and over again in Canada for more than a quarter of a century. This is why thousands have always a good word to say for this great medicine, for instance Mrs. Alex. Gillis, Glenville, N. S., says: "I cannot praise Dr. Williams' Pink Pills too highly. They are really a wonderful medicine. I was very much run down, suffered from frequent dizzy spells, and had an almost constant severe pain in the back. My home work was a source of dread. I felt so weak, and life held but little enjoyment. Then I began taking Dr. Williams' Pink Pills and the result was almost marvellous. They made me feel like a new woman and fully restored my health. I would urge every weak woman to give these pills a fair trial."

You can get Dr. Williams' Pink Pills through any dealer in medicine or by mail, post paid, at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

GERMANY WANTS PEACE.

Extracts From a Conversation With a German Diplomatist.

One may regard the old war spirit as definitely dead in Germany. Every one wants peace, even the Junker class. The peace movement is very strong among the commercial and working classes, and at the court itself every one professes horror at the continuation of the slaughter. All ideas of annexation and indemnity have vanished. On the other hand, no one thinks that the Allies can impose peace terms on Germany.

"Life in court circles is very dull. The Emperor is constantly at the front, and the Empress—in pleasant contrast to most ladies of the court—is an enthusiastic war worker. If the new compulsory civilian service is fairly applied to women, the ladies of the aristocracy will suffer most."

It appears that no one, not even his old-time military friends, has a word to say for the Crown Prince. A joke among hostesses, amusing at first, but since become tiresome, is to whisper to their favorite guests when the Crown Prince is present: Not a word about Verdun.

He is extremely taciturn these days, and freely disclaims all personal responsibility for the Verdun catastrophe, maintaining that the whole idea for the attack was imposed upon him by the General Staff. He and Hindenburg have become excellent friends these days.

In Germany there is undoubtedly a widespread and ever-growing desire for peace, and a powerful and growing suspicion of the Government.

It is one thing to be well dressed; it is another to be able to meet your tailor face to face at any time or any place.

DODD'S KIDNEY PILLS

FOR ALL KIDNEY DISEASES

CURES RHEUMATISM BRIGHT'S DISEASE BACKACHE DIABETES

NUMBER 23 THE PROPRIETORS

The Fashions

Fashion continues in ways of straight and unabated fulness. Skirts fall in soft, clinging folds, so much so that the tendency toward the narrower silhouette becomes very apparent, though we need not yet anticipate the very narrow skirt.

It is already rumored, however, that skirts for spring will be two and two and a half yards wide. But it is really looking a little too far ahead to be thinking of spring styles already. At present skirts are still very ample. Box pleats and side pleats are very freely used, and this means that a good deal of material is used in a dress or skirt. The pleats hang in straight lines, generally unstitched, while in some cases they are stitched as far as the hips and below that point are pressed into position.

7347—7341

Black Satin Dress with Tie-On Collar and Loop Pockets

The gradual lengthening of skirts that has come with the vogue for straighter lines is noticeable in many dresses; but women, on the whole, have not taken readily to the longer skirts, and the short skirt for street costumes is still favored by a great many. A long street skirt is really not graceful in a tailored suit, and women are not willing to sacrifice becoming styles so readily.

In afternoon and evening dresses, however, the longer skirt is not at all ungraceful. Some afternoon and evening dresses show slight variations from the straight lines. The Turkish trouser effect and draped skirt come from Paris as a departure from the extremely straight hanging and clinging effects.

Frill overskirts are also much used for evening, fashioned of soft silk vellas, tulles and laces. Black and white combinations occur very often in evening gowns. Black net worked up with white beads over a white satin foundation is one of the striking combinations used by an expert French designer. A sash of black satin forms a wide girdle, which is weighted at the ends by heavy black and white bead tassels.

Pockets Still Persist

When we consider the traditional fickleness of Fashion, it seems as though the life of the pocket has been very long, indeed; but the pocket still flourishes on suits, coats and dresses and shows not the slightest signs of becoming extinct. The latest development in this line is the long, loop-like pocket placed over the hips and standing away from the skirt. The smart afternoon dress of black satin shown in the sketch illustrates this type of pocket, also the new tie-on collar, which crosses in front and ties at the back, somewhat like the tie-on jumpers. The long loop pocket is usually made of a color which contrasts with the dress, or else it is of the same material, but its presence is emphasized by some trimming in bright silk embroidery or in beads. Or, if it is made of the same material, it is simply lined with a contrasting color.

These patterns may be obtained from your local McCall dealer or from the McCall Company 70 Bond St., Toronto, Ontario. "Dept. W"

KEEP LITTLE ONES WELL IN WINTER

Winter is a dangerous season for the little ones. The days are so changeable—one bright, the next cold and stormy, that the mother is afraid to take the children out for the fresh air and exercise they need so much. In consequence they are often cooped up in overheated, badly ventilated rooms and are soon seized with colds or grippe. What is needed to keep the little ones well is Baby's Own Tablets. They will regulate the stomach and bowels and drive out colds and by their use the baby will be able to get over the winter season in perfect safety. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Strategic Retreat.

Two boys, one the possessor of a permit, were fishing on a certain estate when a gamekeeper suddenly darted from a thicket. The lad with the permit uttered a cry of fright, dropped his rod, and ran off at top speed. The gamekeeper was led a swift chase. Then, worn out, he boy halted. The man seized him by the arm and said between pants:

"Have you a permit to fish on this estate?"

"Yes, to be sure," said the boy quietly.

"You have? Then show it to me."

The boy drew the permit from his pocket. The man examined it and frowned in perplexity and anger.

"Why did you run when you had this permit?" he asked.

"To let the other boy get away," was the reply. "He didn't have none."

The neighbor, being a man and one of the father's former pals, did not expand with appreciation.

Minard's Liniment Cures Diphtheria.

Avoiding Confusion.

"Can you make anything out of the news from Europe?"

"Easiest thing in the world. I only read the newspaper every other day, in this way I get a connected story of one side or the other and avoid the denials."

Minard's Liniment Co., Limited.

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of LaGrippe, and I have frequently proved it to be very effective in cases of Inflammation.

Yours,
W. A. HUTCHINSON.

All Rubbish.

An old gentleman heard the tutor tell his son that the earth revolved every twenty-four hours. So he put a glass of water on his garden wall, and left it all night.

Next morning he went to the tutor and discharged him, saying:

"It is all rubbish about the earth going round, because if it did all the water would have run out of the glass."

Minard's Liniment Cures Colds, Etc.

Reggie: "I say, father, you know all about 'rithmetic, don't you?" Father, (uneasily); "What is it you want to know?" Reggie: "Well, how many times what makes eleven?"

No Need To Rub!

FOR stiff sore muscles apply Sloan's Liniment to the pain or ache. It *quickly penetrates* and soothes *without rubbing.*

Rheumatism, gout, lumbago, neuralgia, sprains and bruises are quickly relieved by its use. Cleaner and more promptly effective than mussy plasters or ointments. It does not stain the skin or clog the pores.

The family medicine chest in thousands of homes has a place for Sloan's Liniment.

At all druggists, 25c. 50c. and $1.00.

EDWARD POLLAK & CO.

260 ST. PAUL ST. WEST, MONTREAL, QUE.

We're All In It

The visiting justices were on one of their periodical visits to a great convict prison.

One of the company found himself with a gentleman who was serving ten years. This guest was in a confidential mood, and was dilating to the visitor on the conditions of prison life.

"It is a terrible thing to be known by a number instead of a name, and to feel that all my life I shall be an object of suspicion among the police—to be pulled up at every corner, perhaps; to be asked for my license; to be indexed in a book as Number So-and-So, instead of as Jack Jones."

"But you will not be alone, my friend," said the visitor consolingly. "The same thing happens to people who own automobiles."

A Good Reason.

"Were you in any great action during the war?"

"Yes. That's the reason there is so little action in me now," said the old soldier who had a wooden leg.

When Your Eyes Need Care

Use Murine Eye Medicine. No Smarting—Feels Fine—Acts Quickly. Try It for Red, Weak, Sore Eyes and Granulated Lids. Murine is compounded by our Oculists—not a Patent Medicine—has been successful Physicians' Practice for many years. Now dedicated to the Public and sold by Druggists at 50c per Bottle. Murine Eye Salve in Aseptic Tubes, 25c and 50c. Write for Murine Eye Free. Murine Eye Remedy Co., Chicago, Adv.

The Only Reason.

"You once kept a cook for a whole month, you say?"

"Yes."

"Remarkable! How did you manage?"

"We were cruising on a house-boat, and she couldn't swim."

Minard's Liniment Cures Garget in Cows.

Fighting-fish are reared in Siam as a means of amusement. These are small fresh-water fish, and so pugnacious that when two of them are placed near each other they at once begin to fight. When the fish is quiet its colors are dull, but when excited it is of a metallic brilliance.

Over a thousand lives are lost every year in the collieries of the United Kingdom.

Yank Out Those Stumps

Send To-day For This Book

TURN your sullen, gloomy, profit-eating stump lands into happy, smiling fields that bear rich crops, and put money into the bank for you.

Our Free Book, "The Gold in Your Stump Land," shows you how you can transform your barren stump fields into rich virgin farm land. It shows you photographs of immense stumps it has pulled; it contains letters from the men who pulled them; and it will convince you that the easiest, quickest and cheapest way is with a

Kirstin Stump Puller

One Man — Horse Power

The barrel reverse ratchet for the big jobs, for the fields of many stumps; it will pull anything it strikes, and, because of its triple power, prevents strain to man, horse and machine. Will clear two acres from a stump setting.

The One Man Puller goes the biggest stumps. Double leverage gives you a giant's power; a push on the handle means a pull of tons at the stump. Clears an acre from one anchor.

Every Kirstin guaranteed for 15 years, new or no flaw, your money back if the Kirstin hand does not live up to its promises. We guarantee the Kirstin method to clear land *ready for the plow* cut 10% to 50% cheaper than any other method.

Money Back Bond 15 Year Guarantee Warranted saving of 10% to 50% over all other methods. Profit Sharing Plan

Big Money to those who Order Now. To early buyers in each locality we offer a special opportunity to join in our profit sharing plan. No canvassing; just a willingness to show your Kirstin to your neighbors. Don't wait—send the coupon today.

The Paisley Advocate

PAISLEY, JAN. 24th, 1917

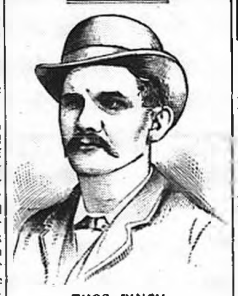
—In Guelph step by step the Board of Education is abolishing all final examinations. Most of the pupils are now promoted from class to class upon the results of their weekly examinations. The entrance examination test remains. But it is under consideration to pass pupils without a final trial who have secured 70 per cent. of the total number of marks, and not less than 40 per cent. on any one subject.

—The ADVOCATE continues to receive enquiries as to rates for liquor advertising. To accept any of this class of business would virtually mean that we become the active selling agents, solicitors and representatives of wholesale booze dealers located just outside the borders of Ontario who are determined to keep the whiskey trade alive and make a farce of the Ontario prohibitory law. We need money to meet the h. c. l., but to make it we are not prepared to perform the functions of a periscope to the submarine whiskey craft. Prohibitory laws should be supplemented with postal regulations closing the mails to the transmission of advertising in any form intended to promote sales of liquor in dry territory. This has been done in some states of the neighboring republic. The "all-reaching power of Government over liquor" is being exercised more widely every day.

—With millions of Canadian money needed for a patriotic fund that is to provide for dependents of the men who are enlisting in our growing army, millions more for Red Cross work, there are daily and hourly demands that personal extravagance should be carefully and thoughtfully guarded against by everyone. Real self-denial on the part of our people will easily provide funds enough for all the purposes mentioned without causing a money stringency, or any real suffering among us. We haven't begun to feel the pinch here as in the Old Country. A large poster, "Bad Form in Dress," which has been posted all over England, containing strictures on the buying of luxurious hats, boots, coats, etc., or anything beyond absolutely needful, plain and durable clothing.

ABOUT OLEOMARGARINE

A young Paisley soldier training in England mentions the fact that butter does not appear on the mess room tables in camp. Oleomargarine takes the place of the cow product. He says that while this substitute is not so palatable as good butter, it is preferable to butter that is not real good. This is first-hand information as to the merits of an article of food that is very little known to Canadians, as it is not allowed to be sold in this Dominion.



The Guelph Mercury says that at the meetings of dairymen and stockmen held during the week of the Winter Fair, many of the speakers vigorously thumped the table in their violent denunciations of any attempt that might be made to allow the importation of oleomargarine into the Dominion.

Were these men to be questioned in regard to the reasons for their attitude, the Mercury argues, they would probably state that they were trying to protect the cheese and butter markets into which this country exports. Some years ago the United States allowed this product within its boundaries. The result was that by allowing the milk to be treated and mixed with foreign fats the hold that the Republic had on the British cheese market was broken and has not since been reclaimed. The cheese men will tell you that as Canada now controls 75 per cent. of the British cheese market and is the manufacturer and a good stiff price to the buyer in his fenced-in market will be found to go hand in hand.

There is being made, in all parts of Ontario at the present moment, a vigorous protest against the exclusion of the much abused margarine. The Toronto Star, in a recent issue, has the following: "A Gananoque man says that in hotels in Clayton, on the American side of the St. Lawrence, margarine is used in the best hotels, and cannot be distinguished in taste from the best creamery. It is manufactured uncolored, inspected under government control; it keeps as long as you don't eat it, as they say. That cannot be said of some of our creameries. Merchants here asked 48 to 50 cents for butter this last week. Oleo sells in Clayton for 25 cents. The people of Canada ought to be allowed to try this food. It would be imported or manufactured here. It could be inspected so as to assure its wholesomeness, and the people could judge of flavor for themselves. The law forbidding its use is senseless and tyrannical."

Those who have made tests of this substitute for butter claim that it is nutritious, and that its cleanliness of manufacture and fitness of ingredients stamp it as an O.K. food product. Even its bitterest enemies cannot urge that it ever killed any person or ever made a consumer ill. In the state of Michigan, for instance, it is bound around by many regulations. Eating houses using it must make the fact known. From this we take it that there is a danger of mistaking it for genuine butter.

While there is, undoubtedly, considerable force in the plea that adequate protection must be provided in order to protect the present high standard of Canadian dairy products, yet there is also the man with the little purse and the big table to be considered. So far he has been forced to buy on a protected market. Whether he will be able to kick some of the rails off the fence remains to be seen. Signs are not needed that the man behind the fence is beginning to use his kicks effectively, and he may yet make a hole big enough to bring in something to relieve the butter situation, especially when prices are swinging around the half dollar mark.

THOS. PINCH

The late Thos Pinch, whose death occurred at Vancouver, B C, on Jan 2nd, was a native of Bowmanville, Ont. About 45 years ago he began his business career in Paisley as junior partner in the firm of McDonald & Pinch, the senior partner being the late Joseph McDonald. The latter retired a few years later, and thereafter the hardware and tinsmithing business was carried on by Mr Pinch until nine years ago when he sold out to McFlavion and went to reside in Victoria, B C. The late Mr Pinch was a most careful and honorable man of business, and when this village was at the most prosperous and progressive period in its history he was selected as one of the municipal council, where he used the same good judgment as in connection with his business.

No one was more attached to the old town of Paisley than Mr Pinch. After removing to the west he always had a particular welcome for anyone he met from this town or county.

He had been ailing for the past five years, due to a stroke — a hemorrhage of the brain which shook his nerves very badly, and from which the doctors were unable to give him much, if any, relief. On Jan 1st he suffered a second stroke which left him unconscious, and his death occurred a few hours later.

The funeral services on Jan 4th were held at the undertaking parlors of Messrs Thompson & Clegg. Rev J G Brown, M A, officiated at the chapel, and the Masonic brethren of Kilwinning Lodge conducted the remainder of the service. The Masonic pallbearers included Hon Ed Thomson, Chas Stitt, Neil McKechnie, John Garbutt and Mr Madden (Kincardine); all old friends of former days in Bruce.

Death of Mrs. Gordon

Last Wednesday Mrs Annie Gordon, daughter of the late Jonathan and Elizabeth Dickson, passed away at her home on Albert St, in her 59th year. She was widely known in Paisley and vicinity, having been born in Elderslie, about two miles north of this village. Although strong and healthy in her young womanhood, the greater part of her life was filled with sickness and suffering. For the past year she was unable to attend the Methodist church, of which she was a member. She is survived by three brothers and two sisters: Mrs Stewart, of Carman, Man; Mrs H J McFadden, of Arran; Robert, of Portage la Prairie; George, of Toronto; and Alfred, of Winnipeg.

Women's Patriotic League Will Collect Cash

At the December meeting of the W P L a committee was appointed to discuss the best and fairest means of raising funds for the purchasing of yarn, flannel, cotton, etc, to make comforts for our boys who are enduring the hardships of trench life. In order to give each and every one an opportunity to do their bit a house-to-house canvass will be made this week for contributions to be paid monthly during 1917. This plan is adopted in place of having concerts or tea room and sales. Please decide as to the amount you will give monthly and have contributions ready when collectors call. Any further information can be obtained from the lady canvassers.

District L. O. L. Meeting

The Orange delegates of the Centre Bruce District met in annual session in Paisley. Wor. Master, Frank Bolden of Walkerton, occupied the chair. The secretary was instructed to send greetings from the district lodge to all members on active service. The present officers were re-elected by acclamation for the coming year as follows:—District Master, F R Bolden, Walkerton; Deputy Master, R M Whyte; Chaplain, Geo. Carbert, Walkerton; Rec. Sec'y, Wm. Van Horne; Fin Sec'y, Wm. Dobson; Lecturer, Sylvester Parker, Brant Tp; Director of Ceremonies, I. Chambers, Cargill. It was decided that the next meeting be in the village of Paisley on the second Tuesday of January, 1918, at two o'clock p. m.

HIS HEART BADLY AFFECTED

"Fruit-a-tives" Soon Relieved This Dangerous Condition

632 GERRARD ST. EAST, TORONTO.

"For two years, I was a victim of Acute Indigestion and Gas In The Stomach. It afterwards *attacked my Heart* and I had pains all over my body, so that I could hardly move around. I tried all kinds of Medicine but none of them did me any good. At last, I decided to try "Fruit-a-tives". I bought the first box last June, and now I am well, *after using only three boxes*. I recommend "Fruit-a-tives" to anyone suffering from Indigestion".

FRED J. CAVEEN.

F. PURDY

Dr James Brown Home on Leave

After fourteen months' absence, during which he served a period with the Royal Army Medical Corps in Macedonia, Dr Jas Brown is back on furlough, visiting his old home at Lockerby Mills. He was on the staff of a stationary hospital at Amara, when he contracted fever, and on the way out through India became a patient in hospital at Bombay. On the voyage through the Mediterranean he had the thrilling experience of being a passenger on a ship that was blown up by a torpedo from an enemy submarine. Some people on board were killed by the explosion, also a few jumped overboard, and were drowned, but the majority were landed safely on the island of Crete, and remained there about nine days. Dr Brown is now in good health, but will feel the benefit of a rest.

Paisley Agricultural Society

There was a good attendance at the annual meeting of Paisley Agricultural Society on Saturday afternoon, and the usual preliminary arrangements were made for holding the fall fair on the 1st Tuesday and Wednesday in September. The treasurer reported that there is practically the same financial balance on hand as at the beginning of 1916. The rain on fair had reduced the gate receipts, but the wet weather insurance received helped to restore the balance. The following officers were elected:

Hon Pres—D McBeth
President—J T Richardson
Vice-Pres—J M Hopper
2nd Vice-Pres—J B McBride
Sec'y-Treas—W R Bennett

Directors—W Pearce, A Galbraith, Geo McKay, Dr Houston, W T Stewart, John McDermid, jr, Jas Lewis, R Fullerton, Jas McFadden, John Brown, A L McKinnon, Geo Grant, W T Hopper, Alex Jack, S Hallachey, W Megrew, J N Collins, W Archer, Alex Brown, Clarence Fraser, D Darroch, jr. Hon Directors—John McDermid, sr, Wm Dryden, Geo Thomson, Wm Lamb.

From Pte Alex Blue

On Jan 9th Pte Alex Blue wrote to his father here, the letter being received on Monday: "I am still in what they call B class. I feel the effects of the bullet very much when I am going up hill, and it catches me very much when I get a cold. I don't think I will be going to France again for some time, but you can never tell, as they need men. I had my sick furlough, and had a very nice time. Enjoyed it much better than Christmas in the trenches. The feeling over here is that we may get peace shortly, but that is a hard question to solve, because we are up against a fighting machine. You people over there don't want to think that Germany can't fight, for they can. The weather over here is very damp, and I don't like it. I would like to be on the link at home. The labor over here is mostly done by women. It's quite a sight to see women with bloomers and pulleys on cleaning windows and lugging ladders. We are billeted in houses here and not too bad, except that they might feed us a little more. That is the worst we have to put up with. It is very quiet, so naturally we get "fed up" and want to go to the front again. You told me Frank Boyle is killed. Well, that is too bad. He is like all the rest. He died doing his duty, in which we all take the chance. One plays with death all the time out there, whether in the front line or in billets, for one can never tell when a smoke shell comes over, only by its noise. I have had them light all around me, shrapnel dropping on my hat like hail, also had my eyes filled with gas as well as my nose. But we have been best at the gas now, and we doubt very much if he does send it over, for we are well protected."

"The Store with the Stock"

We can hardly say too much about our

Shoe Stock

We have been looking ahead and stocking up with desirable lines in advance of our requirements, and we now find ourselves with thousands of dollars worth of Footwear, which at to-day's market price, is easily worth 30 per cent. more than our prices.

This means for you an extra large assortment, and prices which will look very cheap in another year.

WHEN YOU ONCE BUY OUR SHOES YOU'LL BUY THEM AGAIN

Couch—Barss

A very pretty wedding was solemnized at the home of Mr and Mrs J W Robb, Swan Lake, Man., on Jan 10th, at 10 a.m., when Rev H Dodd of Pipestone, brother-in-law of the groom, performed the ceremony which united in marriage Olive H, youngest daughter of Mr and Mrs R C Barss of Paisley, Ont., and Frederick Holmes, fourth son of Mr and Mrs G H Couch of this place. The bride, attired in cream Georgette crepe trimmed with silver lace and cream satin ribbon, and wearing the usual bridal veil caught up with orange blossoms and lily of the valley, was brought in by her brother-in-law, Mr J W Robb, and took her place beneath a beautiful wedding arch, while the strains of Lohengrin's Bridal Chorus were being played by Mrs Geo T Barss of Altamont, sister-in-law of the bride. Little Beulah Robb, niece of the bride, acted as flower girl and was dressed in pink silk trimmed with lace and ribbon. After congratulations and during the signing of the registar, Mr Frank Couch, brother of the groom, sang "I Love You Truly." The bride then led the way to the dining room, where a dainty wedding dinner was served. The groom's gift to the flower girl was a gold locket and chain; and to the playtat a cameo brooch set in pearls. The young couple left on the afternoon train amid showers of rice and confetti, on a short trip to Winnipeg and other points, the bride travelling in a dress of Russian green with hat to match, and wore the groom's gift, a handsome seal coat with sable trimmings and sable muff. The young couple are both well and favorably known here, the bride having been in the office of Mr Wm Muir of this place for almost six years, and the many beautiful gifts bore eloquent proof of their popularity and the sincere good wishes of their many friends. After their return Mr and Mrs Couch will take up housekeeping on the groom's farm at Swan Lake.—Swan Lake Echo.

FRENCH ARE PRACTICAL

War Prices Have Developed the French Industries

It is quite true that all the warring countries are paying topnotch prices for everything they buy from neutrals, just as it is likewise true that they bitterly resent this fact. Their resentment might have a touch more of reason if their own merchants did not do their best to squeeze the last ounce of profit out of each contract. France has recognised these things quite clearly and has guarded herself as well as she can. In the first days of the war she bought a lot of American leather. It was not satisfactory. It was most decidedly not satisfactory. To-day she is only buying American leather when she can buy leather nowhere else.

So the army started a tanning department. Soldiers oversee it and work in it. The hide of every animal killed in France goes to it. They come back from the slaughterhouses just back of the firing line, which are worthy of a story in themselves, and from the great military depots. The leather for army boots costs less, for the aggressions of private enterprise are guarded against, and it is of the highest quality. Something similar was done in the dye-stuff situation. French cloth faded just as white as the English and American cloth did, because the German dyes were missing.

"We will make dyes here," said France. "We must."

Factories were erected and chemists went to work. The product has not been overly satisfactory as yet, but it is improving in quality all the time. The French chemists are gradually getting the hang of the coal tar puzzle. And this is not a merely temporary expedient to meet an emergency. These dye factories and the tanneries and a score of other similar industries are being subsidised by the State. The hope is that under the forced draft of war they will be able to so develop that when peace comes they can take their own part in the world markets.

TO INVESTORS

HISTORY OF PAPER

Introduced Into Europe About the Tewifth Century

From time to time, almost from the very earliest days of the war, there has arisen in many European countries a shortage of paper. Many factories, often unlooked for, have contributed to bring about this result, a scarcity of labor, the increased cost of shipping freights, and deficiency in the supply of the many and various ingredients which go to the making of paper in all its many forms of to-day.

The manufacture of paper was first introduced into Europe by the Moors, also about the twelfth century. They held a great part of spain in those days, and the industry quickly grew. It was good paper, "cloth parchment" it is styled in the laws of Alfonso of 1263, and well styled, for it was stout of substance, and could withstand hard use. At Xativa, Valencia and Toledo the industry grew and flourished until the fall of the Moorish power. And then came a change. The Christian conquerors were less skilled, and the great industry deteriorated, both as to quantity and quality. Meanwhile, however, the Arabs had brought their knowledge of the craft with them when they invaded Sicily. From Sicily paper making ultimately spread to Italy, and there it became a great industry. From Italy it extended to France and Germany.

And then the art reached England, and, in Wynkyn de Worde's "De Proprietatibus Rerum," printed in 1495, at Caxton's Press, we find mention of a paper mill at Stevenage, in Hertfordshire, built by one John Tate. Master Spielman, with his ten years' license from Queen Elizabeth to make paper at Dartford, in Kent, is the next great figure in the paper trade, and so on to the establishment of the famous mills at Maidstone, where John Whatman turned out his paper in and around the year 1740. In 1799 came machinery, and from the small mill at Rozmoor, in Hertfordshire, where Fourdinier, the inventor, first set up his plant, the industry spread all over the country.

ART OF MAKING FRIENDS

Often you come across people who complain that they have but few friends. The matter is easy enough to explain, for, as some one has well said, "The only way to have a friend is to be one." For friendship cannot possibly be a one-sided matter. Just as it takes two to make a bargain or a quarrel, so does it take the same number to make a friendship.

What really does happen is this: Two people meet, and gradually they find points of congeniality, gradually each does little favors for the other, gradually a feeling of affection takes root in each heart. Neither one is thinking of what can be gained from the acquaintance; rather, each is thinking and planning to give instead of take. In other words, both are trying to be a friend unselfishly. And, lo, it is the very thing which makes their friendship.

Every Day a Sabbath

Every day in the week is a Sabbath for some one. The Greeks observe Monday; the Persians, Tuesday; the Assyrians, Wednesday; the Egyptians, Thursday; the Turks, Friday; the Hebrews and several Christian sects, Saturday, and the remainder of the Christians, Sunday.

Flowers Most Fragrant

Flowers are more fragrant when the sun is not shining on them, according to a French scientist, because the oils that produce the perfume are forced out by the water pressure in the plant cells, and this is diminished by sunlight.

"Utility" in fowls does not mean "nonpareilian," any more than "thoroughbred" means "standard-bred."

Most corn requires from 84 to 115 days from planting to reach the edible stage, depending on variety.

Christmas Festivities in the 160th Camp

Almost a month after the great holiday it is possible only after piecing together the many reports from members of the 160th Bruce Batt to form a good idea of the doings in their quarter of Bramshott Camp on Christmas Day. Lieut E Cameron, of Lucknow, says it was one of the merriest Christmases he ever had or hoped to have in his life. A wonderful transformation had been produced in the camp. Instead of the muddy looking huts, all were lighted with bright lights, Christmas decorations and huge bunches of holly. Major Moffat had offered a prize for the best decorated hut, and the competition produced amazing results. Each hut had its decorated Christmas tree. The signallers had built an imitation fireplace that looked very real with the red glow from an electric bulb and red paper. The boys hung up a pair of socks each before tumbling into bed to dream of their first Christmas dinner away from home. An elaborate souvenir booklet was issued, containing the names of all the officers and men of the Battalion, also the Christmas dinner menu card and entertainment programme, as below.

. . MENU . .

Tomato Soup
Fish — Olives and Radish
Turkey — Dressing and Cranberry Sauce
Mashed Potatoes — Turnips
Plum Pudding and Brandy Sauce
Canadian Cream Cheese and Crackers
Celery — Coffee

TOAST TO THE KING

Nuts — Raisins — Figs
Cigarettes

All the Officers, N C O's and men dined together in the big mess hall, which looked like a palace banquet hall with its freshly-painted walls and decorations. Behind Col. Weir's table was a big stack of drums, flanked on either side by a machine gun. At the foot of the regimental colours in the foreground was "Ted Bruce," the lean mascot, all dressed up with a wreath of holly around his neck and a red ribbon on his tail.

When the menu had been disposed of the enjoyment was continued to the length of the programme of

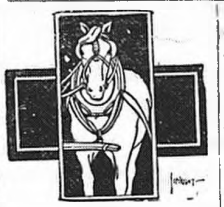
Breaming Bad Air

You cannot keep in good health if you breathe bad air either in your sleeping rooms, your living rooms or work room.

Many persons who would be shocked at the thought of bathing in water that had been used by another, fill their lungs freely with air that is loaded with filth and disease from many persons in a public hall or conveyance, with no feeling of repugnance. There is far more danger in breathing bad air than in bathing the skin in soiled water.

Blowouts A Bad Sign



A motor tire should wear out and not blow out. When an otherwise good casing must be discarded on account of blowouts, it means that the fabric is not as durable as it should be. The fact that inner liners increase the resistance of a tire means that the fabric foundation is not as strong as it should be usually weakened by abuse.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XX.—(Cont'd).

And the old man patted her hand, soothingly, though nothing of his acuteness abated.

Then he led Violet to a seat, and himself drew a little apart, with the captain, who had all this time been, so to speak, measuring his man.

"What has happened?" asked Mr. Thaxton. "Nothing near; concerning the family, I hope?"

"No—o," said the captain, gravely, and then he placed Mr. Thaxton in possession of the facts which were generally known.

A body had been found at the foot of the cliff.

The corpse had been identified as the body of the captain's late valet, Jem Starling.

Near the body a hat had been found. That hat belonged to one Leicester Dodson.

At the name, Mr. Thaxton's sharp eyes shot a swift glance at Violet.

She saw the glance, but did not flinch.

Mr. Thaxton nodded once or twice, thoughtfully.

"Where is the body?" he asked.

"Lying at the coastguard station," replied the captain.

"I think," said Mr. Thaxton, "that I should like to walk up there."

"You will take some refreshment first?" said Mrs. Mildmay.

"No, thank you," said the lawyer. "I will wait until I return." And he took up his hat.

"Is there nothing but the discovery of the hat near the body to direct suspicion against Mr. Dodson?" he asked.

"I do not know," said the captain. "I should think not. It is ridiculous to suppose that he was capable of committing such a crime."

"Exactly," said the lawyer.

And he remained quite until they had reached the guard-house.

Once more the captain looked down upon the dead body and distorted face with calm, grave complaisance.

The lawyer asked a few questions.

"Can I see the hat?" he asked.

"Yes, sir," said the coastguard, approaching the cupboard.

While he was unlocking it, a thin, cadaverous looking man entered, in a quiet, careless sort of fashion, and went up close behind the lawyer.

"There's the hat, sir," said the guard. "It was found close near the corpse, and— Hallo! Who are you?"

This was addressed to the intrusive stranger, who had suddenly pushed closer and stretched out his hand.

"What's that?" he said, pointing to a flower in the cupboard.

"That's a flower," returned the coastguard. "D'ya'pa you didn't hear me ask who you was?"

"Yes, I did," retorted the stranger, mildly. "Where did you find that flower?"

The coastguard stared.

"If you must know," he said, with dignity, "that there flower was clinched tight in the dead man's hand!"

"It was, was it!" said the stranger, quietly, pushing up to the cupboard, and taking up the flower. "A lily," he muttered. "I thought so."

Then, to the astonishment of the coastguard, he quietly shut the cupboard, locked it, and dropped the key in his pocket.

Then he turned, touched his hat to the gentlemen, who stood regarding him attentively, and said:

"My name's Dockett, gentlemen—Detective Dockett."

The captain made a gesture of assent.

"Please not to mention that I'm here, gentlemen," said the detective. "I'd like to walk round quietly a bit before the yokels gets the scent of it."

"Certainly," said Mr. Thaxton, gravely. "Any assistance I can be to you, I shall be glad to render. My name is Thaxton, and I am Mrs. Mildmay's solicitor."

The detective touched his hat again.

"Thank you, sir, sir," he said. "I think I'd like a light trap in a quarter of an hour, and a smart chap who could show me the way to Coombe Lodge."

"Lord Lackland's?" said the captain.

"The nearest magistrate," said the detective.

The captain glanced at Mr. Thaxton.

At that moment the police inspector entered, hurriedly.

"Well," said the detective, "you can speak out."

"He's gone," said the inspector. "Leastways, I can not find him — any tidings of him."

The detective brightened up, as if by magic, and a sharp, ferrety expression came upon his face.

"What, already?" he said, quietly. "Have you posted a man at the station?"

"I did that last night," said the inspector.

"And telegraphed a description of him?"

"Yes," said the man.

"Then I must have that light trap at once, if you please, gentlemen," said Mr. Dockett.

Hurriedly, the party left the station and ran down the path to the village.

"For whom are you looking?" asked Mr. Thaxton of the detective.

"Mr. Leicester Dodson," said the detective, shortly. "It was his hat, and he was seen on the cliff road."

"But—but," said the captain, "it is impossible!"

The detective glanced at him, and smiled.

"Nothing's impossible in a murder, sir. I think I can get a trap or a horse here quicker than going up to the Park. Here, saddle me a horse, sharp, boy, and I'll give you a shilling."

There was confusion instantly all round the "Blue Lion," at the door of which stood Martha, grim and fierce, as usual.

A horse was saddled, and, after giving instruction to the inspector, Detective Dockett dashed off.

The captain looked at Mr. Thaxton with perplexity and dismay.

"This preposterous and ridiculous! Mr. Leicester Dodson is the most respected man in the place."

Mr. Thaxton shook his head gravely.

"The course the detective is adopting is the inevitable," he said. "We had better go to the Cedars, and see his father or mother."

Come along, then," said the captain, who seemed all excitement and indignation, and the two gentlemen hurried off.

At the gates of the Cedars they found a policeman, and it was some moments before he would permit them to pass.

At last they succeeded in overcoming his scruples, and made their way to the house.

Mrs. Dodson came to them, pale and agitated, but her scorn at the mere idea of Leicester's committing such a deed helped to keep her up.

She answered all their questions as she had done those of the inspector.

"Leicester is not here," she said, "and I cannot tell you where he is. He often goes away suddenly and unexpectedly. He may be in London, but, if he is, he will come down at once. And I have telegraphed for him and his father, who went up with Mr. Lennox. What is all this silly story about a murder, Captain Murpoint?"

The captain did his best—or pretended to do—to reassure and soothe her, and Mr. Thaxton, after a few moments' silence, asked if he could see the valet.

Mrs. Dodson dispatched a messenger to find the valet, who soon appeared, looking as bewildered as every one else.

He, however, threw some light upon the matter by informing them of the dispatch of the portmanteau.

"What!" exclaimed Mr. Thaxton. "Why did you not say so before?"

The man hung his head. He was a faithful fellow, and had hoped, by concealing his master's destination, that he should give him all the more time to get out of the way. "If so be as he had committed a mistake."

"Foolish fellow!" said Mr. Thaxton. "It is to your master's interest to return and clear up the matter. We must telegraph to the Isle of Man. If, as I suppose, Mr. Leicester started last night, he would not reach there until midday. Do not be alarmed, madam; he will assuredly hurry back, posthaste, and set the affair straight, so far as he is concerned."

"That I am confident of, sir," said Mrs. Dodson, with simple dignity.

The two gentlemen rose and departed, the captain still excited, the lawyer very calm and thoughtful. They telegraphed, through the police, to the Isle of Man, and waited feverishly for an answer.

An answer came late that night.

The Wave had come in, telegraphed the skipper of the yacht, but Mr. Leicester Dodson, had not arrived by it.

Before nightfall the hue and cry was in full voice, and the police were on the alert to arrest Leicester Dodson, wherever and whenever he might be found on a charge of wilful murder.

CHAPTER XXI.

The days rolled on in the little fishing village, and the terrible drama which had convulsed it was still talked of and remembered, but with less vividness every day.

Up at the Cedars two sorrowful human beings, clad in black, were learning that bitter lesson which all must learn, to suffer and to bear.

Violet was their sole comfort in the hour of darkness.

She had given them the only explanation of the tragedy they would accept, namely that Leicester had slain Starling in self defense and had himself fallen over the cliff into the sea.

Violet's plump roundness gradually toned down to a spareness which was grace itself, but, alas! strangely different to her old healthful vigor.

One other person beside the relations of Leicester mourned for him, and that was little, lame Jemmie, Willie Sanderson's brother.

To the poor, afflicted lad Leicester had seemed to be a beneficent god. The child adored the man who had, in so kindly and true a fashion, ministered to his wants, and no one shed more tears than little Jemmie.

In his little chair, which he could propel himself, he would haunt the Cedars, and the walks which had been favorite resorts of Leicester, and there weep over the memory of his great friend and hero.

One evening, the lad set off in his quiet, sad way for a walk, or, rather, ride on the cliff.

Impelled by an awful curiosity, the boy drove close to the edge of the cliff, and looked down.

He drew back, with a sob of grief, and was about to return, but, as he made the movement, his tear-dimmed eyes caught the glimmer of some object lying under the edge of the cliff, half hidden by the overhanging tufts of grass.

With a mechanical curiosity, he drew near to it, and saw, with a beating heart, that it was a knife.

Instantly it flashed upon him that it was the very knife with which Leicester had, in self-defense, slain Jem Starling.

With the knife hidden in his bosom, he returned home, determined to destroy the weapon, with its tell-tale rust of blood, on the first opportunity.

Of course, the doctor was not at all satisfied with the outward calm and serenity with which Violet bore her grief.

"It is all very well," he said to Mr. Thaxton, as he and that gentleman were smoking a cigar on the lawn and conferring together as to the state of Violet's health. "It is all very well to say that she is resigned, but I must confess that I do not like the word when it is applied to the numbed stillness of a young girl. Could you not get up a little difficulty of some sort? Anything would answer the purpose to divert her mind from this terrible subject."

(To be continued).

The Only Thing To Do

The navy's newest recruit was hauled before the commandant of the naval barracks on a charge of insubordination. "The petty officer explained that the man had resisted when they took him to the swimming baths for the first lesson in the art of natation. "What have you got to say for yourself?" asked the commandant. "Well, sir, it's like this 'ere. I've only been in the navy three days. The first day the doctor drawed six of me teeth out, the second day I was 'oculated, and this mornin' the petty officer comes along to me and he says—'Come on, you pup, we're goin' ter drown yer."

Disabled Soldiers Will Receive This Decoration.

This is the new decoration for disabled soldiers fighting for Great Britain. Any soldier wounded will receive this reward. There is nothing in its monetary value, but it is cherished by the men.

GERMAN TRENCH HOUSES.

Officers Quarters in Dugout Contain Mirrors, Easy Chairs and Pictures.

The German front in the West, the London Times tells us, is like a huge village that is strung out along a road three hundred miles long. Of course the houses are all underground. Still they are houses of one or two floors, built according to certain official designs. The main entrance from the trench level is through a steel door, of a pattern apparently standardized, so that hundreds come from the factory on one order, and missing parts can be easily replaced. The heavily timbered doorway is made to their measure. Inside, a flight of from twelve to thirty-six stairs leads down at an easy angle. The treads of the stairs and the descending roof of the staircase are formed of mining frames of stout timber, with double top sills; the walls are of thick planks notched at the top and bottom to fit the frames, and strengthen with iron tie-rods that run from top to bottom of the stairs and with thick wooden struts at right angles to the tie-rods.

At the foot of the stairs a tunnelled corridor runs straight forward for perhaps fifty yards, and from it rooms and minor passages open on either side. In some of the dugouts a second staircase leads to a lower floor, which may be as much as thirty or forty feet below the trench level.

These staircases, passages and rooms are usually completely lined with planks. In one typical dugout each section of a platoon had its allotted place for messing and sleeping, its own place for parade in a passage, and its own emergency exit to the trench. In another, used as a dressing station, there were beds for thirty-two patients and a fair-sized operating room. A third, near Mametz, was designed to house three hundred men, with the needful kitchens, provision and munition storerooms, a well, a forge, an engine room and a motor room. Many of the captured dugouts were thus lighted by electricity.

In the officers' quarters there have been found full-length mirrors, comfortable bedsteads, cushioned armchairs and some pictures. One room is lined with glazed "sanitary" wall paper, and the present English occupant is convinced by circumstantial evidence that his predecessor lived there with his wife and child. Clearly there was no expectation of an early move.

THE LATEST BATCH OF V.C.'s

Heroes Whose Brave Deeds Make Their Country Proud.

The latest batch of Victoria Crosses have been awarded to three officers and two privates in English regiments and a sergeant of an Irish regiment. All distinguished themselves not only for indifference to danger, but for quick thinking. In every case the winner had rallied and led troops under fire, had snatched victory from defeat. For instance, Private Robert Riley, of the Middlesex, assumed command of his regiment when all the officers had been killed or wounded, led a remnant of men forward, and with the aid of a Lewis gun cleared the trench in front of him and carried the enemy's position. In commenting upon the latest awards and reviewing some earlier ones, the New York Sun observes that among the heroes was an elderly man who left a wife and nine children at home in order to serve his country, and "that glorious boy," John Travers Cornwall, who, mortally wounded, remained at his post in the Jutland battle because, as he explained shortly before he died, "he thought he might be needed." We may be sure that when the roll of heroism for the war is completed no name will shine more radiantly than that of this lad.

Nor shall the first to win the cross in this war ever be forgotten. This was the famous Captain Francis O. Grenfell, who was wounded in both legs and a hand at Andregnies, Belgium, on August 24th, 1914, while saving the guns of the 119th Battery. He was invalided home, but returned to the front and was killed in action. In his will Captain Grenfell left his decorations to the Ninth Lancers, "to whom," he wrote, "the honor of my gaining the V.C. was entirely due, thanks to the splendid discipline and traditions which exist in this magnificent regiment. This was one of the "First Hundred Thousand," the "Old Contemptibles," as they are proud to be called. Some of the regiments that formed this first immortal expeditionary force to France, the Coldstream Guards, for instance, lost almost every officer. This force had been trained to fight to the last ounce of human endurance, and there was little of it left when the Battle of the Marne was decided.

Making Paper in Japan.

Paper making was one of the earliest industries of Japan. When Europeans were writing on the skins of animals and leaves of plants ancestors of modern Japanese were recording their thoughts on paper made from wood or vegetable fibre. Paper making in Japan was probably introduced from Korea about A.D. 610.

Good Advertising.

"That ben's a good cackler," remarked Mr. Wigwag.

"Yes," the mistress agreed; "they're laying a corner-stone across the street, and she's trying to make us believe she did it."

PRACTICAL FARMING

Butter Maker's Chance.

It is well known that cream to churn in a reasonable time and in a satisfactory manner as regards quantity and texture of the butter produced, must be held at a proper temperature for some little time before being placed in the churn. This fact no doubt has much to do with the presence of undesirable flavors in dairy butter during the Winter months. In testing half a dozen different pounds of butter recently with the intention of purchasing the most satisfactory, the writer was surprised to find that no two pounds tasted alike. Each pound was dairy butter and each of a different brand. The cause of this variety of flavors was very likely due to the want of ventilation in the place where the churning had been done and the want of ventilation was probably due to an endeavor to maintain sufficiently high temperature by excluding outside air, or rather by keeping indoor air, which was warm, from escaping from the churning room.

A difference of 11 cents a pound in price of dairy and creamery butter, as was experienced on the occasion above mentioned, is sufficient to make any consumer enquire for the lower-priced product, and if he can find good-flavored dairy butter he is willing to overlook many shortcomings in texture which is a point that many dairy butter makers find hard to command satisfactorily.

The farmer's wife or daughter who finds she thinks it worth her while to make butter during the Winter should demand a room or building that is shut off entirely from the living quarters and that can be artificially heated to such an extent that a free passage of fresh air can be allowed without reducing the temperature below that desired for best results in churning. Such a dairy as this will help to ensure well-flavored butter; a good cream's starter, cleanliness and good ventilation in the stables are of course, other helps that must be provided if a satisfactory article is to be expected.

The present is no doubt the time at which the home dairy has the best chance to make a name for itself, and the rapidity with which a good brand becomes popular with dealers at any certain store in the city, is surprising and warrants an extra outlay by the maker as the grocer likes to move his goods as quickly as possible and is willing to pay a premium for a quick seller.

Salt Poisoning.

Samples of salt are occasionally sent to experimental stations by farmers for analysis, with the statement that animals, usually cattle or sheep, were poisoned after eating it in considerable quantities. In no case has any foreign substance that would account for the poisoning been found.

Since salt is necessary to life and is in universal use it is difficult to realize that in large amounts it is poisonous. Many cases of poisoning in chickens have been reported and occasionally in larger animals. In one instance salt was by mistake used instead of sugar in making a cake. The cake was given to the chickens and killed all of them. Chickens are very susceptible to salt poisoning and, while the amount that it takes to kill a horse or cow is considerable, this sometimes occurs when these animals are especially salt hungry.

When animals have not had access to salt for a long time it is safer to give it to them sparingly at first.

Farrowing Pen and the Sow.

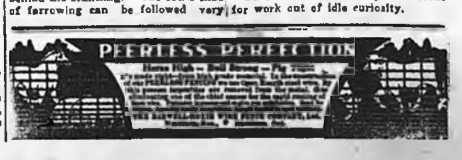
Many a litter of pigs has been destroyed at farrowing time because the necessary precautions haven't been taken. A costly pen is not necessary, but a few things are necessary, viz., reasonably warm quarters, free from drafts, and dry and clean. A pen 6 x 8 or 8 x 8 is plenty large enough There should then be a railing or scantling 8 or 9 inches from the floor around the wall and set out from the wall about 6 inches.

This will remove the possibility of the sow crushing her pigs between herself and the wall, which is a common occurrence, as the pigs have a way of escape by getting under and behind the scantling. The sow's time of farrowing can be followed very closely. If we have the exact date of service and add to it 112 days, we may be almost sure of having the new arrivals on that date, as a sow seldom varies 12 hours, which cannot be said of any other of our live stock, so far as I am aware. So when that time arrives, it is well to clean the pen out thoroughly and put in a small bedding of cut straw or chaff, as whole straw sometimes hinders the little pigs from crawling around and getting back to the mother.

In case of farrowing in very cold weather, it is a good plan to partly fill a feed basket with chaff, set down in the chaff a jug of warm water, and put the little fellows into this basket as fast as they arrive.

They will in this way be out of the mother's way while she is in pain, and they will soon dry one another and keep warm around the jug of warm water. As soon as the sow is done farrowing, they can be carefully emptied out beside their mother, who will usually stretch out and let them nurse. In the case of a young sow, it is a good plan to gently rub and handle her at times a few days before farrowing time. She will thereby get used to your appearing in her pen, and at the same time be gentle with her young. The sow should not only be fed upon laxative food for several days before farrowing, but should be fed upon laxative foods and fed very lightly for several days after farrowing, gradually increasing the quantity of food as the size of the litter requires. With the above precautions taken, we are now on a fair way to successfully raise the litter. It is a good plan, however, to let the sow and pigs out of the pen for exercise whenever the weather is suitable. If it is not convenient to let the sow out, it is a good plan to make a small opening so as the little fellows can run in and out at will. It will greatly lessen the dangers of (thumps) which causes many fatalities among winter litters. If they cannot be turned out, sods or earth from the root cellar should be thrown into them. Hogs are like some people in this regard, they want the earth.

FRESH GREENS IN WINTER.



A Kitchen Garden Grown in a Window Box.

I find much pleasure in having a kitchen garden on a sunny window sill during the Winter, and the bits of fresh greens that can be gathered in it give flavor and character to many soups, salads, and sauces. A few flower pots and wooden boxes, some fine pulverized rich earth, reliable seeds, and some patience are all that you need to succeed. With me the first thing to plant is parsley. It is excellent for flavoring and makes a fine salad. A few six-inch pots filled with parsley will give a supply for months, as the pickings may be repeated over and over again. The Fine Curler is the most desirable variety for the purpose. Fill the pots full to the top with rich earth, sprinkle the seeds over it, add a little more earth mixed with sand, sprinkle with water, and stand in the sun. Keep the earth slightly moist until the seeds come up. As the seeds germinate very slowly it is a good practice to soak them twenty-four hours in tepid water before sowing. Spread them on a blotter to absorb the superfluous moisture, and then mix them with a little dry sand so that they can be easily handled.

Onion seeds can be planted in a rather deep box filled with very rich black earth. These are delicious for cutting when they are no bigger than a small radish, to give flavor to salads, and the flavorsome ends can be used in the soup pot.

It is easy to plant a few successions of mustard in a rather shallow box filled with finely pulverized rich earth. Sprinkle the seeds, cover them lightly with rich earth mixed with sand, water them and wait. The little mustard plants cut off from their roots, chopped and added to salads, give a delightful savor. Peppergrass seed can be grown in the same way, and proves equally interesting.—Farm and Fireside.

Once in a while a lazy man looks for work out of idle curiosity.

About the House

Useful Hints and General Information for the Busy Housewife

Selected Recipes.

Johnny Cake.—One cup of cornmeal, one-half cup of flour, one tenspoonful soda, salt, two tablespoonfuls molasses, one tablespoon sugar, sour milk to mix.

Oatmeal Cookies.—Mix one teaspoonful butter with one cup granulated sugar, add two eggs, two and one-half cups of rolled oats (raw), two teaspoonfuls baking powder. Put a teaspoonful of the mixture on a greased and heated pan. Bake about five minutes, or until a light brown in color.

Potato Specials.—Mash several cold boiled potatoes, add butter, one egg, pepper and salt. Mix, shape into balls, roll in flour and fry in butter. Arrange on platter with slices of cold roast chicken. Garnish with lettuce leaves.

Cabbage with Eggs.—Drain a well-boiled cabbage and chop it up very fine. Put into a frying pan two tablespoonfuls of butter and one of flour for every quart of chopped cabbage. When hot, add the cabbage, season with salt, pepper and one or two tablespoonfuls of vinegar. Stir constantly for six or eight minutes, then put it in a dish, smooth the outside and garnish with quarters of hard-boiled eggs.

Missionary Cake.—One cup brown sugar, one cup cold water, two cups raisins, one-third cup lard, one-quarter nutmeg, one-quarter teaspoon cloves, one teaspoonful cinnamon, pinch of salt. Boil all together about five minutes; let cool; then add one teaspoonful baking soda dissolved in water, one-half teaspoonful baking powder. Sift with two cups of flour and bake in medium hot oven about thirty minutes.

Rout-Drop Cakes.—Mix two pounds of flour, one ditto of butter, one ditto of sugar, one ditto of currants, clean and dry; then wet into a stiff paste with two eggs, a large spoon of orange flower, ditto rose-water, ditto sweet wine, ditto brandy; drop them in a tin plate floured, a very short time bakes them.

White Taffy.—Four cups of granulated sugar, one cup of vinegar, one quarter cup of water. Boil and do not stir or move until it is done. When it hardens in water pour onto buttered plates, then flavor with vanilla last, pouring on plates of taffy, but don't stir. Then, when enough loosen from plates, take up and pull into taffy. Then cut it off and place on smaller plates to cool.

Corn Bread.—One cup and one-half cups corn meal, quarter cup flour, one tablespoon sugar, ½ teaspoonful salt 2 tablespoons baking powder, one tablespoon butter, one and one-quarter cups milk, one egg. Mix and sift flour, corn meal, baking powder, salt and sugar together twice, then mix these dry ingredients cut the butter with a fork until in fine bits. Beat the egg slightly and add the milk to it, then add this milk-and-egg mixture to the dry ingredients and beat all well together. Pour into a shallow well-greased cake pan and bake in a hot oven for about thirty minutes.

Prune Cake—One cup of sugar, two-thirds cup of butter, yolks of three eggs, one cup of cooked and chopped prunes, one-half teaspoonful of nutmeg and an equal amount of cinnamon mixed to the flour; one and one-half cups sifted flour, the grated rind of half a lemon and a teaspoonful of the juice, three tablespoonfuls of sour cream or, milk, one level teaspoonful of baking soda dissolved in a tablespoonful of hot water and added to the cream. Mix in order given and bake in moderate oven. When nearly cool cover with icing made from one cup of confectioner's sugar mixed to a soft paste with lemon juice or orange and lemon mixed. The cake should be baked in a shallow cake tin about ten inches square.

Boiled Noodles.—One egg, one-half teaspoon salt, grating of nutmeg, dash of cayenne and flour. Beat egg, add seasonings and enough flour to make stiff dough. Work on floured board until smooth and elastic. Cut off small portions and roll each as thin as a wafer. Slash into strips with sharp knife and cook in boiling water or soup stock twenty minutes. May be dried before cooking and stored until wanted. Serve sprinkled with breadcrumbs which have been browned in hot butter to golden color.

Cake With Custard.—Moisten with lemon juice enough stale cake to cover bottom of glass dish holding one quart. Make soft custard by scalding two cups milk and pouring slowly over two beaten egg yolks, mixed with three tablespoons sugar, one teaspoon butter, and a little salt. Cook in double boiler until it thickens. Strain, and when partly cool add one-half teaspoon vanilla and pour over cake. When ready to serve, beat whites into stiff froth, add one tablespoon sugar and a little lemon juice when beating. Drop lightly, by spoonfuls, on top of custard and put bits of jelly on meringue.

Spice Cake.—Boil four cupfuls sugar, one-third cupful lard, eight cupfuls raisins, four cupfuls water, one nutmeg, one and one-half teaspoonfuls ground cloves, four teaspoonfuls cinnamon and level teaspoonful salt, three minutes, then cool and add eight cupfuls flour, two teaspoonfuls baking powder, four teaspoonfuls soda dissolved in warm water, one and one-half cupfuls nut meats and a small piece of citron. Put in a deep round baking pan and bake in slow oven. Frost with maple frosting and mark eyes, nose and mouth with raisins or nut meats.

Things To Remember.

Salt or soda and a damp cloth will remove stain from dishes.

A tough chicken can be made tender by steaming it for three hours before roasting.

Fruit is a more economical dessert than puddings, when eggs are so high.

If you use sour cream for butter making, it should be soured quickly.

Fresh air and plenty of rest and water will go a great way towards curing a cold.

Garments that are soaked in hot soapy water for a time before they are washed will be snowy white.

A little cold boiled potato added to the filling for fowl will prevent it from being too dry.

Discarded rubber garments may be cut up into mittens to be used when blacking the stove, etc.

It is wise to once in a while take out the rollers of the carpet sweeper and wash them thoroughly. They will sweep much cleaner.

If you have to light a coal fire in the kitchen every morning see that kindlings, coal, are all laid ready to hand the night before.

To prevent tumblers from being linty and streaked wash them in clean water, rinse in scalding water and drain; do not wipe with a towel.

To freshen stale loaves of bread, moisten slightly with cold water, just merely running the wet hand over surface, then place in hot oven a short time.

Old magazines or catalogues will save your oilcloth, by using them to set your smutty cooking on. When the top leaf is soiled it may be turned.

If when frying fish the pieces are put in the hot fat with the skin side uppermost and allowed to brown before turning they will not break.

Using coarse threads for stitching does not insure longer service, as the thread stands out on the surface of the cloth, causing it to receive constant rubbing and thereby wearing away before the garment.

To prepare pumpkin for pie, do not stew. Cut the pumpkin in half and bake, open side down. By this means all moisture will be drained away. When pumpkin is soft (not browned) the skin can be removed readily and the flesh mashed. To each cup of pumpkin pulp add one level teaspoon salt, one saltspoon mace, one teaspoon cinnamon, two-thirds cup karo syrup. Add one well-beaten egg and one cup each of cream and boiling hot milk. Beat well together and bake either with or without a crust. Many persons like the latter way, and serve it as a custard.

I WILL SERVE

Dedicated to National Service Commission Campaign

By "Patriot."

If my King and country need me,
I will serve;
Tho' to sacrifice they lead me,
I'll not swerve;
For the laggards and the slacker—
Are the Germans strongest backers—
They will get what they deserve
I will serve.

If they want me in the trenches,
I will serve;
'Mid the shrapnel and the stenches
I will serve.
For my country and my King
I will suffer anything;
All my service they deserve,
I will serve.

I'll not loaf while others toil,
I will serve;
Can I plan the foe to foil?
I will serve.
Power of muscle and of brain
Surely will the victory gain;
With more vigor, vim and verve,
I will serve.

None shall ever charge that I
Did not serve;
None shall taunt with "You're the guy
Would not serve!"
When a wounded man I meet
Limping down the busy street
He'll not hint, "You had cold feet!"—
I will serve.

In the mill or in the field,
I will serve;
Britons ne'er to foemen yield,
I serve;
If I cannot man the guns
I can send supplies in tons
Thus, to help defeat the Huns,
I will serve.

In the hot munition shop,
I will serve;
That the war may sooner stop,
I will serve;
Lest on me should rest the guilt
For a broker's life-blood spilt,
Glad, I offer mind and nerve—
I will serve.

One-fifth of the earth's surface belongs to the British Empire.

A Chic Spring Bonnet of Green Braid on New Lines

As spring approaches Dame Fashion goes into council with her talented aides and devises just what will be the prevailing modes for the coming season. This spring there is offered a most charming assortment of new and novel bonnets, in which the one shown above is truly representative, although in itself distinctive. The hat is of green braid, the lines new and attractive. The bonnet is just the thing for wear with spring suits. It is simply trimmed.

HISTORY OF THE LITHUANIANS

PROPOSED TO ESTABLISH THE KINGDOM OF LITHUANIA.

An Ancient Fold Little Known to the World Who Inhabit the Eastern Shore of the Baltic.

The recent peace proposals by Germany suggest the establishment of the kingdom of Lithuania, concerning which there is very little known by the civilized world and which has about five million inhabitants.

Lithuania is situated on the eastern shore of the Baltic Sea and forms an oblong, being 300 miles long and 200 miles wide. The date when the Lithuanians first settled in their native country is not exactly known, but there is a belief expressed by the German and Lithuanian scientists that they came before the birth of Christ. Lithuania is mostly a low land, but here and there the landscape is broken by picturesque ridges and mountains. The soil varies from poor sandy to a black rich one. The Lithuanians, according to German explorers, are descendants of the old Arian race, speaking a language similar to the old Sanskrit and ancient Greek. They are mostly an agricultural nation.

Character of the Lithuanians.

There is no country in the world in which ancient culture is so mixed with the later inventions. Throughout the territory will be found small huts built beside the more modern dwellings. The wooden household furnishings, such as spoons, dishes, table ware, with ornaments in the old style, are mixed with those produced in the modern factories made of iron, zinc and tin. Most of the clothing, foodstuffs and all agricultural implements are produced at home. However, there are places where everything is produced in the factories, the same as in modern Europe.

The Lithuanians lived in closely settled villages, but in 1864, after the abolition of serfdom, the Lithuanians started to divide their villages into farms, and the cultivation of the crops was carried on according to the modern methods. The abolition of serfdom gave an opportunity for the Lithuanian peasant to send their children to the schools and to educate them. Lithuania was always fond of education.

At the commencement of the nineteenth century there were several mothers in the villages who taught their children by their old methods to read and write, and at the time of the abolition of serfdom there were several men and women in every village who understood how to read and write and were able to start a new era in Lithuania of modern culture and industry.

Nowadays education has become so popular that there is no village in the country which has not at least two or three men with the highest education, such as priests, teachers, doctors and lawyers. This intelligency arose from the peasantry and inspired the desire in all classes of the Lithuanian people to become a free and independent nation.

History of the People.

Lithuania started the historical life in the beginning of the thirteenth century. Before that time her clans were scattered through the country and each had its own ruler. At the beginning of the thirteenth century the German merchants came to Lithuania and discovered a new territory for their commerce but the Lithuanians were heathens and prevented the German merchants from penetrating into the interior of their country. Therefore, the merchants brought with them military powers consisting of the Knights of the Cross and Knights of the Sword. Under the strokes of these orders the Lithuanian clans began to unite in the State and there were elected dukes as leaders of the military and civil life, and Lithuania formed an independent State from 1201 until 1569, in which year it was united with Poland in the so-called Polish-Lithuanian Republic. Then her history was merged with the history of Poland, and Lithuania lost its identity as an independent nation.

In 1795 the united Polish-Lithuanian Republic was conquered by Russia and Lithuania was divided into two parts, viz.: the government of Kaunas, Vilnius and Suvalki, which were annexed to Russia, and the districts of Koenigsberg and Gumbinno to Germany.

The Lithuanians, being united with Poland, were forced by the Polish Government and priests to use the Polish language and schools, and in those countries Lithuania was Polandized. When Lithuania fell into the hands of the Russians she was forced to adopt the Russian schools, language and culture.

Progress of Lithuania.

There was before the war very few railroads and good highways, and the advancing Lithuanians wanted to improve Lithuania by building new railroads and highways, but the Russian Government, on account of strategical plans, prevented the Lithuanians doing this because of the close proximity of the German border, and thus the advancement of Lithuanian industry and commerce was suppressed.

Lithuania is rich with large rivers, from which she can obtain electricity, and there were good opportunities for the engineers to build dams for purposes of producing electricity, but the above-mentioned suppression prevented it.

Taking into consideration the growth of the Lithuanian culture during the last ten years, it can be seen that the nation is worthy of freedom and should be an independent nation, and we are of the opinion that Germany believes this from the way she spoke about Lithuania in the peace proposals to the Allies, and now it is only natural that the Allies and the neutral nations should understand and realize the desire of the Lithuanian people.

An Expert Opinion.

A man who kept a road house in Rhode Island, was called upon to testify in a suit as to the number of cubic yards that were handled in some filling work near his place. He showed very little knowledge of the matter, and his idea of a cubic yard was so indefinite that it seemed doubtful whether he knew what the term meant. In order to make its meaning clear, the judge said:

"Listen, witness! Assume this inkstand to be three feet across the top this way and three feet that way and three feet in height, what should you call it?"

"Well, Your Honor," said the witness, without hesitation, "I should say it was some inkstand."

Magistrate: "Officer, what's the matter with the prisoner? Tell her to stop that crying. She's been at it for fifteen minutes." (More sobs.) Officer: "Please sir, I think she wants to be bailed out."

GERMAN GIVES NEW VERSION OF WAR

DISTINGUISHED GERMAN HISTORIAN'S VIEW OF STRIFE.

Conflict Has Proved There Are Limits to Any "Knock-out Strategy."

The London Times says: Prof. Meinecke of Freiburg University, the distinguished historian, contributed to the Frankfurter Zeitung recently the most remarkable article on the history of the war which has appeared in any German newspaper. Being compelled to lie about the origin of the war, German writers generally have had to lie about all inconvenient events during the war.

Prof. Meinecke, on the other hand, adopts the convenient formula that it was only "in a political sense" that Germany "began the war as a defensive war," while in a military sense it was distinctly a knockout war (Niederwerfungskrieg). Thus, happier than other German writers, he is able to tell the truth about the Battle of the Marne and admit that the battle for Verdun was a failure.

First Phase of War.

Prof. Meinecke has the courage to describe the first phase of the war as follows:

"Our first object was to overthrow France rapidly and compel her to make peace. If we succeeded we would then turn quickly and carry out the same military idea against Russia, with the best prospects of success. Then we would conclude a final peace with England, who would have been disarmed by the Continent. This peace would have had to assume the character of a compromise, since we did not hope to overthrow England's naval supremacy.

"This whole programme, brilliantly begun, collapsed at the gates of Paris and the Battle of the Marne. This battle was not a tactical victory, but a great strategical success for the French. Perhaps our programme would not have collapsed if we had carried through our original strategical idea with perfect strictness, keeping the Marne forces strictly together and for a time abandoning East Prussia."

Prof. Meinecke sketches subsequent events much as follows: The Germans took to trench warfare and the enemy did likewise. The Germans tried but failed to break through at the Yser and Bzurka-Bawka, and the French tried but failed to break through Champagne. The German people began to argue that the war had become a war of attrition. Then the Germans succeeded in breaking through Galicia, but ultimately they had to settle again in defensive positions. The British and French then tried, but failed again, to break through in the west, and the battles of Loos and Champagne followed.

Battle of Verdun.

Prof. Meinecke then gives the following account of the battles of Verdun and the Somme:

"An argument used a year ago was that a decision must be sought, not in the tangible, distant East, but in the concentrated West—the nerve centre of the enemy's forces. The decision, however, must not be a decision in the old sense that we should break through a particularly critical position, destroy one of the most important of the French fortresses and prove to the French that they could no longer win. That was the origin of the undertaking against Verdun. This time a new politico-military idea led only to a heroic episode; but, meanwhile, our enemies pulled themselves together for still more gigantic achievements. England learned the use of universal military service and the conversion of industry for the production of a mighty supply of arms and ammunition. At the same time she leaned upon the industrial strength of America, so, while Japan helped, she was able to equip the new Russian formations, the apparatus which we had smashed the year before.

"Thus in June and July, 1916, it came—the great double offensive of our enemies, East and West. The result was that we had to interrupt operations at Verdun. The enemy's offensive also achieved partial successes, especially in the East, although the real object—to break through and roll up our lines—could not be achieved. This was due to the fact that in the interval we still further developed the possibilities of trench warfare."

Results of Somme Fight.

Prof. Meinecke says the Battle of the Somme led to the conviction in Germany that it was no longer possible to arrive at a military decision in a full peace-compelling sense. So he describes the German peace overture as arising naturally from the idea that the sacrifices which would be demanded by a continuation of the war would no longer bear any relation to military results, and it would be statesmanlike, intelligent and wise to abandon the intention of destruction and seek a reasonable compromise.

As regards the real guarantees which Germany professes to require, he makes two final observations: One is that Germany has taught all the small Powers of Europe that they are risking their lives if "they touch the electric wire which protects Central Europe." The other is that the war has proved there are limits to the possibilities of "knockout strategy in a war between great Powers." Consequently a knockout policy aimed at procuring fundamental revolutions in the relations of European Powers does not pay.

Thus, according to the professor, the motto of the future will be "not overthrow, but balance."

Although no other writers are allowed to confess German failures, his account of the peace manoeuvre is confirmed in other quarters. There is now little or no talk of German benevolence and German dislike of bloodshed. It is argued simply that its enemy ought to be persuaded to agree with Germany that a compromise is inevitable and then discuss peace based upon the war map.

THE ROADMAKER.

Humble Service Cheerfully Done for King and Country.

Dr. Wilfrid T. Grenfell, of Labrador, tells this fine incident of his work as a surgeon at the Front:

"A particularly bright young soldier came into our hospital in France one day," he writes in the Boston Congregationalist. "He was shot through the spine and for many days suffered much agony. The worst danger was over, and I was sitting on his bed talking to him.

"'Where is your home?' I asked.

"'In Argentina,' he replied.

"'Argentina? In South America? What brought you over here?'

"'Well, Doctor, I was good and strong, and I wanted to do my bit.'

"'Was work scarce when you left?' I continued.

"'Not much. That's the country to live in,' he answered, smiling at the very thought of it.

"'Sad business, getting hit so soon. It will be a long time before you'll be able to get about again, I'm afraid.'

"'Don't worry any about that,' was his immediate reply; 'I'm glad I had the chance.'

"As I looked through his smiling eyes into his soul I realized that only lately I had seen men seeking this man's now inalienable possession among dollars and cents, and never finding it because they sought amiss.

"'Where were you, and what were you doing when you got hit?' I asked a 'common' soldier one day in our ward. 'Were you charging the enemy?'

"'No such luck, Doctor. I was working on a road detail when a "Jack Johnson" came along, and a bit of the nose found me.'

"It was a terrible wound. I had wondered if he would ever see England and home again. Among the convoy that brought him, he had been a dying case. A scarlet edged tag, pinned on his breast as he lay on the stretcher, had signified that he was among the dangerously wounded. He had only been one of the host of soil-soaked Tommies, whose work in mud up to his knees repairing the 'pave' of the road to the trenches in the dreary flats of Flanders must have appeared inglorious enough. And now he was knocked out for good.

"It seemed odd that a man like that could be so cheerful and contented. This, however, and his anxiety for 'the other chaps,' had made him quite a favorite, and his bed a popular corner in the ward.

"'Making roads through the mud wasn't the kind of job you were thinking of when you joined the Colors, was it?' I asked him one day.

"'Not exactly. But it was good to see the ammunition and the grub go by over them to the other chaps. You bet we kept the road good almost to the front trench. I'll never forget seeing a battery of our artillery gallop by once when there was some straffing going on. If it hadn't been for our road maybe them Germans would have got through.' The pleasure of that humble service is going to survive all the horrors of filth and wet and misery, yes, and life itself."

SCOTLAND'S BELATED CANAL.

Oft-raised Proposal of Waterway Between Forth and Clyde.

The oft-raised proposal to construct a canal between the Forth and the Clyde, Scotland, for great ocean-going vessels is by no means a recent one. The Romans built a wall across the same line, but history says nothing about a canal. Nevertheless, the idea has been mooted for at least a century and the canal has not been commenced yet.

The Kiel Canal, made famous as the hiding place of the great German fleet, was talked about in the days of Napoleon, but it is only of recent years that it has been completed.

No fewer than four centuries elapsed between the conception of the Panama Canal and its completion. It was one of the earliest ideas of the old Spanish and Portuguese navigators, seeing that it cuts off thousands of miles on the way to the Pacific.

The completion in 1893 of the canal across the Isthmus of Corinth—which would come into prominence in the event of Greece becoming a belligerent—was the finish of a scheme for which the first survey was made in the year 600 B.C.

Miss Vance: "He was talking to you about me, wasn't he?" Miss Speitz: "Well, yes." Miss Vance: "I thought I heard him remark that I had a thick head of hair." Miss Speitz: "Well, he didn't mention your hair, dear."

WILLOW CREEK

Mr Dave Wittig was the purchaser of the dearest box at S S No 10 social, which sold for $6 and was brought by Miss Pearl Reptke.

We are told that Mr Sam Bonnet has bought Mr Alex Reid's farm.

Evangelistic meetings will be conducted in the church here. This week the services will be in the German language and thereafter in English.

The Kaiser may take cold if he gets too near Russia.

Mr Henry Roppel may be back to this neighborhood before long.

A large number of the farm boys around here are taking the special agricultural course at Underwood, under the direction of Mr Norman MacKay the Agricultural Representative at Walkerton. The girls are also taking advantage of the Domestic Science Course.

ELORA ROAD NORTH

Wedding bells are ringing.

Mr And Miller had a wood bee at his new farm on Monday.

Miss Irene Culham, of Kincardine, visited at Mr J S Campbell's last week.

Miss Edna Sparrow is spending the winter in Owen Sound.

Mrs Morton, of Port Elgin, spent a few days at Mr John McDougall's.

Mr David Bryce, having disposed of his greys, has bought a fine bay team.

A successful operation for adenoids was performed on the young son of Mr Watson McKinnon last week.

Mr and Mrs Thos Rae, of Toronto, spent a few weeks at the home of his father, Mr Sam Rae.

A few friends were entertained at the home of Mr J S Campbell one night last week.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

TWELTH CON of BRUCE

Gollies! Hadn't we a fine night for our Mystic Tea. Never mind, we had a swell time anyway. A fine tea was served and some classical music rendered.

Mr John Greaves accompanied by his sister, Mrs J W Howe, visited friends in Huron last week.

Miss Nellie McGillivray has a knitting machine. She is knitting the legs of the Red Cross socks, and the Red Cross workers knit the feet on them. It certainly is a much quicker way than we were used to.

Mr and Mrs D Walks of Elderslie visited at the home of their daughter, Mrs A H McGillivray, and attended the Mystic Tea.

Mrs D A Campbell returned to her home in Bentinck last week, accompanied by her sister, Miss Esther McGillivray, who will visit her many friends there.

Mr and Mrs Jos Stoddart and daughter Lily Sundayed at Mr J Dunlop's.

Mr Ed Barnes was kept busy for a couple of days choring for Mr John Greaves during the latter's absence.

A number of the soldier boys from here who are now in England are in the hospital suffering from mumps.

GLAMIS

The Red Cross Society sent their second shipment of supplies for the soldiers consisting of socks, bed socks, trench caps, towels and pyjamas.

Clyde McKeeman, who has been home since Christmas, returned to London last week.

Miss Tena Wittig, of Underwood, spent a few days at W J McKeeman's.

Mr Wilbur McNally, of London, spent the week end at his home.

We are sorry that Mrs Jas McLennan is laid up. Miss Flossie remained at home for this week, Miss Young teaching in her place.

Miss Norah McNally, who remained at home owing to the serious illness of her brother, was able to return to her studies in Toronto on Wednesday last.

Mrs Neil McFarlane is laid up with la grippe.

Mr Archie McKay of Underwood spent Tuesday evening of last week at W J McKeeman's.

On Saturday morning death again visited another of our old pioneers in the person of Archie McFadyen on the boundry. Although not in very good health yet his death was rather sudden. The time for the funeral has not been decided on yet, as they are waiting for friends. His son Alec arrived on the late train on Saturday night.

EDEN GROVE

We will not mention the weather this week, as it's boisterous enough to speak for itself.

Mr John Seiler is nursing a sore hand at present.

Messrs Sanford and Cress Farrow and Miss Salome Farrow, from the west, were welcome visitors in this district during the past week. While in the Grove they were the guests of Mr and Mrs Seiler at the White House.

Teacher — "Children, who can tell me what great event happens on Feb 2nd?" Frank—"The bear comes out." Dorothy—"Please, teacher, the box social in Eden Grove school." Both correct.

Mr and Mrs Pearson and son, Mrs McCutcheon and Master Lorne visited friends in Cargill on Sunday.

The minister delivered a sermon on votes for women to a large audience on Sunday morning. The subject was well handled in favor of the votes.

Joe represented the Grove at the farmers' lecture at Walkerton on Thursday evening. If you wish to know all the latest in the farming line just ask Joe.

Mrs Blue and family are spending a few weeks at the home of Mrs Catio, Mrs Blue's mother.

The Grand Trunk commenced their winter plowing on Monday. Little early this year.

The many friends of Mrs Tennant will be pleased to learn that she has so far improved from her recent illness as to be able to be out again.

Sunny Jim says "Single for mine." If the women have votes that settles it. No stopping in rocking the kids for him

Mr John Desmond spent the week end at his home here.

Mr Mogul rushed to hospital in dying condition. When the noon train, drawn by two large Mogul engines, arrived at the Grove station it was discovered that one of the engines had burst a flue, and in a short time the fire would be extinguished and the great Mogul dead. In the absence of an ambulance the way freight engine carted Mr. Mogul off to Palmerston for repairs.

Miss Johnston, of Paisley, teacher of vocal music, was in town Monday. Should Miss Johnston secure a sufficient number of pupils here desirous of taking vocal lessons she will probably open up a class in the Grove.

Mr McKeeman has sold his famous pacer, Minnie R, to Mr Gilchrist. Minnie R had a record of 2.17. When it was hitched to a rig at one end and tied to a post at the other it was fast at both ends.

Mr Emery and Miss Emery visited at the home of Mr and Mrs Perdue last week.

There will be a hot time in the old county town this week when the Bruce county editors meet. For a good time the old fellow himself isn't in it with the editors.

"Jimmy, what are you doing up that tree?" "Want to get a good look at a Grand Trunk train coming in on time." "Come down out of that. Why, child, that's yesterday's train 24 hours late."

No. Aunetta, the young lady Monday evening was not training for a race. She was racing for a train.

Mrs Thos Taylor and Miss Bessie Taylor are the guests of county town friends this week.

Mr Dan Cassidy has accepted a position with the G T R bridge gang.

The race Monday evening was a corker. One of the starters corked himself. John is not so young as he used to be.

GREENOCK COUNCIL

Knox's Hotel, Pinkerton, Jan 8th.

Council elect for the Township of Greenock for the year 1917, as follows: D Phelan, Reev; Jas D Campbell, Geo W Gilchrist, Thos Sawyer and Thos Symon. Councillors, met as per statute and after taking declarations of qualification and of office, took their seats, the Reeve in the chair. The minutes of last meeting were read and adopted. The following accounts were presented for payment:

Jas S Dewar, 7 12 inch tiles, per order of T Sawyer	$ 5 25
H Moffat, contract 165 yds gravel at 6ac, less half inspection	100 00
J Mutrie, tuq getting Moffat contract 6 days at $1 75	10 50
Jos Kenny, 81 yds gravel per Moffat contract	8 40
Municipal World, election supplies, Ass't and Coll rolls, minute book and blank forms	22 85
H Kroeplin, com work Dec 15th to 31st	5 00
A R Knox, rooms for Council	3 00

Campbell—Sawyer—That the foregoing accounts be paid and that the Reeve be instructed to sign checks for same—Carried.

Campbell—Sawyer—That the D R officers, poll clerks and owners of polling booths and nomination hall be paid.—Carried.

THOS H PURDY, Clerk.

BACKACHE, LUMBAGO AND RHEUMATIC TROUBLES.

Dear Mr. Editor—I wish to state that I suffered greatly from backache, lumbago and rheumatic troubles. I used "Anuric," the latest discovery of Doctor Pierce for backache and kidney troubles, and I can cheerfully recommend the "Anuric Tablets" to anyone suffering from any of these maladies.

Yours truly,
J. F. GARNER.

Note: It is now asserted with confidence that these painful effects due to uric acid in the system are entirely eradicated. A new remedy, called "Anuric," has been discovered by Dr. Pierce, and is the cause of its drainage outward of the uric acid with which it come in contact within the body. It will ward off backache, headache, and the darting pain, and aches of articular or muscular rheumatism—of those diseases which are caused by too much uric acid, such as gout, asthma, sciatica, renal calculi, etc. Anuric prolongs life because old people usually suffer from hardening and thickening of the walls of the arteries, due to the excess of uric acid in the blood and tissues.

Dr. Pierce, who is director and chief physician at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., has been testing this wonderful medicine for the relief of overworked and weakened kidneys. The relief obtained by sufferers has been so satisfactory that he determined to place "Anuric" with the principal druggists in town where people could get this ready-to-use medicine. "Anuric" is not harmful or poisonous, but aids nature in throwing off those poisons within the body which cause so much suffering, pain and misery. Scientists assert this remedy is 27 times more potent than lithia. Send 10 cents for large trial package.

"Anuric" is living up a reputation as good as Dr. Pierce's other well-known medicines which have been proved reliable during nearly fifty years, such as Doctor Pierce's Favorite Prescription for the ills of women, Doctor Pierce's Pleasant Pellets, the liver regulator, and Doctor Pierce's Golden Medical Discovery for red blood.

CANADA MUST ECONOMIZE

Depression Will Come With Peace—Economy Imperative

Economy is not being practised extensively in Canada. We are sharing the prosperity which war has brought to the American continent. Prosperity is infectious. It does not always conduce to thrift. Men frequently save more when money is tight and the outlook is uncertain than they do when money is plentiful and the future assured. To-day the position here is the existence of temporary good times, dependent largely upon war orders. Peace will bring a jolt. How serious it will be, none can tell. Nor can we say what favorable factors will relieve the depression which must come with the strain of economic re-adjustment. These facts make economy imperative. Yet even although their patriotism be undoubted, nevertheless many Canadians are aiding the enemy thoughtlessly, frittering away the profits and earnings due to a prosperity which may be suddenly arrested by the advent of peace. The trade returns continue to furnish evidence of the importation of many unnecessary articles and, to the extent that this is the case, our financial ability to resist the enemy is lessened. The words of Sir Charles Addis, in his address on "The Means of War Finance," apply to Canada as much as to the United Kingdom, when he says that people "do not understand that by the manner of their personal expenditure they may be determining whether the horrors of the conflict are to be prolonged or the blessings of peace anticipated. There does not appear to be as yet any general or adequate recognition of the special responsibility for the right use of war earnings attaching to those whose prosperity depends upon the continued sacrifice of life and limb by their fellow-countrymen in the field. It is surely a small thing to ask of those who are restrained from joining the fighting line by the disabilities of age, or infirmity, or sex to make some sacrifice for those who are fighting their battles for them. Sacrifice! let us call it what it is—a privilege, perhaps the only privilege left to us."

SCREENING GRAIN

It is certainly not economy to ship dirty grain, as the farmer hauls from thresher to his car at expense of his man loading and unloading and his team drawing; pays freight on same to the terminal elevator, and then gives it away. Those who get it must consider it valuable as they insure it. I noted some time ago that my insurance company's report showed an item $29,000 paid for loss on screenings by fire at terminal. How many others were on the risk? These screenings (dockings) are treated and used for feed by chopping, steaming or boiling. Wild oats chopped fine enough to destroy power of germination or boiled makes good feed. The smaller seeds, as pig and mustard, are also good when so treated, and when cooked are relished by animals which will not eat them when raw.

The up-to-date threshing machines are so equipped that these smaller seeds are left in a heap under the mill and paid for at threshing by estimating the number of bushels in the heap. The farmer might pay two prices and leave this dockings, so left rather than have to separate it from his grain before shipping. Threshing machines should be so equipped with separators to grade wheat, as to run off different screens or through a similar separator to "Jumbo" from elevator, and bag the screenings and small and broken grain, running the good into wagon boxes for the granary or elevator. If the machine does not do a clean job then the farmer should certainly separate himself at home before teaming or run it through an elevator having a good cleaner, and use the screenings as stock feed.

Old Customs Explained

There is no good reason nowadays why the bow or other ornament on a man's hat should be confined, as it usually is, to the left side; but in the days when every man had to be prepared to battle for his life there was a very good reason for this custom. In those days long plumes took the place of bows as ornaments for hats, and if they had been on the right side there would have been serious danger of their getting in the way of the sword and thus causing the overthrow or even death of their wearer.

When Motor Misses

If motor persists in missing when only a light load is being carried, before resorting to adjustments of the carburetor try making spark gap a little wider, presuming, of course, that the magneto is being used. On the other hand, if the motor misses when there is a heavy load on board, it may possibly be obviated by closing the spark gap slightly.

Why Fowls Need So Much Air

Fowls are obliged to throw off much of the waste of the body through the lungs, they do not sweat in the sense that do other animals, but instead breathe several times faster than sweating animals when heated. To keep in good health a hen requires nearly seven times the amount of fresh air in proportion to its size as does a horse.

There is almost as much difference between different families or strains of each breed, as between the different breeds of fowls. Therefore, receive with some allowance the praise or condemnation of any breed.

To decrease the number of accidents a French city is building a street with a separate roadway for each kind of traffic, motor, horse and foot.

Solidified alcohol in the cube form is coming into use in Germany for cooking and other purposes for which small amounts of heat are sufficient.

A cooking utensil on the double boiler principle has been patented in which the inner and outer sections are permanently attached together.

An Englishman has invented combs to be sewed to women's hats to hold them in place without the use of pins.

SKATING SHOES

Now is the season for skating. We have a complete stock of Skating Shoes, Skates, Skate Straps, Ankle Supports.

Wind, rain, snow and sleet,—these have no terror for the man who wears our

Boots, Rubbers, Moccasins or Overshoes

H. PFAFF & SON

The Wizard who put Music into millions of homes

AS you sit in your own home and listen to the stirring strains of a military band—or the liquid, luscious notes of a far famed singer—do you realize the thanks that you, and all other music lovers, owe to Thomas A. Edison? As you know, Mr. Edison invented sound-recording and sound-reproducing instruments. It was due to his genius that millions of homes are able to enjoy everything in music.

It was due to Mr. Edison's efforts that you—no matter where you live—may have the great artists, the famous bands, the cleverest entertainers, the brightest public speakers, right in your home.

For more than thirty-six years, Mr. Edison has developed and improved the Edison Phonograph and Edison Records.

The NEW EDISON DIAMOND AMBEROLA

—the latest development of his phonograph—with its diamond reproducing point (requiring no needles)—has a softness, a richness, a velvety smoothness, a wealth of delicate overtones, that cannot be obtained with any instrument using metal needles, which must be changed with every record.

You really must hear the Edison to appreciate it to the full. Won't you come in and let us play some of your favorite pieces for you? 58

PETER McKINNON, PAISLEY, Ont.

—Mrs A W Sinclair, of Loring, Ont: is visiting at the home of her brother, Mr W Megraw, of Greenock, and her sister, Mrs McVittee, at Burgoyne.

—The funeral of the late Mrs David Beatty, who died at Paris, Ont., on Tuesday, will be held from the home of her sister, Mrs H Reed, on Friday at 1 p.m.

—Mr and Mrs Patterson, of Niagara Falls, were visiting Paisley friends last week, guests at the home of Mrs McInnes Goldie St. Mrs Patterson was formerly Dr Mary McNeil.

—Mr W Pearce, Elora road north, went down to Toronto market on Monday with eight two-year-old steers, which were the finest offered. The bunch brought out this note in the Globe's market report: The top price was $11.25 for a few choice weighty steers that were easily the best quality seen on the local market for the last few weeks.

—The coming season is going to be marked by high prices for all farm products. It will be in your interest to watch the markets closely. The Farmer's Sun, Toronto as a farm and local paper has no equal. It has saved its readers many dollars by keeping them posted as to the trend of prices. There never was a time when this information was of such value to the farmers of the Province as now. Those who read The Sun regularly find it a business proposition that means money to them. Your subscription for The Sun can be left at this office.

Trustee Elected

Dr Gage was the only candidate nominated on Monday for the vacancy on the School Board, so was declared elected by acclamation.

Death of Alvin Rankin

The remains of Alvin Rankin who died in Calgary on Sunday, are expected to arrive here on Saturday for interment in Paisley cemetery. The message was received by Hoyle & Cavill.

Mr John Wright, an old resident of Greenock, died at Glenelg, Man. and his remains are being brought east for burial. The funeral will take place from the residence of his son Mr Robt Wright, lot 14, con 14, on Saturday. Service at the house at 2 o'clock p m. Interment in Purdy's cemetery.

Special Sermon Series

The Incarnation Attested by the Temptation" was the subject of a sermon delivered in the Baptist church on Sunday evening by the pastor, Rev M Nelson. This is the first of a series of four evening sermons. The others to be delivered are: "The Transfiguration as the Unveiling of the Incarnation," (3) "The Crucifixion as the Glory of the Incarnation," (4) "The Second Coming as the Consummation of the Incarnation."

Large Drove of Horses

On Friday last Irwin Bros. of Walkerton had a delivery of 25 horses at the Central hotel stables here, which they drove to Walkerton. These were part of a consignment of five cars they are shipping from the county town this week by C P R to the west. The starting of the drive in Walkerton caused quite a stir on our streets. The steeds were mostly young, and feeling fresh and frisky as they emerged from the stable to the street, and were inclined to mix it up lively. By time the animals had travelled a mile or so over the heavy, loose roads much of their gaiety of gait had vanished. The bunch were halter led for a distance and then all let loose except the leaders. Mr Hank Irwin generalled the drive, and, mounted on a pure white charger, looked the part of a Napoleon of the horse trade. McLachlan's delivery horse couldn't stand for the excitement as the prancing drove went by the shop, and it started off with the bread rig to cut niches in the procession. Somebody was smart enough to stop the wild performance just about the time the bread loaves were due to spill over the scenery, so there was no real drop to bakers' products.

—Paisley hockey team expect to play an exhibition game in Port Elgin on Friday evening.

—Mr Cavill of Chesley, has been over visiting his son, of Hope & Cavill, who is laid up with an attack of erysipelas.

IT HAPPENED AT JOHORE

"Because he called me a name no white man can stand I thrashed Dutch Blauvelt in a cafe down in Johore and knocked out two of his front teeth. They left marks in my fist that ahow to this day," said Captain John Goodman. "Dutch swore he'd get me for it, and he mighty near kept his promise.

"I was a bit sorry afterward that I'd smashed Dutch, for the man was a bit in liquor at the time, but the life we lead makes a man strike quick and think afterward. If he doesn't he's likely to go where he can't think before very long.

"So I tried in different ways to make it up to Dutch, and when he came to me in Sydney while I was skipper of the four-master Penguin and asked for a berth I shipped him as second mate, my officer of that rank having been locked up in jail for stabbing a boarding house keeper who objected to the mate's somewhat warm attentions to his wife.

"We ran out of Sydney that trip with orders to go to Surabaya and take on a consignment of coffee for Liverpool.

"I was sitting one night on a coil of rope, smoking a pipe and watching the stars do queer dances the points of the spar as the ship rolls gently to the swell when Dutch Blauvelt, who should have been turned in, came to me quietly and asked if I would step forward for a minute, as he had something to tell me which he didn't want the man at the wheel to hear.

"To tell the truth, I thought he wanted to mention the little affair at Johore and tell me that he was sorry for what he had said after all I had done for him. I had seen the man eyeing me of late, and whenever I looked at him he dropped his eyes and grew a bit red, after the manner of a man who feels embarrassed because of his thoughts, just as though he had expressed them aloud.

It was not until we were well forward of the house, where the helmsman could not see us, that Blauvelt turned and faced me and I smelled liquor on his breath.

"The men had not been given grog for several days and I supposed he must have smuggled some on board, and made up my mind to give him a few words of advice when the explanations should be over, for I wanted to see the man on his feet.

"'Well, Dutch, what is it?' I asked, for he seemed to find it hard to begin.

"He laid both hands on my shoulders in friendly fashion. 'It's that little frarcas at Johore,' he said.

"His eyes did not meet mine and I did not quite like that, although I put it down as embarrassment at the time. Then I caught a glimpse of the whites of his eyes. They were red streaked and he moistened his lips with a swollen, thick tongue. I knew he had too much liquor in him, but still I thought he wanted to make amends and I tried to overlook the breach of discipline.

"'Now, that's all right, Dutch,' I said. 'There's no hard feelings any more. A hard knock more or less needn't stand between two sailormen. Forget it!'

"'Forget it -hell!' said Dutch, and at last he faced me. I didn't like the gleam in his eyes, although his hands were still on my shoulders in friendly fashion. "We'll settle the score."

"With that he gave me a mighty shove with his left arm that sent me staggering from him and at the same time struck out at my face with his right. It was his own attack that saved me. He had pushed me so violently that I staggered out of reach of his blow. Before he could strike again I recovered my balance and lunged at him, but he dodged.

"'We'll finish it now,' he said, and his left fist landed on the side of my jaw. The blow maddened me. I might have cried out and aroused the crew. The helmsman would have been at my side in a minute, but the animal in me both was roused. We were alone there, he in his bare feet and I in my socks. It was not likely any one would hear us, and, as Dutch said, we would finish it.

"Round and round we circled and I felt with joy that the deck was steady under our feet, for although the Penguin was driving ahead the wind was astern and she rode the crests of seas for seconds at a time as steady as the floor of a house.

"I felt the bones of Blauvelt's nose crunch under my knuckles with the first blow I drove home and I became completely a mad man.

"He spat and the blood rushed from his battered face, but in his momentary blindness he reached for my throat, just to the right of the Adam's apple, and the muscles of my neck tightened about the handgripe as though an iron hand were strangling me. But for the moment I had the advantage and before he recovered I landed a blow that sent the wind out of him with a grunt. But my whole strength had not been behind it and Blauvelt kept his feet.

"'Pretty,' he murmured, 'but how about this?' And with the words his bony fist crashed glancingly against my left ear. He had struck for the eye, but I had warded in time to break the blow. He clinched with me then, and buried his teeth in my shoulder, but I got my fist against his stomach and battered and battered with short, terrific jabs until he broke away, cursing. The pain in my shoulder was excruciating, but when I feinted for his stomach and struck him full between the eyes as he warded the misleading blow I forgot the pain.

"Blauvelt went down on the deck, but even as I sprang at him he was on his feet again and at me. I remember how he panted, and it gave me pleasure to hear his breath come in short, loud sobs that I knew must hurt, and then I realized that my own breath was all but gone. The blows which struck me no longer hurt. I was becoming dazed. Dutch staggered, but I knew that I was doing the same and I rushed at him in a fit of fury to finish the thing.

"I thought he had stumbled as I struck, but he gripped me around the body and slung one arm under my left leg just above the knee. I felt him lift me from the deck and I struck blindly, savagely at his face. I felt the impact of my blows as I rained them time and again upon his face, but I could not get my feet under me. I felt myself flying through the air.

"Then came the shock of cold, stinging water. I tried to call out, but my mouth filled and I sank. When I came to the surface I shouted for help, but the lights of the Penguin twinkled fifty yards away and my weak voice would not carry that far. I suppose it was about three in the morning when I was thrown overboard, and the sun rose at four. The scene was beautiful beyond description, but all its warm loveliness struck terror to my heart.

"Rage burned in my heart in that moment of despair and doubt. I would have beaten impotently on the unfeeling sea and wasted my strength in worse than unreasoning temper. I raised my hand to curse all things, but with the act the water closed over my head and I choked. The great relentless enemy was there all about me, ready to seize remorsely any opportunity that offered. With the slightest relaxation on my part I would be dragged down, overcome. My foe was tireless, vigilant, absolutely unmerciful.

"For a while I tired myself with crazy, frantic swimming, whither I knew not, but with the first feelings of exhaustion I came to my senses. My sole hope of rescue lay in keeping myself afloat until some passing vessel picked me up or the Penguin returned, which it was not very likely she would do after all this time. The struggle resolved itself into a cold reasoning fight against infinite, unthinking forces.

"Gradually the freakish currents of the sea had carried me into warmer water—or I was becoming numbed. I felt sluggish, and I think consciousness was beginning to slip away from me, for I began to forget things. Then suddenly a horrible thought seized me—sharks might attack me.

"I wondered what fashion of finny creatures there were in the waters about me. I had an ereater horror of some slimy, freaklish reptile fish than of the sharks. I feared my mind was going, and I gripped myself, but the thought returned, and returned all ways stronger.

"Then I shrieked aloud in fear, for as truly as the sun shines I felt some scaly creature brush against my side. A fever dream, perhaps it was—but to me it was as real as the fingers on your hand. Wildly I struck out with arms and legs and thrashed about to scare it, but although I could not see the thing it seemed as if a dozen monsters of the sea were brushing against my side.

"Slimy creatures played in the waves about me. To some I tried to talk, but they only laughed and mocked me, and I raged against them and tried to strike them with my fists, but they parted in twain where I struck, and then the parts, swimming off, joined together again and mocked me.

"There loomed in the distance a new monster. Black and high out of the water it was, with great white wings, and it ploughed up foam before it, so fast did it forge ahead. It was dim in the distance, but I was eager to do battle with it and swam toward the thing.

"Closer and closer it drew. I knew I must kill it, and swam slowly to preserve my strength. When I drew close I saw it was not one monster I must fight, but many, for out from the side of the parent darted a fleet little white creature with many legs.

"This I swam toward, to kill it before attacking the larger one. As it approached it roared with many voices, and its legs churned the water. One of the voices roared in a singsong, regular fashion. Suddenly I felt something strong lifting me. The monster had me, I thought, and I lost consciousness.

"When next I opened my eyes I was lying in my cabin on board the Penguin. Mr. McTavish, the first mate, was by my side.

"'It's a fine second mate you shipped,' said he after he had spoken of simple things to see if I was myself.

"'Where is he?' I asked.

"'In chains,' said MacTavish, where he's likely to stay till we reach a British port. I've had the whole story from you while you were delirious, and Blauvelt has admitted it.'

"It seems when the watch was changed they found Blauvelt lying senseless on the deck. I was missing, and the canny Scotch first mate had guessed the situation. Blauvelt swore that I had attacked him and fallen overboard during the scuffle. At any rate the Penguin was put about and I was picked up by a part of the crew in the dinghy which I had taken for the smaller monster, after I had been thirteen hours in the water.

"We touched at Singapore and turned Blauvelt over to the authorities there, who attended to his case, I have never laid eyes on him since."

Belgian Refugee Children Arriving at Ellis Island, N. Y.

The most interesting travellers among the 965 who arrived on the liner New Amsterdam, a few days ago, were the Belgian children sent to the United States by Father John De Ville. They will make their homes with relatives or friends of their parents in Chicago and other cities in the Middle west. They wore the warm clothes sent down the bay to the steamship for them by the American Red Cross, and tugged along bundles of the thin and worn apparel they crossed the ocean in.

DUTCH DEFENCES.

Gigantic Undertaking in Holland For Military Purposes.

The Zuider Zee will become in time a mere memory. Little Holland, always on the look-out for defensive measures for her little kingdom, proposes to drain her famous waterway and to erect military stations on its site.

A Bill has recently been introduced into the Second Chamber of the Dutch States-General providing for this tremendous operation, the cost of which is estimated at over $45,000,000, and the undertaking will cover a period of fifteen years.

It is proposed to shut off the Zuider Zee by a dyke running from the North Holland coast, through Amstel Diep, to the Island of Wieringen, and from this island to the Frisian coast, near Pinam. It is then proposed to drain four sections of the Zuider Zee when thus closed—namely, the northwest, south-west, south-east, and north-east sections.

An even more stupendous feat has lately been accomplished in Bombay, India, though there the measures were reversed. Three huge reservoirs have been constructed by the damming of the River Shirawata, and it is only because of the great war problem now before us that this extraordinary piece of engineering skill has not been accorded its due meed of praise. The largest dam erected in connection with this work is over 8,000 feet long and 93 feet high, and contains more masonry than the famous Assouan dam on the Nile.

The reservoirs, which will be used for working the native cotton-mills, will render Bombay a particularly clean city, as hitherto Indian coal was used to drive the mills, the burning of which caused huge pulls of smoke to overhang the city.

SHOCKS THAT CURE SHOCK.

New Cures as Well as New Maladies Result From the War.

The war has introduced new maladies. But it has also introduced new cures. Falling downstairs, for instance, lately cured a man from shell-shock.

If a doctor were to prescribe smoking with the lighted end of the cigarette in your mouth, you would probably consider him a lunatic. This operation, nevertheless, was completely successful in curing another case of shell-shock, and in giving the sufferer back his speech, says London Answers.

Soldiers have been more strangely cured from shell-shock than from any other malady. Music has cured numerous victims, and temporary dumbness has been banished by over-excitement at cards. One man—a Canadian—found his lost voice through his appreciation of an entertainer. He roared with laughter, and suddenly found himself saying to a neighbor, "Ain't he a peach?"

The shock of being photographed by flashlight and the agony of having a tooth pulled out—without an anaesthetic—cured two other men who believed they had forfeited their speech for ever.

Even a guilty conscience has power to heal! A Tommy who could not speak used a pencil and paper for conveying his messages. One day in hospital he lost his pencil, and decided to borrow one lying on a shelf above his neighbor's bed. His neighbor was asleep, but awoke just as the pencil was being removed.

"I—I'm so sorry," stammered the man, in confusion. "I was only going to——"

Cured!

But the ignorance of a lawyer isn't bliss for his client.

SUBMARINES CENTURIES OLD.

Used by Alexander the Great More Than 300 Years Before Christ.

According to researches which have been made by a French professor, it would appear that submarines have almost as many a past as aeroplanes, which, as is well known, involved ideas which are centuries old. It appears that submarines were built as early as the beginning of the seventeenth century. The origin of the invention is older still. Aristotle tells how Alexander the Great made use of submarines during the siege of Tyre, more than 300 years before Christ.

A Dutchman named Cornelius Van Drebel astounded London in 1620 with a submarine that held twelve oarsmen and some passengers, among whom was King James I. Previous to this, in 1634, a monk suggested the idea that a ship be constructed of metal, so as to be watertight and able to resist the pressure of water. A submarine was constructed according to the monk's idea, and was shown to be practicable to a certain degree.

In 1537 a ship with twenty cannon, eighty sailors and many bags of money on board blew up and sank in the port of Biegje. Three years later a Frenchman, Jean Barrie, called Prodine, built, according to the old monk's ideas, a submarine with which he promised to rescue the bags of gold and silver from the wreck and possibly some pieces of artillery. The great Pascal, then a little boy, was an eyewitness to the experiments of Prodine, which were carried on till 1660 with ultimate success.

IS TOMMY AFRAID?

Some Strange Delusions of Soldiers Under Influence of Ill-Health.

If you were asked the above question you would reply with an indignant "No!" and regard the questioner as one who ought to be interned.

There are, however, certain things of which Tommy is afraid. Not when he is in health—while the deadly shells are screaming around him he coolly bets with his companion as to where they will fall—but under the influence of shell-shock or trench fever.

He is often haunted then by strange hallucinations. He believes that the trench has been lost and cannot be got back, or that he will fall asleep on duty, or fail to carry out some important instruction. Such ideas as these form his night-mares. His fear is rarely a bodily one.

One of the strangest delusions is the delusion of blindness. Men declare they are totally blind, only to discover that, when the doctor raises their lids, they can see perfectly!

Illness of this kind is frequently hard to detect, and it is inevitable that in certain cases a good deal of hardship occurs. Recently a boy of nineteen was accused by his sergeant of falling asleep while on sentry duty. Fortunately, he was examined by a doctor before the impending court-martial, and he was found to be in a stupor, which lasted ten days.

THE INVASION OF PALESTINE

BRITISH-EGYPTIAN FORCES ARE NEAR TURKISH BORDER.

Britain May Obtain Control of Armenia and Southern Part of Holy Land.

The victory of the Anzac mounted troops and the Imperial Camel Corps at Rafa, within a few miles of the Palestine border, and only 35 miles from Beersheba, the Turkish railhead, is important, not so much because of the magnitude of the affair itself, but because of the conditions that make it possible. The blowing up of an important bridge on the Bagdad railway, near Adana, a few weeks ago, prevents the Turks from sending heavy reinforcements to Constantinople. The speed of their evacuation of El Arish betrayed their surprise at the sudden offensive by the British Egyptian army, and it is likely that their Palestine army is unprepared to withstand a strong aggressive movement. If aid from Constantinople is long delayed through the interruption to railway traffic, the British Egyptian forces may gain possession of Beersheba, and then be able to work northward along the railway. The possession of the railway is a vital factor in the attempt, apparently projected, to capture Palestine.

Preparation for Offensive.

Only now is coming to light the magnificent preparations for the offensive. The British have London and South-western railway engines hauling freight trains far out in the desert as quickly and easily as in England. Motor roads have been built over the sand with a light stone; 30,000,000 sandbags were used for the Suez Canal trench defences, and the transportation facilities that made such preparation possible have been extended to connect with the roads the Turks built to haul artillery over for the attack on the canal. British ingenuity has introduced a new type of temporary road for infantry—five widths of heavy wire netting laid on the sand. The mounted corps has had to do most of the fighting, because in every case attack on Turkish columns has been a question of speed. The destruction of the Turkish forces at Magdhaba, at Rafa, and, later, of a relief column several miles east of Rafa, indicates magnificent organization, military and engineering. If progress along the coast can be continued, in conjunction with an advance on the railway from Beersheba, the British forces will eventually obtain control of Palestine seaports, bases from which provisioning can be conducted by the navy. The avoiding of the long desert haul would be a splendid gain. It would enable the employment of far bigger forces, and operations on a scale that might lead to an ultimate junction with the Russians near Erzingan. The possession of adequate sea bases, and use of the Palestine railway, which joins the Bagdad line near Adana, would be half the battle.

British Outlook in Asia Minor.

Whether or not the invasion of Palestine is vigorously prosecuted, the Turkish threat at Egypt is definitely ended. British troops will, in almost any circumstances now, be found occupying the lower part of Palestine at the end of the war. With the Allies in control of Armenia on the one side and much of Palestine on the other the Bagdad route would be a vulnerable "corridor," and its value for German purposes much depreciated. Turkey will, apparently, have the choice soon of either withdrawing divisions from the Russian front or of losing valuable strategic territory in Asia Minor.

She Did Not Buy.

Mrs. Jenkins had a passion for the old and curious. One day when rummaging about in a bric-a-brac shop she noticed a quaint figure, the head and shoulders of which appeared above the counter.

"What is that Japanese idol over there worth?" she asked.

The salesman replied in a subdued tone:

"About half a million. That is the proprietor."

A patched up quarrel always looks the part.

$25.00 FOR A LETTER

CAN YOU WRITE ONE?

Thirteen Prizes to be Awarded In a Letter Writing Competition.

Some years ago the Dr. Williams' Medicine Co., of Brockville, Ont., offered a series of prizes to residents of Ontario for the best letters describing cures wrought by the use of Dr. Williams' Pink Pills for Pale People. Hundreds of letters were submitted in this competition, and yet there must have been thousands of other users of the pills who did not avail themselves of the opportunity to win a prize. To all these another letter writing competition is offered. Thousands of cures through the use of Dr. Williams' Pink Pills have never been reported. These will furnish the material for the letter to be written in this contest. There is no demand upon the imagination; every letter must deal with facts and facts only.

THE PRIZES:

The Dr. Williams' Medicine Co., of Brockville, Ont., will award a prize of $25.00 for the best letter received on or before the 17th day of February, 1917, from residents of Ontario, on the subject, "Why I Recommend Dr. Williams' Pink Pills." A prize of $10.00 will be awarded for the second best letter received; a prize of $5.00 for the third best letter, and ten prizes of $2.00 each for the next best ten letters.

THE CONDITIONS:

The cure or benefit from the use of Dr. Williams' Pink Pills described in the letter may be in the writer's own case, or one that has come under his or her personal observation.

More than one cure may be described in the letter, but every statement must be literally and absolutely true.

The letter should be not longer than is necessary to relate the benefit obtained from the remedy in the case described.

Every letter must be signed by the full name and correct address of the person sending it. If it describes the cure of some person other than the writer of the letter, it must also be signed by the person whose cure is described as a guarantee of the truth of the statement made.

The writer of each letter must state the name and date of the paper in which he or she saw this announcement.

Fine writing will not win the prize unless you have a good case to describe. The strength of the recommendation and not the style of the letter will be the basis of the award.

It is understood that The Dr. Williams' Medicine Co. shall have the right to publish any letter entered in this contest if they desire to do so whether it wins a prize or not.

The contest will close on February 17th, 1917, and the prizes will be awarded as soon as possible thereafter. Do not delay. If you know of a cure write your letter Now. Observe the above conditions carefully or your letter may be thrown out.

Address all letters as follows:

The Dr. Williams' Medicine Co.,
Brockville, Ont.
Letter Contest Department.

Test of Popularity.

The colonel of a regiment now at the front is, to say the least of it, not as popular with the troops as is Sir Douglas Haig. Recently this colonel visited the trenches, and during his inspection he stood on the parapet for a considerable time, while an enemy sniper made ineffective attempts to shoot him. That night, when the colonel had returned to the base, the regiment made a successful charge, took the enemy trenches and many prisoners, amongst whom was the sniper who had been busy earlier in the day. "Yer'll be shot to-morrow if I can get it done," said a sergeant, who recognized him. "Mercy, kamerade, mercy!" yelled the unhappy sniper. "Mercy, be——, yer great blinkin' 'Un! What? Yer 'as the cheek ter ask for mercy after a-missin' of 'im seven times."

The average woman is vain enough to believe that she isn't.

Don't say "Breakfast Food"—say "Shredded Wheat"—for while you no doubt mean **Shredded Wheat**, you may get one of those mushy porridges that are a poor substitute for the crisp, delicious shreds of baked whole wheat—that supply all the nutriment for a half day's work. Two Biscuits with milk or cream make a nourishing meal at a cost of a few cents.

Made in Canada.

The World of Fashion

The very latest influence in dress has come from the Far East. Japanese and Chinese embroideries and like effects have come in for recognition and have taken quite an important position in the world of fashion.

Many of the windows of the best shops are now displaying the real Japanese and Chinese garments with their rich silks and gorgeous colorings. Most of us, however, are content to admire these beautiful costume in the windows. No one has yet appeared in Toronto arrayed in the true costume

Showing the Oriental Influence

from the land of the cherry-blossom. But many have been seen in costumes showing the Oriental influence, such as the sketch above illustrates.

Another country from which has come inspiration for some of the present styles is Spain. The red and black combination worn by the dark-eyed senoritas of that country is frequently used with charming effect, especially in semi-evening gowns. From Spain also have come the beautiful fine lace scarfs or mantillas which are now fashionable, and the large combs for the hair which are used with the coiffure that is distinctly Spanish.

Bags of all descriptions there are, for these are considered a very necessary addition to the wardrobe in these days. Bags of velvet, suede ribbon and beads are seen in such a variety of colors and shapes that no one can possibly have any difficulty in selecting those that will harmonize with her costumes. Of black velvet with a band of Paisley placed at the bottom or in the center, are some very attractive round bags finished with long silk tassels. Others show Chinese embroideries in gold and colors. The bead embroidered bags of silk and velvet are still popular. Silver mesh bags are also worn.

These patterns may be obtained from your local McCall dealer or from the McCall Company, 70 Bond Street, Toronto, Ontario, Dept. "W."

Have a Bottle Handy!

Sloan's Liniment is assigned its place among the trusted family remedies in thousands of medicine closets. Confidence in it is based on the uniform effectiveness with which it banishes the pains of rheumatism, neuralgia, gout, lumbago, sore stiff muscles, bruises, sprains and strains. Cleaner and easier to use than messy plasters or ointments. It penetrates and relieves quickly *without rubbing.*

At all druggists, 25c. 50c. and $1.00.

Sloan's Liniment

KILLS PAIN

THE ROYAL NAVAL COLLEGE.

England's Most Beautiful Specimen of Classical Architecture.

The Royal Naval College, to which Sir Henry Jackson has been appointed Admiral President, occupies what has been described as the finest specimen of classical architecture in England. It was built from plans by Wren as a memorial to Queen Mary, the wife of William III. The work was begun by public subscription, to which the bereaved monarch contributed (or, rather, promised) $10,000; but all kinds of devices, including lotteries, had to be resorted to before it was finished. First opened as an asylum for disabled seamen in 1705, the hospital was more than a century and a half the home of over 2,000 Greenwich pensioners. They and their quaint uniforms disappeared from the scene in 1870, and three years later, when the necessary alterations had been made, the college was opened. The Act of 1869, by which it was established, provided that in case of war the building shall be at all times available for its original purpose.

NERVOUS DISORDERS

Are Promptly Cured by the Use of Dr. Williams' Pink Pills.

If your hand trembles or is unsteady, it is a sure and early sign that your nervous system is at fault. The trouble if not taken in time will develop slowly to a worse stage, and there is no person more to be pitied than one suffering from nervous trouble. You feel unaccountably weak after exertion, lose flesh, turn against food, and suffer palpitations and indigestion after eating. Sometimes sharp pains shoot down your spine and legs, and often neuralgia robs you of your sleep at night. These are some of the troubles that indicate the presence of nervous disorders. If they are neglected they result in a complete nervous collapse, sometimes in paralysis. Dr. Williams' Pink Pills have won a great reputation in curing all forms of nervous diseases. The nervous system depends entirely upon the blood supply for nourishment Dr. Williams' Pink Pills actually increase the supply of rich, red blood; feed, strengthen and tone the nerves, enabling them to perform their functions and dispel all signs of a breakdown. Mrs. B. Wainlott, Beaver Bank, N.S., says:—"I was sick, run down and awfully nervous. The slightest noise would startle and annoy me. I suffered pains around the heart and every particle of color left my face and hands. I always felt tired, and slept poorly at night. I was so poorly that my friends thought I would not recover. I tried many medicines but they did not help me. Then I read of Dr. Williams' Pink Pills and decided to drop all other medicine and try them. It was fortunate I did for in the course of a few weeks I found them helping me. I continued taking the pills for some weeks longer and they completely cured me. I earnestly advise every weak woman and girl to give Dr. Williams' Pink Pills a fair trial, and I am sure they will not be disappointed."

You can get these pills through any medicine dealer or by mail at 50 cents a box, or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

READY-MADE THOUGHTS.

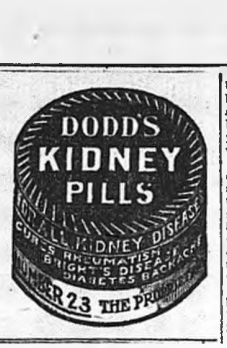
Tendency to Extinguish Originality and Independence.

The world—men, women and children—turns, at least in this country, more and more to ready-made clothes. Of course, as the number of those who demand such things becomes larger, the supply becomes better. Production on such an immense scale insures something that will fit any need. There is a great saving of time, of strength, of physical and mental effort. Repeated sessions with a tailor or a dressmaker are wearisome to hurried nerves and muscles; but to walk into a shop and walk out again freshly, if not quite perfectly, arrayed, gives you a joyous sense of the triumph of spirit over matter. Then, too, the democratic instinct is, not to accentuate differences, but to remove them. To dress and to live very much as others do is easier and kinder.

The same tendency is manifest in thought. More and more we incline to take our thoughts, and alill more the dress of them, from others. Universal common-school education has great advantages; but it has this disadvantage that it tends to diffuse ready-made thinking, to extinguish originality and independence under a vast garment of commonplace. A still more energetic distributor of ready-made thoughts is the newspaper, which from Maine to California disseminates stock words, stock phrases, stock ideas.

Well, we all get most of our thoughts from others. How can we help it? The rush of life leaves us little time to think. And even if it left us much, the most of us are perhaps somewhat inadequately provided with the necessary machinery. But two points at least are worth remembering in this matter: First, let us try to have a thought of our own occasionally, or, if that is impossible, to make ready-made thoughts our own by testing them and adapting them and seeing that they are really true for us. Second and far more important, let us realize that our thoughts are ready made, and be humble and quiet with them, and not make the world smile by pompously parading ideas as our own that mankind accepted or rejected ages before we were capable of thinking of anything.

WINTER HARD ON BABY



The winter season is a hard one on the baby. He is more or less confined to stuffy, badly ventilated rooms. It is so often stormy that the mother does not get him out in the fresh air as often as she should. He catches colds which rack his little system; his stomach and bowels get out of order and he becomes peevish and cross. To guard against this the mother should keep a box of Baby's Own Tablets in the house. They regulate the stomach and bowels and break up colds. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

MAKE DOLLARS FIGHT HUNS.

Thrift and Economy the Hall-Mark of Strong Character.

There is no better time to inculcate and apply the doctrine of thrift than now, when business and industrial activity afford exceptional opportunities for getting money when high wages and liberal credit increase the tendency to free spending. In his speech in Toronto recently Sir Thomas White urged everyone to save and make the dollars fight the Huns. Now comes the announcement from Ottawa that on payment of $21.50 a certificate to the face value of $25, payable at the end of three years, will be issued, under the plan of the Finance Department for war savings certificates in connection with the campaign of national saving. These certificates will yield on the investment 5.6 per cent. The plan is especially designed to promote saving on the part of the people who have only small incomes. There is a widespread agreement that the gospel of thrift ought to be more widely impressed on the rising generation, but the question of methods presents some doubt and perplexity to many minds. Let parents encourage their children to own a "war certificate"; let women practice even a more rigid economy and own a war certificate. Let father save his pennies and also become the owner of a war certificate.

Sir Charles Addis recently addressed a conference of the London Trustee Savings Banks Association, and in epigrammatic phrases emphasized the sound doctrine of thrift. One of his sayings was: "Thrift and economy are not the penalty, but the privilege of patriotism"; again, "Waste was always a sin; it has now become a crime." On every hand Canadians are being exhorted to practice economy and thrift. We all take pride in the conservation of natural resources by the Government. But saving money and depositing it in a bank or buying a war certificate, to earn interest, are nothing else than conservation of financial resources and of capital. It is no more meritorious for a Government to conserve on a great scale than for an individual to do so on a small scale. The saving of a cent is as essential in principle, and as important in influence as the saving of a forest. It is the French peasant's conservation of centimes that has placed France in the strong financial position she is in to-day and enabled her to do her part in the war and to render valuable monetary assistance to Russia. There is no doubt that thrift is an admirable quality for people to possess. It is the hall mark of character. On thrift France is built, the France that met the Germans at the Marne. The saving of money is but one evidence of thrift. With it must be rated temperate habits, close observation, loyalty to an ideal, industry and all of the other qualities which make a solid people. Let thrift build such character for Canadians.

ELIMINATING WASTE.

Secret of British Success And of Industrial Prosperity.

There are two ways to eliminate waste. One is to prevent its occurrence entirely. The other is to utilize waste in such a way as to bring a profit.

For example, consider the thrifty Scotch traders. They save things that other people waste. They utilize the soot from their chimneys to manufacture shoe blacking. They import scraps of wood from the Scandinavian sawmills to be used as firewood. With cork shavings brought from Spain and Portugal they manufacture linoleum. They ship their old tin cans to the continent, where they are melted into block tin (or, at least, they did before the war broke out). The old rags of the world are brought to Leith to be converted into paper. They export old horseshoes to China, where the Mongols convert them into cutlery and domestic utensils.

The secret of British success in manufacturing is said to lie in the efficiency of labor in England and in the elimination of waste is to be found the reason for the industrial supremacy of Lancashire and Yorkshire.

Theodore H. Price, an American economist, says that in the cotton mills of Lancashire a very large proportion of the cotton waste discarded by American cotton manufacturers is being worked over. It is mixed with a certain proportion of American and East Indian cotton and spun into yarns that are extensively used for weft or filling.

The coal that is used in the Lancashire cotton mills costs about $8.25 a ton, and yet in one Lancashire mill the cost of coal per indicated horsepower is less than $7 per annum for 52 weeks of 66 hours each. This is said to be below the average in America, and the difference is due to better stoking and more careful conservation of the heat produced.

It is thrift of this kind from the big manufacturer down to the humblest wage-earner that will make and keep a country prosperous.

THE NATION'S FUTURE Depends Upon Healthy Babies

Properly reared children grow up to be strong, healthy citizens

Many diseases to which children are susceptible, first indicate their presence in the bowels. The careful mother should watch her child's bowel movements and use

Mrs. Winslow's Soothing Syrup

It is a corrective for diarrhœa, colic and other ailments to which children are subject especially during the teething period.

It is absolutely **non-narcotic** and contains neither opium, morphine nor any of their derivatives.

What They Did For One Family

Dodd's Kidney Pills Cured Where Doctors Failed.

Mr. and Mrs. Sawyer, After Years of Suffering, Found the Remedy They Sought in Dodd's Kidney Pills.

Capreol, Ont., Jan. 22nd (Special.)—Firm believers in Dodd's Kidney Pills are Mr. and Mrs. Adolphe Sawyer of this place. They have their reasons and are quite willing to make them public.

"I was a complete wreck when I started to take Dodd's Kidney Pills," Mr. Sawyer says. "I had suffered for ten years. I tried five doctors altogether. Some said it was rheumatism. Others called it lumbago, but none could give me any permanent relief. Dodd's Kidney Pills made a new man of me.

"My wife got the same good results from them. She also had been to several doctors. A specialist from Sault Ste. Marie advised her to stay in bed for a month. But she tried Dodd's Kidney Pills instead with splendid results.

"Do you wonder that we both praise Dodd's Kidney Pills? No one can speak too highly of them."

Dodd's Kidney Pills are purely and simply a kidney remedy. If the disease is of the kidneys or from the kidneys they will cure it.

Ruined the Ruin.

An English nobleman was about to set out for India, and, fearing that in his absence vandals might destroy a picturesque ruin on his estate, he said to his steward, "I want you to build a wall here," he drew a tiny furrow with his stick around the ruin—"a stone wall five feet high."

On his return home the nobleman stared for the spot. When he reached it he rubbed his eyes in amazement. There was the new stone wall, but he could see nothing towering up inside of it. He turned excitedly to his steward:

"Look here, where's the ruin, man?"

"The ruin, my lord?" replied the steward. "Oh, that ould thing! Sure, I used it to build the wall with."

Minard's Liniment Cures Garget in Cows.

A Social Distinction.

Casey had dropped in for a visit on Callahan, and during the course of his stay observed that Miss Callahan spoke several times of a chafing dish party she had attended the evening before.

Now Casey agreed with Callahan that the latter's daughter was putting on entirely too many airs; so, with a view to disconcerting her, he suddenly asked:

"An' phwat is a chafing dish?"

"Chafing dish, Casey," said Callahan, with a sly wink at his visitor, "a chafing dish is a fryin' pan that's got into society!"

Minard's Liniment Co., Limited.

Sirs,—I have used your MINARD'S LINIMENT for the past 25 years and whilst I have occasionally used other liniments I can safely say that I have never used any equal to yours.

If rubbed between the hands and inhaled frequently, it will never fail to cure a cold in the head in 24 hours. It is also the Best for bruises, sprains, etc.

Yours truly,
J. G. LESLIE.

The Paisley Advocate

PAISLEY, JAN. 31st, 1917

—President Wilson's peacespeech is the product of the mind of a dreamer who never has any waking moments in which he might see things as they really are. Dernburg is perhaps right in saying that the speech is fifty years ahead of the times. That, however, is better than being 2500 years behind the age, as the Prussian war party are in their ideals. We hear it stated that not a hundred miles from Paisley there has been found a man who didn't know there is a war going on. He and Wilson should both be invited to see Europe. Henry Ford saw it and was convinced.

COUNTY COUNCIL

The regular meeting of Bruce County Council was held at Walkerton, opening on Tuesday. Roll call showed 9 changes from last year's council—Arran, Bruce (2), Lucknow, Paisley, Walkerton, Tara, Southampton and Culross. The election of Warden was at once proceeded with, and Messrs Izzard (Port Elgin), Douglas (Hepworth), Case (Eldersle), and Wilkinson (Huron), were nominated. All others, however, retired in favor of Mr Izzard who was thus elected by acclamation—the first acclamation in the County of Bruce for many years. Mr Izzard thanked the members for the double honor done him, electing him Warden by acclamation. He paid a tribute to the ability of Mr McNab and other Wardens who had preceded him and outlined matters likely to come before Council, mentioning particularly patriotic matters and good roads, the claims of both of which he strongly advocated.

STANDING COMMITTEES FOR 1917

Finance—Messrs Doering, Johnson Jas, Brown, Hunter, Kastner, Ferguson and Forbes.

Roads and Bridges—Messrs Pilsinger, Craig, Wilkinson, Christie, Phalen, Routledge, Case, Willoughby, Case, Scott and Dobson.

Equalization and Salaries — Messrs Brown, Douglas, Dobson, McDonald D A, Scott, Johnston R, and Steele.

House of Refuge—Messrs McDonald D A, Pilsinger and the Warden.

Petitions and By Laws — Messrs McDonald B D, Munn, Russell, Whitworth, and Johnson Jas.

Education and Printing—Messrs Douglas, Bell, Whicher, Steele, Johnson Jas, Johnston R, and Munn.

Property—Messrs Case, Rowand, Phelan, Hunter and Russell.

Warden's—Messrs Christie, Forbes and Ferguson.

The usual grants were made—Agricultural Societies $15; Women's Institutes and Boards of Agriculture, $25; Teachers' Institutes $30; Libraries, $15 and $30; School Libraries, $2; Children's Aid Society, $150; four northern Townships, $500, divided equally; National Sanitarium Association, $10.

The Patriotic Grant loomed strong, and the Finance Committee recommended a grant of $100,000 to be divided—to Patriotic Fund $75,000, to Canadian Red Cross $6,000, Belgian Relief $1500, Sailors' Relief Fund $1500, and to hold in reserve for similar purposes $14,000. All payments to be made quarterly. The whole amount to be raised by 20 year debentures. The report was unanimously adopted.

It was found that the Road and Bridge Committee, which consisted of nine members, was not large enough to allow a proper representation of the different districts of the county and was increased to eleven members.

H McLaren of Port Elgin, and W J Taylor of Tara, were reappointed County Auditors. A E McNab and N Robertson were appointed members of the Board of Audit of Criminal Justice Accounts. High School Trustees—O F Klein, Walkerton; J S McEwen, Chesley; H H Stevens, Port Elgin; Wm Mitchell, Kincardine; Dr Wigle, Wiarton. Wm Gilmore, Tara; and Wm Douglas, Southampton, were appointed to Board of Examiners.

Each newspaper in the county was ordered for the inmates of the House of Refuge.

A committee was appointed to examine the bridge in Kincardine Tp on the South Line, between the Saugeen Road and the sideline, to determine whether or not it should be assumed as a County bridge.

The question of Good Roads, left over from December session, was again before Council and took up considerable time. Wm Hunter of Kincardine strongly supported Good Roads. The Council had now had the question before it for some time and should deal with the matter. Some of the members said the municipalities were opposed to Good Roads, but he was satisfied this was only because they did not understand the matter, and many thought it was an expensive undertaking, whereas it really is not. If it were understood, he was sure no municipality would oppose it.

Mr McDonald moved that the question be shelved until after the war. He thought that no doubt the Good Roads would be adopted, but it was time to consider it then and not enter into any large undertaking during the war. He thought it would cost from $5,000 to $8,000 a mile and some people would not get as much benefit as others. He admitted that it would be a good thing for towns and villages and had doubts about the townships.

Mr Douglas, of Hepworth, pointed out that the Government made estimates on large experience and that for a county like Bruce it would cost $1,000 to $2,000 per mile.

Mr Kastner (Wiarton), has larger interests in Townships than intowns, and knew it was a good move for all. Many other counties had adopted it and not one of them would go back to the old way. We had sent representatives to the meeting of the Good Roads Association, some of them strongly opposed to the movement but every one of them came back and reported in favor of it when they understood it and found from representatives of other counties how well it worked out.

Mr. Wm. McDonald, M. P. P., was present and, at request of Council, addressed them. He strongly advocated Good Roads, and that the travelling public should be taken care of in this way. No member should take the narrow view and see it only from the standpoint of how it affected every member of his township, but should take the broad view—the greatest good to the greatest number. The money now being paid was out of the third $1,000,000 Government had raised for this purpose. The County better get their share. There may be no more raised.

Messrs. Case (Eldersle), Brown (Chesley), and McDonald (Tiverton), all strongly urged the adoption of Good Roads, pointed out that the Government paid 40 per cent of the cost of construction and 50 per cent of maintenance of these roads. That the statute labor on such roads was available for other roads in a township, and that there was no use waiting until after the war. The money was raised now by the Government, and if we did not start now we would not be ready until some time after the war ended. That if we started now we would be in shape to go on at once after the war, and thus help find employment for labor at a time when it would be badly wanted.

It was finally decided to leave the question over until the June session, and in the meantime send Messrs. Christie, Willoughby and Johnson (Bruce), to get all possible information.

At request of Messrs Willoughby and Rowand a committee was again appointed to investigate the bridge on the 10th Con. of Brant, to see if it is a County bridge.

A grant of $200.00 was made towards repairing road opposite Indian Reserve—Arran and Amabel.

Mr. John Rowland is entertained the Council at the rooms of the Young Ladies for the benefit of the Red Cross, and Warden Izzard announced that it had been his intention to entertain Council at a supper but he thought they might have too much of a good thing, so he would, instead, donate the cost of a supper to the Young Ladies.

A pleasing feature of the session was the presentation to a Mr. N. Robertson of a gold headed cane and to Mrs Robertson a set of pearl-handled knives, etc. Mr Robertson has completed thirty years as Treasurer of the County, and Council thought it should be acknowledged. Mr Robertson fittingly and feelingly replied.

Council adjourned Friday to meet at Chesley on the 18th of June next.

P. A. MALCOMSON, County Clerk.

On Hospital Staff at Shoncliffe

Capt John A Reid, son of Mr and Mrs Adam Reid of Pinkerton, is now on the staff of the military hospital at Shorncliffe, England. Capt Reid was on duty at the front in France for about a year, and had been twice in the casualty list. Last spring a shell burst alongside an ambulance in which he was riding. The driver was killed, and other occupants thrown out, and the Capt was affected by shell shock. Then at the Somme he and two others were buried in the upheaval caused by a big explosive mine, and he suffered slight wounds in the leg and head. Since his last recovery he was given a safer post in "Blighty," having charge of fifty beds occupied by patients from the front.

Knox Church Annual Meeting

The attendance at the annual business meeting of Knox church on Thursday evening was very small, because of the stormy weather of that date. Reports of the various departments of the congregational work were submitted. A great part of the evening was occupied with discussion of the finances. There is a deficit of about $8.00, which, together with a request of the pastor for an increase of salary, also the need of a coal furnace in the manse, calls for some action to be taken towards raising extra funds during the ensuing year. It was finally decided to appoint a committee to make a special canvass of the congregation at an early date. The amount of money contributed and raised during the year for congregational purposes was $1062.05, including a bequest of $189.98 by the late Wm Porter, and the payments, including $250 on manse mortgage, were $1831.97. Retiring officers were all reelected. The S S report showed receipts for the year were $166.80. Young People's Guild $12.62, W M S $370, and the Session Fund $38.93—these sums added to the congregational receipts making an aggregate of $3023.65 for all departments.

From the 160th

Pte Walter Swanston, of A Co. 160th Batt, in a letter to his uncle, Mr W G Ritchie of Greenock, tells that he (the writer) is in Aldershot Isolation Hospital with mumps. Aldershot, he says, is an old military barracks used by the English army for over 100 years back. The training that the Canadian soldiers are getting over there is different to what it was here. There is not so much squad drill. We have the new Lee-Enfield rifle, which is a short rifle, not so powerful as the Ross and weighs less. I was in London for Christmas and had a great time seeing the sights, for six days. You can't see your hand in front of you at night on Trafalgar Square. I travelled five hours at a stretch on top of a motor bus, and saw nothing but stores and houses. In a restaurant you can't spend more than 3 shillings for a meal. I stayed at the Maple Leaf Club, which is run by the Daughters of Empire. It costs one shilling and eight pence for bed and breakfast, and we got a free Christmas dinner. Princess Pat waited on the tables for a few minutes at the Club. Our army rations are about the same as in Canada, except that we get margarine for butter, and we get rabbits now and then.

Railway Construction Battalion

The 256th Railway Construction Battalion (Toronto unit, with Lieut-Col W A McConnell in command), is recruiting throughout Ontario, and any man, skilled or unskilled, who can do a day's work and pass the physical standard for recruits (which standard has been considerably lowered for this unit), will be accepted. The age limit is 40 years. Any man who cannot get a medical examination in his own locality may proceed to the nearest recruiting depot, and if he is not passed he will be allowed his railway fare, and pay for time lost at the rate of $1.70 per day. The headquarters of the unit is at 24 Front St West, Toronto. By joining this unit you will help in a very important way to bring victory to our cause. It is upon such battalions as the 256th that the men in the fighting trenches depend for their supplies, food and ammunition; and without which they are helpless in front of the enemy; and also are unable to send back promptly their wounded for attention. The rate of pay and allowances after enlisting are $1.10 a day, clothing, rations and quarters paid, also a separation allowance of $20 per month to married men or one who is the only support of a household. This does not include allowances for Patriotic Fund, which are granted in accordance with requirements.

THE CHIEF CHARM OF LOVELY WOMAN

Soft, Clear, Smooth Skin Comes With The Use Of "FRUIT-A-TIVES".

NORAH WATSON
86 Drayton Ave., Toronto.
Nov. 10th, 1915.

A beautiful complexion is a handsome woman's chief glory and the envy of her less fortunate rivals. Yet a soft, clear skin—glowing with health—is only *the natural result of pure blood.*

"I was troubled for a considerable time with a very *unpleasant, disfiguring rash*, which covered my face and for which I used applications and remedies without relief. After using "Fruit-a-tives" for one week, the rash is completely gone. I am deeply thankful for the relief and in the future, I will not be without "Fruit-a-tives".

NORAH WATSON.

50c a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Brother and Sister Dead

Mr Robt Keyes, lot 16, con 13, Greenock, died on Sunday in Guelph hospital where he went on Wednesday last for treatment. He had been ailing from kidney trouble, and for three years was unable to do any work, although he looked well and retained his usual flesh until a month ago. The deceased was a son of the late Wm Keyes, one of the early settlers of Greenock Tp. He was married to Isabella Needham, who survives him, with their family of three daughters and three sons—Eva, who is a trained nurse in New York city, Lela, Mana, William S, Robert T, and Irwin, all at home. The funeral takes place on Wednesday afternoon to Purdy's cemetery. He was in his 59th year. Mrs R Cooper, a sister of Mr Keyes, passed away in Walkerton on Friday, at the age of 37 years. She had been taken there to undergo an operation. Her home is about three miles south of Glamis.

Paisley 10, Southampton 7

The above is the score in the hockey match played here on Friday evening last between Southampton and Paisley. From a spectator's point of view the game was a good one, as the teams were very evenly matched in everything except weight, the visitors being considerably the heavier outfit. The game started at 8 o'clock sharp with Referee M. McVittie, of Southampton, handling the ball. The first two periods were fast and clean, Paisley opened the scoring in short order and soon had it 2 0. The visitors then got going and shot their first, and for a few minutes they were very dangerous, but the back-checking of the local youngsters relieved the situation on several occasions. Before the period had ended both teams had added another, making the score 3-2. The second period opened faster and more furious than ever, with both sides striving to their utmost to get the rubber past the opposing goal-tender, but the Paisley boys excelled in shooting ability and played their positions well, and by the close of the second 20 minutes of play the score read 6-2 in favor of the locals. Up to this period of the game Paisley had a trifle the better of the play in the third and last period the staying powers of the visitor showed to advantage, while the home boys began to tire badly, this being their first hard game of the season. With the score 9-4 and Paisley playing a defensive game, Southampton suddenly 'came to life and for several minutes bombarded the Paisley goal, but only managed to get three past our goalkeeper. The Paisley defence was putting up a great game and many of the visitors' shots were of the long range variety from outside the defence. However, the locals took advantage of every chance to break away and before the game rang they had added four to Southampton's five, making the final score 10-7 in favor of the home team. Though Referee McVittie appeared at times to favor the visitors a little in the matter of handing out penalties, his work on the whole was satisfactory. A fair sized crowd was on hand. The line-up: Paisley—Goal, Cottrill; defence, A Shoemaker, D McGregor; rover, C Morgan; centre, A Stanley; left wing, D Elwes; right wing, McKenzie. Southampton—Goal, McLeod; defence, Howk, Huber; rover, W Knowles; centre, R Knowles; left wing, Gummel; right wing, Campbell. Efforts will be made to have Chesley Northern League team play here, when the rink should be packed after the good showing made on Friday. The Paisley team are nearly all juniors, and will improve with every game.

A Questionable Practice

Having made the penalty severe for infractions of the liquor law for the purpose of punishing perpetrators and deterring prospective sinners from yielding to temptation, the question arises as to the wisdom of the course recently adopted by the Ontario License Commission in rebating certain fines imposed by magistrates under the Liquor Law. While not taking exception to the young Walkertonian getting back a portion of his fine owing to probable extenuating circumstances in the case, yet the fact remains had he not had the wherewithal to engage a lawyer to do the writing-he act would he have ever seen the color of a coin? In Hepworth where a man was mulcted $100 and costs for an infraction of the Liquor Act, his fine was also reduced to $50 and the booze that had been confiscated restored to him. A lawyer's letter beseeching the Department is said to have done the trick. On the other hand a poor working man residing in Port Elgin was heavily fined for getting astray on the booze game, but want of funds probably kept the poor wretch from engaging legal talent, with the result that no law office appeal reached the Department for him, and this horny handed son had to come across with the full pound of flesh, and only the other day succeeded in cashing in the last instalment of his fine from his slim weekly pay. Mus. the poor cash up while their more wealthy brethren who are able to enlist the services of a lawyer, be handed rebates? If refunds are going to be passed out they should go all around regardless of whether it's a rich man's son or a nobody's darling that gets sent. Nor should the location of the trial cut any figure in the deal, for if those convicted in Toronto have to finance their fines in full why should the Commission play Santa Claus with Bruce and pass the liquor offenders here back something on a plate? Barley. If the success of the Act is to depend on the strictness of the prosecution and severity of the fines, the interference by the Department with the awards of the magistrate in Bruce is bound to have a baneful tendency and to almost throw the majesty of the law into the joke column here. Bruce courts certainly have as much right as Toronto to have their decisions upheld and convictions respected and duly in extreme cases should an interference be staged. The Commission should therefore beware of the rebating ordinance becoming epidemic, lest the delinquents think that the thing is easy and the place become as wide open as a mining camp. —Herald and Times.

The Listowel man who fed horse meat to his hogs and was fined $5.00 and costs, smiley got off easy, compared with a like offender, Morley Wass, farmer, of London township, near Granton, who was fined $15.00 and costs and had his whole herd of swine, valued at several hundred dollars, seized by order of County Magistrate Hawkshaw, of Lucan, and ordered sold to a soap manufacturer.

"The Store with the Stock"

WE ALL HAVE TO EAT!

NO matter where prices go, we must have three meals a day and one of our objects in life is to supply the materials of those three meals in the best possible manner and at the smallest possible price. Our Grocery shelves are full of standard goods of every description. Fruits, Spices, Coffees and Teas, Canned Goods, Soaps and many articles you do not think of till you need them.

Greatest Battle the World Will Ever See

Only Two Ways in Which the War Can End

Germany's prayer for peace is inspired by fear, and by fear alone. Of what? Defeat. For her almost any kind of peace is preferable to military defeat, for she could ascribe it to our blockade. Military defeat spells disaster for her dynasty, for her war lords and for her world prestige. The Germany that would emerge from it would be a different Germany.

The Germans were soundly thrashed on the Somme. Their finest troops were broken by blows which enabled the French to shatter them finally at Verdun. The German army will never recover from the pounding it got between July and November on the Somme. It is a dying army. It is not fit to fight the great British Army which is preparing to join the great French Army to deal it its death blow.

The Verdun and Somme battles were greater than any battles in this war of great battles, but they will be far surpassed in magnitude by the battles of 1917 all along the western front. The war will be decided in these battles. Germany is trying hard to open up peace negotiations before they begin. Desperately she is searching for any and every means of escape from them. Her frantic conquest of Rumania is an attempt to knock out Russia and force peace upon the Allies before the German military power is destroyed in France.

The breathing space granted to her by the winter may be briefer than she imagines. I heard the British artillery on the Somme in September. It was more awe-inspiring than any words could suggest. Compared to it the most violent thunder storm is like the mew of a kitten. It seemed impossible to imagine any increase in its volume.

But let me picture the battles of 1917 as I see them in my mind's eye.

The massed guns that the British Army will use will make the massed guns of 1916 sound like pop guns. The increase in our gun power will be utterly unimaginable. The Germans know what to expect, and they are afraid. The German army in France and Flanders will be subjected to a steady rain of steel, not for weeks but for months. The steel rain will rain every day from dawn till dark. The German army will be forced to bear what it bore on the Somme multiplied a hundredfold, and it will be slowly pounded to pieces by gunners who are no longer amateurs, but veterans. Its last reserves will be sucked into the melting rampart. The cohesion and discipline of the great German military machine will be destroyed and the greatest military catastrophe in history will be witnessed by the world.

There are pessimists who predict a draw on the western front. They base their arguments upon the impregnable strength of the modern defensive against the modern offensive. But they overlook the new factor of 1917—the superior power of the British army in men and in munitions. The Battle of the Somme was not a true offensive. It was a defensive offensive undertaken with the object of relieving the pressure on Verdun, on the Russians and on the Italians. The 1917 offensive will be carried out by a British army numbering not less than two millions in conjunction with the French army. It will be a multiple offensive aimed not at a short thirty-mile sector of the German line, but at the whole German line, with a fixed determination to destroy the German masses where they stand.

The new tactical method employed by General Nivelle at Verdun will be adopted. The losses sustained by the attacking troops will be reduced to the lowest possible figure, for it will be a battle of big guns in which the British and the French will possess a crushing superiority. The Germans will strain every nerve to mass gun against gun, but they cannot overtake the lead already established by the Allies. It is too great and it is increasing too rapidly. They will be out-gunned, outmunitioned and out-generaled. And they will be pitting a half-beaten, old and war-weary German army against a fresh, young and vigorous British army.

Another factor which will tell heavily against the Germans in 1917 is our new railway organization. The transport problem will be solved. While the Germans will be pinned to their positions, our army will be free to strike where it pleases and how it pleases. Its guns and its munitions as well as its men will be mobile. Its reserves will be ample. The darned and patched German divisions will be used up, and there will be no mass of manoeuvre behind them. It is difficult to believe that the progressively weakened German army will be able to stand the strain.

The superiority of the British in air work will be intensified. There are gloomy rumors with regard to the new German type of aeroplane—the Halberstadter. I am told that some of our slow types are obsolescent. But we have had full warning, and I decline to believe that our pilots will be handicapped with inferior machines. They won the command of the air in the Somme battles. They will keep it unless there is criminal sloth and negligence at home, a thing which at this time of day is unthinkable. I shall never forget the talks I had with some of our haughty young pilots on the Somme. Those marvellous boys gravely apologized because they could not show me in the sky either a German aeroplane or a German observation balloon! And I saw great bodies of our troops moving about within range of the German guns in perfect security, because the German gunners were air-blind.

Air work is eyesight, so far as the gunner is concerned. Artillery which has lost the command of the air is blind artillery. And blind artillery is like a boxer who fights with bandaged eyes. No artillery can stand against a superior artillery that has secured the mastery of the air.

The battles of 1917 will be battles of tanks as well as battles of guns and aeroplanes. I picture thousands of tanks in action. The German tanks will make their debut, for the Germans are prompt copyists. I have no doubt that they will try to provide tank-destroyers. But we have secured the advantage of the initiative. And the tank is the weapon of the attacker, rather than that of the defender. His function is to complete the havoc wrought by high explosives. A stationary tank is only an armored house. Moreover, a tank on the defensive cannot quickly be transferred to another point. Tanks cannot be used like machine guns. The enemy cannot stud his whole front with tanks.

It must also be remembered that the Anglo-French offensive will be co-ordinated with the Russian and Italian offensive. There will be a converging pressure upon the Central powers. In order to break it up Hindenburg will probably try to destroy the Russian armies. He may also attack Sarrail at Salonika. He may also try to overwhelm the Italians. He may even threaten Egypt. But there is not much time left for these secondary diversions. It is also possible that he may endeavor to shake our nerves and derange our plans by using the German fleet to cover a raid on these islands. Or he may violate Swiss neutrality. But these would be desperate enterprises, and Hindenburg is an easterner, not a westerner. The whole history of the war turns upon German vacillation between the western and eastern fronts. The western school crippled Hindenburg right up to the crowning disaster of Verdun. Since then Hindenburg has crippled the western school. He has for the moment secured the German mastery over Middle Europe and the Balkans, and if he could get peace now Germany would be supreme from the Baltic to Bagdad. But Russia is unconquered and unconquerable, and the life blood of Germany is oozing out in France.

Her fate, therefore will be decided this spring and summer on the western front. And the main factor in the decision will be the British army. There is an eastern school in this country which would dissipate our military power by an offensive at Salonika. Happily, the western school will be too strong for it. The German masses are in France. Victory there means victory everywhere. Victory elsewhere means nothing, just as reverses elsewhere mean less than nothing. The future of the Balkans will be moulded in France in 1917 by the greatest battle of nations the world will ever see. Into that battle we must put every gun and every man.

I confess that the vista of bloodshed appals me. It may well appal the Kaiser. He may accept the terms of the Allies rather than face the carnage of 1917. For the sake of the innocent millions whose lives are the stake, I pray that the imperial gambler may make his peace with man, if not with God. But if he hardens his heart, like Pharoah, we must march through the Red Sea and the wilderness of war into the Promised Land.—London Sunday Pictorial.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXI—(Cont'd.)

"Hem!" said Mr. Thaxton. "I have always avoided business, though as you are aware, I was summoned to go in to some matter. Every day I offer to touch upon the subject with Mrs. Mildmay she entreats me to wait a little and to remain."

"Yes," said the doctor, "and I am very glad you are here, but still I think I would attempt to interest her. He seems to have taken the manage. Cannot Captain Murpoint assist us? ment of affairs."

"Yes," said Mr. Thaxton, and his brow clouded slightly. Captain Murpoint is invaluable; he is extremely clever, and seems to obtain implicit obedience here."

At that moment Captain Murpoint came on to the lawn

"Good-morning," said Mr. Thaxton. "We were talking of you, captain. Mr. Boner was suggesting that it would be as well to attempt a little diversion for Miss Mildmay."

"With all my heart," said the captain, gravely.

"In the shape of business," continued Mr. Thaxton. "You have never informed me yet why my presence was wanted at the Park.

The captain's face flushed slightly. He had been waiting for this moment, and now it had come he braved it boldly.

"I write to you at the request of Miss Mildmay," he said. "It was a matter connected with a locket of her father's—mine it would have been had he lived longer. But let us come in; we will find the ladies, and go into it—that is, if Violet is well enough. You, Mr. Boner, must come and ascertain that for us."

So, with his usual artfulness, he secured another witness for the business which he had on hand.

The three gentlemen went into the drawing-room, where Mrs. Mildmay and Violet were seated, the elder lady knitting, the younger, not reading, with a book open before her.

Mr. Thaxton crossed over to her and, seating himself by her side, said in the gentle voice with which he always addressed her:

"My dear young lady, do you feel well enough to go into business this morning?"

Violet smiled faintly.

"I am quite well," she said. "I always am. It is only your kind heart which fears otherwise. What business is it?"

"The business upon which you sent for me," said Mr. Thaxton.

Violet started slightly, and a dim look of pain shadowed her eyes.

"I forgot," she said. "I forget so many things. Then she looked over at the captain. "Captain Murpoint sent for you; he will tell you."

The captain, thus adjured, crossed over to them, and explained.

Mr. Thaxton listened.

"And this locket," he said, "you are anxious to get, my dear?"

"Yes," said Violet, sadly. "I would like to have it. I had forgotten it. Yes, I would like to have it; I must have it."

"Then," said Mr. Thaxton, cheerily, hoping to rouse her to something like interest, "suppose we venture boldly into the ghost's quarters, and find it? What do you say, Mr. Boner? Are you courageous enough to accompany us?"

The doctor smiled an assent.

"Miss Mildmay must come, too," he said, hoping to rouse her, or to awaken some feeling in place of the dull lethargy which had taken hold of her.

"Yes, I will come. Auntie!" and she called to Mrs Mildmay; "we will go together."

The whole plan, as far as this, had worked admirably, and the captain, offering his arm to Violet, led the way to the closed chamber.

Arrived at the door, Mr. Thaxton tried the handle.

"Have you the key?" he asked.

"Yes," said Violet, and she went to fetch it.

While she was gone, Mr. Boner examined the door.

"We shall want a screwdriver," he said; "the door is screwed up."

A servant was despatched for the tool, and Mr. Thaxton himself unscrewed the door.

"The screws are quite rusty," he said; "the door has not been opened since the day on which it was first closed, then."

"No," said Violet, "it has never been opened," and, as she spoke, she unlocked it.

There was a few moments of silence, during which the lawyer's acute eyes had taken an inventory of the room and its contents.

"Yes," he said, "the room has evidently not been entered for years. Have you the keys, Miss Mildmay?"

Violet handed him a bunch of keys.

The doctor followed the lawyer into the room, and, drawing forward chairs, dusted them and requested Violet and Mrs. Mildmay to be seated.

"I suppose," said Mr. Thaxton, "that we had better try this old bureau first."

Mr. Thaxton slowly tried a key, and opened a drawer.

It was full of papers, which he scanned hastily and laid aside.

Then he opened the writing-desk portion of the bureau, and found a drawer full of trinkets.

"Here it must be," he said, pointing to the drawer. "Will you look?"

Violet rose, and, with trembling fingers, turned over the jewelry.

"Those were my mother's jewels," she said.

"Is the locket in there?" asked Mrs Mildmay.

"No," said Violet, after a pause, and with evident disappointment. "No, there is no locket here."

"Let us search another drawer," said the lawyer, and he unlocked the next in succession.

This, also, was full of papers, but nothing in the shape of a locket could be found there.

Mr. Boner came forward.

"I am rather familiar with the oddities of this sort of furniture," he said. "Indeed, I have a taste for old bookcases and secretaries. May I see if I can find a secret drawer?"

He passed his hand upon the bead ing running around the writing-desk.

"No," said the doctor; "I am disappointed."

Violet rose.

"I will try," she said, and she passed her white, slender fingers over the ornamental part of the bureau.

As she did so there was a sudden click, and before them all the secret drawer glided out.

Violet started, then bent down and examined it.

There was only an old, faded piece of parchment.

"There is no locket here," she said "Only this," and she laid the paper on the table. "Will you please put the papers where they were—and—close the room again?"

And she shuddered.

"You are chilled," said the doctor. "There is a draught here from that broken window," and he pointed to the window, in which a pane was broken.

The captain started.

He had quite forgotten that slight evidence of his dark deed.

"A bat or an owl has flown against it," he said. "Let me take you down, Miss Mildmay."

Violet placed her hand upon his arm.

"One moment," said Mr. Thaxton. "With your permission, I will glance at this document; it should be of some importance, so carefully preserved."

Violet made a gesture of assent.

"A lease, or something of the sort," muttered the lawyer, putting on his spectacles and taking up the parchment. "Ah!" he exclaimed, suddenly, looking up and scanning the faces all round with a look of surprise.

"What is the matter?" said Mrs. Mildmay nervously.

"Have you any idea as to what this paper may be?" he asked Violet.

She shook her head wearily.

"No," she said. "What is it?"

"This," said the lawyer, tapping the document, "is a codicil to your father's will, signed"—here he glanced at the last page—"by him, legally and in due form."

Violet remained silent.

There was a general expression of surprise.

Mr. Thaxton thought for a moment, with the document in his hand.

Then he said:

"I am glad there were so many present at the finding of the deed, and I think I will take the precaution of sealing it in your presence. May I ring for sealing-wax and paper?"

He rang the long silent bell, and a servant, at his request, brought the required articles.

Then, with due formality, the man of law folded the document and sealed it, using a seal of Violet's for the purpose.

"Now," he said, looking at his watch, "as it is important and only reasonable that we should learn the contents, I should recommend that Mr. Beal, the solicitor at Tenby, be telegraphed for. I would rather that another legal adviser as well as myself were present at the reading."

"I will telegraph at once," said the captain, gravely as the party passed out of the room, which was locked and screwed up as it had been before.

In a very short time Mr. Beal, the Tenby solicitor, arrived.

Mr. Beal was the exact opposite to Mr. Thaxton in appearance and demeanor. He was astute, but a gentleman of the old legal school, and he had risen from a hearty dinner at the special summons with no a little of ill humor.

"This is a singular discovery," said Mr. Beal. "Of course, it has considerably surprised you, madam."

Mrs. Mildmay murmured "Yes," and the lawyer, after conferring for a moment, broke the seal.

"It is very short," said Mr. Beal. "Will you read it, or shall I?"

"You," said Mr. Thaxton.

Mr. Beal opened the parchment, and continued:

"I, John Mildmay, being in sound bodily and mental health, do declare this to be my true codicil to my last will and testament. I do hereby bequeath to my dear and beloved daughter, Violet Mildmay, the whole of my real and personal estates, with the exception of the legacies mentioned in my will, to hold and to have on these terms: that is to say: That I hereby appoint Howard Murpoint, captain in Her Majesty's army, sole guardian and trustee of my moneys and estates in trust for Violet Mildmay, who shall have and hold them so long as she remains unmarried or marries with the consent of the said Howard Murpoint; and I hereby will that, in case of Violet Mildmay's death unwedded or her marriage without the consent of the said Howard Murpoint, that all moneys and properties held under my will shall revert to the said Howard Murpoint, with the exception of the bequests and legacies contained in my will; and I bequeath the sum of five thousand pounds, to be raised from the estate, or from my personal assets, to the said Howard Murpoint, to have and to hold for his own use. And I do assign to him the sole charge and care of my beloved daughter, Violet Mildmay, and do beseech him to hold her as his daughter, and to guard and cherish her as such. The aforesaid are my last bequests and wishes, subject, so far as legacies to servants and relations are contained in my last will and testament. Dated the — day of —, 18—. As witness my hand.

"' (Signed) John Mildmay.

"' (Witnesses: Henry Matthews, Mary Matthews.'"

(To be Continued.)

ON THE FARM

Big Yields Produced by Mixing Grains

The average results obtained from sowing oats and barley in combination of equal amounts in bulk, but in various total quantities per acre, by members of the Ontario Agricultural and Experimental Union, show that a mixture of one bushel of oats and one bushel of barley, or a total of two bushels per acre gave the highest general yield in grain production in 1916 and also in the average of the previous five years throughout Ontario.

It was found by experiment at the college previous to recommending these tests of barley and oats in combination for co-operative work throughout the province, that a combination of varieties of the same class of grain gave no satisfaction through increased grain production, but that combination of certain classes showed decided advantages; one of the most marked being that of oats and barley of the right variety, which gave a yield of 200 lbs. per acre over either grain grown separately. The varieties giving this exceptional yield were: Danbeney oats and Mandscheuri barley in 1910; Alaska oats and O. A. C. No. 21 barley in 1911; Danbeney oats and O. A. C. barley in 1913 and 1914; O. A. C. No. 3 oats and the O. A. C. No. 21 barley in 1915.

Three different thicknesses of seeding (41, 82 and 123 lbs. per acre) were used in the co-operative experiments, and the tabulated results show that in two years of the five the heaviest seeding (123 lbs.) was most successful, these being dry years, but that in each year the lightest seeding gave the lowest yield of grain per acre.

Results from further experiment with the sowing of mixed grain for the production of grain will probably be announced at the coming meeting of the Experimental Union and extra interest in the practice will no doubt be expressed by many farmers whose chief interest in grain-growing lies in the production of a plentiful supply of feed for live stock. The habit of growing the old standard grains—wheat, oats and barley—by themselves is so set in the minds of many farmers that it will be difficult to induce them to change their method, but the fact that feed is exceptionally scarce and high in price at the present moment should do something toward popularizing any means that will increase the supply without added cost. With cattle prices as they are, the live stock raiser should be satisfied to follow his line of farming to the limit and give up attempts to win out on either of two counts, namely, sale of grain in case of good prices, or sale of grain on the hoof, only when grain prices are very much below the average. If such a course is considered too much of a plunge, then at least a particular field should be set apart for the growing of the market grain while the majority of the farm is devoted to production of feed. An excessive yield, due to the mixing of two classes of grain, should be well worth trying for at any rate.

There are many parts of Canada that are so situated with regard to soil and want of proximity to market, as well as climatic conditions, that wheat-growing is their obvious line. To these districts should be left the work of providing wheat for export, and, largely, for all milling purposes, until such time as through decrease of fertility of the soil, the farmers of the districts find it necessary to go into live stock raising.

Value of Farmyard Manure.

The cost of manure obtained from the dealers is determined by the expense of handling the commodity and by the law of supply and demand. The exact value of the manure as a fertilizer is not very closely considered by the farmer, and the dealer is not concerned in that side of the question to any extent beyond satisfying the demands of the purchaser, with as little expense to himself as possible.

To gain an adequate idea of the benefit derived from using this or any other fertilizer on a particular crop it is necessary that a check plot or strip of the field, entirely unfertilized, be set apart for comparison with the main portion. In cases where commercial fertilizers are used on one part of a field and barnyard manure on another part, the cost of the former should be kept strict account of and its effect compared with that of the latter; then if the effect of both is equal, the value of the manure may be set down as equal to that of the commercial fertilizer used.

Of course, with barnyard manure a great deal of expense is added in handling, by reason of the great bulk required in comparison with other fertilizers, but the humus supplied by the former offsets this, to some extent, possibly entirely. The value of this supply of humus is, however, a matter difficult to determine, requiring as it does, the tracing of effects through several years' crops.

A mistake made by many growers of vegetable crops is that of increasing the application of manure unduly the next season, after having obtained a satisfactory crop owing to the use of a relatively small quantity.

A case in point within the writer's knowledge was that of a man who made a success of tomatoes in one season by the use of 20 tons of manure to the acre; hoping to nearly double his crop in the second year, and also to benefit the peach trees between which the tomatoes were planted, he doubled the application of manure, with the result that his second crop of tomatoes consisted chiefly of vines, and was not as good as that of the first year.

In general farming it is always found that light but frequent applications of manure pay better than heavy dressings at long intervals. By this method not only is less excess lost by evaporation or leakage, but if a systematic rotation of crops is maintained the greatest benefit can be derived from the manure indirectly, though the conservation of the unharvested part of the crops by plowing them into the ground.

CHINA'S POSSIBILITIES.

Capt. Robert Dollar, of San Francisco, in a recent address before the Vancouver, B.C., Rotary Club, stated:

"The Russian trade is an unknown quantity just at the present time. The Russians will likely have but the one port of Vladivostok to offer as the only certain port, and that might be shut at any time the Russians so wished. It is to China that you must look for your future trade, and I desire to emphasize this fact right now that China will be your mainstay in the future in foreign trade relations just as soon as the Chinaman learns his own purchasing power. "China has only been scratched for trade," he said, "and when you stop to consider that one-fourth of the population of the world is living there, an immense population which is awakening to civilization as we see it, then you may be able to grasp the immensity of the situation. The day is coming when the Yang Tse Kiang valley will be the greatest steel-producing section of the entire world."

CANADIANS

WANTED FOR THE ROYAL NAVY

Canadians wanted for the Royal Naval Canadian Volunteer Reserve for immediate overseas service. Only men of good character and good physique accepted.

Pay $1.10 Minimum per day — Free Kit. $30.00 per Month Separation Allowance.

Experienced men from 38 to 45, and boys from 15½ to 18 accepted for service in the CANADIAN NAVAL PATROLS for defence of the Coasts.

Apply to COMMODORE ÆMILIUS JARVIS
Naval Recruiting Officer, Ontario Area
103 Bay Street, TORONTO, or
Dept. of the Naval Service
OTTAWA

It Pays to Use Good Fertilizers

Cheap fertilizers are always more expensive in the long run. If they are not well mixed, for instance, they may produce uneven plant growth, because the fertilizer is weak in some places and strong in others. Make sure of first-class results by using

Harab-Davies FERTILIZERS

They are very finely ground and perfectly mixed by the most thorough method known. One of these fertilizers is the right one for your soil. It will increase your crops, hasten maturity, improve the quality and make more money for you. Harab-Davies fertilizers are true plant foods good for both crop and soil. Write to-day for bulletins and our fertilizer booklet. We send them free of charge

Ontario Fertilizers, Limited, West Toronto.

FIVE ROSES FLOUR

FOR BREADS - CAKES
PUDDINGS
PASTRIES

Can you guess it?

There are housewives whose cake is always praised—whose pastry is famous for its melting flakiness—whose firm, light bread wins daily compliments—whose puddings are noted for savoury lightness—whose cookies are so lastingly crisp. They have one rule that applies to all their baking.

Can you guess it?

Redpath SUGAR

is made in one grade only—the highest. So there is no danger of getting "seconds" when you buy Redpath in the original Cartons or Bags.

"Let Redpath Sweeten it."

2 and 5 lb. Cartons—10, 20, 50 and 100 lb. Bags.

Canada Sugar Refining Co., Limited, Montreal.

Condensed.

Editor—How's the new society reporter? I told him to condense as much as possible.

Assistant—He did. Here's his account of yesterday's afternoon tea: Mrs. Lovely poured. Mrs. Jabber roared, Mrs. Duller bored, Mrs. Rasping gored and Mrs. Embonpoint snored."

FOR

Indigestion and Biliousness

Indigestion, biliousness, headaches, flatulence, pains after eating, constipation, are all common symptoms of stomach and liver troubles. And the more you neglect them the more you suffer. Take Mother Seigel's Syrup if your stomach, liver, or bowels are slightly deranged or

MOTHER

SEIGEL'S SYRUP

have lost tone. Mother Seigel's Syrup is made from the curative extracts of certain roots, barks, and leaves, which have a remarkable tonic and strengthening effect on all the organs of digestion. The distressing symptoms of indigestion or liver troubles soon disappear under its beneficial action. Buy a bottle to-day, but be sure you get the genuine Mother Seigel's Syrup. There are many imitations, but not one that gives the same health benefits. M11

Best Remedy

About the House

Useful Hints and General Information for the Busy Housewife

Selected Recipes.

Coconnut Cookies—Take one cup of sugar, one-half cup of butter, one teaspoonful of cream tartar, one-half teaspoonful of soda, pinch of salt, one egg, one-third cup of milk, three-quarters cup cocoanut, flour enough to roll, one teaspoonful of vanilla.

Eggless Plum Pudding—One cupful bread crumbs, two cupfuls flour, one cupful chopped suet, one cupful raisins, one cupful molasses, one cupful milk, one chopped apple, one teaspoonful soda in little hot water, one teaspoonful cloves, one teaspoonful cinnamon. Steam two and one-half hours. Serve with hard sauce.

Cleaning Copper and Brass—Brass and copper can be brightened by washing in salt and strong vinegar, rubbing until bright, then rinsing in clear, very hot water, and while still hot polishing with a clean chamois skin dipped in sweet oil and a pinch of whiting or very fine sand.

Vaseline on Linen.—Stains on white line can easily be removed by washing in hot water and ammonia or hot soapsuds. If the linen is colored apply magnesia or French chalk to the spots, allowing it to remain on a day, then brushing off.

Rolled Oats Bread—Put two cups rolled oats into mixing pan, add even mixing spoonful of lard, one cup molasses, one tablespoon salt and four cups boiling water. When lukewarm add one yeast cake and flour enough to mix quite stiff. Let rise overnight and put in pans in the morning. Bake in slow oven.

Buckwheat Cakes.—Mix two cupfuls of buckwheat flour, half a cup of white flour or corn meal, half a teaspoonful of salt, two cupfuls of boiling water, half a yeast cake. Let stand over night. In the morning, add half a cupful of milk in which a quarter teaspoonful of soda is dissolved. A tablespoonful of molasses may be added before cooking.

Date Cake.—Three eggs beaten well, one cupful sugar, one cupful flour (rounded), one teaspoonful baking powder, one teaspoonful vanilla, one package dates, stoned and quartered. One-quarter of a pound pecan nuts, quartered. Mix in order given and bake in a low tin (7 by 4 inches) in moderate oven for twenty-five minutes.

Excellent Cake.—One-half cup of granulated sugar, one-half cup corn syrup, one tablespoon butter, one egg, one-half teaspoon lemon, three-quarter cup milk, one and one-half cups flour, two level teaspoons baking powder, one-half teaspoon salt, three-quarter cup chopped raisins may be added. Mix in order named and cook thirty-five or forty minutes in moderately hot oven.

Boston Brownies.—One cup of sugar, one-third cup of butter, two eggs well beaten, two squares of bitter chocolate, one teaspoonful of baking powder, one cup of nut meats broken in pieces (English walnuts), one-half cup of raisins, one scant cup of flour. Drop by the teaspoonful on waxed paper two inches apart. You can bake them in tiny cup cake tins, placing an English walnut on each before putting in oven. Bake in a moderate oven.

Hot Potato Salad—Wash and cook six medium-sized potatoes without paring; cool, peel, and cut in thin slices. Arrange a layer of potatoes in the bottom of a dish, season with salt and peppers and sprinkle with finely chopped parsley and celery; mix together four tablespoonfuls each of vinegar and olive oil, add a little lemon juice and heat just to the boiling point. Pour over the potatoes and cover tightly. Stand in a warm place until wanted, then serve with crisp fried bacon or cold sliced meat.

An Eggless Recipe.—Put one quart milk, after cream has been taken, into double boiler. Mix five even tablespoonfuls of cornstarch with four tablespoonfuls of sugar. This may be put into the milk without blending. Add very slowly, stirring all the time. When it begins to thicken add one-half teaspoonful of salt and either a piece of stick cinnamon or a strip of orange or lemon peel. This should cook—not rapidly—for half an hour. Stir often to avoid a skim forming on the top. Pour into molds that have been wet with cold water. Set aside to cool gradually. May be served with any fruit juice or cream.

Winter Soups.

Some one has said that there are as many soups as there are days in the year. Probably there are more, but only a very small number of them appear on the dining table of the average family. Among the following receipts are some that are little known, but they are especially appetizing on cold winter evenings, when a hot, rich soup seems the most appropriate beginning for a meal.

French Onion Soup.—Chop two medium-sized onions, and fry them to a rich brown in two ounces of butter over a moderate fire, for onions burn quickly. To them add a quart of boiling soup stock of any kind, or simply water or milk, and cubes of lightly toasted bread. When the soup is ready to serve, add a little grated cheese, and season it with salt and white pepper.

A Flemish Soup.—To two pounds of washed and picked Brussels sprouts add ten potatoes, two onions, two leeks, salt and pepper. Cook all gently until the vegetables are tender; then pass them through a sieve. Force as much of the vegetable pulp through as possible. Add one quart of beef stock and serve the soup very hot.

Cream of Potato and Chestnut Soup.—Boil one cupful of diced potatoes and one half cupful of chestnuts in salted water until they are tender. Drain them and add one quart of scalded milk; season the mixture with a dash of nutmeg, salt and Cayenne pepper; thicken it slightly with a tablespoonful of cornstarch moistened with a little cold milk, and add one tablespoonful of minced parsley when it is ready to serve.

Pot-au-Feu.—Choose a good-sized beef bone that has plenty of meat on it, cover it with water and boil it for three hours. Remove the bone and cut the meat into bits. Let the stock cool, then remove the fat, add the meat to the stock, return it to the fire, add one large onion that has had ten whole cloves imbedded in it and has then been roasted until it is brown, add one pint of cooked tomatoes, one half cupful of rice, and one quarter cupful each of chopped potatoes, carrots and cabbage. Cook the whole until the vegetables are tender, and add salt and pepper. Just before you serve the soup, add one teaspoonful of white sugar burned to a good brown color. That adds to the flavor of the soup and gives a rich color.

Things to Remember.

Bread not thoroughly baked is very indigestible.

Corn bread with raisins in it is an agreeable change.

Remove rust from garments by boiling in cream of tartar water.

Keep the fat hot if you would have the whites of fried eggs fluffy.

Household refuse is better cremated than disposed of in any other way.

Save candle ends and melt together to use as paraffin covers for jelly.

Raisins will be easy to stone if they stand in hot water a minute or two before stoning.

Economical frying is possible only when the fat is carefully saved after use.

Whenever soup is an important part of a meal, as a luncheon, it should be thick and nourishing.

Brown bread can be used for bread pudding just as white can, but it should be flavored with spices.

Stale bread will make good hot cakes if it is soaked soft in milk and made up as you would muffins.

If the cookies are not very rich, cut them in animal shapes and the children will be just as well pleased.

Plain boiled rice, liberally sprinkled with raisins and served with hard sauce, makes a nourishing dessert.

Don't imagine you're the most unlucky person that ever lived. Other people have had troubles and setbacks to overcome that the world never knew about. You can do as well as they. Keep on trying.

Soap and water rubbed on zinc only make a bad matter worse. First wipe off the zinc with a dry cloth. Next rub with kerosene. Let that stay a few hours. Go over it then with a cloth wet with kerosene, and polish with a dry cloth.

Seems natural to leave the wet umbrella wide open till it dries. It isn't the best way, though. First thing you know the covering will be stretched all out of shape. Shut it and stand it up, knob down, till the water runs off and it dries out.

See if the wood above the furnace or behind the stove is charred. If it is, a sheet of zinc or tin should be put there, not in contact with the wood; a sheet of asbestos is better yet. Clean the pipes and look for cracks.

Make a list of all the spring sewing you must do, then check off each garment as it is made and put away. There is no time to stop and make a forgotten garment after housecleaning and other spring work has commenced.

Didn't Know His Own Mind.

A sergeant was drilling some very raw recruits, and felt the great importance of his position until "Right turn!" he thundered, "As you were." "Left turn," "As you were," "About turn."

He was about to give another command when he noticed one of the recruits walking away.

"Here, you, where are you going to?" he shouted.

"Oh, I'm off, I've had enough of this; you don't know your own mind two minutes together," answered the recruit.

Conscientious.

Mrs. Jones had a new maid, who appeared at the door of the library one afternoon, where her mistress was reading.

"There's no coal, mum," said the domestic, "an' the fires are goin' out."

"No coal!" cried the mistress, in surprise. "Why didn't you tell me before?"

"I couldn't tell you there was no coal, mum," replied the girl, "when there was coal."

DREAMS.

Bright dreams of the past leave relics of joy
That time in its flight can never destroy;
Like a vial Attar of Roses contains,
Though shattered to fragments, the perfume remains.

Kingdoms may flourish in brightest array
And vanish again e'er the light of the day,
No rule can be made, no bound can be set—
Dreams have no limit, in any respect.

Then let our dreams, in the stillness of night,
Fly swift to the realms of endless delight;
Let the pain and the care each day brings to view,
Be cancelled in sleep, when visions come true.

Sweet dreams of the past—some never fulfilled;
Yet sweet as the breath of roses distilled.
With faith, hope and trust, then look to the light
And dream golden dreams in the darkness of night.

F. TALLING, Vancouver, B.C.

FOOTPRINT IDENTITY.

The System May be Introduced in English Police Courts.

There will be no more confusion regarding the identity of Tom, Dick, or Harry if the footprint system is introduced into our police-courts, says London Answers.

Particularly in the case of young children and babies has this method proved most successful. It is difficult to obtain a firm imprint of a baby's hand, but no difficulty exists in obtaining impression of a baby's foot, and the lines of the latter never alter, increasing gradually with the child's growth.

The method is being applied in many foreign hospitals to-day, especially in the maternity wards, where confusion of identity is much greater than the public ever imagine. The sole of the child's foot is covered with a solution of printer's ink by means of a roller, and a transfer is then taken on to a sheet of paper. The ink is cleaned off the foot with alcohol, and care is taken not to disturb the impression made by the foot on the paper until quite dry.

A definite record of the child's identity is thus obtained, for the prints of no two feet are ever identical, and, if necessary, the record will hold good in any court of law.

RESTORE ALSACE-LORRAINE

This and Belgian Deliverance Demanded by France.

Paul Deschanel, in addressing the French Chamber of Deputies after his re-election as president of that body, said:

"The first articles of our programme remain the deliverance of Belgium and the restoration of Alsace-Lorraine. This is the only programme that can recompense us for our sacrifices and to assure to our children a durable peace worthy of France and the Republic.'

In apparent allusion to the request of the Government for authority to issue decrees in anticipation of legislation on urgent question., Mr. Deschanel said:

"Since the war is prolonged, it is our duty to adapt our methods and accelerate our procedure. To maintain order and discipline in our debates also is a form of patriotism, but to that end it is not necessary to throw our institutions into confusion. It will be to the eternal honor of our country to have forced the greatest upheaval of all the ages without changing our laws."

An old Japanese prophecy says: "When men fly like birds, ten great kings will go to war against one another."

EXPERT WRITES OF MACHINE GUNS

INTERESTING SKETCH OF THE HISTORY OF MODERN GUNS.

How the Various Models in Present Use Vary in Points of Excellence.

One of the things which Germany knew before the war and which the Allies did not know was the part that machine guns would play in the struggle. Therefore the Germans had twenty times as many machine guns on the front as their enemies, and the machine guns did more for their early successes than the famous howitzers which battered down the Belgian forts in the early days of their advance. Fortunately, machine guns were easily made; the Allies learned the lesson, and now are supposed to have as many machine guns, if not more, than Germany. Perhaps the bravest men in the German army are the machine gunners. Whether leading an advance or defending a retreat they are a veritable forlorn hope, and time and time again instances have been reported of German machine gunners refusing to surrender even though they saw certain death awaiting them. They are as savage as they are desperate, and have been known again and again to turn their fire on their own wounded, and also to sweep with murderous blasts those of their comrades who held their hands up shouting "kamerad."

The Early Mitrailleuses.

In La Revue des Deux Mondes Captain Henri Carre, of the French army, had written an article upon German and French machine guns, which is translated in Current History. He points out that the mitrailleuse, which is the common name of the machine gun in France, is really a misnomer, because the word designates grape shot, by which was meant the scraps of iron with which cannon were formerly charged. The first weapon with several barrels—and it was from a multi-barreled weapon that the machine gun was evolved—was thought of in the fourteenth century, and was made by the simple expedient of fastening several light guns together parallel to each other. It was not until the nineteenth century, however, that any marked progress was made along this line, and then by a Belgian, who devised a weapon of fifty barrels, each about the size of a rifle barrel, assembled parallel to each other in a prismatic bundle. This gun could fire one hundred bullets a minute, and its range was about a mile and a quarter.

Maxim the Real Inventor.

The next step was the invention of the Gatling gun, with six or ten barrels, a crank turned by hand providing the motive power, and another development was the so-called "bullet cannon" of France, a bundle of 25 barrels containing twenty-five cartridges and capable of discharging 150 bullets a minute to a range of a mile and a half. None of the weapons mentioned was automatic. All were operated by hand power. The honor of inventing the modern machine gun must be awarded to Sir Hiram Maxim, who produced his first practicable model in 1882 after having spent a tremendous sum in experiments. All modern machine guns have taken the Maxim as a model. The French army has three types of machine gun, and it is that called the Saint-Etienne that Capt. Carre describes. The power to explode the bullets and move the cartridge-belt is obtained by drawing gas from the barrel through a hole 4.8 millimetres in diameter, the gas entering a cylinder called the gas chamber and later escaping to the air by appropriate apertures. The piston at the end of its movement is driven back by a spring. It is a to-and-fro movement, which brings about the complete action of the weapon. It can be fired at any rate, either at rapid fire or at a speed regulated by a special apparatus which permits all rates from ten to 600 shots a minute.

French v. German Guns.

In one notable respect does this gun differ from the popular German machine gun. It has no water-jacket for cooling purposes, with the result that the barrel gets exceedingly hot when fired at a high rate. But since the barrel is made of special manganese steel, the ballistic properties of the gun are not impaired even when the barrel is glowing red. The gun is fixed on a tripod and can be fired with the gunner either sitting on a saddle or lying on his back. The French gun is carried in parts and on the road is conveyed on pack saddles or in carts. At the front it is carried by soldiers. The barrel of the German gun is surrounded by a metal sheeve filled with water for cooling purposes; but when the gun becomes hot the water begins to boil, steam escapes, and the aim of the gunner is obscured. The steam also betrays the presence of the gun, and Capt. Carre says that on many occasions the Germans have sought to draw away enemy fire by generating steam by means of damp grass to imitate the boiling machine gun. The German gun can fire 400 shots a minute. It can be carried either on a man's back, or by cart or automobile. It is not packed by horses or mules. Capt. Carre says that in the German Mercedes automobiles manufactured in time of peace there were certain nuts fixed in the chassis, the purpose of which nobody could explain. It has been learned since that the cars were constructed so that they might be fitted with Maxim guns.

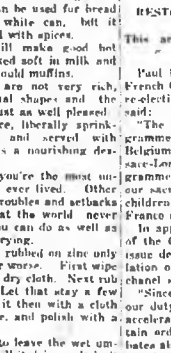
How the Bullets Fly.

It is probable that of all the various models of machine gun now being used at the front one does not stand out. One excels in one point; one in another. For instance, the cooling jacket of the German gun, as said, discloses its presence when the gun gets hot. One fires faster than another, but after a certain point this expert says, nothing is gained by extreme speed, since there is rarely justification for firing for more than a minute at one target. Theoretically a weapon on a fixed support should send all its shots along the same path. In practice this is not so, because of the concussions of the gun. Each bullet takes its own curve, and the ensemble makes a sheaf, closely packed but very narrow, which is properly compared to the stream of water discharged from a hose. In the mowing fire, which is the normal fire, a certain number of sheaves is juxtaposed along the whole front of the objective. From this it results that at the point at which they strike the earth, the density of bullets is terrible, and an extraordinary effect of destruction on unsheltered men is produced.

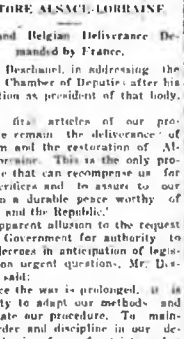
KING GEORGE'S 300 COUSINS.

His Majesty is Closely Related to All Warring Nations.

As far as the crowned heads of Europe are concerned, this war may virtually be called a civil war, says London Answers.



The Royal Houses of Europe are inextricably inter-related, and many an anguished and tortured heart must be beating now in the palaces of this continent.



As Queen Victoria was the grandmother of Europe, and as King Edward was it uncle, so is King George the cousin of Europe. He has cousins in Prussia, Denmark, Greece, Russia, Norway, Sweden, Belgium, Spain, Portugal, Austria-Hungary, Italy, Holland, Rumania, Bulgaria, Montenegro, Wurtemberg, Saxe-Meiningen, Schaumburg-Lippe, Hesse, and Brunswick. In fact, it has been estimated that his first and second cousins, all told number close on three hundred.

His most famous cousin is, of course, the Kaiser, whose mother was King Edward's sister. It is not generally known that the Kaiser stands twentieth in the order of succession to our throne. Fortunately, however, King George has five sons, so that even the Crown Prince is not likely to get a look in.

And while on the subject of succession, it may be mentioned that the present heir to the throne of Rumania has, as far as descent goes, a better title to the British throne than any member of our own Royal family. Prince Carol of Rumania, who is now twenty-two years of age, can trace his descent in a direct line from Henrietta, the youngest daughter of Charles I.

King George's cousins also include the Tsar and Tsarina of Russia, and, incidentally, King Constantine of Greece. King Alfonso is a cousin of King George by marriage. Another cousin is King Christian of Denmark, but he married Princess Alexandrine of Mecklenburg. The sympathies of King Haakon of Norway, however, should be strongly pro-British, inasmuch as he is a nephew of Queen Alexandra and married one of King George's sisters.

Switzerland's President and Vice President.

Left, Edmund Schulthess, new President of Switzerland; right, Felix Calonder, new Vice-President. Should a peace conference be held in Switzerland or one be held in which Switzerland would take part, the two men pictured above will play prominent parts. Mr. Schulthess, President of Switzerland, has just affirmed the intention of his country to maintain strict neutrality. A peculiar law of succession obtains in Switzerland. To-day's President was Vice-President last year. Felix Calonder, who is now Vice-President, will next year automatically step into the Presidency. The term of office is for one year only, and to become President a man must first sit as Vice-President.

Awful Good Time.

The children returned from the party, where they had been the guests of Johnny and Susie Wilkins.

"Did you behave yourselves nicely?" mother asked.

"Sure we did."

"Then you had a good time, didn't you?"

"We had an awful good time," they answered. "Johnny and Susie both got lickings."

Many a man who pretends to be looking for work looks the wrong way.

NEWS FROM ENGLAND

NEWS BY MAIL ABOUT JOHN BULL AND HIS PEOPLE.

Occurrences in the Land That Reigns Supreme in the Commercial World.

Two trawlers, the Stralton and Battle Abbey, collided off Spurn, resulting in the loss of life of some of the crew of the Stralton and the sinking of that boat.

A miner was fined £5 at West Riding Court for having a bright light in his house on a Zeppelin raid night after being ordered by the police to extinguish it.

A Belgian refugee died at Bath recently who had effected his escape from Antwerp after the German occupation by hiding in a piano which was taken across the Dutch border.

For hiding her son, a deserter, under the floor of her house, Mrs. Emma Boys, of Wimbledon, was fined £1. In this way the young man had evaded the police for some time.

Captain William McKenzie, Salvation Army chaplain, with the Australian forces, was given the Military Cross by the King at Buckingham Palace as a reward for conspicuous bravery during the Gallipoli campaign.

John Marin, a native of Dublin, was found on a street in London in an exhausted and starving condition and was admitted to the Whitechapel Infirmary, where he died the next day. On his person £30 in Treasury notes was found.

In addressing the Boy Scouts at Wigan, Lancashire, General Baden-Powell said the increase in juvenile crime was alarming and that the two chief reasons were playing in the streets and attending moving picture shows.

A pork famine is threatened in England owing to the farmers killing off litters of young pigs on account of the high cost of feeding stuffs. The Agricultural War Committee has taken the matter up and will endeavor to stop further slaughter.

Gertrude Barker was charged before the magistrates of Ashby-de-la-Zouch with stealing money and various other articles from a lady at Whitwick who had befriended her. She was sixteen years of age, and was sentenced to the girls' refuge for two years.

THE LORD MAYOR'S CHAIN.

Holder Must Enter Bond for Its Safekeeping.

The Lord Mayor of the City of London wears the most costly badge of office in the country. It contains diamonds to the value of £120,000, and each holder of it during his term of office is called upon to enter into a bond for its safe custody before he is sworn in, and thus becomes entitled to its possession. The jeweled collar worn by the Lord Mayor of London is of pure gold, composed of a series of links, each formed of the letter "S," a united York and Lancaster rose, and a massive knot. The ends of the chain are joined by the portcullis, from the points of which, suspended by a ring of diamonds, hangs the jewel.

The centre collar contains 28 "S's," 14 roses, 28 knots, and measures 64 inches. The jewel contains in the centre the City Arms cut in cameo of a delicate hue, on an olive ground; surrounding this a garter of blue, edged with white and gold, bearing the City motto in gold letters.

The whole is encircled with a costly border of gold "S's," alternating with rosettes of diamonds set in silver. The jewel is suspended from the collar by a portcullis, but when worn without the collar is hung by a broad blue ribbon. —London Tit-Bits.

SOLDIER MUNITION-WORKER.

Heroes All Are They Whether in Khaki or Not.

A young man, fired at the beginning of the war with patriotic ardor, joins up. He sees himself covering his name with glory while striving to uphold the country's prestige and honor.

Then one day the unexpected happens on parade.

"Private Jones!"

"Sir!"

"Your occupation before the war!"

"Turner, sir. I worked on a big screw-cutting lathe, too, sir."

No more is thought of that until, a month after, an order comes through: "Private Jones to proceed to munition factory at——"

There is the end of his ambitious dream of glory. Glued to a lathe inside a building for twelve hours a day till the war ends! The wonder is that we men are not going down under it. Why do they keep up and struggle on with it? They are heroes, that is why! Heroes, whether seen or unseen.

At the same time, we must not forget the men not in uniform who are struggling along in munition factories all over this country of ours. To those who have not been in such a factory I would say that the men may not leave to join the Army; they have to work twelve and even more hours per day, whether they wish to or not. It is quite impossible to realise the noise and strain to be endured for such a long time each day, and the whole body of men are heroes, whether in the much-admired khaki or not.

GLAMIS

The funeral of the late Archie McFadyen was held on Thursday afternoon. Interment took place in the Riverton cemetery. All the family were present excepting one daughter who is in Florida spending the winter.

Miss Davidson, who has been the guest of Miss Jennie McKeeman, returned on Wednesday to her home in Beamsville.

Miss Lottie McNally and brother John, who were visiting old friends around our burg, returned on Friday to Sarnia.

Mr and Mrs J K McLennan celebrated the anniversary of their marriage with Mr and Mrs Will Hendry on Friday, the 26th, that being the anniversary of Mr and Mrs Will Hendry's also.

Mr Hugh McFadyen, of Newdale, Man, came down to attend the funeral of his father.

Mr Abb Smith, on the 2nd, is taking his little boy to Toronto Hospital this week for treatment. The little fellow lost his eyesight through sickness.

The Glamis Red Cross Workers Society began work on Nov 14th. Mrs Deehan is the capable and energetic president of the society and Mrs Dave Robertson treas. The following will show money collected and donations for the two months Nov 14 to Jan 18: 36 members at $1 each, $36; proceeds of tea given by Mrs Cunningham, Nov 14, $9 20; proceeds of lecture given by Rev Dr Gilmore, $25 15; donations—Mr McCauley $10, Capt McKinnon 50c, Rev Ecker 50c, Miss Symons 40c, Mr Russell 50c, Mr Downey 25c, Mr F Walpole 25c, Mr T Webster 25c, Miss M Kirktown 25c. I O O F lodge $10, Bruce Tp council $35, Kincardine Tp council $30. Donations of material were received from Mrs Robt Russell, Mrs Deehan, Mrs Cunningham, Mrs McLure, Mrs McKeeman. The society forwarded to headquarters at Toronto as follows: 3 pillows, 7 doz pillow covers, 4 doz towels, 1½ doz bottle covers, 20 pyjama suits, 6 pair bed socks, 54 pair socks, 6 trench caps. The society is looking for more members and would receive gladly any contribution given to them. They meet fortnightly in basement of I O O F hall, which has been kindly given to them by the society for their meetings. Next meeting Feb 1st. Laura Cunningham, Secretary.

Children Cry
FOR FLETCHER'S
CASTORIA

EDEN GROVE

There is Harry Thaw and Evelyn Thaw, also other Thaws, but this is what we call a January thaw.

Messrs Mack Scott and R Clark were business visitors to Paisley last week.

Never mind the bear. Let us see your shadow at the box social on Friday evening.

Some of our young men want to practice dancing so as not to be stepping on their partners' corns while doing the waltz act.

Mr and Mrs R Perdue spent Sunday with friends in Cargill.

We hope Alec will not see his shadow Friday and go back again.

The young ladies are making an autograph quilt which will be sold at the social Friday evening. The pillow will also be presented to the lucky ticket holder.

Last Thursday Mr Wm Todd, of the B & B department, working on the G T R at Hamilton, along with two other men was on a scaffold when it gave way. Mr Todd, belonging to the Grove, came first, the others falling on top of him. He is suffering from a baoly bruised high and broken toe, and is under the doctor's care at Paris.

Mrs Tennant and daughter Martha called on Paisley friends last week.

There must be some old maids in the box social committee, as we noticed a Kat song on the programme.

The many friends of Mr Solomon Cobbs will be sorry to learn that he is seriously ill.

Thursday will be citizens' night at the Epworth League. Mrs Seiler will handle the topic. It is hoped a goodly number of our citizens will take advantage of the treat in store.

Yes, Tommy, there is lots of driving shed space.

Quarterly service next Sunday—Sunday school will be at 9 30 a m, and church service commences at 10 30 a m.

Feb 2nd—"For the love of Mike, what are you doing up that telegraph pole, Jimmy?" "I'm looking for the Polar bear." "Come down and get ready for the box social."

A fellow with a Methodist head and Presbyterian feet may make it do, but the Methodist feet will never go the tango.

Miss Johnston, of Paisley, has opened up a class in vocal and instrumental music here.

TWELFTH CON BRUCE

We are certainly having lovely weather these few days.

A number from here took in the box social on Friday night and report a good time.

We are sorry to hear that Mrs Dan McLean is still in very poor health.

Mr Alex McLeod has purchased a fine new span of horses.

Mr and Mrs Wm Archer Sundayed at his old home on the 12th.

Mrs (Dr.) Donald is down from Alberta on a visit to her aged mother and brother, Mr Wm Kissack.

Miss Stella Cumming spent the week end at the home of her grandfather, Mr R Stoddart, Elderslie.

Russell Cumming Sundayed at his home here, accompanied by his friend, S Gowoulock.

A number of fine horses were delivered from here to Mr Hank Irwin on Friday last.

Mr Hector McGillivray, sr, is at present under the weather, suffering from an attack of lumbago.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

EBENEZER

Mr and Mrs Chas Underwood and family, of Swift Current, Sask, are visiting at Mr Dright Potts'.

W C McKelvey delivered his fine matched team to Hank Irwin last week for the handsome sum of $150. W C is one of our many horse fanciers and always keeps an A 1 team, so gets the fancy prices.

Hockey is the main attraction here this winter. A league has been organized consisting of four teams, namely, Wanderers, Stars, 160th and Victorias. At present the Vics and Stars are tied for first place, and Wanderers and 160th are tied for the cellar position.

The ladies also have a fine hockey team, and are showing the boys some fast work. They play their first match on Thursday with the Port Elgin ladies.

Mr Eph Grant had the misfortune to sprain his ankle while playing hockey and will be out of the game for some time.

A number of our hockey sports attended the game between Paisley and Southampton and were pleased to see Paisley win out.

Mrs Stewart, of Carman, Man, is visiting her sister, Mrs J H McFadden.

Mr Joe Hagerman, of Nanton, Alta, made his friends here a cyclone call on his way to Chicago, Montana and California, where he will spend the balance of the winter.

Miss Annie McKelvey intends visiting friends in Detroit next week.

Mr and Mrs Dright Potts entertained a number of their friends one evening last week.

Mr Will Martin is engaged with Mr Thos Peacock for the winter.

The Misses Black, of Dolphin, Man, visited at Mr Wm Martin's last week.

SECOND CON ELDERSLIE

When does the January thaw come in this year? It has been a good steady wintry month. There is a good depth of snow on this con. Watch for the bear next Friday.

The hay pressers have been busy in this section lately.

La grippe is still prevalent here. Alex Campbell, And Young, also Mr and Mrs W Young are all its victims at present.

Jas Vancise attended Mr Alexander's sale in Greenock last week, and as usual was a purchaser.

Mrs J B Allen went to Toronto last week to attend the funeral of a friend there.

Mrs W E Patterson and Mrs T Pepper are both able to be out again after very serious attacks of la grippe.

The weather favored Fred Schilling's sale last Friday. There was a good turnout and stock sold well. Robt Bell, of Paisley, purchased a cow for the nice sum of $91.

Walter Patterson is all struck on the job of sweeping, dusting and attending to the fire at school No 12.

Children Cry
FOR FLETCHER'S
CASTORIA

WILLOW CREEK

Mr John Hyde has purchased the church building which stands on his premises. He may probably turn it into a munition shop.

The evangellatic meetings which commenced here have been postponed.

Messrs Wm Wrightson and Dave Lamont are in Guelph hospital, where they recently underwent operations for appendicitis.

CANTIRE

The proverbial January thaw will have to get a hustle on if it is going to be in the records of the year 1917.

The latest addition to the Cantire school register is the name of Stewart Gore. He is making his home with his aunt, Mrs Henry Winch.

A number of Cantireites attended the wood bee at Mr John Walpole's at Gillies Hill on Thursday last, and accompanied by their ladies took in the dance in the evening.

Mr Wm Hay, of Hannah, N D, was the guest of Messrs Neil and Donald Reid for a few days last week. He is the owner of fifteen hundred acres of land which he has rented. Like a great many westerners Mr Hay is on easy street.

Mr and Mrs Angus McDonald, of Craik, Sask, have spent the past two weeks the guests of the former's uncle, Mr Stewart Muir.

Last season Mr John Johnston mixed sunflower seeds with his ensilage corn. Like most other farmers his corn crop was almost a failure, but the sunflowers grew and in the fall presented an imposing sight, their great heads bending over. The whole crop was harvested and put in the silo. Neighbors were skeptical as to its food value or whether it would be palatable for the stock. Mr Johnston has been using his ensilage for some weeks, and informs us the cattle are very fond of this ration, and he is quite pleased with the results of his experiment.

Mr Donald Reid delivered a fine three-year-old filly to buyer Tom Irwin on Friday last.

Blackburn Bros have purchased an 8-horse power gasoline engine and will shortly have it installed to do the chopping, pumping water, and run any other machinery to which it may be attached.

Cantire beef eaters are becoming alarmed over the prospect of having no beef ring for the coming summer on account of the Blue Bros, who have done the business so satisfactorily for the past number of years, deciding to quit the job. This ring has been in operation for about twenty-five years, and is one of the co-operative schemes that has given the farmers entire satisfaction. It is to be hoped the ring will not be broken up even if we have to go out of the neighborhood to secure a butcher.

Mr John Campbell, whose home is near Butte, Montana, was a visitor at John A McIntyre's on Wednesday of last week. Mr Campbell went west thirty years ago and engaged in the ranching business, of which he made a success. Owing to the influx of settlers in late years the large ranges have been broken up and the land which was thought to be of no value for farming has been found to be very productive, and is now yielding bumper crops.

PINKERTON

Rev Mr Gale and Mr Thos Birrell are in Toronto this week attending the Social Service Congress.

Senator Donnelly spent Sunday at home here.

Mr and Mrs Jas McRae, of Paisley, spent Sunday at Mrs Murray's.

We are glad to know that Mr Trotter, sr, is recovering from his critical illness.

Untended for last week!

Senator Donnelly is in Ottawa attending the session which opened last week.

The ladies of the Red Cross Society at their weekly meeting on Thursday packed boxes of good things for our 20 soldier boys who are overseas. We feel sure the boys will enjoy consuming the contents as much as the ladies did packing them, which was a real pleasure.

The Red Cross Society here packed and shipped the following articles last Thursday: 16 hospital suits, 4 suits pyjamas, 2 surgical shirts, 40 huckaback towels, 3 pillows, 2 quilts; for hospital use—5 old table covers, 1 old sheet, various old white articles; soldiers' comforts—10 khaki shirts with collars, 6 khaki shirts without collars, 58 pair socks, 12 boxes stationery donated by a member who prefers to remain unknown.

BORN

BIRD—At Paisley, on Jan. 25th, to Mr and Mrs Alex Bird, a son—Chester Glen.

MARRIED

VANCE—HENRY—On Jan 24th, Miss Susannah Henry, daughter of Mrs Mary Henry of Dobbinton, to Mr Alex Vance, of Arran Tp.

DIED

KEYES—In Guelph Hospital, on Jan 28th, Robt Keyes, lot 16, con. 13, Greenock, aged 58 years, 10 months and 13 days.

The increase in the price of news paper will cost the Toronto publishers about $600,000 a year. To one the increase is said to be $180,000. The increase to the whole of Canada will exceed $1,000,000. It is estimated that Chicago papers alone will have to raise $1,000,000 and proportionately in every town on the continent. Something or somebody is bound to give. Either subscriptions or advertisers or both must give more or the newspaper give in.

MAY GO TO SCRAP HEAP

Wiarton Canadian Echo: If something does not develop very soon the plant of the Crown Portland Cement Co will be scrapped. This was what the representative of the Toronto Trust Co told The Echo last week. He says the Trust Co is not a charitable institution, (who ever heard that a trust company is?) that it has carried this plant for a long time, has never received a dollar, and has paid out a good many. The taxes alone amount to $800 per year and the Trust Company does not intend to get stung, so unless some one buys it the whole institution will be scrapped. The plant cost at one time and another about one million dollars, and a Wiarton junk dealer says that as a junk proposition it is worth $3,000. Will this be the end of the cement plant?

Coming on the bay a stranger can see an array of buildings that would make him think that he is approaching Birmingham, England. The buildings were apparently erected for eternity. The construction and operating days of the Colonial Portland Cement Co are still fresh in the memories of the present generation. The scheme originated in the days when there was big money in cement and very little money in hogs and cattle. It was very little trouble in those days to get subscriptions for an industrial proposition. The money came, and the engineering work went on, and there were things done that would eclipse anything on the Panama Canal. But as a cement proposition it was never a success, and probably the failure was due more to the eternal wrangling than to any other cause.

However, it is not with its past that we want to deal. Let the "dead past bury its dead." What is to be done now? There are immense buildings there that should be in demand now. If the town council can assist the Trust Company to effect a sale it will be a timely act. It is just possible that the township of Keppel might let up some on the taxes to see if something cannot be done. In the meantime we ought to get busy.

Women Bear the Heaviest Burdens of the War

The following letter was received by Mrs Colin McGillivray, 13th Bruce, in acknowledgment of Christmas gifts sent by ladies of the Red Cross Society of S No 15, Bruce:

France, Jan 3rd, 1917

Dear Mrs McGillivray—Your box arrived this we Thanks, very much. It was very kind of your Society to remember me. I have been an absentee from your section for so long that I did not think I would be eligible for anything of that nature, but I am pleased to know that though absent I am not entirely forgotten. I think the women have done a great work in this war. They have not forgotten the boys at the front. It may be only a letter or a parcel that awaits him at his billet, yet it makes life more bearable. He knows that to his work here he has the whole-hearted support of those at home. Yet I often think the women are called upon to bear the heaviest burdens. We get accustomed to seeing men fall around us. We miss them, but only for a day. Others come and take their places. But it is later, when we receive letters inquiring for particulars of some one who was dear to them, that we realize that with them his place cannot be filled. We are present busting a few days off, and our billets are very comfortable. My brother Charlie's division was here before we came, but I did not see him. We have had a very nice winter, weather so far being very mild. Give my regards to the ladies of your Red Cross Society, by whose kindness we have been remembered so generously at this time of year. And I extend to you all a hearty wish for a Happy and Prosperous New Year, and hope that before I is spent we may all be home in Canada once more. Yours sincerely,

SGT NEIL McGILLIVRAY

WHAT ONTARIO FOLKS SAY.

Hamilton, Ont.—"This is to state that I have received great benefit from the use of Dr. Pierce's Favorite Prescription. Some time ago I was run down and weak, suffered loss of appetite and was miserable. Four bottles of the 'Prescription' cured me up in fine shape; it did wonders for me and I can recommend it very highly to women who are ailing."—Miss MARIE MILLER, 127 Hess St., Hamilton, Ont.

Brantford, Ont.—"Some few years ago I got in a very much run-down condition. Was very weak; could not do anything; had no strength at all. I began taking Dr. Pierce's Favorite Prescription; I only took five bottles and it put me in splendid condition. I felt better than I had for years. Other members of my family have used this medicine and found it equally as beneficial. I can highly recommend it to weak women."—Mrs. A. GILMOUR, 71 Brighton Row, Bractord, Ont.

The use of Dr. Pierce's Favorite Prescription makes women happy by making them healthy. There are no more crying spells. "Favorite Prescription" makes weak women strong, sick women well.

Like an open book, our faces tell the tale of health or disease. Hollow cheeks and sunken eyes, listless steps, sleepless nights—tell of wasting debilitating disease some place in the body. It may be one place or another, the cause is generally traceable to a common source.

Get the "Prescription" to-day—either in liquid or tablet form—if you want to better your physical condition speedily.

Dr. Pierce's Pellets regulate and invigorate stomach, liver and bowels. Keep the body clean inside as well as outside.

SKATING SHOES

Now is the season for skating. We have a complete stock of Skating Shoes, Skates, Skate Straps, Ankle Supports.

Wind, rain, snow and sleet,—these have no terror for the man who wears our

Boots, Rubbers, Moccasins or Overshoes

Be sure to give us a call for your Footwear.

Fresh Groceries always in stock

H. PFAFF & SON

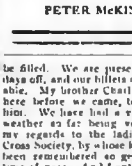
The Final Test Is —HEAR IT

IF you are ready to have a Phonograph in your home, there are many exclusive Edison features that will add much to your pleasure this winter.

The NEW EDISON DIAMOND AMBEROLA

—has a permanent diamond reproducing point

—has no needles to change



—has uniform pitch and even speed, due to the wonderful Edison motors.

—has a rich, mellow, luscious tone impossible to obtain with metal needles.

There are many other features that will appeal to a music lover like yourself.

But we merely say—come in and hear the New Edison—hear it play everything you enjoy; grand opera, popular songs, quartettes, old fashioned melodies, recitations, violin, piano and mandolin, whistling, bands, orchestras—then decide which particular Edison model you prefer.

PETER McKINNON, - - PAISLEY, Ont.

Cleaning Up Before Stock-Taking

As we will be taking stock shortly, and finding that we have some lines of Winter Goods that we do not want to carry into our stock sheet, in order to clear these lines quickly they now go on sale much below their value. The following are a few of the lines and prices—

Men's Heavy Rubbers	Regular price	$2.35, to clear at	$1.79
" " "	"	3.50, "	2.89
" " " 12 in. top,	"	4.75, "	3.98
Boys' Heavy Rubbers	"	2.50, "	2.19
" " "	"	1.90, "	1.49
" " "	"	1.35, "	1.19
Men's Overshoes	"	1.85, "	1.39
Men's Sweater Coats	"	5.00, "	3.98
" "	"	4.50, "	3.69
" "	"	2.50, "	1.98
Boys' Sweater Coats	"	1.50, "	1.19
" "	"	1.00, "	.69
Ladies' Sweater Coats	"	4.00, "	3.39
" "	"	4.50, "	3.69
" "	"	3.00, "	2.49
" "	"	1.35, "	1.19
Men's Heavy Cloth Overcoat	"	15.00, "	10.98
Men's Heavy Black Beaver ...	"	22.00, "	15.48
" " " ...	"	18.50, "	11.49
Boys' Heavy Cloth Overcoats	"	8.00, "	5.98
" " "	"	11.00, "	6.98
" " "	"	6.50, "	4.49

We have still a few lines of Men's, Boys', Ladies' and Children's Underwear to clear at less than the cost of manufacture.

See our Men's All-Wool Underwear, special, to clear at $2.25 per Suit.

We have a few Ladies' Heavy Cloth Coats left that we are selling at less than half-price.

Don't forget to see our Teas, of which we bought a large quantity before the rise in price. Our Black and Japan Tea, 3 lbs. for $1.00, beats all.

Bring us your Butter, Eggs and Dried Apples and get highest market prices.

We would ask our customers who are in arrears to please call and settle last year's accounts.

THE PAISLEY MERCANTILE CO.

THE CITY BAKERY

Has Always Something Special to Offer!

SYRUP! SYRUP!

We are selling Syrup in quart bottles, maple flavor. These are extra good quality. We bought a quantity and, therefore, can sell them at 30c per bottle. This is no fake game. It is genuine, as all our Groceries and Baking are. Be sure to get a bottle while they last. Also Maple Sugar for the box you are packing for our brave boys.

We have Other Specials for the Box for the Front

Do not forget our prices on Tea—Black at 35c per lb., Green at 30c per lb.

F. S. MacLACHLAN

Groceries Bakery Confectionery

WAR!

Other nations are joining our Allies, and and so sure as our Allies are bound to win, so sure is the ORDERED suit going to win against the FACTORY ones.

We have been fortunate in securing a fine line of patterns, which we can guarantee for color, and of all-wool materials.

Come in and look them over before buying. Prices right with quality of goods.

Ladies' Tailoring a Specialty

I. S. Cruickshank

Desirable Village Property for Sale

LARGE frame house with kitchen and woodshed attached, 1½ acres of land and well, water at house; large stable and two sheds, and water and hydrant in stable. Plenty of room for garden or poultry. Will be sold on easible terms. T. H. GEORGE, prop.

Bush Accident

Mr. S. Davison of Greenock is laid up with a sore back. A tree he was felling in the bush lodged in some saplings, and when Mr Davidson cut one of the saplings it flew back, striking him in the back with force enough to put him off work for a few days.

—Mrs McAllister, of Owen Sound, is visiting at the home of her grandmother, Mrs Wm McBeath.

—Miss A Matheson, Mr J Matheson and Mr W McGeorgeolate, of Kinloss, are visiting at Jas Matheson's, 12th Bruce.

—Mr. Alex Morland has returned to town and will take charge of Mr. John Logie's farm. Alex has been working in a Toronto munition factory since December.

Trains Blocked by Storms

The week-end blizzard knocked out the train service on this line of railway from Friday night to Saturday afternoon. The late train of Friday didn't reach Paisley until the small hours Saturday morning. Saturday the mail went north late, and the first train from the north came in at 6 p m.

Horses vs Motors

In speaking of the demand for horses in the west this season, Mr John Rorke, who is down from Alberta, tells The Advocate that the big motor plowing outfits are not the general success they were expected to be. The machines work alright on level, firm land, but where the ground is wet or soft they get into difficulty and soon run up a big bill of expence and lost time. For this reason many farmers are throwing the motors aside and turning back to the use of horse-drawn outfits. There will be a big push on the spring cropping this year, which will cause an extra demand for horses.

A Prince Rupert Visitor

Mr O H Nelson, publisher of the Prince Rupert Journal, and an alderman in the council of that new city, was here last week on a short visit to his brother, R J Nelson, V S, and other friends. He was sent east on a delegation to the Fisheries Department at Ottawa, and was appointed one of three commissioners from B C who are to look after that important branch of the Pacific Province's natural industries. O H made THE ADVOCATE a fraternal call, and gave us an optimistic talk on the prospects of Prince Rupert. The present population is about 3,500.

Public Library Board

At the annual meeting of the Board the following officers were elected for 1917: Chairman, I Shoemaker; Secretary and Librarian, Miss McCallum; Treasurer, Miss Miller; other members—S F Ballachey, G L Carter, Alex Jeffrey, T Muir. The total number of books issued during 1916, as stated in the Librarian's report, was 7,535. There were 130 new books purchased, and 78 donated, this making a total of 5,875 volumes on the shelves. There are two daily papers, three weeklies, 14 magazines and periodicals to be found on the reading room tables.

Invest to Help the War

The new War Savings Certificates which have been created by the Government to encourage thrift and economy and to give everyone an opportunity to assist in financing our war expenditures, are now on sale at every bank and money order post office in Canada. The $25 certificate sells for $21.50, the $50 for $43, and $100 for $86. As an investment these certificates offer many attractive features—chief of which are absolute security and the excellent interest return. For every $21.50 lent to the Government now, $25 will be returned at the end of three years. There are two other features which are especially interesting to small investors. First, the certificates may be surrendered at any time, if the buyer should need his money; and second, each certificate is registered at Ottawa in the buyer's name and, if lost or stolen, is therefore valueless to anyone else. But while they are excellent from an investment standpoint, the certificates should appeal strongly to Canadians because they offer to those who must serve at home a splendid opportunity for a most important patriotic service. The person who honestly saves to the extent of his ability and places his savings at the disposal of the Government by purchasing these certificates, may feel that he is having a direct share in feeding, equipping, and munitioning our Canadian soldiers, who are nobly doing their part.

CARD OF THANKS

To the many friends in town and country who expressed sympathy by word or token on the occasion of the funeral of our beloved brother, we return our heartfelt appreciation on behalf of the family.

Give the "Kiddies" All They Want of

CROWN BRAND CORN SYRUP

It is one of the delicious "good things" that has a real food value.

A slice of your good homemade bread, spread with "Crown Brand", forms a perfectly balanced food, that is practically all nourishment.

So—let them have it on biscuits and pancakes, and on their porridge if they want it.

You'll like it, too, on Griddle Cakes—on Blanc Mange and Baked Apples. And you'll find it the most economical sweetener you can use, for Cakes, Cookies, Gingerbread and Pies.

Have your husband get a tin, the next time he is in to order a 5, 10 or 20 pound tin—or a 3 pound glass jar.

THE CANADA STARCH CO. LIMITED
MONTREAL, CARDINAL, BRANTFORD, PORT WILLIAM.

Our new recipe book, "Desserts and Candies", will show you how to make a lot of really delicious dishes with "Crown Brand". Write for a copy to our Montreal Office.

FORETOLD THE WAR IN 1912

CLEVER DESCRIPTION BY GERMAN MILITARIST.

He Was Very Much Out in Several of His Calculations However.

E. B. Marston, a well-known British publisher, writing in the London Daily Mail, says:

In 1912 an old Russian angling friend of mine, Baron [illegible], wrote to me to advise me to get a copy of a German work which was attracting much attention in Russian military circles.

It was entitled "Der Europaische Kreig von 1913" ("The European War of 1913"). I procured a copy and found that it was a clever description of this present war by an eye-witness who published his account in 1912!

Among things he did not foresee were trench warfare—and the British Empire army. The work has peculiar interest just now, because in 1912 its publisher, Paul Baumann, of Charlottenburg, when issuing a third edition, was graciously permitted to print in red type on it an extract from a letter from Count Zeppelin in which he blessed the work, saying: "May it have its due influence on the fortunes of our country."

This is the most significant, coming from the count, as the book attributes the inevitable Teuton victory to the Zeppelin air squadrons.

Hatred of England.

Not the least striking thing in the book is the intense hatred of England which is preached in every chapter, but in this respect it is not extraordinary. During the last twenty-five years or so the extent and virulence of this anti-British propaganda in the German publishing world has been especially noticeable.

The war is described as due, ostensibly, to sudden insuperable dissension between France and Germany over Morocco; really to British intrigue and to the conviction on the part of France that at last the hour had arrived for the "Revanche" for 1870.

The Entente between England and France had never been more cordial; Russia had been bought over by proffer of a free hand in Persia; Italy could not be counted on by Germany, and is described as later on throwing in her lot with France and England.

A Scrap of Paper.

"As the pawns guaranteeing these small states (Belgium and Holland) were at war with each other, the treaties guaranteeing neutrality were merely 'ein Stuck Papier' (a scrap of paper), without practical value." This was said two years before Herr von Bethmann Hollweg's historical 'Scrap of Paper' speech. England being engaged to help France, these states ask Belgium if she will or will not permit them to attack Germany through Belgium and allow England to land her troops at Antwerp; Belgian Chauvinism catches fire from that of France; Holland reluctantly listens to the wooing of her great German neighbor; and when English fleets and transports appear in the Scheldt, Dutch heavy guns in armored batteries make a landing at Antwerp impossible. This upsets the plans of the allies, and the first great battle of the war, the battle of Liege, ends in the French 3rd Army Corps being defeated [illegible] up, and compelled to seek safety under the guns of Namur, Huy, Givet and Maubeuge."

Fate of Liege.

The Belgian army, withdrawn to complete its mobilization mainly behind the extensive fortifications of Antwerp, was to have operated against the German right wing, but owing to the threatening attitude of the Dutch and to German demonstrations was unable to move, and the greater part of Belgium, with its capital, was in German hands. Italy having joined the allies, Austria's task is to defeat her on land and sea, which she eventually does. Except for a temporary success in the invasion of Germany at Mollhausen, the course of the war naturally goes against France. Liege is described as being safe but for a few days to withstand the battering her forts were subjected to by the modern German siege artillery. The fall of Liege left the road to Namur open, and Namur, Maubeuge, Mons, etc., are described as falling—much as they did fall. In a battle on the Sambre the little English army is defeated, surrounded, and has to capitulate. France is left to fight her battles on land by herself.

Zeppelin Attacks London.

In the early days of the war the English are described as being beaten in the Bight in an attempt to capture Heligoland, but for a time they succeed in confining the German fleet to its fortified bases. Then the whole civilized world was astounded at news from London. From his base at Brussels, Count Zeppelin with six great airships, had suddenly appeared over London and paralyzed its inhabitants by destroying London Bridge with high explosive bombs. As suddenly as they came they disappeared, only to do enormous damage to the docks and arsenals at Portsmouth, Chatham, etc. The 250-mile voyage between Brussels and Portsmouth is comfortably done in eight hours.

Destroys British Fleet.

But his work is only commencing. After refitting and taking in great stores of explosives, he disappears with his air squadrons and drops bombs with such success on the British fleet that before long all that is left of it submit surrenders—"never had there been such a sudden destruction of sea power in the history of the world"—and Britannia no longer rules the waves. France makes heroic but hopeless efforts to repel the invaders; even her women, under a new Joan of Arc, rush to battle, fight, and die. Paris, the wonder city of the world, lies once more at the feet of the conqueror. Then the world is asked to look on while Germany, magnanimous, holds out her hand to France, says she bears her no ill-will, no hatred, offers her a place in the German sun and the blessings of German kultur.

England the Enemy.

In his last chapter this German prophet tells us that before the war there was only one nation, England, towards which Germany evinced an unalterable, outspoken feeling of hatred. The reason for this hate has its roots, this Teuton tells us, far less in envy of England's possessions in the world than in the blood-boiling rage at the "everlasting, never-smiling expressions of British brag," and her open and secret inciting of the nations against her dreaded competitor in the domains of commerce and industry—in short, "at the provocative hemming-in policy, which has its seat in Downing Street and its organs all over the world." It was this unbridled hate, he says, which led Germany to employ against England "such brutal methods of warfare as the world had never known before."

"FIVE O'CLOCKS" VERBOTEN.

Functions to Become Illegal Henceforth in Berlin.

"Five o'Clock Teas," which the Germans in pre-straffing days used to call by the English term of "Five o'Clocks," have just been verboten by the Berlin police, says London Mail. The public is not clear either as to the reason or as to the exact kind of "Five o'Clocks" which have become illegal. The ukase blotting them out simply reads as follows:

"In recent times there have been repeated functions described as 'Five o'Clock Teas.' The attention of the public is again called to the fact that these functions are forbidden."

It is suggested that the Berlin resorts known as "cabarets" have been enticing large numbers of women and girls to entertainments advertised as "Five o'Clock Teas" which turned out to be of considerably less innocent character than their name implied. The newspapers suppose that the police authorities' desire to put an end to these shady functions, rather than to the "Five o'Clock Teas" which, before the war, in imitation of London and Paris, were conspicuous features of Berlin's cease to be with tactless impediment.

Confound the Other Fellow.

The Kaiser (to his professor of frightfulness)—Those dastardly British tanks outrage all the decencies of civilized warfare. Why haven't we got some?

THE APPLE IN CANADA.

Dominion Horticulturist Gives Some Valuable Information.

There were 10,408,467 bushels of apples produced in Canada in 1910, according to the census of the following year. Of this quantity, 6,250,672 bushels were produced in Ontario, 1,666,382 bushels in Nova Scotia, 1,481,239 in Quebec and 575,377 in British Columbia. New Brunswick produced 212,886 bushels and Prince Edward Island 160,124 bushels. In Prairie Provinces apple-growing was in its infancy, but there was every indication of rapid development, as shown by the number of trees coming forward. These facts are pointed out in a valuable and most comprehensive bulletin recently issued, of which the Dominion Horticulturist, Mr. W. T. Macoun, is the author, and which can be had free on application to the Publications Branch, Department of Agriculture, Ottawa.

Mr. Caroun notes the prominent place the Dominion has come to occupy in the world's fruit industry and especially as regards the apple. He tells us that there are probably 3,000 named varieties, that 734 have been tested at the Central Experimental Farm and that 613 are now growing there. He takes a survey of the different provinces, pointing out the varieties that are probably the best adapted to certain districts. Quebec is the oldest apple-growing province and Nova Scotia comes next, but Ontario is a long way the greatest producer, although in 1911 no fewer than 1,734,000 barrels were packed and sold from the Annapolis and adjacent valleys in Nova Scotia.

Mr. Macoun lists and describes the varieties suitable to Canada, records the results of the numerous experiments and tests at the Central Experimental Farm, gives complete instruction on the cultivation of the apple, describes in full the necessary treatment of the trees, advises as to the soil that is best adapted for orchard, says how disease and insect pests can be combatted, counsels as to picking, packing, shipping and marketing, tells of the keeping qualities of different varieties, and, in short, has written a bulletin of 138 pages of the utmost worth to the apple-grower and all interested, or likely to be interested, in the industry.

HUN SPIES IN SCOTLAND.

Have Photographs of Scotch Coast in Germany.

In the course of an article, one of a series which he is contributing to the London Times, descriptive of a ten months' stay in Germany, Mr. D. Thomas Curtin writes:—

One of the finest pieces of spy work achieved by Germany was the obtaining by a German professor of a unique set of photographs of the whole of the Scottish coast, from north to south.

These photographs, showing every inlet and harbor, are now at the Reichs-Marine-Amt (Admiralty) in the Leipsigerplatz. They have been reproduced for the use of the navy. I don't know how they were obtained.

I know they are in existence. It is possible some Scottish reader of these lines may be able to explain the mystery, and I should be glad to receive further information on this subject. That the photographs, which were, I believe, taken for geological purposes, exist in Germany is beyond dispute.

Why She Wanted It.

"Algy, I want you to buy me a book."

"I am glad you are becoming literary, my dear."

"Fudge! This article says one way to acquire a good carriage is to practise balancing a book on your head."

Contentment a Blessing.

"Do you think contentment is a blessing?"

"It depends on the kind of contentment. If your contentment is due to the fact that you have about everything you want, it is highly desirable."

A Corn Shopper.

Clerk—"Now, see here, little girl, I can't spend the whole day showing you penny toys. Do you want the earth with a red fence around it for one cent?"

Little Girl—"Let me see it."

PRACTICAL FARMING

Cooking Hog Feed Unprofitable.

The advisability of cooking or steaming food for swine was for many years the subject of much controversy; many of the most successful feeders both in Canada and in the United States held widely different opinions, and differed quite as widely in their practice. During the past decade, however, the process, unless in the case of potatoes, has fallen very largely into disuse. It has been pretty conclusively proven that, unless under exceptional circumstances, better results are obtained from a given amount of grain or roots given raw than from a similar amount after it has been cooked.

It was formerly believed, and is still by many feeders, that the process of cooking increases the digestibility of the food; but it has been shown that as a rule the contrary is true, especially in the case of food rich in protein. Extensive experiments, conducted both in Germany and in America have been remarkably uniform in their results, and unite to show that protein is less digestible after exposure to high temperature. The digestibility of starch is to some extent increased by cooking, and for this reason potatoes should always be cooked for hog feeding. It must be conceded that some feed stuffs, such as turnips and pumpkins, are made much more acceptable to pigs by cooking, and will therefore in some cases give better results cooked than raw; there is also some advantage in giving feed warm during cold weather, but both German and American investigators are practically unanimous in condemning the practice of cooking feeds, other than potatoes, that are palatable in their raw state, because it reduces the digestibility of the protein; a loss for which in the absence of any increased palatability it offers no compensating advantages. It is now generally conceded by those who have given the feeding of potatoes a fair study that these tubers fed raw have very little nutritive value, but when cooked they are worth about one-quarter as much as mixed grains.—Canadian Countryman.

Study Your Soil.

The soil is the farmer's capital—his workshop. Upon it is founded the whole business of farming, and upon its fertility will depend in large measure the success of the farmer's operations. Too often it is not given the proper care nor is sufficient intelligence exercised in its use.

The plant derives certain substances necessary to its development from the soil; the most important of these are nitrogen, phosphoric acid and potash. The farmer should know whether his soil contains these in sufficient quantities to meet the requirements of a maximum crop providing good cultivation is given, or if he is not getting satisfactory yields, he should find the cause. No two farms have been treated and cropped in past years in exactly the same way, which means that even adjoining farms may be entirely different so far as soil requirements are concerned. To bring it up to a state of profitable productiveness one farm may need a rotation different from the other or a different fertilizing treatment. Bulletins, books, experts and governments help the farmer in many ways, but they cannot be expected to furnish every detail in a manner to fit his every need. The farmer himself should learn what his crops require, learn what his soil contains, learn what is lacking in his soil, learn how to supply the deficiencies, and then he may safely look for increased yields and greater profits. It involves study, but the farmer must work out many of his own problems on his own farm under his own conditions, by trial, by test, and by experiment.

Wild Oats.

The weed problem is one of the most serious confronting Canadian farmers to-day. Some weeds are troublesome in every province, while others cause most loss where grain farming is exclusively practised. Wild oats are a terrible pest in the Prairie Provinces and must be dealt with earnestly in order to keep them under control.

Various methods are advocated for their eradication, but one of the very best is the fallow and fall rye method practised and recommended by one of the oldest and most successful farmers of the Northwest.

The infested field should be ploughed deeply (seven or eight inches if possible) as soon as spring seeding is over, and each day's ploughing harrowed as ploughed. As each crop of oats appears it should be cultivated or disced up to the 10th or 12th of August when the field should be given a final preparation and seeded about Aug. 15th, at the rate of one and one-quarter bushels of fall rye and packed or harrowed after seeding. The oats that germinate with the rye will be winter-killed, and those coming up in the spring will not ripen before the rye is ready to harvest. The better the soil is cultivated and prepared to receive the rye crop the greater will be the number of oats germinated and winter-killed. If necessary this treatment can be repeated. Fall rye is a sure crop, the grain brings a good price, and it is the one crop which will ripen ahead of the wild oats.—P.C.N. in Conservation.

Shortage of Grain World Wide.

Rigid economy throughout the world in the consumption of food, in view of the deficient crops and the extraordinary requirements by the International Institute of Agriculture, which has made the most extensive report it has issued since the war begin. The institute says all nations are confronted with a grave situation.

It is estimated that at least 2,200,000,000 bushels of wheat will be consumed in the year ending July 31, 1917, and that the end of this period the world's surplus supplies of wheat will have decrease to 46,000,000 bushels. The report says it is only on account of the fact that last year's harvest was abundant, leaving a balance of 250,000,000 bushels, that there is available sufficient wheat for the year ending with next July.

The world's surplus of five cereals—wheat, rye, barley, oats, and corn—is placed at 533,000,000 bushels. This includes the unexportable Russian stocks and also the stocks of Rumania and Bulgara. The surplus of oats is placed at 166,000,000 bushels. A general scarcity of fodder is expected.

The total Russian stocks of wheat now stored, which if military conditions permitted, would be available for export at the next harvest are estimated at 300,000,000 bushels.

CANADA AS AN EXPORTER.

What an American Magazine Has to Say on the Subject.

Yankees are inclined to look on the Canadians, with a total population for their country of less than that of New York City, as of comparatively small consequence in the adjustment of world trade which is expected to take place after the war. Yet Canada is not blind to her opportunities, nor will she neglect them.

Already there is a great deal of Canadian money invested around the Caribbean Sea and in South America, particularly Southern Brazil and the Argentine. Much of this money has been put into public utilities, so that the Canadian exporter has some advantage. In many cases considerable, in having been preceded by Canadian interests which, from the very nature of their enterprises, must make a careful analysis of local conditions and needs.

In natural resources Canada is as well off as the United States. Labor has been more expensive, but this condition is likely to adjust itself, for labor in the United States is advancing in cost constantly, while it is to be expected that immigration to Canada after the war will have a steadying effect on the labor market of that country.

Canada is particularly well fitted for foreign commerce through having two ports which are the closest American ports to Europe and Asia—Halifax and Vancouver respectively. Halifax is also nearer to the ports of Brazil and Argentine than Boston, New York or Philadelphia. Halifax is now in the midst of a great harbor development costing $30,000,000, which will enable the port to handle traffic expeditiously. It is connected with the West by the Canadian Northern and Grand Trunk Pacific transcontinental railways, both of which have auxiliary shipping services on the Great Lakes. Each of these railroads opens up large areas of natural resources, both agricultural and mineral.

Canadian shipping is in the hands of three strong organizations which can be counted on to co-operate with Canadian manufacturers and exporters. These are the Allan Line, Cunard Line and the Canadian Pacific Railway. They have been gradually absorbing the independant lines until the Canadian Atlantic is fairly evenly divided between them, while the Canadian Pacific Railway has held the lead on the Pacific for many years.

The fact that Canadian shipping facilities are being modernized and constantly enlarged means that the Dominion will be an important factor in world trade. It means that the markets which the United States is looking to as the nucleus of future American world-commerce may not be so easily captured as appearances indicate. It means that Canada is right now making plans to become a formidable competitor, and on nearly equal terms, with the United States, and that the whole energy of British Imperial influence will be exerted to further intercourse between Canada, the West Indies and South America.

Canada is a unit in the greatest commercial organization the world has ever seen. Her citizens and her government are in a position to benefit quickly from the experience of other members of that organization. To balance this advantage, the United States is better fitted financially than is the Dominion to go after the trade for which these two will compete. The United States is not lacking in either foresight or ability. It is recognized as the most energetic and persistent of nations. But the exporters of the United States will make a mistake if they think that this country is to have the Western Hemisphere to itself.—The Bush (New York) Magazine.

Accidents Will Happen.

Officer—"Is that soup ready, Jones?"

Officer's Servant—"No, sir, the stove went out, sir."

Officer—"Went out! Then why don't you light it again?"

Officer's Servant—"Cos it went out by the roof, sir."

Redpath SUGAR

was a favorite name among the long-forgotten food products of half a century ago, just as it is among the live ones of to-day. Only exceptional quality can explain such permanent popularity.

"Let Redpath Sweeten it."

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

Made in one grade only--the highest!

The Housewife's Corner

Eggless Egg Dishes.

Eggs and Tomato Kedgeree.—Have ready a cupful of boiled rice per person and allow one tomato per person. Stew and sieve the tomatoes. Allow one egg to each person and scramble egg, tomato and rice with salt and pepper just as for scrambled eggs.

Kedgeree.—This is a blessed dish, as one-half pound of cooked, flaked and boned white fish with six teacupfuls of boiled rice and two eggs beaten up together, well seasoned and made hot, makes a fairly substantial dish for six persons.

Savory Toast.—The bread (stale) should be cut quite half an inch thick and in four-inch squares. Toast crisply on both sides, spread with butter, with deviled meat or bloater paste. Make very hot and serve.

Ham Toast.—The ham should be minced very finely, and only a little fat used. To every two tablespoonfuls of the meat add one tablespoonful of crumbs or well-boiled rice, and mix it with some good, brown gravy, or a white sauce. Spread this mixture on the buttered toast and cover with breadcrumbs, brown and serve very hot.

Eggless Batter.—Four ounces flour, a pinch of salt, one-quarter pint tepid water, one tablespoonful of salad oil. Mix the oil and water well together, then very gradually add the flour and salt, sifted together, beating thoroughly between each addition. Let the batter stand for at least an hour before using. If you wish to use this as a sweet batter for apples, etc., add a teaspoonful of powdered sugar instead of the salt. This batter can be used to eke out meat that would otherwise be insufficient for the number of people.

Meat in Batter.—Cut the meat into small dice, dust with pepper and very finely powdered herbs, mix in with the batter and drop by tablespoonfuls into very hot fat to fry. Drain well on absorbent paper and serve on toast.

Apricot Cream.—Use dried apricots, wash them, soak until soft and simmer with a little sugar and a spoonful or two of water. Sieve, and mix with an equal quantity of cornstarch mixture. Place in a china souffle dish, and, if desired, cover the top with whipped cream. For the cornstarch, use one-half ounce of cornstarch, half to a teaspoonful of sugar, according to the sweetness of the fruit. Mix the cornstarch in a little of the cold milk. When smooth, heat the remaining milk, and stir the cornstarch into it by degrees. Add the sugar, and boil for three or four minutes, stirring all the time. If a little essence of apricots be added the taste is improved.

Dover Pudding.—One-half pound of bread pieces, two tablespoonfuls of cornstarch, three ounces of brown sugar, one-half pound of apples (sliced), one ounce of margarine, butter or vegetable butter, one-half pint of milk, one-half teaspoonful of powdered ginger and one-half of lemon rind (grated). Break the bread into small pieces and pour over it a quarter of a pint of boiling water. Add half an ounce of shortening and leave it all night. Next day sprinkle the cornstarch over. Put the milk into a saucepan with the powdered ginger, brown sugar and the grated lemon rind. When boiling, pour it over the bread and beat well with a fork until quite smooth and free from lumps. Turn into a dish and cover with thin slices of apple. Sprinkle with sugar and put some little bits of shortening on top. Bake in a moderate oven for one hour. A layer of marmalade spread over the apples is a great improvement; this should be added when the pudding is almost cooked.

Household Finances.

Money matters are a very common source of irritation and unhappiness in the home. There are two financial systems in common practice in different homes, both of which are decidedly wrong.

(1) The husband keeps charge of all the money. The wife occupies the same financial position as a dependent child or a servant. She is compelled to buy on credit or ask for money every time she has occasion to make any purchases. Under this system there is no incentive for the wife to be an efficient household manager. If she is thrifty she derives no benefit from her thrift. If she is a spendthrift by nature her outlays are limited only by the amount of money she can coax from her husband or by the size of the bills she is allowed to run.

(2) The wife assumes financial control of the household. The husband is required on payday to hand over to the wife the full amount of his pay. Any money necessary for his personal expenses, such as lodge dues, tobacco, etc., is given to him by the wife as spending money. This system reduces the husband to the position of an inferior. He cannot buy a pair of shoes or take a friend to a show without asking his wife's permission and receiving from her the necessary money.

In contrast with these two wrong systems, here are two systems as correct in principle and successful where practiced:

(1) Where the husband and wife are so strongly united in affection and so similar in tastes and inclinations there need be but one purse for the home. Under this system there is no boss. The wife can buy a new dress without asking the husband's permission; the husband can spend a dollar without asking a wifey. Of course, in matters of importance each asks the advice of the other, but neither is dependent.

(2) This system will work in any household, no matter how dissimilar the husband and wife may be in tastes and inclinations, and no matter how lacking they are in genuine affection for each other. It is this: Make an equal division of the family income between the husband and wife. Make an equitable division of the necessary household expenditures, one part to be met by the husband, the other part by the wife.

Useful Hints.

Try using an old pair of scissors to clean small fish. It can be done more quickly than by using a knife.

Newspapers are a better substitute for polishing lamp chimneys, as there is no line.

Rice, if washed in hot water instead of cold, is much more quickly cleansed and freed from all starch and dirt.

To remove mildew from linen, wet the part with water, rub with laundry soap, sprinkle with salt and place in the sun; repeat several times until spots have been completely removed.

If the left-over breakfast cereal is carefully molded at once into a bowl or square pan that has been first wet with cold water, it may be sliced and delicately fried for a luncheon dish.

Dry staples used daily in the kitchen should, if possible, be kept in glass bottles or jars where they will retain their flavor and freshness twice as long. The wide-mouthed preserve jars are handy to label and to use for this purpose.

A pair of ten-cent canvas gloves are a great protection to the hands from heat and burns when stirring gravy or dressing over a hot fire or toasting bread over the coals and turning cakes, pies, etc., in hot ovens. By having two pairs one can always have a clean pair on hand.

A mop to dust the floor oilcloth—Take four pairs of worn-out stockings, cutting off the feet, doubling and fastening securely to a broom handle by nailing to the end from which the broom was cut. Before the nail is driven through the stockings into the handle put a small piece of leather or other strong material next to the nailhead so it will not cut through. Saturate with kerosene.

There are many cases in which baking soda can be used other than for bread and cake making. Lamp chimneys which are washed in water to which a pinch of baking soda has been added will shine brilliantly. If a lamp burner is boiled in a little soda and water it will cause the lamp to burn with a far brighter light. Soda is also an excellent remedy for scalds. When milk is on the verge of turning a little baking soda will restore it to its original sweetness.

She who makes successful sponge cake remembers that such success depends upon the amount of air beaten into the eggs and the expansion of that air during the baking. She beats the yolks until thick and lemon colored, the whites until stiff enough to adhere to the dish if held on end; then she combines the ingredients with a deft turn of the wrist, holding the spoon lightly in her hand. She bakes her cake with a slow, steady heat, and avoids doing anything that would jostle or shake the stove. Such a cake, if not overbaked, is moist and fine-grained. It should be broken in neat pieces—not cut for serving. It is useless to recommend keeping it in an airtight tin box—none will be left for another meal.

PATRIOTIC CHINAMAN.

Did "His Bit" by Chopping Wood for Soldiers' Wives.

This pretty little story, which seems to carry the stamp of truth, comes from an office of the Canadian Patriotic Fund in British Columbia.

In a little town on the Fraser River lived an old Chinaman. He existed by doing odd jobs. When the patriotic fund was formed in that town John came to the chairman and said, "You catchee me job, I givee to help soldier's wife." The chairman, not knowing of any work for John at the time, said that he was sorry but he could not give him employment. A few days later John came again. Once more he said, "You catchee me job, me givee to help soldier's wife," and once again no employment was forthcoming. The third time John came to the chairman. This time his request was somewhat different. "You givee me name of six soldiers' wives; me go cut wood, no chargee," said John. "Me no get job, me no give money, but me cut wood." And so John is now giving a day a week to cutting the firewood for six soldiers' families and thus doing his bit for his adopted land.

O Brien: "Oi can say wan thing—Oi'm a self-made man." Casey: "Is it boastin' ye are' or apologisin'?"

THE SUNDAY SCHOOL

INTERNATIONAL LESSON

DECEMBER 31.

Lesson XIV—Christ's Coming And Coming To Christ.—Review. Rev. 22. 6-14, 16-21. Golden Text Rev. 22. 17.

1. God deals in the open with men. "And he saith unto me, Seal not up the words of the prophecy of this book; for the time is at hand." (Verse 10.) He speaks nothing in secret. He calls men to witness the declaration here made. In verse eleven, "two pairs are selected to stand as representatives of the good and of the bad; in these four included all classes of the godly and ungodly; those who sin against society and those who sin against themselves; those who act honorably and those who keep themselves pure. But what does the verse mean? Does it mean that the time is so short that it is hardly sufficient to allow of men reforming themselves, so as to be ready for their Lord, and that therefore the lesson is, let those that would be ready for him remember that now is the day of revelation? This is the view adopted by some; it contains a truth, but the meaning of the verse seems more general. Is it not the declaration of the ever-terrible truth, that men are building up their destiny by the actions and habits of their lives? Sow an act—reap a habit; sow a habit—reap a character; sow a character—reap a destiny. The righteous become righteous; the godly become godly. So, slowly, but surely may the power of being masters of our fate pass out of our hands" (Bullcott's Commentary).

2 "I am Alpha and Omega." The first and last letters of the Greek alphabet are here employed to express the sum and substance of all the possibilities of the alphabet in conveying thought. The truth of this statement is that Christ is the sum and substance of God's revealed thought. The idea is intended to be conveyed, too, that Christ is the Eternal One—the beginning of all things and the end of all things.

3. The last beatitude. "The first beatitude that Jesus spoke from the mountain was, 'Blessed are the poor in spirit.' The last beatitude that he speaks from heaven is, 'Blessed are they that wash their robes.' And the art commended in the last is but the outcome of the spirit extolled in the first. For they who are poor in spirit know themselves to be sinful men; and they who know themselves to be sinful men will cleanse their robes in the blood of Jesus Christ" (Hastings).

4. The privilege of the blessed are two, as set forth here—right to the tree of Life and entrance into the city. The city is the society of the redeemed. There, with washed robes and shining faces shall come together the redeemed out of every kindred and nation. Every element of the perfect life will be found there. We may be sure of the joyful activities of the soul, there will never lack the interest of employment. We may be sure of finding there and having forever those we have loved long since and lost awhile. And we may be sure, too, of the permanency of that state of blessedness—the city through whose gates we shall pass has foundations and is eternal in the heavens. Having passed the gates, there life shall be at flood-tide through eternity.

BRITISH BISCUIT DANGER

National Whole Wheat Flour Order Hits Manufacturers

What will the British biscuit manufacturers do with a 76 per cent. flour? The manager of Messrs. McVitie and Price told a London Chronicle representative that if they were unable to get white flour their business must stop.

"That is a very serious thing," he went on, "seeing that our export trade alone in this country is worth £5,000,000 a year, and is continually growing. The whole of this trade will go and most of our home trade, if we are obliged to use the new flour.

"The biscuit factories employ 100,000 persons, mostly women, and represent a capital of £20,000,000. My firm alone has 25 representatives now travelling in the United States, and our trade with that country, since the Wilson reform of the tariff came into operation, has grown enormously.

"The new flour will have far too much gluten in it to make into biscuits. The flour we use is mostly made of English wheat. That is the best for our purpose."

"But it may be said that biscuits were not an absolute necessity of life?" the interviewer suggested.

"They are becoming so more and more every day," was the reply. "Half of our present out-turn is going to the army for canteens and camps. It seems rather a foolish thing to destroy an industry like ours. The country will surely want some export trade after the war. For various reasons we make biscuits for the whole world in this country; no other country has any export trade to speak of."

His Portion.

Bacon—They say in some countries they eat giraffes.

Egbert—Great guns! Think of getting the neck!

EXTRAORDINARY STORY.

Links Hope Diamond With House of Hapsburg.

An extraordinary narrative, linking the misfortunes of the house of Hapsburg with the tragic history of the Hope diamond, and tracing both to the looting of a temple in Burma, acquires special interest by reason of the death of the Austrian Emperor. It has been communicated to the London Daily Express by a soldier now on active service, and, says the Express, is "presented to students of the occult for what it may be worth."

"The story," says the author, who signs himself "W. B.," "was told me by a Buddhist priest when I was in Ceylon. He was a man of high repute in the native community there, and he assured me that every word of his narrative was strictly and absolutely true. Personally I hold no brief for the occult and will not venture to express any opinion on the extraordinary series of events recounted to me by the Buddhist priest. I transcribe his strange story for the benefit of those who understand more than I do of these mysterious matters.

"'Many years ago,' said the priest, 'a member of the house of Hapsburg, one Count Hermann, in conjunction with a Duke of Braganza and a number of followers, set out on an expedition to Burma with the ostensible purpose of converting the natives.

"'They sailed from Lisbon, and in due course reached Mandalay, near which town they speedily became involved in a religious controversy which ended in the death of more than a thousand Burmese worshippers.

"'The Count and the Duke and their followers then made for the great temple of Rama and Sita, which was known to contain gold and jewels in enormous abundance and of priceless value. They slaughtered the priests and all the guardians of the temple, and looted its treasures. The temple walls were inlaid with gold and inset in almost every inch with precious gems. Every stone that could be wrenched from its place was stolen by the marauders, each of whom had his share of the booty.

"'Two of the finest stones in the temple formed the eyes of the golden statue of Rama. One (to be known later as the "Blue Rope Diamond") was appropriated by Count Hermann and the other fell later into the possession of the late King Leopold.

"'Rama,' continued the priest, 'called down upon the thieves the vengeance of all the gods, and more than fifty sons of high degree have already fallen under Rama's curse and lost their lives by violent means. With their death the curse came to an end, but in the case of the house of Hapsburg it goes on for ever.'"

Whatever may be thought of the Buddhist priest's weird story, it is known that the looted jewels were scattered by marriage and inheritance through most of the royal houses of Europe, with the exception of those of England and Denmark, and strangely tragic is the record of many of these regal families.

A MOUNTAIN OF A MAN.

General Grosetti Is Fearless in Face of Enemy's Fire.

In the ruined village of Pervyse, writes Mr. George Adam in his book, "Behind the Scenes at the Front," I was able faintly to appreciate the calm, genial bravery that has made of General Grosetti a popular hero in the French army. General Grosetti is a man of almost phenomenal girth, and he has a strong objection to walking or standing. There are countless anecdotes about his behavior under fire. On one occasion he and his staff, while examining a piece of the country, were seen by the enemy, who at once began to shell them. General Grosetti, who was sitting on the camp stool he had brought with him, seemed to be quite oblivious of what was occurring, and when one of his staff suggested that, as they had seen all they need see, it was running a needless risk to remain in the open, General Grosetti remarked that he would rather be killed by shrapnel than start walking again for another five minutes. At the end of the five minutes the general folded up his camp stool and strolled back to cover.

At Pervyse, during the rush toward Nieuport, he was also seen seated, this time in an armchair. The village was being smashed by heavy explosive shells, shrapnel was scattering all over its streets, and the enemy had chosen the moment for bombardment with great good luck, for through the village were marching important bodies of troops. To pass through shell fire so intense as that which was directed upon Pervyse required very high courage. The place was pounded to pieces. It exists now only on the maps. The church is a ruined shell. The graves in the churchyard have been torn open by "marmites." The central square of the village is a rubble heap of brick and plaster, blackened here and there by the flames of the incendiary bomb; but in the middle of it, opposite the churchyard, General Grosetti sat in his chair for two hours, and shouted jesting remarks as they passed on toward the firing line.

Much Trouble.

Onyx—My wife burst into a flood of tears the other night.

Bruny—Did she cause any trouble?

Onyx—I should say so. Swept away $48 for a new hat in the first torrent.

The AUTOMOBILE

Automobiles and Good Roads.

Nothing has had as much to do with the beginning and the subsequent widespread growth of the good roads movement as the pneumatic-tired automobile.

Fifteen years ago country roads (and there was little, if any, pavement in the country districts at that time), continually traveled over by steel-shod wagons and horses, were badly cut up into ruts and holes.

Under these conditions passage over the highways was possible only by means of great effort and consequent irritation on the part of the traveler.

With the coming of the automobile and its pneumatic tires, however, the question of betted roads immediately asserted itself. Pleasure being the chief asset required of the automobile, the owner thereof demanded good roads over which to travel in his new "horseless carriage." Almost immediately road conditions began to improve, little by little, with the result that in a few years' time the good roads movement was launched.

Pavements of brick or asphalt and macadamized highways were built in proportion as the number of automobiles increased. As soon as automobiles were introduced into a community the residents began the improvement of road conditions as a matter of course.

Certainly motor trucks would not be possible and touring cars hardly usable were it not for rubber tires. The pneumatic-tired vehicle conserves the road surface, and very little repair work is needed to keep any well-built highway in excellent condition.

Besides heralding the coming of the good roads movement, the pneumatic-tired automobile has drawn the city and country together. It has bridged the gap, the time of demarcation that once separated town from country. To enjoy the advantages of both is the fortunate lot of many a present-day auto owner, not matter whether he resides in the country or in the city.

The good roads movement has visibly enhanced the value of country property, particularly that adjacent to main traveled roads.

The Auto Trailer.

One of the newest and most practical farming utilities which is coming into general use is the auto trailer. The auto trailer fills a distinct function for the farmer who has hauling problems to sole. While the motor car has simplified his carrying problems, the trailer is a step farther in automobile development which bids fair to effect new and valuable economies in farming operations.

A recent issue of the Michigan Farmer published an article from which the following is quoted:

"On Tuesday of this week, we saw a young farmer marketing 3,400 lbs. of corn with his pleasure car and a trailer. He carried 2,700 lbs. of the weight in the trailer and the other 700 lbs. in the car. It was 16 miles to market and he made the trip in one hour."

POULTRY

Poultry in Cold Weather.

It being so extremely important that poultry, during the cold fall day and nights rains and the bad weather of winter, to do well, be properly and comfortably housed, the Pennsylvania Department of Agriculture urges farmers and all others keeping poultry at this time to do the following things to their poultry houses this month.

First. To thoroughly clean by removing all rubbish, litter, dung and insterior fixtures; by sweeping down all walls, etc., and applying a coat of whitewash. And to do this on a clear, sunny day so as to promptly dry out.

Second. To see that the roof is tight and does not leak in the heariest storms.

Third. To batten all cracks to the north, west and east and if there are any windows or openings on the north side or in roof or at eaves to close up tight, with boards.

Fourth. To arrange or rebuild so that from fifty to eighty per cent of the south side is in openings in glass. It is important though, that there be not any considerable amount of glass in a poultry house. A house with a twenty-foot frontage to the south and eight feet from floor to roof on this side—the roof should always slope to the north, if it does not, turn the building or change its location until it does—can have an opening ten feet long by five feet high placed in its exact center and can have an ordinary sized window on each side of opening and be about right.

If your flock is not as good as it should be, a male judiciously selected will do a lot of good.

Fifth. To put in a floor, a tongue and grooved board floor, or an insulated cement floor. A great many farmers balk at this expense, but it is the thing to do if poultry are to have any chance at all to make good in bad weather. Board or cement floors in the poultry house are really feeding floors and floors under good management are always covered with deep clean litter with some grain always therein and the chickens always busy scratching. Such floors become polished like wax and the only cleaning they need is a weekly shaking of the straw to one side and the sweeping together and removal of the dirt and fine stuff.

Sixth. And most important of all, the chickens must like the house and be willing to spend most of the time therein.

Seasonable Hints.

When the pullets are put into winter quarters spend as much time with them as possible; all your movements should be quiet; when feeding encourage them to eat from your hand; it will not be long before they will recognize you as a friend. Never hurry into a pen unannounced; let the pullets know that you are at hand, so that they will not become startled when you appear.

This is the time of the year that colds are most prevalent. Keep the front of the house open, but see that there are no openings in the back or side walls to cause draughts.

Permanganate of potash in the drinking water,—enough to make it crimson—is not out of place. It may save colds from spreading.

Clean the drinking vessels often.

If your fowl are dying, don't guess what the trouble is. Send one of the dead birds to the Biological Laboratory, Experimental Farm, Ottawa. Dr. Wickware will be pleased to make an examination and to let you know definitely where the trouble lays. When sending the fowl it is not necessary to pay the express charges, as the Department will attend to that; but it is advisable to give symptoms as fully as possible.

SOLDIERS IN ARMOR.

Success of Helmets Led to Adoption of Body Shields.

Certain British war equipment factories have entered a new phase of work—the manufacture of body armor for the troops, writes W. S. Forrest, London correspondent of the Washington Post.

Added to their already complicated impediments, the Tommies will carry into battle a metal protection for their vitals against the deadly machine gun bullet. No intimation has been given by the War Office as to the exact make-up of the new armor, but it is supposed it will consist of thin, highly-tempered steel coverings for the heart, lungs and abdomen.

The success of the new steel helmet, designed against shrapnel, was partially responsible for the official decision to shield the men against machine guns. The lavish German use of these deadly weapons, together with an increasing clamor in England for more protection for soldiers also contributed to the decision. The War Office received scores of ideas for the new armor from civilians and army men alike, and passed these along to Sir Douglas Haig, the British commander-in-chief.

The first intimation that Haig had sanctioned the plan in general was made in the House of Commons with the announcement that the Government was taking steps to meet Haig's wishes. The Government will not supply the new bullet-stopping device to all of its 6,000,000 Tommies. The great numbers who constitute the army service corps—transport drivers, etc.—will wear no shields. Only the men in storming attacks and those who are called upon to face serious fire will be supplied.

Sir Arthur Conan Doyle, the noted author, has been one of the leading advocates of armored soldiers. His suggestion to the War Office called for steel of seven-sixteenths of an inch thickness, the equipment to weigh not more than 30 pounds.

He contended that 90 per cent. of the losses in the Somme offensive could have been avoided if the soldiers were entirely sheathed in armor. Adding that a complete shield was impracticable, he declared that at least two-thirds of the body could be easily covered, and thus two-thirds of the 90 per cent. of casualties avoided.

No Evading That Bill.

"I ordered some flowers sent to Miss Redbud, and I'll be hanged if the florist didn't send them C.O.D."

"Phew! Did she pay for them?"

"She did, and now, dence take it, I've got to pay her."

What He Did.

What do you do when you go home late at night and find your wife waiting up for you?"

"Wish I hadn't gone home."

Dubious Compliment.

She (at masquerade ball)—Do you think my costume becoming?

He—Yes, indeed; but you would be lovely in any disguise.

The Paisley Advocate

PAISLEY, FEB. 7th, 1917

—Do the actions of animals signify any knowledge of the coming weather? Well, the bear and groundhog could plainly see their shadows on Friday last. Are we to have six weeks more of this winter? The weather man asserts that the beasts are more frequently wrong than right. Is human science greater than animal instinct?

—Premier Borden is moving to provide salaries for the three new officials recently appointed. One of these is the Parliamentary Under Secretary of State for External Affairs, Col Hugh Clark, of North Bruce, whose services are to be rewarded with a salary of $5,000 per year. The office is to be continued through the war and until the end of the session after the war. It will not be necessary for him to go to his constituents to be returned in a bye-election.

—That stretch of much travelled and much neglected "no municipality's highway" connecting the Elora road at Paisley with the town line of Saugeen and Bruce, which became very miry last fall, is to have proper attention this year. The local teeves got together at the County Council and secured a grant which is to be supplemented by grants from each of the municipalities interested—Paisley, Greenock, Bruce and Saugeen each to bear a share of the outlay necessary.

—The many uses to which electric power can be adapted for household purposes are constantly increasing in number. The latest we have noticed is an electrical scrubbing machine which is being placed on the market. This machine washes, sweeps, scrubs and dries the floor at a single operation, and is driven by a ¼ horse-power motor. It is rather too expensive for the ordinary household, but it brings nearer the day when the old hand-scrubbing will be done away with. The owner of such a machine could scrub all the floors in a town once or twice a week. Cooking by electricity appears to be quite general in the town of North Bay, where there are 290 cooking ranges heated by electricity, instead of coal or wood. Orillia has only half a dozen ranges, but, says The Packet, there can be no question that at the present prices of coal, their lucky owners are saving money, as well as worry, their monthly bill for light, cooking, ironing and other purposes ranging from $3 to $6.

—In issuing a war loan in small denominations the Government is taking a step which has long been urged upon them by both parties. So far all the contributions of money for the prosecution of the war have been called for in such sums that only the well-to-do or the really wealthy could respond. Similarly, only the well-to-do could take advantage of the opportunity of investing their surplus cash at the attractive terms of interest offered by these war loans. Under the new plan about to be launched, nearly everybody will be able to contribute to the raising of the funds necessary to carry on the war, and small investors will be put practically on a par with large ones in the matter of interest earning on their money. We look for two distinct benefits from the issue of these certificates in small denominations—first the prompt placing of ample funds at the disposal of the Government for the purpose of providing for Canada's war outlay; secondly a marked incentive to thrift and greater individual saving. This is undoubtedly the most attractive investment ever offered to small investors in this country, and it is one, moreover, which it is the patriotic and personal duty of every citizen to take a share in to the extent that his means will allow.—Owen Sound Sun.

Frenzied Financing

While the Toronto dailies have raised the price of birth, marriage and death notices from 50c to $1.00, the county weeklies continue, as of yore, to run all such items free gratis. Our experience has been that a particularly vivid account of a marriage or a lengthy obituary on a death is almost sure to bring from some interested relative a request by mail for several extra copies of the paper—free. Such a demand is no assurance that you have made a hit in some quarters—and like the foolish virgins in Scripture who hadn't their lights trimmed, the editors can't see that they are thus slammed, where they are weakest—in their pocket books, for, sold as old paper, those extra copies would bring something, besides the postage expended in despatching them to the relative. As a bit of financing it is crazy enough for the asylum, and as likely to make dividends as the Bruce County House of Refuge. Some citizens have suggested that the two editors get committed to-day and elect the Town Council, but as the town wouldn't stand such financing as we do against ourselves, we would say, "Flow gently, sweet Afton, disturb not our dreams."—Herald and Times.

See Your Label

We have corrected our mailing lists up to Feb 1st, and all renewals made before that date are changed. We would ask all to examine the figures and see that proper credit is given for payment. If a label reads Jan 18, subscription is paid up to 1st Jan, 1918, and Jan 17 means that it is paid up to 1st Jan, 1917. From these two readings everyone can understand the figures that appear on the address label.

Because of the increases we have to pay for everything nowadays, and the closer terms of buying, we require a lot of subscription money to meet obligations at this time of year, and we would ask that all pay it promptly. The amount of one subscription is small, but when a few hundred delay payment it means a large sum is being withheld.

We must thank our subscribers for the loyal support we are receiving at this critical stage in our business caused by the absolute necessity of raising our subscription rate from $1.00 to $1.50 per year. It is indeed gratifying to find that the great majority of people can see that we must have more for our paper when everything that we have to buy is so much more expensive than formerly.

LOCAL AND DISTRICT NEWS

Nineteen Horses Killed

Through a railway accident up on the North Shore line of the C.P.R., Irwin lires had nineteen head of their shipment of horses killed and about five more badly mutilated. A head-on collision occurred west of Schreiber, and three of the horse cars rolled down an embankment. We understand the owners had the animals insured. Mr Clarence McAlpine, who was down here from the west, had charge of the shipment, and had two or three assistants, who all seem to have escaped injury in the wreck. Messrs Tiros and Jll Irwin, the shippers, have gone from Walherton this week to look after their interests. The whole shipment consisted of ninety horses.

Paisley Loses Hockey Game

The Paisley hockey team journeyed to Port Elgin on Friday and participated in a game which turned out to be more like the old-time "shinney" than the present day game of hockey. The ice had not been even or flooded in several days and was badly cut up and cracked in many places, making good hockey impossible. Paisley were leading 4-3, with less than a minute to go, when one of their players accidentally scored in their own goal, tieing the game up and necessitating twenty minutes of overtime play. During the extra periods Paisley had two shots to the boosters' one, but failed to add more than one to their opponent's three, the final score being 7-5.

Successful Box Social

Last Friday night was the fiercest of the winter, so far, and not at all what could be called auspicious conditions for a public entertainment. Nevertheless the patriotic people of S.S. No 8, Greenock and Elderslie (Jackson's) made their box social on that evening a booster for the Red Cross fund. The total proceeds amounted to $152.45, all of which goes for Red Cross. Of this sum $50 was realized from sale of tickets for a quilt donated by Mr Ias McArthur of Lovat. Wilson Metcalf was the lucky ticket-holder. The programme of the evening consisted of flag drill and chorus by the school children, club swinging by four girls from S. S. No 7, dialogues by boys and girls of the section, vocal solo by Mrs H. Lyon, recitations by Beatrice Lyon and Mr W G Ritchie, mouth organ selection by Howard Watson, and a parade of the flexible giants. The chair was occupied in a very acceptable manner by Mr H G Clark. The boxes were sold by Auctioneer Pearce, and the bidding was as wild as the storm, one going at over $8.00.

From the Front

Numerous acknowledgements have been received by the Paisley Women's Patriotic League for the Christmas boxes sent overseas to soldiers. The following letter is from a son of Mr and Mrs H Reed of town, who went to England as a quartermaster's sergeant with a Winnipeg battalion, but resigned his commission so that he could get into the fighting line earlier:

France, Jan 9th, 1917.

DEAR LADIES AND FRIENDS AT HOME —Your must excuse me for being so slow in acknowledging your gift of comforts, which was received on Christmas morning in good order. It made me feel like being back home in the big red house when I opened up your parcel and found a stocking filled with articles of which all are very useful. Two articles of which I must mention as being just what I was badly in need of are the tooth brush and paste. We had just come out of the front line a week or so before receiving your parcel, and while there I was about one morning trying to find a shell hole to have a wash and a general brush up, as my face had not seen water or a razor for nine days, and on finding the desired spot in an old trench I laid out my toilet articles and proceeded to do my face justice, but when I came to brush my teeth both paste and brush were gone. Upon investigating I found the rats had carried them into their hole for enough out of my reach that it would necessitate some digging, which I was not doing that morning, consequently your parcel brought to hand the very useful articles. The other articles were very useful, also, and those of which I had an overplus were distributed among the boys who were shy on such articles, which is what the boys in our section generally do. I must thank you all for the work you ladies have undertaken to do, and I am sure that the parcels, however large or small, have gladdened many a reminder's heart. I hope that you have the greatest success in the work you have undertaken, and may your efforts be crowned with the glory for which we are all fighting. Thanking you for your remembrance, of which I am very grateful, and wishing to be remembered to all my Paisley friends.

NORMAN REID.

THE TONIC THAT BRINGS HEALTH

"Fruit-a-tives" Builds Up The Whole System

Those who take "Fruit-a-tives" for the first time, are often astonished at the way *it builds them up and makes them feel better all over.* They may be taking "Fruit-a-tives" for some specific disease, as Constipation, Indigestion, Chronic Headaches or Neuralgia, Kidney or Bladder Trouble, Rheumatism or Pain in the Back. And they find when "Fruit-a-tives" has cured the disease, that they feel better and stronger in every way. This is due to the *wonderful tonic properties* of these famous tablets, made from fruit juices.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Jeweler and Optician

VILLAGE COUNCIL

Council met Thursday, Feb 1st. All members present except Mr Pearce. Minutes of last regular and special meetings were read and approved.

The treasurer reported all unpaid taxes that had been sued in the Division Court, collected.

Auditors' statement of 1916 accounts was presented.

Certificate read from Deputy-Registrar-General re births, marriages and deaths.

The clerk informed Council that Mr John N Collins made request for his deed of carpet factory as per agreement.

The following committees were formed:

Finance—Messrs Steele, Houston and Logie.

Property—Houston, Steele and Pearce.

Roads and Bridges — Sparrow, Logie and Pearce.

Cemetery—Pearce, Steele and Houston.

Fire and Light—Logie, Sparrow and Pearce.

Sparrow—Logie—That the clerk procure two copies of the Municipal World for the Council's use.—Ca.

Logie—Sparrow—That ..... incll have deed prepared conveying cer... factory property to John N Collins, and that the reeve and clerk are hereby authorized to sign same and to affix the corporation seal thereto.—Carried.

Houston—Logie—That a grant of $100 be made by this Council, to be used in conjunction with grants from the townships of Greenock, Saugeen and Bruce, supplemented by a grant of $200 from the County Council for the improvement of the road from the townline of Saugeen and Bruce to the Elora road, Paisley.—Carried.

Logie—Sparrow—That the usual grant of $175 be made to the Paisley Public Library, $100 of which to be paid forth with.—Carried.

Houston—Sparrow—That one hundred copies of the synopsis of auditors' report be printed as prepared by the clerk.—Carried.

Cheques were authorized to be paid for the following sums:

M Leitch	$45 00
H C Wilkins	33 33
Weighmaster	11 45
"	17 30
Paisley Public Library	100 00
Electric Light Co	47 48
Local Registrar	5 60
Returning Officer	3 00
D Rutherford	88
Paisley Advocate	21 40
H B Putnam	8 00
O L Carter	8 00

THE ADVOCATE will be a most welcome gift to absent ones of your family, whether in Canada or away to the fighting front in France.

THE DEATH ROLL

Mrs. Frank Coleman

—There passed away at her home in Kincardine, Jan 26th, Agnes MacPherson, beloved wife of Frank Coleman, in her 35th year. Mrs Coleman had been in failing health for some time, but was possessed of great vitality, and although she had many serious illnesses was always of a bright and sunny disposition. The sympathies of the public are extended to the young husband and little daughter, Thelma, four years old, who survive her. The funeral, conducted by Rev M McArthur, on Sunday afternoon was largely attended.—Review.

Alvin Rankin

The death of this former Paisley boy occurred at Calgary on Sunday evening, Jan 28th. He had been troubled with rheumatism for a number of years, and since going west two years ago he had been frustrated from the same cause at different times, and it had affected his heart. On the evening of his death he was changing his shoes, when he suddenly fell over and shortly after breathed his last. The remains arrived here on Saturday afternoon accompanied by his two brothers, James and Thomas. A funeral service was held in Knox church on Monday afternoon, conducted by Rev Mr Little. Interment was made in the Paisley cemetery. The deceased was the youngest son of the late Archibald Rankin, and is survived by his mother and four brothers—James of Calgary, Thomas and William of Duluth, and John of Portland, Oregon, who have the sympathy of all old friends here in their bereavement. Alvin was 32 years of age.

Mrs. Beattie

Jane Scofield, widow of the late David Beattie of Allenford, died at the home of her daughter at Cairo, Ont. on Jan 30th, having been stricken very suddenly from heart trouble. The deceased was a daughter of the late ..... Scofield, who lived at Burgoyne in the early days, and was born in Scotland. After her marriage she lived in Keppel and at Allenford. Mr Beattie died ten years ago. For the past two years Mrs Beattie made her home with her daughter, Mrs Alfred Welhanu, at Cairo. Other members of her family are Mrs W Allen, of Allenford; Mrs Bell—David and Albert, at Shallow Lake; John, at Allenford; Wm, in Toronto; and Adam, with the 147th in England. Three sisters of deceased are living—Mrs T T Patterson, Sarnia; Mrs Moffat, of Greenock, and Mrs H Reed, of Paisley. The funeral took place on Friday afternoon from the Reed residence, the services being conducted by Rev Mr Crighton. Interment was made in the family plot in Salem cemetery.

ARCHIBALD MCFADYEN

Death again visited one of our pioneers in the person of Archibald McFadyen, Lot 23 Con. 1 Bruce, on Saturday, Jan 20, 1917. Mr. McFadyen was born in the year 1847 on the Isle of Tyree, and as a small child emigrated to Brock in the County of York and from there to Bruce Tp., being one of the first settlers, where he spent the most of his life. As a young man he worked at carpentering in the United States. Forty years ago he was united in marriage to Janet McFadyen, also of Bruce, who along with nine children still survives him. They were blessed with five sons and six daughters, two of whom predeceased him. The surviving children are: Angus of Lot 2 Con. 1 Bruce Tp., Hector at home, Hugh of Newdale, Man., Alex of Rochester, N. Y., Martin of the south Bruce Peninsula, W. H Fulcher of New York City, Mrs J N Montgomery of Tiverton and Florence and Kathlyn at home. All were able to attend the funeral except Martin who is overseas, and Mrs Fulcher who is in Florida for the winter. Mr McFadyen was very well known and highly esteemed and his death came quite unexpectedly and is deeply regretted. The funeral which was largely attended took place to the Tiverton Cemetery.—Watchman.

—A three million dollar plant for the building of airships is to be established at Camp Borden, with an aviation school in connection.

FIFTY YEARS AGO

First General Session was Held in Bruce County—Interesting Facts Recalled

We have heard no one mention the fact that this is the fiftieth year of the organization of the County of Bruce. Before the first day of January, 1867, it constituted a part of the County of Huron and Bruce.

From Mr. Thos. Ulleon, Clerk of the Peace, we have secured interesting information regarding the first General Session held in Bruce County.

In those days the General Sessions was held quarterly in March, June, September and December, for some years they have only been held half yearly in June and December.

The County put on its war paint by holding the first General Session on Tuesday the twelfth day of March, 1867, presided over by the late John Jacheran Kingsmill, supported on the bench by John Gillies, the then Warden of the County, other justices of the Peace being present. The Sheriff was the late William Batten. The Clerk of the Sessions, the late D. W. Ross. The Clerk of the County Court, the late William Gunn, and the Crier the late Samuel Roether, afterwards the late William Richardson was appointed the crier of the Courts. High Constable the late Ezra Anson Healy. Twenty Grand Jurors attended of whom the foreman was the late Simon Bricker.

The Grand Jury brought in a true bill against Archibald McKinnon for Common Assault who upon arraignment pleaded not guilty on which a jury found him guilty and the judge sent him to gaol for a month with hard labour. Peter Sinclair made claim to a patent for lot one in the second concession of the Township of Bruce.

The jury who tried McKinnon was composed of Vickerman Addison, Angus Bowie, John Connell, James Coll, Wm. Clydesdale, Adam Fisher, Jas. Gray, Jno. Gray, Dunc. Kerr, Arch. Morrison, John McKay, and George McKay. On the second day a true bill for assault (commoe) was brought in against George Minard, who upon arraignment pleaded not guilty.

The jury who tried this prisoner and found him guilty was Thos. Barry, Vickerman Addison, Thos Mogg, Robt. Wilson, Alex McGillivray, Geo. Kerr, Dunc. Kerr, William Meadows, Duncan Ross, William Johnston, John Gray and William Johnston. The sentence was one week without hard labour. On the fourteenth the Court audited the Criminal justice accounts, those present besides the judge being Jno. Gillies, Wm. Rastall, Wm Hall James Rowand, Michael Fischer Peter Reid, Robert Purvis, Robert Pinkerton, Donald McLennan, James Brechlebank. J C Eckford is the only surviving justice whose name appeared on the commission of the peace read at the opening of the court.—Tele er .

COUNTER CHECK BOOKS

People Talk About Economy

But how many really KNOW, have PROVEN that there is no economy equal to that of buying and eating healthful food?

This economy sometimes spends a few cents more a week on Groceries just to be sure.

This economy distinguishes between what is low priced and dear, and what is moderate priced and cheap.

This economy considers the health of a family, the most valuable of assets.

To people who practice this sort of economy we commend this Grocery stock of ours.

Our methods have stood and are standing the severest tests along this line.

If you appreciate the top-notch Grocery quality —investigate.

Successor to Dr. Morrison.

WHEN THE GERMANS CAME

A Dream

The British fleet had been practically wiped out in battle, and those few ships remaining were captured; the armies of the Allies, because of a shortage of men, had given ground and were forced to surrender; France had been overrun; London, after a long seige had capitulated; Italy and Roumania were under Germany's thumb; Russia had made a separate peace with the conquerors in return for Constantinople and the Dardanelles, and all Great Britain's overseas dominions had been ceded to the government of the Kaiser Wilhelm. Great Britain was a memory; the war was over; might had won over right!

On the eastern shores of Canada a million Germans landed from transports, and the few thousands of Canadian soldiers who had been training for overseas but had not been carried over, aided by the untrained—all those who would not fight in France but always maintained they would shoulder a rifle were their country invaded—went to meet them.

Battle of St. Lawrence

A terrible, though one sided, battle was fought along the banks of the Gulf of St. Lawrence, and the victorious Huns marched through the province of Quebec, destroying towns and villages, murdering civilians, raping the women, pillaging—on to Montreal.

There was no opposition from the city of Montreal. The mayor hurriedly assembled his council and ordered the capitulation of the city. Truth to tell that there were not sufficient French-Canadian soldiers in Montreal to guard the post office, let alone the city, and that metropolis, as well as the Province of Quebec, through sheer apathy, had to depend on soldiers from other parts of the Dominion to fight for them. These soldiers, however, had been defeated—yes, routed—and were no longer an army, but rather an armed mob.

What About the Monroe Doctrine?

In the meantime, friends of the Allies in the United States went to President Wilson and said: What about the Monroe doctrine? Are you going to allow these foreigners to destroy Canada as they did Belgium and Servia and Roumania and France and England?" And Wilson rubbed his hands a la Shylock, and answered them: "Mine friendts, ve say noddings. Der Kaiser is our best custom er!"

And so the United States stood aside and Canada was conquered!

Then the victorious Germans, having reached Ottawa and seized the Royal Mint and the Houses of Parliament and the bullion and the records and the reports, sent forth the order that no one over ten or under seventy-five years of age was to leave the country under penalty of death.

Simultaneous with the coming of the Germans all those fathers and mothers in Canada, who in the olden days sent their sons over to the States to avoid enlistment asked these self same lads to come back again. These people were ignorant of German methods and German rule, but were always sure that if the British lost, life under the Kaiser Wilhelm would not be as bad as Canadian and British papers and orators had told them.

Canada was neat fined one billion dollars for taking the Mother Country's part in the Great War, and another half billion for putting up a defence against the German landing party. And there were evil days in store for Canada—which was called New Germany—because soldiers went all over the country making new laws, confiscating property and food and clothing and horses and cattle. All along the boundary line they watched that nobody should leave the country, and anybody so doing was promptly shot without trial.

Then all males between the ages of fifteen and sixty were called up for military service—no excuses were taken, no quarter was given—and these recruits had to submit to insults and abuse from insolent, pig headed, pot bellied butchers in the uniform of the Imperial German army. A militaristic government was set up at Ottawa, and the country was overrun with men in uniform.

And those who had relatives in the German prison camps were forced to do all kinds of menial labor, under threat that the lives of their dear ones would be taken if they refused. Others were chained together and sent to the mines to mine ore to be used in the construction of battleships, guns, and all kinds of death-dealing devices for the Fatherland.

Germany was in complete control of the country!

The press had been muzzled and free thought and free speech had become a memory. Editors who dared publish what they thought had their hands hacked off by the victors, those who by word of mouth spoke of the good old days had their tongues cut out. Children and women were placed in institutions where tortures never heard of during the Spanish inquisition were brought into use.

Ah, it was a devil's state of affairs!

As time wore on, farmers who had two hundred acres of land were compelled to give one half back to the State, and the State, in turn, gave this land to the Germans from the Fatherland. Taxes went sky high, but it was the Canadians who were forced to pay them.

Deposits in the banks and the post office were seized, railways, steamships, telegraphs, cables, telephones—all were under government control, and woe unto him who used these things without permission or until after they had paid an excessive price. All confiscated food was sent to Germany, but the Canadian soldiers in their camps died from lack of such sustenance.

Huns Take Possession

All stores and places of business were closed, and in their place arose institutions run by Huns. Beer gardens were one of the innovations of the conquerors, and the scenes of more hideous drunken orgies than were ever known before. Suicide became popular; crime increased.

The English and French languages were banished from the schools and the German language was compulsory. No man could go from one place to another without having to undergo a rigid examination before the soldiery: all letters were opened and censored so that no evil report would go abroad.

Laws were enforced that no two men could talk together for more than a certain length of time lest they be hatching a rebellion; lights must be out by nine o'clock every night, and no working man should receive more than fifty cents per day in wages. Soldiers were paid nine cents.

Women were Abused

Women were herded in schools and told that their only function in life was motherhood and they must obey the country's laws, raise large families, and thus secure big armies for the Kaiser. Disobedience to any law meant illtreatment of the devil's conception.

Busts of the Kaiser Wilhelm were placed in all public places, and the people were compelled to bend their knees in passing. The Germans continually harped that they were "God's Chosen" and were intended for the "Real Bosses of the world."

And religion all simmered down to that of the Evangelical Church. No more were there any Presbyterians, nor Anglicans, nor Baptists, nor Congregationalists, nor Latter Day Saints, nor Roman Catholics.

The priests went to the Governor at Ottawa.

"We told all our Roman Catholic young men not to enlist to fight against you," they said. "Now what do we get?"

Roman Catholics Get Their Answer

The Governor called a guard.

"Take these men and have them shot at sunrise. In telling your young men not to enlist, they disobeyed the laws of our enemy. In like manner would they disobey ours. Germany is supreme, Germany is all! The Roman Catholic Church must not be permitted to stand in the way of the government of His Illustrious Majesty, Kaiser Wilhelm. Under penalty of death, I forbid anyone to be or become a Roman Catholic; I hereby proclaim that the Roman Catholic Church is no more.

So the priests were taken out and shot, and their churches, in fact all churches, were seized and converted into Prussian Evangelical institutions, and no man nor woman nor child could be Roman Catholic under peril of his life.

And all this was the result of a short age of men on the west front. A shortage of men caused in Canada by the priests forbidding the Roman Catholic young men to enlist and parents sending their young men to the United States to avoid their duty to their flag and king.—Orange Sentinel.

CANADA STANDS PREPARED TO CONTINUE FULL ASSISTANCE

Bank of Montreal Annual Meeting Marked by Striking References to Part Played by Dominion and Lays Down Policy For Country's Guidance. Campaign of Thrift Strongly Urged. Bank's Record at Front.

Canada's position in the great European war—the policy the Dominion should follow in order to be at all the better prepared for post war conditions—the resolve of the country to continue to give, in youth and money, full assistance to the great cause and the aims some of the outstanding features of the Ninety-Ninth Annual Meeting of the shareholders of the Bank of Montreal held at the head office.

The importance of the announcements made and their bearing on conditions that the Dominion would most likely have to meet seemed to impart a special significance to the meeting, and the shareholders were quick to give their heartiest support to the suggestions firmly offered by Sir Vincent Meredith, Bart., President, and Sir Frederick Williams-Taylor, the General Manager.

There was no misunderstanding the firmness of the suggestions as it was clearly shown that many of the conditions that prevailed in the country were merely of a temporary character, and what was most important was to get ready for the time when normal conditions only might exist.

In this connection it was pointed out that all efforts should be centred on the attainment of three objects viz., Economy, Production and Immigration but at the same time a note of confidence was struck as to the ability the country would show in dealing with any new problems that might present themselves.

Fine Record in Overseas Service.

Sir Frederick made special mention of the record of the staff of the Bank of Montreal overseas, saying:

"As for the Bank of Montreal Contingent with the colours, I have no words sufficiently eloquent wherewith to fully express our pride in their achievements, our grief in their losses, 48 per cent. of our total male staff, or 42 per cent. of those of military age, have enlisted, 61 of our best have been killed and 107 are wounded, this is a heavy toll of war. Many of our men have been decorated by the King for conspicuous valour and the whole contingent is illustrious."

A similar appreciation was given by the shareholders when Mr. Yuile, on their behalf, asked to be allowed to especially compliment Sir Vincent Meredith on the great honor which had been conferred upon him during the course of the past year, in being created a baronet. Mr. Yuile pointed out that this was regarded by the shareholders not as an honour to Sir Vincent alone, but to the Bank as well, and the honor conferred was alike popular with the shareholders and the public generally.

The vacancies in the Board of Directors were filled by the election of Captain Herbert Molson of Montreal, and Sir Harold Kennedy of Quebec. At the first meeting of the new Board of Directors Sir Vincent Meredith, Bart. was re-elected President, and the Vice-Presidency, which had been vacant for the last few years, was re-established by the appointment of Mr. H. Geoffrey, President of the Dominion Textile Co.

Sir Vincent Meredith, Bart., President in reflecting on the principal developments of the year and the steps that should be laid to cope with them said in part:

"I hoped when I last had the pleasure of addressing you that before this Annual Meeting the end of the cruel and desolating war, which has convulsed Europe would be in sight or at least within measurable distance. In this expectation we have been disappointed. No one can see the day of the termination but I am sure I express your feelings when I say we hold an unshaken confidence in the ultimate victory of Britain and her Allies.

"Canada inspired by a deep-rooted loyalty to the Empire, has given and is still prepared to give freely her gallant youth and monetary means to the great cause, upon the success of which her liberties and national existence so greatly depend.

"As the result of the phenomenal crop of a year ago, coupled with vast expenditures by the Allied Governments in this country, for munitions, and by our own Government for requirements in connection with the war, high wages are being paid for all classes of labour, and trade conditions at the moment in Canada are buoyant in nearly all lines of business. The few exceptions will generally speaking be found in industries connected with the production and sale of luxuries.

Success of Domestic Loans.

In a little more than a year Canada has issued two Domestic Loans amounting to $200,000,000, and the Canadian Government, has borrowed in New York $35,000,000. The success of the internal loans is a matter of pride and congratulation. It is due largely to the spirit of loyalty of our people and a determination in all within them to bring the war to an early and successful conclusion.

"So far, a depletion of bank deposits in consequence of these contributions has not taken place. In fact, during the month in regard a gratifying increase. It must not be forgotten, however, that these increases are only partially due to the savings of our people. They may be accounted for to a very considerable extent by the withdrawing of resources by our large corporations, a prudent and wise precaution in view of the uncertain conditions which now prevail and will continue to exist during the continuance of the war.

"The Minister of Finance to whom the country owes much for his wise and far-seeing consideration of our financial affairs, will doubtless keep in view these conditions when making further calls on our resources, which of necessity he must do from time to time.

Outlook For Post War Period.

"And now, as my remarks draw to a close, I am tempted, contrary to my usual practice and unreinforced by the old adage 'Never prophesy unless you know,' to look into the future. The thoughts of many men are focussed towards the problems that will confront us after the war. Government conventions are dealing with them; the press devotes much space to their discussion; international conferences have met but our first, obvious and imperative duty is to WIN THE WAR.

"When that is done, new conditions will necessarily prevail. Never. It seems probable that for some months to come, orders for munitions and war supplies will continue to keep our industrial plants actively employed.

"Canada is bearing up magnificently under the strain of this world-wide war, and sacrifices will be amply repaid by the engendering of a spirit of self-reliance, and she will emerge a comparatively little known country to take her rightful position in the affairs of the nations.

"The future, as I have said is beset with new problems and is not entirely free from financial anxieties, but by a young people possessing great national spirit, a territorial Empire and unrivalled natural resources the future can be looked forward to with hope and confidence."

General Manager's Address.

Sir Frederick Williams-Taylor, the General Manager, dealt especially with the main features of the changes in the Bank's business during the course of the year, and the manner in which Canada's adverse trade balance was disappeared as though by magic. Sir Frederick said in part:

"The outstanding business feature in Canada is an industrial condition more abnormal than ever before in the history of this Bank, or of the country.

"The same statement applies in a greater or lesser degree to several belligerent and neutral countries, but in Canada economic conditions as well are in an unnatural state. This is partly due to the war, also a result of suspended immigration and of a lengthy period of extravagance of which we are now feeling the cumulative effect.

"Canada sold her enormous crop of last year at high prices, as in the years of the American (1861) War, while this year we are disposing of a moderate crop at such steadily moving prices that we again reap a golden harvest about equal in amount to that of 1915. The total value of last year's crop was $750,000,000.

"Our much criticised adverse trade balance has disappeared as though by magic, and our exports are now vastly in excess of our imports.

Note of Caution Sounded.

"The transient nature of our increased exports alone is a simple index to a situation that commands the attention of all thinking people.

"These views may not be acceptable to all but they are common sense and based upon indisputable facts. To be forewarned is to be forearmed.

"These are the main factors that have influenced and will influence the banking position and management in deposits and loans and the safety of both. Therefore in my opinion, the business of this year should be conducted with such views plainly before us until the situation clears.

"These are two obvious means of lightening Canada's enormous burden, thrift and immigration. The two are closely allied, for only by practising national and personal economy or thrift can we reduce our high cost of living—the most effective barrier to immigration. Upon immigration we mainly depend for the future development of our undeveloped natural resources.

"Thrift is everyday but can be started forthwith. Immigration must wait, but should follow in natural sequence. I have urged during my command with which to adequately urge the necessity of an organized and individual effort to promote thrift.

"The timely and eloquent 'Call to Action' of our Minister of Trade and Commerce commands attention in the strongest possible terms. I am free to say that the importance of the problems of the situation be impressed upon those who are living their lot we say, the leaders of the nation.

"Some optimism and self-confidence are admirable national qualities and should be the order of the day. There is a point where optimism loses its value and the danger of over-confidence begins. That is the point for nations to avoid."

Bank Helping the London Market.

Sir Frederick drew attention to the important position occupied by the Bank now in the London market. In this connection he said:

"It is not out of place to mention here that this Bank is among the important and experienced bankers of short money in the London market, and though it is not our desire to take praise for this yet the fact is not to be lost sight of when weighing Canada's assistance to the Empire in this war."

THE MAN WHO "MADE GOOD."

"I believe you have a yellow streak in your nature."

Had the woman lashed the man across the face with a whip she could not have stung him more bitterly. He sat hunched-up in the chair. His cheeks became sallow and bloodless.

"Will nothing move you?" she went on passionately, as no word came from his parched lips. "Isn't there a grain of patriotism in your constitution? Look at Jack—Jack, my best-loved brother! Did he wait for compulsion, or for his group, or whatever you call it, to be summoned? No. And a tiny cross marks his grave out yonder in Flanders."

Something akin to a sob strangled itself in the throat of the cowering man.

"Fred," she went on mercilessly, "fell in Gallipoli, Ben died the death of a hero in the Dardanelles, and Willie—Willie, the youngest, the Benjamin of the family—was dashed to death from the skies. Four out of six brothers who have given their young lives for their country; two still at the Front. And my husband, the man I swore to love, honor, and obey, thirty-two years of age, strong, healthy, physically fit, skulking at home on the plea of business."

"Don't! For the love of Heaven, don't!" pleaded the man.

They had had it all over before. It had been the only serious quarrel of their married life, this question of enlistment. The man hugged the belief that he was temperamentally unfitted for military life. Appeals to his patriotism left him cold. He conjured up pictures of his dainty, frail wife struggling along on the separation allowance of twelve-and-six a week, living in one room, going short of food, having to accept charity. And he thought his duty was to stay at home until he was fetched.

Repeatedly she had urged him to go. If other women could live on twelve-and-six a week, if other women could work, then so could she. Yet all her arguments, all her pleading, all her sarcasm had been in vain.

And now she was having one last try to make him not only a soldier, but a man as well. It hurt her because she loved him. But wise little woman, she knew that he possessed one of those natures that want "gingering up."

"I've thought the matter over very carefully, Jimmy," she went on, more calmly. "I'm not acting in the heat of passion; I'm not going to do something I shall regret later on. I'm going to leave you!"

He started up from his chair, but with an imperious wave of the hand she motioned him back.

"I've said that at the altar I swore to love you," she added. "Could any true woman love a coward? I swore to honor you. Instead I have grown to despise you. I swore to obey you. Hitherto I have done so, but, Jimmy, I've obeyed you for the last time. All my things are packed. I've given you the chance to be another man and you've refused. So in future our paths lie apart. Good-night!"

Two hours later she left the house, and the man did not try to stop her. He knew she was right.

Eight months slipped by. No word passed between them. At first he loathed the rough shirt, the coarse socks, the heavy boots, and he hated the drab color of his khaki uniform.

Then gradually he began to change. Early rising, open air, and exercise made him hungry. His muscles grew and his chest expanded. He carried himself with a swagger. The sergeant-major said he was the best soldier in the whole bally crush.

He thrilled with ecstasy when he saw his name in the next draft for France. In his first engagement he felt no fear; only a glorious exhilaration that he was doing his bit.

A piece of shrapnel got his right arm. When he came to, it had been amputated. He didn't care twopence for the loss of the limb, but what he did care about was that his brief career as a soldier of the King was over.

While he lay in hospital he thought things over. His wife—what had become of her? She had stigmatized him as a coward. What would she think now that he was maimed and broken? Where could he find her? Would she want him back?

The nurse in the hospital slipped a two-shilling piece into his one sound hand and bade him go for a 'bus ride into the country.

"Have a regular sun-bath," she told him.

He clambered painfully to the top of a motor-'bus running to Richmond.

"Fares, please!"

Heavens! Where had he heard that voice before? The blood rushed to his head.

With a tremendous effort he turned. His eyes started at the boots; then they took in the short, trim, blue skirt; then came the tunic with its pretty white facings, its bell-punch and money-satchel hanging crosswise. And then he was looking hungrily into the eyes of his wife.

"Jimmy! Thank Heaven, my Jimmy!"

She breathed rather than spoke the words. But in a moment she was sobbing like a child, gripped firmly in his one sound arm.

The 'bus rolled on its way; but nothing in the world mattered.

Her Jimmy had come back. And he had made good!—London Answers.

WORKERS DEMAND PEACE.

Peace Movement Grows Despite Arrest of Leaders.

The arrest and sentence of Liebknecht, a leader of the Social Democrats in Germany, for daring to tell the truth about the war and demand peace, created a deep feeling of resentment among the working classes, and accentuated the growing popular demand for peace, says Madelina Holy, who spent last summer in Germany, studying conditions among the masses, for the New York Tribune.

The demonstration that caused Liebknecht's arrest occurred in Leipziger Strasse and Potsdamerplatz, where several thousand were gathered. Liebknecht's appearance was enthusiastically cheered, but he told the crowd not to cheer for him, but to shout rather, "We will have no more war, we will have peace, now."

The crowd took up the cry and a mighty shout of "We will have peace now" rolled in tones of thunder along the avenues.

Miss Doty says that the gaols are full of peace radicals, four hundred serving terms in Stuttgart alone and corresponding numbers in all the big cities. Every Liebknecht radical is clapped in gaol by the military authorities, but this does not stop the growing desire for peace, and peace meetings have been held all through the Empire and petitions signed on a basis of the "status quo" before the war. So strong is the movement that meetings were tolerated on these lines. Revolt is spreading quietly among the workers and on the day of Liebknecht's imprisonment 5,500 workers in one munition factory alone, just outside Berlin, went on strike for the entire day as a protest against the action of the military authorities.

Liebknecht was sentenced to four years' imprisonment at hard labor, which was given as little prominence as possible in the German newspapers, that day being chosen to smear the pages over with big type proclaiming the return of the Deutschland to Bremen, when as a matter of fact the submarine merchantman had been in port several days. It served, however, to direct attention in a measure from Liebknecht fate with an announcement calculated to arouse national pride of achievement.

MILK PRODUCTION

Remarkable Records Made at Provincial Institutions.

That Ontario's milk production, and consequently her production of butter and cheese could be doubled, even trebled without adding a single dairy cow to the total now being fed on the farms of the province and without adding materially to the cost of maintaining them, is the rather astonishing lesson driven home by the results secured in milk production from the herds maintained at the provincial institutions.

The records for the year compiled by S. E. Todd, director of farming in the Provincial Secretary's Department, show that the milk production of the Holstein herds averaged from 8,000 to nearly 10,000 pounds of milk per cow. The average yearly production dairy cows for the whole province is but 3,500 pounds per cow, and of first class dairy herds about 5,000 pounds per cow.

The improvement in output has been secured by a policy of constant weeding-out, by keeping heifers from only the best milkers. A minimum is set and the cows that do not reach it are eliminated. At the Hamilton Asylum for the Insane, where in six years 225 cows have been passed through to make up a herd of 75, the production of milk averages 9,825 pounds per cow. At this institution there is one Holstein pure-bred giving over 20,000 pounds of milk per year.

During the year at Brockville, Orillia and Woodstock, the herds have been changed from Holsteins to Shorthorns in order to give a supply of beef for the institution in addition to milk. Although the Shorthorn, as a double-purpose cow, is not supposed to be a particularly good milker, the herds at the institutions have given from 6,269 pounds per cow up to 6,820 pounds.

The 521 cows in lactation during the year produced 3,169,267 pounds of milk, conservatively estimated as a saving of $70,000 to the institutions of the province.

PEACE TERMS TO BELGIUM.

Germany Accompanies Proposal With a Threat.

The London Daily Telegraph prints prominently the following:

"We have received information from an unimpeachable source that the Central Powers recently offered peace to Belgium on the following terms: 'The Belgians are invited to insist upon immediate peace. In return for this their country will be restored to them, its independence guaranteed and financial assistance given for its economic rehabilitation.'

"In the event of these terms being refused the intimation has been given Belgium that her very existence—her monuments, her public buildings, and even her towns—is threatened."

Experience is a wise teacher because she never pampers her pupils.

The best advice is usually unpleasant.

KAISER IS A FALSE PROPHET

FRANCE IS NOT DYING, SAYS A PARIS EDITOR.

They Would Perish on Battlefield Before Submitting to Germany.

Frederick Boyd Stevenson writes as follows in the Brooklyn Eagle:

"Von Hindenburg says France is dying."

We were drinking our coffee when I said this to him. There were six of us in India House at a luncheon given by Maurice Leon, the French lawyer of New York, in honor of Stephane Lauzanne, editor-in-chief of the Matin of Paris, who recently was called from Verdun, and is now with the Minister of Foreign Affairs of France.

Monsieur Lauzanne smiled at my remark.

"If," said he, "that were true, France would still welcome the war, for every man, woman and child in France would rather die than submit to Germany.

His answer was characteristic of the spirit of France, which has been interpreted to us not by the mere words of Frenchmen, but by their wonderful morale and bravery, which wrought victory from defeat at the Marne and which has been fashioned into glorious permanency by the magnificent defence at Verdun and the brilliant offensive on the Somme.

So, with more leisure at our command, we resumed the topic the other morning at his hotel in Manhattan.

"What I said to you yesterday," he began, "is the sentiment of the whole French people. General de Castelnau, who had three sons killed in battle before the fourth son is a prisoner of the enemy, said, 'The whole French race will perish on the battlefields rather than submit to Germany,' and in saying this he was speaking for the entire nation. We have suffered much; we are ready to suffer more. We have made many sacrifices; we are ready to make more.

The Kaiser's Voice.

"'France dying?'

He repeated my query.

"Von Hindenburg simply echoes the voice of the Kaiser. He says what the German Emperor directs him to say. So it is the Kaiser who is speaking. He is speaking to a press representative of Austria—to cheer that Austria which has faltered as an ally of Germany and which would have collapsed had it not been for the aid of Germany. Yes, it is the voice of the Kaiser, whose prophecy is false. Let us see what the Kaiser has prophesied before.

"In 1915 at Cracow," he said: 'Germany will never be defeated. The Almighty uses Germany to accomplish a mission.'

"In November, 1915, he declared to his soldiers on the Russian front: 'I guarantee it to you. You are reaching the end. This end comes and will reward you for your sufferings.'

"In March, 1916, he said: 'The enemy begins to yield before Verdun, and, in the meantime, our allies chase the Italians from mountain to mountain. The halo of admiration of England over the world has disappeared.'

Monsieur Lauzanne spread his hands before him.

"There is the prophet who says France is dying," said he with a smile.

"France to-day was never stronger, never more united in determination to punish a foe who has been unequalled in all the histories of wars for brutalities, for violations of the laws of God and humanity and for acts of atrocities which would dismay barbarians. We have suffered and we shall suffer. We shall suffer till we win—and we will win!

"Little by little we are pushing on—no matter how long it takes—we shall enter Germany and the peace that follows will be on our terms."

DRAMA OF THE SKIES.

Visit of Hun Zeppelin Excites Event to Villagers.

A correspondent of the London Chronicle writing from one of the northeastern English towns recently visited by German airships gives an interesting account of the exciting event which he describes as "a thrilling drama of the skies."

Hundreds of the inhabitants witnessed the sight and "men's nerves tingled with the joy of battle as they saw a hostile invader held four full minutes by a powerful searchlight while the guns thundered at the enemy."

The approach of the enemy had been heralded by the warning droning notes of her high-powered engines. As the air-defence guns found the range the Zepp seemed to be hit and hastened to get away from the hail of shot and shell and the spectacle so exciting for the populace was over. Bombs were dropped from the airship, but not a single casualty occurred, nor was any damage done to public works or places of any significance.

If men voted as they talked, some of them would be voting all the time.

SWISS ARE KIND TO OUR MEN

THEY ARE LIVING IN AN EARTHLY PARADISE.

Wounded British Soldiers Are Comfortable in Beautiful Switzerland.

The London Daily Mail publishes the following article descriptive of invalided British soldiers in Switzerland:

A few days ago as I sat basking in the blazing sunshine of Chateau d'Oex a British soldier hobbled up and asked me the war news in my Journal de Geneve. When I had read the daily summary, I asked what he thought of Chateau d'Oex. He raised his scarred, bronzed face to the divine rays of the sun, stared a moment silently at the mountains, and answered, "We have come into paradise."

The relatives and friends of the British soldiers interned here can picture the home of our men if they imagine a stage setting of a musical blaze of almost tropical sunlight, pine-skirted mountains soaring into a sky of turquoise blue; wooden chalets more romantic than any the stage ever devised, a chiming of musical bells all day; meadows more green and lush than our own April emerald; moonlight that swims over peak and valley and dusky forest; days like days of rarest English June; October nights so warm that one pulls the bed to wide-open balcony windows to breathe for the whole twenty-four hours this magic air.

The Sun Cure.

On the balconies of these hotels British convalescent soldiers, brown-skinned as any Indians, lie half-naked for the final sun cure of their slow-healing wounds. The street of Chateau d'Oex is full of loitering British soldiers, whose happy faces are burnt like the faces of Alpine climbers. The first party of interned men's wives dreaded having to meet husbands who were human wrecks; the are greeted by phalanx of hardy bronzed heroes. There are, of course, men here who are terribly wounded; I have seen suppurating, two-year-old wounds when the dressings are removed in hospital and marvelled that men have lived after such maimings. But mountain air, floods of sunshine, a land of glory, and tender sympathy, are all working new daily visible healing.

Splendid Quarters.

There are already about 550 British officers and men quartered in this lovely valley of the country known as Pays d'Enhaut, and 200 more are expected next month. Chateau d'Oex house about 250 in hotels or chalets, the remainder are within a "front" that extends along the valley from Rougemont to Rossiniere, a distance of nearly ten miles. Invalids and men still unhealed of wounds are quartered at the Soldanelle, a large building that was already a clinic before the war. The Swiss authorities have fitted it with an operating room for electric treatment. Other men where wounds are more advanced towards healing are quartered at the Berthod, a first-class hotel.

It is pleasant to be able to tell British people how comfortable and, indeed, luxurious are these soldiers' quarters. There is spacious width of sun-trapping verandahs and balconies, profusion of easy cane chairs; the bedrooms are airier and the beds more comfortable than in many British hotels.

Change of Diet.

I can imagine how Swiss soldiers accustomed to their delightful light breakfast of coffee, bread, and butter would turn away from our heavy English breakfast fare. But Mr. Atkins turns away from the Swiss petit dejeuner. He is pining for bacon and sausage. I have talked to scores of British soldiers here, and their conversation as eternally recurs to bacon and sausage as the tent talk of Shackleton and his comrades-turned to fats and oils. Work and play are also needed.

GERMAN FOR DUTCH THRONE.

Steps Taken to Prevent Succession Going to Foreign Prince.

There is danger of the Dutch throne being occupied by a German prince. Only two lives, those of the reigning queen and of her daughter, Princess Juliana, seven years old, bar the way in the natural order of things to the accession to the throne of the Netherlands of a German prince. This question is giving Dutchmen much concern, and an agitation has started for a revision of the constitution declaring null and void all potential rights to succession of foreign princes leaving the choice of a sovereign, in case of interrupted succession, to the Parliament.

BETWEEN THE TRENCHES.

French Ceasing Firing to Allow Germans to Rescue Comrades.

Sapping deeper, the French engineers had countermined their foes, and very early in the morning, with a thunderous explosion, they blew up the German position. Many Germans were killed, but some escaped and ran for their nearest trench. The French leaped their embankment and dashed forward to occupy the crater that the explosion had made; but the enemy's fire drove them back. So, now, French and Germans faced one another not thirty yards apart, with the demolished trench between them, neither army able to occupy it.

None dare show his head above the trench, for sharpshooters watched with keen eyes and ready rifles from the opposite positions. A great silence reigned, broken only by the agonizing cries of the wounded who were unable to crawl back to their lines.

Gradually the cries of these unfortunates ceased, all except one, whose piteous wails filled the air: "Hilfe! Hilfe! Um Gottes willen!" he repeated over and over again. But none dare go to him.

The hot sun shone down mercilessly upon the half-buried, suffering man. He was severely wounded and pinioned beneath the fallen timbers of the trench. It appeared he must die a slow and agonizing death, with help so near, yet so far; with power so close to him, yet so impotent.

"Help! Help! For God's sake, help me!" he kept groaning.

His voice became weaker and weaker.

"Water! Water—oh, give me water!" he moaned. But none dared to help him.

Suddenly, with utter disregard of the danger, a tall, slim, young French captain leaped to the top of his trench. A shot sang past him instantly, but he fearlessly held aloft his hand to command attention. Then he shouted to the imprisoned German, "Tell your comrades to come and fetch you! We will not fire. We give our word." He jumped down inside again.

The wounded man heard. Summoning his last remaining strength he raised his voice and cried the message aloud to his comrades.

There was a short conference inside the German trench. Then four tall soldiers in the uniform of the Prussian Guard climbed over their parapet and advanced boldly into the open, carrying a stretcher. They faced a hundred rifle barrels, but there was no shot. The word of honor had been passed, and men were acting as human beings, saving instead of destroying.

Quickly the Germans reached their comrade. A heavy beam of the demolished trench had fallen upon him and crushed both legs. Working with a will, they soon had him released, and, placing him on the stretcher, they bore him away to the safety of their trench.

A moment later some sixty Prussian helmets were hoisted enthusiastically on rifles above the trench, and in mighty chorus there came the shout, "Thank you, comrades, thank you!"

The French captain climbed upon the trench bowed courteously, and responded, "It was our pleasure comrades. Now to our duty again."

And pitiless war reigned once more between the lines.

Dyspeptics Should Avoid Drugs And Medicines

Try a Little Magnesia Instead.

Some people instinctively shut their eyes to danger, and it may be that instinct, or custom of habit causes dyspeptics to take drugs, patent foods and medicines, artificial digestents, etc.

But closing the eyes does not banish the danger, and it is certain that neither drugs nor medicines possess the power to destroy the harmful excessive acid in the stomach, which is the underlying cause of most forms of indigestion and dyspepsia. They may give temporary relief, but ever increasing quantities must be taken, and all the time the acid remains in the stomach as dangerous as ever.

Physicians know this and that is why their advice so often to sufferers from digestive and stomach troubles is to eat about an ounce of pure bisurated magnesia from your druggist and take a teaspoonful in a little water immediately after every meal. This will instantly neutralize all the harmful acid in the stomach and stop all food fermentation, thus enabling you to enjoy your meals without experiencing the least pain or unpleasantness afterward.

IF ALL WERE SHIRKERS.

Cemeteries Would Replace Barracks—Man Power Will Win the War.

Better a country of barracks than what the shirkers would make it—a country of cemeteries, says the English Review.

If we aspire to regulate the balance of European power in a sense favorable to ourselves, which in brutal truth means our continued existence as a world empire, it is as a nation in arms we must pursue the fight to a finish. To-day it is men, not money or armaments, that our nearest ally lacks, and it is man power that we must contribute if a premature and inconclusive peace is not to be forced upon our valiant friends under conditions which they would regard as detestable. For unless Britain can maintain for another two years or thereabouts an uninterrupted flow of man power to the western and southern fronts our valiant neighbor across the silver streak will find it humanly impossible to maintain the struggle which has in the last two terrible years involved the depletion of the flower of her manhood.

This was whispered many months past; now it is being openly discussed wherever thinking men get together, whether in dugout facing the unspeakable Hun or snatching a few hours' leave in the bosom of their families.

"Men; more men," "England must send more soldiers," are the common expressions of opinion in the fair land where already so many of our khaki-clad heroes sleep.

ST. VITUS DANCE CAN BE EASILY CURED

A Tonic for the Blood and Nerves With Rest All That is Needed.

Many a child has been called awkward, has been punished in school for not keeping still or for dropping things, when the trouble was really St Vitus dance. This trouble may appear at any age but is most often met between the ages of six and fourteen. The most frequent cause of the disease is poor blood, aggravated by indoor confinement, or mental strain at school. Under these conditions the blood fails to carry nourishment to the nerves and the child begins to show listlessness and inattention. Then it becomes restless and twitching of the muscles and jerking of the limbs and body follow. A remedy that cures St. Vitus dance and cures it so thoroughly that no trace of the disease remains is Dr. Williams Pink Pills which renew the blood thus feeding and strengthening the starved nerves. This is the only way to cure the trouble, and parents should lose no time in giving this treatment if their child seems nervous or irritable. Mrs. Wm. A. Squires, Cannington, Ont., says: "My only daughter, now fourteen years of age was troubled for several years with St. Vitus dance. She was so bad that at times she would lose control of her limbs and her face and eyes would be contorted. We had medical advice and medicine, but it did not help her. In fact we thought the trouble growing worse, and finally we had to take her from school. About a year ago we began giving her Dr. Williams' Pink Pills and by the time she had taken five boxes she was completely cured, and is now a fine, healthy girl. I firmly believe we owe this to Dr. Williams' Pink Pills and are very grateful for her restoration to perfect health."

You can get these pills from any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

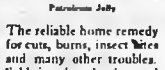
Overhauling the Liners.

The C.P.R. is going to overhaul its trans-Pacific liners at the beginning of the new year. The boats will be laid up at drydock at Hong Kong for renovation and repair. The Empress of Asia will be the first to be laid up. She will be out of commission for about a month. The Empress of Russia and Empress of Japan will be laid up in turn—the former having a month and the latter 26 days at Hong Kong. The big liners are kept in the best of trim, being all thoroughly overhauled once a year. The Empress of Asia and Empress of Russia have not been completely overhauled since they were released from the Admiralty service, toward the latter part of last year. The Montcalm, which is now on her way across the Pacific, was recently overhauled at Hong Kong.

Krupps' Works in Danger.

The Amsterdam correspondent of the London Times says that since French airmen attacked Essen a large number of anti-aircraft guns which had previously been removed have been remounted. Workmen have been busily engaged in constructing bomb-proof underground shelters, which, it is believed, are intended for storing the most dangerous explosives. Regarding the reports of disturbances at Essen, a strike was threatened, but the workmen's conditions, which it is believed concerned the food arrangements were granted.

Gratitude is so cheap that there is no excuse for giving it grudgingly.



For every ailment there are a dozen cures that don't.

A WEIRD LEGEND IS RECALLED

GERMANS WERE PARALYZED AT YPRES.

Frightened by Optical Illusion of Huge Reserves Behind British.

Captain Norman Thwaites, of the Fourth Dragoon Guards in the British army, now in the United States on leave, describes a recent visit to a prisoners of war camp in England. His story, published in the New York World, is as follows:

I talked with the senior officer, whose rank entitles him to rule the camp under the British commandant. He had been taken near Ypres during the terrible five days when the "contemptible little army," depleted by one-third, faced the flower of the German army urged on to Calais by the War Lord himself. The culminating attack by two whole German divisions was made against one cavalry brigade, which lost 40 per cent. of its total in five days.

I was greatly interested when this Prussian officer informed me that he had been separated from his comrades and had run into a trench full of British cavalrymen. I was eager for a piece of information.

"How was it," I asked, "that the Germans did not get through that day? The British were retiring slowly and stubbornly, and a vigorous pursuit would have made a sauve qui peut of it. We thought we were scuppered, sure."

Illusion of Reserves.

"Well, I'll tell you," he said. "When the British occupied the prepared trenches outside the town we advanced in force, but the Dragoon Guards held us up a long time. They had a good field of fire and we could not make headway. They spoiled our game. Then when we did manage to get some of the French trenches on the right of the cavalrymen we saw your enormous reserves and had to wait for our supports to come up."

I was amazed. "Reserves!" I exclaimed. "Why, we had no reserves. We had not even any supports that amounted to anything. Several days passed before any considerable number of troops were able to assist us."

Puzzling Halt.

Now this statement of the prison commander was of rather weird interest. After the pretty but wholly fictitious story of the angels of Mons, which originated in a poetic conception of Arthur Machen, there went from mouth to mouth the story of the heroes of Agincourt who had arisen from the ancient battlefields where their bones had lain these 500 years, and in their thousands had faced the invaders of France and Flanders. The wise and unpoetic sneered at the fantastic conception, but some sort of explanation for the German halt in the midst of their victorious stride during those early days of November, 1914, has still to be offered. My friend the prisoner of war was merely confirming the evidence given by numerous prisoners of those strenuous days who persistently talked of vast reserves descried behind our thin and tortuous lines.

Still Hold Trenches.

Whatever the explanation, the fact remains that by some optical illusion the Prussian commanders were led to believe that the further advance of their troops was fraught with danger, and the trenches held that day by the British are still in their possession.

Our conversation was interrupted by a messenger. A party of newly-taken prisoners from the Somme front was about to arrive. A flutter of excitement ran through the camp. "Now we shall have some reliable "news," said the prisoners. They got it.

Early arrivals in this camp had fumed and fussed at the ill luck that made them prisoners of war when their fellows were driving along to certain victory. This spirit of confidence has received harsh blows in the course of two years as new batches of prisoners arrived with discouraging tales of checked progress and steps of retrogression. They were to hear sad tidings from the Somme. A nerve-racked, disheartened group of captives, dusty and torn of raiment, was ushered into the grounds.

Slowly and with much shaking of the head, with gestures of despair, outspreading of expressive hands and tears of humiliation, the tale was told. It was a tale of overwhelming, soul and body-shattering shell fire. Of trenches and shelters, laboriously constructed during months of patient perseverance, blown to fragments in an hour. Of wave upon wave of sunburnt, laughing British Tommies and battalion after battalion of resolute, bearded Poilus that came over the shot-torn landscape to overwhelm the soldiers of the Fatherland, dazed and distracted by the most terrible artillery preparation the world has ever seen.

For into the night the captives talked. The cheeriest of them grew solemn during the recital. The elder men wept. There appeared no gleam of hope of victory. An ill-balanced compromise was the best to be hoped for. The "place in the sun" was more remote than ever.

CANALS OF MESOPOTAMIA.

Great Irrigation Schemes and Their Destruction.

Great irrigation schemes enabled Mesopotamia, Armenia and other countries in the near and middle East to become the seats of mighty empires in spite of their arid climates. To-day, says Dr. Arthur Selwyn-Brown in the Scientific American, they have few cities of any importance. Bagdad, which has a population of about one hundred and fifty thousand, had two million ten centuries ago. The difference between Mesopotamia then and to-day is the result of the destruction of the canals.

In the height of its prosperity Bagdad had the most remarkable system of irrigation that has ever been constructed. The canals about the city measured over three thousand miles in length. They were well built, supplied with storage basins, locks and weirs, bridges and loading docks for barges, and were carefully kept in good order.

There were others, both north and south of the city that joined the Euphrates with the Tigris, and there were several that ran parallel with the rivers.

The largest was known as the Chosroes Canal. It was built in early historical times to connect Bagdad with the city of Dur, about one hundred miles north. This canal was extended by the Caliph Al-Mansur to the city of Madharaya, the modern Kut el Amara. Later caliphs carried it one hundred and fifty miles beyond Dur. Whenever this canal passed through loose soil it was over two hundred feet in width and six feet deep. Where the ground became rocky it was reduced to a width of forty or fifty feet. This trunk canal carried a large boat traffic and supplied water to hundreds of miles of lateral canals and irrigation ditches. It served many thousands of miles of most splendid farming country.

South of the city of Kerbela, on the Euphartes, three were great irrigation works on what is probably the richest agricultural land in Asia. The Euphrates has since shifted its bed about thirty miles to the eastward, and the rich canal lands are nothing but unwholesome, reedy swamps, the haunts of water buffaloes, cranes and other animals and birds.

Between Dur and Basora there were over fifty trunk canals between the Tigris and the Euphrates, and they irrigated thirty-seven thousand square miles of rich farming lands. These lands, called the "Meadows of Gold," were worked to the fullest extent under the Abbasside caliphs, and even until 1258, when the Mongols sacked Bagdad and brought the rule of the caliphs to an end. After the Mongolian invasion Bagdad was no longer the capital of the Mohammedans and the holy city of Islam.

Minard's Liniment Cures Diphtheria.

The Vital Point.

A beautiful young lady interviewed a fortune-teller on the usual subjects.

"Lady," said the clairvoyant, "you will visit foreign lands and the courts of kings and queens. You will conquer all rivals and marry the man of your choice. He will be tall and dark, and aristocratic-looking."

"And youngs?" interrupted the lady.

"Yes, and very rich."

The beautiful lady grasped the fortune-teller's hands and pressed them hard.

"Thank you," she said, "Now tell me one thing more. How shall I get rid of my present husband?"

Paper From Flax Straw.

The Canadian Pacific Railway's Research Department is working upon a method whereby a commercially satisfactory paper pulp can be made from flax straw. Hitherto the straw had to be burnt for want of proper methods of treatment.

Minard's Liniment Cures Distemper.

No Trouble at All.

Friend—I suppose if people would do just what you tell them you would have a great deal less trouble.

Doctor—Yes, indeed! I would tell some of them to settle their accounts.

When Your Eyes Need Care

Use Murine Eye Medicine. No Smarting—Feels Fine—Acts Quickly. Try it for Red, Weak, Sore Eyes and Granulated Eyelids. Murine is compounded by our Oculists—not a "Patent Medicine"—but used in successful Physicians' Practice for many years. Now dedicated to the Public and sold by Druggists at 50c per Bottle. Murine Eye Salve in Aseptic Tubes, 25c and 50c. Write for Book of the Eye, free. Murine Eye Remedy Company, Chicago, Ill.

On the Border.

"Watch yourself, man! Be more careful with that rifle!" the range officer exclaimed, angrily. "You just missed me that shot!"

"Did I, sir?" the badly rattled recruit responded. "I'm awfully sorry, sir—I'll try to do better next time!"

Montreal,
For 14 days in the month of January I was suffering with pain of rheumatism in the feet. I tried all kinds of remedies but nothing did me any good. One evening I rubbed me about MINARD'S LINIMENT, as soon as I tried it the Saturday night, the next morning I was feeling very good. I tell you this remedy is very good. I could give you a good certificate any time that you would like to have one. If at any time I come to hear about any person sick of rheumatism, I could tell them about this remedy.

Yours truly
ERNEST LEVEILLE
216 Rue Ontario East, Montreal
Feb 14, 1908.

Old Jim Keen's Observation.

"Real friends," says old Jim Keen, "are the ones who guess you're in need of help before you've even begun to holler."

Minard's Liniment Cures Garget in Cows.

No Disappointment Here.

A man who was convinced of stealing was brought before a certain judge, well known for his tenderheartedness, to be sentenced.

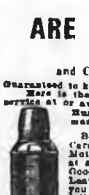
"Have you ever been sentenced to imprisonment?" asked the judge, not unkindly.

"Never!" exclaimed the prisoner, suddenly bursting into tears.

"Well, well, don't cry, my man," said his Honor, consolingly; "you're going to be now."

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.



London—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If you could but know that something as Dr. Lewis there is real hope for you. Many home cases are using my they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind; could not see to read at all. Now I can read everything without glasses and my eyes do not water any more. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me; I only used it once." The atmosphere seems heavy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read for hours without eye fatigue. It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many description may be wonderfully benefited by following the simple rules. Here is the prescription. Go to your druggist and get a bottle of Bon Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them before it is too late. Many a person is needlessly blind right here because they had feared for the cost of glasses.

Bon Opto is a prescription of well known ingredients, the formula of which is given above. It is a very remarkable remedy in many instances, and is not expensive. The ingredients are printed on every package and anyone can have them filled by their own druggist. Bon Opto tablets are sold by druggists everywhere, and are guaranteed to strengthen weak eyes in many cases within one week's time. Bon Opto is also highly recommended for cataract, blepharitis, sore eyes, eye strain, etc. Bon Opto is sold in Canada by Bon Opto Co., Windsor, Ont., who will fill your orders if your druggist cannot.

WINTER DAYS AND SUMMER DAYS ARE THERMOS DAYS

and Christmas Days are the best Thermos days of all.

Guaranteed to keep Boiling Liquids hot 24 hrs. or Ice Cold Liquids cold 3 days. Here is the ideal gift, handsome and practical, giving years of perfect service at or away from home. If Purely 10?) ?!

"Mention twelve animals of the Polar regions," said the professor, and the respairing student wrote:

"Six seals and six polar bears!"

Rare, Indeed.

"He has a very rare disease."

"That so? What is it?"

"Something brought on by overwork."

Consistent.

Teacher—Willie, your face is but half washed.

Willie—Yes'm, but to-day is only a half holiday.

The fellow who does his own thinking is never afraid of what the other fellows think.

EDEN GROVE

Hockey match in Paisley rink on Wednesday evening, Feb 7th—Port Elgin vs Paisley.

Well, boys, I guess Mr Bruin saw his shadow, all right.

Miss Myrtle Elder, of Cargill, was the guest of Mr and Mrs Pearson last week.

Our station agent says if it keeps on snowing he will have to put a flag on top of the station so that he can find it in the morning.

Mr and Mrs Vansickle and two children, of Swan River, Man., were the guests of Mr and Mrs Arthur Reed last week.

Runaway—After helping his fair maiden out at the gate after the social, the horse thought he had heard enough dialogues for one evening and started home. Fortunately it was stopped before much damage was done, and the interested parties breathed freely once more.

Reeve Willoughby was the guest of Mr and Mrs McKeeman while in town on Friday.

I'm a great guesser. Puts me in mind of one time when I was in Detroit. Meeting a little lad I said, Well, Johnny, can you tell me the way to the depot?" He said, "Who told you my name was Johnny?" "Why, I guessed it." "Well, if you are such a good guesser, you can guess the way to the depot."

Mr Arthur Reed sold Mr Cowbrance for a good sum to Mr Rudolph, near Paisley.

Mr and Mrs Jas Alexander and children from the west are the guests of Mr and Mrs Robert Alexander

If it keeps on snowing the roads will be as high as the price of pork.

Mr Jas Young, from the west, is visiting at the home of Mr and Mrs Harry Young, on the 8th.

Grand Success—Perhaps the most successful social entertainment ever given in the Grove took place on Friday in the midst of one of the worst storms for the past three years. When the curtain was drawn the large schoolhouse of S S No 7 was filled, many having to stand. Had the weather been fine a ten-acre field would not have held the crowd. Miss Blanch Powell, the popular young teacher, spared neither time nor trouble in arranging a No 1 programme, being ably assisted by her pupils and young friends of the town, and succeeded in putting on an entertainment that would be a credit to any city. Every number was rendered in a masterly style, showing careful study and drilling. As each artist did their best, we hardly need mention any names—although the flag drill and cat song were alone worth facing the storm to witness. The Hopper Bros sustained their good reputation as entertainers. Miss Mary Spong, of the red school, delighted the audience with her prettydancing. Reeve Willoughby filled the chair very acceptably. Too much cannot be said for Mr Wes Able the able auctioneer who so ably disposed of the boxes and raising Coin, making some of us poor fellows pay all we were able for the delightful sensation of lunching with some fair young damsel. The proceeds amounted to $166. Miss Powell and her assistants must be congratulated upon this great success.

Postponed—Owing to the storm on Sunday the quarterly meeting was postponed until next Sunday morning at 10.30. S S at 9 30 a m.

Miss Salome Farrow called on Walkerton friends last week.

The pathmaster got out a search-warrent Monday morning and spent the day trying to find the road.

Mrs Brown, of Dunkeld, visited her daughter, Mrs Cassidy, last week.

The porter from the Simcoe has quite a time meeting these slow late night trains.

The minister came over Sunday morning from Cargill on snowshoes. He certainly made a better break for church than a lot of other people, there being the unlucky number thirteen present.

Messrs Pearson and Reynolds were in Cargill Thursday evening. "Sunny" got his face frozen. He says he is not used to driving with mitts on.

The Grand Trunk have engaged a number of extra men to open up some new banks along the line—with snow shovels.

Mr O'Reilley intends shipping a car of turnips as soon as they turn up.

Miss Jessie Alexander had the honor of bringing the box that brought the highest bid, $6.25. Mr Reg Proud being the lucky man. Mr Ed McGarvin purchased the quilt for $20. Mrs J Butchart donated the pillow, for which Miss Emery held the lucky ticket.

Wonder who will be our valentine Wednesday.

GLAMIS

The Red Cross box social that was held in the Oddfellows' Hall on Tuesday night of last week was a success. The sale of the boxes together with the fee at the door amounted to over $100.

Sacramental services were held in St Paul's church on Sunday. The day being stormy and the roads heavy, the attendance was small.

The school has been closed here for a week owing to a rash that appeared on quite a number of the pupils. They expect to open again this week, as the trouble proved to be of a very mild nature.

We are very sorry to report the serious illness of Mr Kenneth McLennan. He has been confined to his bed for over a week.

Miss Ada Cunningham, who spent a few weeks at Mr Murdoch McKay's, is at Mr Robt Russel's on the 9th, now.

The funeral of the late John Wright took place on Saturday from the home of his son Robert. Owing to the stormy day not many attended.

Mr Jos Cunningham was confined to the house for a few days suffering from lagrippe.

Wedding bells are ringing on the boundary.

TENTH CON BRUCE

Hockey match in Paisley rink Wednesday evening.

The storms of the past week have been humdingers. The roads are fairly passable, but the blinding wind and snow makes you feel like staying at home. The only real casualties in this neighborhood owing to the storm were the complete disappearance of Mr J Yule's well and the failure of the rural mail to deliver the Saturday Globe.

Mrs R J Caldwell and Miss Retta McDonald are both under the weather with severe colds.

Mr Robt Irwin is busy these days training in a fine pair of Percheron horses which he purchased a short time ago from Mr H Irwin of Walkerton.

Mr A Sinclair has disposed of his farm to Mr A Shipley, of the 8th con.

The latest news from England of the boys of the 160th Batt of this locality is that they are all out of quarantine again and enjoying good health. They expect to go to France in the near future.

EBENEZER

Port Elgin vs Paisley hockey match in Paisley rink this (Wednesday) evening, Feb 7.

Mr and Mrs Wm Bulger, from Swift Current, Sask, are visiting at Mr Robt Quigley's.

Mr Robt Irwin and his daughters, of Castor, Alta, are visitors at Mr Frank Quigley's.

Mr Wm Grant, sr, went to Toronto last week to consult a specialist as to his eyes.

The Y M C A social on Thursday evening at the rink was a great success, the proceeds being $58 00. The boys' hockey match between Port Elgin and Ebenezer resulted in a win for the home players by 15 to 0. The Port girls did not come because of the weather. The boys will play a return match at Port Elgin on Mouday night.

Ebenezer Epworth League entertained Tara, Arkwright and Mt Hope Leaguers on Tuesday night. A short programme was held in the church, and after adjournment the young people went skating in the rink for the balance of the evening.

Mrs Alfred Robinson, who has been seriously ill, is now improving.

FOR FLETCHER'S
CASTORIA

ELORA ROAD NORTH

Hockey match—Port Elgin vs Paisley—in Paisley rink to-night (Wednesday).

It seems like old times when the telephones are out of business and the roads almost blocked, as was the case after last week's storm. But we are always reminded of bygone days when we work our way through the pitch holes and drifts caused by those old rail and board fences near Paisley.

Mrs Jas McCallum and family have returned to the west after a few months spent at the home of her parents, Mr and Mrs Neil McArthur.

Mrs J S Campbell is visiting at Chippewa Hill.

Dr Jas Brown called on his friends here last week.

Mr and Mrs Alex Giles left for the west last week with the good wishes of all their friends on the Elora road north.

At the meeting of the Elora Road North Patriotic Society held at Mr A Miller's on Thursday a pleasing feature at the close of the meeting was the presentation of a purse of money and the following address to Mrs M Sparrow, the money to be used for the benefit of their son James who is at present with the C A S C in England, and expects to be in France very shortly. Mrs Sparrow, who was completely taken by surprise and deeply affected by the kindness of the League members, thanked them all on behalf of her son.

Mr and Mrs. Sparrow.

Dear Friends—As your son who enlisted with the long roll at heroes was called away so quickly that we did not get a chance to show him we appreciated his manliness and courage to make such a great sacrifice, we are taking the opportunity of presenting to you, his parents, this purse as a slight token of honour in which he was held by us, knowing that you will use it for his good in any way you think best. Praying earnestly that the Giver of all good things will give you both strength to bear up under the awful strain that is upon you and that God may protect your dear son and give him back to you where a hearty welcome awaits him, is the wishes of your neighbors and friends. Mrs S. Winch, Etta Pearce.

TWELFTH CON BRUCE

Port Elgin hockey team plays Paisley Wednesday evening in Paisley rink.

The last three days have been one of the old time storms, as the old folks say. The bear could have seen his shadow if he was out.

Mr Greer had a fine day for his sale, which was attended by a large crowd. He has gone to spend the winter with his daughter, Mrs H Petrie.

Mr and Mrs John A Howe and family have moved to Mr Dugald McArthur's farm. We wish them every success.

Mr Alex McGillivray Sundayed in Port Elgin.

Mr Dan McGillivray has bought a new team of colts.

A number from here attended the funeral of the late Alvin Rankin on Monday, which was held from Knox church, Paisley.

PINKERTON

Port Elgin and Paisley play a hockey match in Paisley rink this (Wednesday) evening, Feb 7th.

Hockey match in Paisley rink Wednesday evening.

Mr Wm Trotter, sr, who has been ill for the past two weeks, died at his home here on Friday morning. Mr Trotter was in his 100th year, and until this illness overtook him recently was quite smart and able to take short walks.

Lieut Harold Pinkerton spent the week end at his home here.

Mrs R M Gale returned home on Saturday after visiting her son at Alma for the past three weeks.

The Red Cross Society are holding a box social here on Friday evening, Feb 16th.

FARM DON'TS

Don't forget that flock of sheep. If given half a chance they will return more clear profit than any branch of farming you can engage in.

Don't forget to give the stock plenty of water. Water is as essential as food.

Don't forget that a good cream separator is a valuable machine to have on any farm on which there are two or more cows.

Don't forget to shelter your machinery when you are done with it. Under a tree or in a fence corner is a very poor place to leave a machine. Rust and decay ruin a machine sooner than use.

Don't forget that a small gasoline engine will do small jobs more quickly and easily than you can do them.

Don't forget to use plenty of good oil on any machine you use. Oil reduces friction and friction means wear. A properly oiled machine will run longer and easier than a poorly oiled one. Oil is cheaper than new machinery or repairs.

Don't forget to see that your tires are properly inflated before you run your car. Too much pressure is likely to cause the tire to stretch or blow out, while too little pressure will cause rim cuts and the tire walls to crack.

Don't forget that an open well or cistern, or one with a poor top on it, or one close to a barn or cesspool, is a source of never-ending danger.

Don't forget that every weed which is allowed to go to seed means several weeds next year.

Don't forget the birds. If you will be a friend to them they will be both friend and helper to you.

Improvised Typewriter Desk

Travelers and others who carry typewriters on their journeys frequently find it inconvenient to use the tables provided because they are usually too high for typewriters. A method of overcoming this difficulty is to withdraw the drawer from the table and invert it in the slide shown. The typewriter may then be placed upon the bottom of the drawer and will be considerably lower than if placed upon the table top.—From Popular Mechanics.

CAPES AND BICYCLES

Curiously enough, the cape is one of the articles which came in with the bicycling pastime, and has needed very little alteration in pattern since. Many have tried various novel forms of weather protection as well, but most have at last returned to the primitive cape as the simplest and best. It is by no manner of means an ideal garment, for to undertake a lengthy journey swathed in a mackintosh cape is not to encourage one's temper to a cheerful mood; but we have nothing to beat it, nor is there known any method to improve the design. True, there are too many of the "skimp" kind about.

Removing Dirt From Autos

Grease or oil is a hard thing to get off an automobile body, particularly if it has had a chance to dry. If necessary either gasoline or kerosene may be used to remove such deposits, but gasoline is the most advisable as it evaporates quickly, and therefore will not collect dust. Road tar that has not been allowed to dry can be removed by local applications of a mixture of lards or butter with a small quantity of salt. Take a small amount of it on the finger and rub it on the tar spot lightly so that there will be no scratching. This should loosen the tar and allow it to be washed off immediately.

Female Emigrants

As a result of the restrictions on the emigration of males of military age from the United Kingdom, the emigrant parties which now leave Dublin twice a week are largely composed of young women and children. They are setting out from that port at the rate of about one hundred a week, the majority bound for the United States. Many who hoped to settle down in the States are returning, denied admission for a variety of reasons.

In Paris markets the eggs are dated, and one pays according to the freshness, so that it is possible to be certain of newly-laid eggs; or, it is necessary to be economical, yesterday's eggs, or the day's before, are offered at a reduction.

The sooner farmers recognize the fact that poultry culture should be followed along the same line as dairying—giving food and care to secure results—the sooner will they begin to reap their share of profits and become competitors with practical poultry raisers.

Recently invented thumb tacks are provided with handles to help in without drawing them and which fold down into the heads of the tacks so as to be out of the way when not needed.

Australian postal officials are planning to establish at busy street corners in cities combinations of letter boxes, telephone cabinets and stamp selling machines.

A puncture resisting automobile tire has been invented that has a strip of chrome leather on the inner side of the shoe, where it is in contact with the inner tube.

A simple device has been invented for pressing stones out of cherries without touching them with the hands.

Green bones are bones fresh from the butcher, with the adhering gristle, meat, etc.

Don't throw away lighted matches, cigars or cigarettes.

Mental Development Is One True Test of Age

What is your mental age? It makes no difference what your actual age is, you have what is now known as a mental age—somewhere between six months and twenty-five years or thereabouts. Among school children it has long been noticed that some, much older than others in point of years, were a good distance behind them mentally. The idea was evolved that if children, imbeciles, and criminals could be given simple tests to determine exactly how far advanced they were mentally a good deal of trouble could be saved—In children by placing them to the proper grade at school, in imbeciles to determine exactly what would be best for their welfare, and in criminals to determine the responsibility in a moral way for their crimes. Thus if a criminal were found to be only eight years old mentally, then the proper way to treat him, no matter what his actual age happened to be, would be the way a boy eight years old committing the same crime would be treated.

Binet has a good many tests that have been modified by experience into what are known generally as the Binet tests. They run all the way from recognizing a hand waved in front of the eyes for a tiny infant to remembering sequences of numbers and describing the various articles seen in a picture but for a moment, for older ones.

It is the endeavor of some humane societies to have a law passed to test all criminals, and that, if found of ... mental age, they shall not be punished in the ordinary way. It has also been suggested that our own Civil Service use these tests instead of the oftentimes absurd examinations now used. Results from testing criminals have been startling and peculiar. In a great many cases grown men and women have not gone higher than ten or twelve years in mental age. In the case of children the tests have indicated other things besides their mental age—they have indicated the general vocation for which the child is best adapted.

DIED

TROTTER — At Pinkerton, on Feb 2nd, William Trotter, in his 100th year.

"ANURIC!"
THE NEWEST
DISCOVERY IN CHEMISTRY.

This is a recent discovery of Doctor Pierce, who is head of the Invalids' Hotel and Surgical Institute at Buffalo, N. Y. Experiments at Doctor Pierce's Hospital for several years proved that there is no other eliminator of uric acid that can be compared to it. For these easily recognized symptoms of inflammation—as backache, scalding urine and frequent urination, as well as sediment in the urine, or if uric acid in the blood has caused rheumatism, it is simply wonderful how rarely "Anuric" acts. The best of results are always obtained in cases of acute rheumatism in the joints, in gravel and gout, and invariably the pains and stiffness which so frequently and persistently accompany the disease rapidly disappear.

Go to your nearest drug store and simply ask for a 50-cent package of "Anuric," manufactured by Dr. Pierce, or send 10 cents to Dr. Pierce for a large trial package. If you suspect kidney or bladder trouble send him a sample of your water and describe symptoms. Doctor Pierce's chemist will examine it then Dr. Pierce will report to you, without fee or charge.

NOTE:—French scientists affirm that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid, and is a harmless but reliable chemical compound that may be safely given to children, but should be used only by grown-ups who actually wish to restore their kidneys to perfect health, by conscientiously using one box—or more in extreme cases—as "Anuric" (thanks to Doctor Pierce's achievement) is by far the most perfect kidney and bladder corrector obtainable.

Dr. Pierce's Pellets are the original little Liver Pills. One little Pellet for a laxative—three for a cathartic.

Principal Resigned

Mr A E Marks, Principal of Paisley Continuation School, has handed in his resignation, to take effect by March 1st, and the School Board is advertising for a successor

Farmers Buying Cows

A good many car loads of cows have been brought into Bruce County since fall and disposed of by auction to farmers who have a big crop of hay in their barns. This should give quite a boost to the stock and dairy business of the district, and help to further enrich both the farms and the farmers.

Train Delayed by Snowbank

The stormy weather of Tuesday again filled in the railway cuts, and the noon train was nearly three hours late in arriving from the south. Then it was completely blocked by a heavy drift a short distance north, and had to return to the station, to remain until a snow plow came up and cleared the way. The train proceeded north about 11 p m.

Red Cross Shipment

The first shipment by the Red Cross of Elora Road south was made Friday last, when the following articles were sent: 12 feather pillows, 2 quilts, 20 sheets, 22 pairs pillow cases, 12 towels, 10 hospital sheets, 37 pair pyjamas, 220 handkerchiefs, 2 doz flannel shirts without collars, 33 pair socks. Mrs Marshall Watson, Secretary.

Hawaiian Lecturer's Reputation is Bad

A despatch from Sault Ste Marie, Mich, on Feb 9th says: A report that she was suspected of being a German spy, together with the knowledge that she had once served a prison term in Toronto for shoplifting, resulted in the rejection of Miss Lottie Tillotson by Canadian immigration officials when she attempted to cross the border to-day. The woman had been lecturing here, and was to have made a tour through a part of Canada.

Returned from the West

Mr Wes Miller, who hit the trail for the prairie country three years ago, and has been at Munson, Alberta, arrived here last week, and is preparing to re-camp on the old homestead farm, Elora road north, as soon as his brother Andrew moves to his new farm on the 2nd of Saugeen. It's too bad the Elora road can't hold them both. There is nobody will be more welcomed in the old community than William Miller. Mrs Miller is visiting her parents at Owen Sound for a short time.

THE MAGIC OF MINA

Buckingham, of Scotland Yard, was jubilant. His luck was in. Although he was only at present a detective-sergeant, he knew that his superiors centred great hopes on his advancement, and he was determined to see that those hopes were realised.

Andrew Buckingham wanted promotion. He wanted a wife, too. And the fact that only by promotion could he marry pretty Mina Kenwood and give her the sort of home to which she had been accustomed, dominated every case he undertook. Mina was his inspiration.

Everybody at the Yard liked Buckingham. He was as straight as a die. Even many of the crooks, among whom his life was spent, had a warm corner in their hearts for the man who had never been known to play them what they called "a dirty trick." If Buckingham could not catch you by fair means, they said, he would not catch you by foul.

It was the memory of a service rendered long ago—one of the many actions he performed, which had a habit of slipping from Buckingham's memory—that sent to him one memorable evening a discharged convict, with the startling information that Slim Flannery, the redoubtable "fence," had, but an hour previously, purchased the stolen Gillingworth diamonds, worth £5,000. Even at that moment, the informer declared, they were in the house, and a trusted pal was watching to see that Flannery did not leave.

Flannery had not earned the title of "Slim" without meriting it. For years he had been known to the police as the most skilful and dangerous receiver of stolen property in the metropolitan area. Yet, although they knew he was a fence, they always missed that tiny link in the chain of evidence so essential—indeed, necessary—to secure a conviction. Flannery was too cunning for all the brains at the yard, and, skilfully avoiding the scores of traps carefully prepared for him, he laughed up his sleeve, and went on waxing fat and wealthy by purchasing stolen property at a fiftieth part of its true value.

To the outside world he was just a harmless curio-dealer; in the secret archives of Scotland Yard he was labelled as a prince among fences.

Buckingham knew him well. Flannery knew Buckingham, too. And in the secrecy of his den, when the mask had fallen from his face as he sat ruminating over some profitable deal, he was wont to mutter:

"Buckingham! The rest don't count! Buckingham is the rock on which I shall split, if I split at all! Brains! Buckingham has brains!"

Ten minutes after he had received the information which had placed him in such a jubilant frame of mind, Buckingham had taken it to the Commissioner itself. In twenty minutes the necessary search-warrant had been signed. And in half an hour Buckingham, who had secured permission, as a special mark of favour, to see the business through, was on his way to execute it, accompanied only by a detective-constable.

As he walked blithely along, filled with the pleasant sensation of impending triumph, Buckingham met Mina. The girl, who had been for a walk, as was her custom about this time every evening, blushed a rosy red as the detective communicated his news to her.

"And, darling," he finished, "if it comes off—as it is sure to do—it will mean promotion and—you!"

"How I should love to come with you, Andy!" she said wistfully. "It would be worth anything to see that wicked old man's face when you discover the diamonds."

How I should love to come with you, Andy!"

Buckingham thought hard. The temptation was great, and, although it was against the regulations, he knew Flannery well enough to know that there would, in the ordinary course of events, be no unseemly struggle, no danger. And he would thrill with pride when the woman he loved saw him bring off the greatest scoop on which the future of them both depended to such a large extent.

"Very well, then, little woman," he said at last; "come along!"

Buckingham entered the receiver's shop with a businesslike air, and stated his mission. He knew that he was dealing with a master mind in crime, but what he did not know was that, through one of the many mysterious agencies he controlled, Flannery had had warning of the pending raid three minutes before his—Buckingham's—arrival, and had placed the diamonds where he imagined no human being would look for them.

This knowledge gave the fence confidence. He was the soul of politeness, but the detective was not to be deceived by his suavity. He knew that his information as to the purchase of the diamonds was reliable; he knew, from the man his informer had placed outside, that no one had entered or left the premises since the transaction had been completed, and he argued that the diamonds must still be in the house, and that Flannery was putting up a big game of bluff.

Suave and smiling, the fence looked on while Buckingham and the constable demolished his property. Every drawer, box, and cupboard in the house were searched inch by inch. Mattresses were ripped open and gone over, and even the pillows on the beds were searched. Every stitch of clothing possessed by Flannery was investigated. The chimney, the dust-bin, coal-scuttles, and the cellar—all came under Buckingham's keen scrutiny.

But the diamonds could not be found.

Mina Kenwood's face showed the keen disappointment she felt. She had watched every operation with the keenest interest, fully expecting that every moment would bring to light the hidden diamonds, and see the handcuffs clapped on the smiling fence. Now, however, visions of the pretty little house, with its nice furniture, over which she hoped soon to rule as the wife of Andrew Buckingham, faded away.

Instead, she grasped dully that her future husband, who, contrary to all precedent, had been entrusted with an important mission that many of his superiors coveted greatly, had failed.

As for Buckingham, he was stunned by the blow. That the diamonds were in the house he was morally certain, but the cold fact stared him in the face that he had been unable to find them, although he had searched every nook and cranny.

The trio stood disconsolately in the little kitchen, with the fence looking on, smiling and confident, and ironically asking if they would like a little refreshment before taking their departure.

The kitchen was spotlessly clean. Mina Kenwood cast an approving glance round, and sorrowfully thought that this was just the sort of kitchen she would have liked in her own home had her future husband succeeded in his quest—had he achieved the expected success which would lead to undoubted promotion.

Dinner plates, tea plates, vegetable dishes, saucers, soup tureens, and everything in the crockery line were stacked in proper order on a big dresser, with shelves covered with white oilcloth. Other kitchen utensils were arranged with the obvious touch of a woman's hand on the shelves of the dresser. Every detail implanted itself on Mina's mind. She liked the arrangement of the things better because she could not now arrange her own like them, and——

A curious indefinable feeling clutched her heart as she glanced once more at the dresser. Into her brain there suddenly leapt a thought, an inspiration—a wild idea, truly, but one which seemed a Heaven-sent solution of the baffling problem. It caused her pulse to throb wildly and her cheeks to burn, yet it was only a very little thing.

Projecting from the shelves of the dresser were some ordinary, brass-headed nails, and on these nails, with their bottoms outward, facing her, hung a dozen teacups—just ordinary teacups. And Mina's keen eye had noticed that, whilst everything else in the kitchen was scrupulously clean, the cups were thickly coated with dust, showing they had only recently been brought there from somewhere else, and bore the distinct impress of finger-marks. As calm as possible, she took her handkerchief from her waistbelt and moved nearer the dresser.

"Why, Mr. Flannery," she said merrily, but with a fast-beating heart, "what a shame to spoil such a duck of a kitchen with dirty cups! Let me dust them for you."

The fence sprang forward, with a wolf-like snarl. His face blanched, and his eyes became pin-points of livid flame.

But the girl was too quick for him. Even before he could cover the distance which separated them in the small kitchen, she had unhooked the first cup in the line, and out of it fell four of the missing diamonds.

It took Buckingham and the constable some seconds to grasp that, where their systematic search had failed, a woman's domestic intuition had won, and in those few seconds Slim Flannery had changed from a polite, frock-coated, triumphantly-smiling gentleman into a veritable fiend.

He foamed at the mouth, and made a murderous dive for Mina's throat. But Buckingham was on the alert, and dealt him a sma-shing blow on the temple. And then commenced a struggle such as Buckingham had never been called-in to take part in before. He was a powerfully-built man, and so was the constable, but Flannery fought with the strength and fury of a maniac, biting, kicking, and cursing like a man possessed.

"Curse you, Buckingham!" he cried. "Curse you! Caught by a fool of a girl!"

"Yes," said Buckingham, between gasps. "You're caught! It doesn't matter how, though!"

To right and left they swung. Over went the table. Two chairs came down with a dull crash. Getting one hand free, Flannery seized a heavy earthenware jug.

In another minute it would have broken over Buckingham's head, but Mina saw his intention, and, just in time, grabbed his wrist, and it fell harmlessly to the floor.

Still the struggle went on, interspersed with shouts, cries, and gasps from the combatants, until Mina wondered whether she should fetch help from outside.

At last, however, the detective got the upper hand, and the handcuffs were clapped on Flannery's wrists, while his feet were securely bound with a length of his own cord.

Turning a glance of concentrated fury on the detective, he saw him rapidly empty the contents of cup after cup into his hand until it held, in a glittering, scintillating heap, the whole of the missing Gillingworth diamonds.

They were very pleased with Buckingham's triumph at the Yard. So was the judge, who sentenced Flannery to seven years' penal servitude. Indeed, he publicly commended Buckingham and expressed the opinion that a man who could effect the capture of a rogue as dangerous to society would go far in the Service.

But his lordship did not know that the credit of the capture was due to the little woman who was shortly to become Mrs. Buckingham, or, rather, the wife of Detective-inspector Buckingham, of Scotland Yard.—London Answers.

THE MOSQUITO PERIL.

Medical Discovery Showing Danger From Malarial Parasites.

One of the greatest discoveries in the history of medicine was that of Dr. Ronald Ross, who, at Calcutta, in July, 1898, found that the spores of An. Dr. Ross himself wrote, "The exact route of infection of this great disease, which annually slays its millions of human beings and keeps whole continents in darkness, was revealed. These minute spores enter the salivary gland of the mosquito and pass with its poisonous saliva directly into the blood of man. Never in our dreams had we imagined so wonderful a tale as this." Until lately it was not known whether a disease-spreading mosquito could infect more than one person. Recent experiments have proved that an infected malarial mosquito can infect several persons without again obtaining blood from an original source of infection, and that an infected mosquito retains her ability to infect with malaria for at least twenty-five days. Even if a mosquito empties her available supply of malarial parasites into one man, she may infect a second man a few hours or a few days later through a new generation of parasites. This is a most important discovery, for it shows that the individual disease-laden insect is a veritable machine gun in point of danger, and it emphasizes the necessity for stamping out the breeding places of the malarial mosquito.

TREED BY HYENAS.

Adventure of a Moving Picture Photographer.

While spending several months in East Africa, taking moving pictures of the big game of that region, Mr. Charles Cottar had one curious adventure that gave him a new idea of the ferocity of the spotted hyena.

On that occasion he had taken a side trip off into the jungle and had gone farther than he realized. Darkness fell before he could get back into camp, and as he stumbled along on the faint trail he became conscious that the beasts that hunt by night were abroad and had discovered his presence among them. From time to time he noticed a shadowy form shaking along through the bushes at the side of the path, and he recognized both hyenas and jackals among those undesired companions. The persistence with which they followed him made him a little uneasy, although he was not really afraid, for jackals will never attack a live and active man, and he had been told that hyenas, although bolder and more savage than jackals, were not likely to trouble a man who was able to protect himself.

But when Mr. Cottar heard the padding steps of larger animals behind him, and on turning quickly found saw two grand lions coming up along his trail, he got decidedly nervous. He was still some distance from camp, and he did not know enough about the habits and peculiarities of lions to know just how to deal with them.

The lions kept in close pursuit, and looked so threatening that when a third one appeared Mr. Cottar decided to take to a tree. He had a rifle and plenty of cartridges with him; but if he should miss it would be safer to be twelve feet or more above ground than to be where the wounded lion could get at him and maul him about.

So he took the first good-sized tree he came across and drew himself up to safety just as the lions arrived under the tree. They gave every evidence of intending to remain there until Mr. Cottar came down; and since he did not care to meet them on the ground, he took careful aim from his perch and killed the three, one after the other.

He was about to descend from the tree when a number of hyenas came rushing up and attacked the dead lions with such ferocity that the man thought it wise to delay his descent. They continued to arrive until the pack numbered at least a hundred. In a few minutes the lions were devoured; only their skeletons remained.

Mr. Cottar did not dare to venture into the pack that circled restlessly about his tree, quarrelling and snapping at one another. He had heard that hyenas would not attack living creatures, but these were so numerous and so hungry that he distrusted their hard-earned meal. He shot several of them, hoping that that would drive the rest away; but it did not. The survivors ate their dead comrades and waited for more. So Mr. Cottar, his ammunition being insufficient to exterminate the pack, spent the night uncomfortably in the tree, and came down only when at sunrise the snarling creatures dispersed.

Poetic Spelling

At the age of sixteen Alice Jones wrought poetic changes in her name. She signed herself E. Alysse Jones. Thus designated, she entered a new school. The head mistress asked her name.

"Alysse Jones," she replied. "A-ly-s-s-e."

"Thank you, said the teacher. "And how are you spelling Jones now?"

Starting Cold Motors.

If you have been compelled to leave your car exposed to zero weather, or if a friend of yours has been placed in a similar unfortunate position, you doubtless have been called upon to exercise the widest knowledge in overcoming trying obstacles. There are a number of excellent things to be done when a motor refuses to start. If the radiator is filled with plain water, it is always advisable to drain it off and substitute the warmest water possible. In many cases, however, the radiator may contain a valuable anti-freeze solution, and so it is not deemed advisable to drain it with consequent loss in real money. The radiator cleaning action, however, can be followed if receptacles are handy for retaining the original liquid, which when the motor has been started can be again placed in the radiator. If the use of hot water in the radiator does not give you results, it is always well to pour some on the front of the carburetor, but be very careful that none of it gets through the tickler to the gasoline inside. We also strongly suggest that you pour hot water on the intake manifold. If after carrying out these manoeuvres you should again fail to develop power, you may find it an excellent idea to place very hot bricks or hot water bottles against the intake manifold and around the carburetor. The idea in all these movements is to encourage the development of quick vapour. Perhaps these methods may not bring gratifying results, but there is one that generally will, and that is the use of a blow torch on the intake manifold. We must insist that such a method be not adopted unless you are an expert, as you can readily understand that if a flame touches the gas or a wave of vapour from it, a disastrous fire is bound to take place. It has been said than an ounce of prevention is worth a pound of cure," and therefore you will be well advised to cover up your radiator with a robe or rug if you find it necessary to leave the car standing in a cold atmosphere any length of time. It is surprising how much heat can be retained in a radiator that is even partially enclosed with warm material. A great many rural districts now have electric lights, and a simple system for keeping the intake manifold warm is to burn a small incandescent lamp inside the hood covers, close to the intake manifold. The amount of heat from an ordinary lamp will maintain in a temperature at which starting should be easy.

Cold weather also prompts us to give some advice regarding oil for winter use. Many of the brands which are sold at present are not entirely suitable for zero weather as they freeze readily and so make it difficult, in general, for the motor to operate, and in particular, for the pump to handle the oil itself. In this, as in many other matters we do not expect our readers to use our judgment but rather to seek out the agents from whom their cars were purchased and secure from them information based upon experience.

Recently a circular has been sent out by a manufacturing firm of considerable prominence, and in it we read an interesting paragraph regarding the filling of radiators. The item states that, "Care should be observed especially in the case of block motors, to only fill the radiator about to the center of the name plate. The remaining space is required for natural expansion and if this is not provided for, the expanded water will only waste through the over-flow pipe, and under certain conditions, once the overflow pipe becomes full, a syphoning action may set up, and this may continue until the level of the cooling system is below the radiator inlet. This condition shall off the circulation and results in a heated motor. This is responsible for warping the cages, valves and cylinder." —Kelly in Farmer's Advocate.

FROM OLD SCOTLAND

NOTES OF INTEREST FROM HER BANKS AND BRAES

What is Going On in the Highlands and Lowlands of Auld Scotia.

Ex-Bailie Forsyth has been appointed a police judge and magistrate in Stranraer Licensing Court.

Glasgow Subway Railway Company have introduced a universal 2cent fare over the whole system.

A delegation of French women munition workers have been visiting the Clyde, Glasgow, and other places.

Information has been received that Lance-Corp. Thomas Orr, a native of Garliestion, has been killed in action.

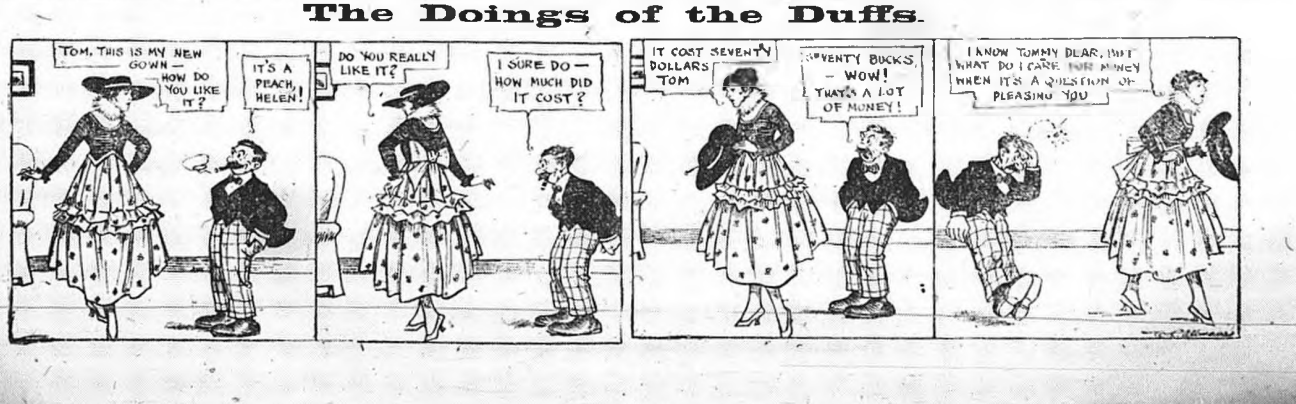
At a special meeting of Kilburnie School Board, Mr. David Conn, M.A., was appointed headmaster of the new Central School.

Greenock and District Master Bakers' Association intimate a further advance of bread which will now be 21 cents per 4-lb. loaf.

An outbreak of fire occurred in the home of Mr. William Mann, of Hamilton Road, Rutherglen, and the infant child, six months old, was burned to death.

Sergt. James A. Turnbull, of the H.L.I., a native of Glasgow, won the V.C. for conspicuous bravery on the field, and was killed later the same day.

Councillor Clarkson, Hamilton, has been appointed chairman of the West of Scotland Divisional Council of the National Federation of Hairdressers.



There has been placed in position on the site in St. Andrew's Square, Edinburgh, the Gladstone memorial executed by Mr. Pittendrigh Macgillivray, R.S.A.

BISURATED MAGNESIA

For Dyspepsia, Indigestion,

Heartburn, Belching, Sour Stomach and Stomach ache, take a teaspoonful of Bisurated Magnesia in a half glass of hot water after eating. It is safe, is a quick and harmless relief and gives almost instant relief from all forms of stomach disorder. Sold by druggists everywhere.

The Doings of the Duffs.

The Housewife's Corner

How to Use Bananas.

Banana Pudding—Six bananas, one-half cupful of sugar, one-half cupful of milk, one-half cupful of bread crumbs, one-half cupful of chopped peanuts, one tablespoonful of cornstarch. Gradually dissolve the cornstarch in the milk and mix with the banana pulp. Add sugar, then place a layer of the mixture in the bottom of a buttered baking dish. Sprinkle over this some of the mixed bread crumbs and nuts, then add another layer of the bananas and another layer of bread crumbs and nuts. Sprinkle the top with powdered sugar and bake in a moderate oven for about forty-five minutes. This can be served with a lemon sauce if desired.

Banana Sauce.—Four bananas, peeled and mashed; two cupfuls of milk, one tablespoonful of butter, one tablespoonful of cornstarch, one tablespoonful of sugar, salt. The cornstarch is gradually dissolved in the milk, and the banana pulp and sugar and salt are added. Melt the butter in the saucepan and pour in the mixture. Cook until creamy.

Stuffed Baked Bananas.—Remove only one side of the skin from large bananas, then scoop out a hollow in the fruit. Chop any candied or preserved fruits, cherries, pineapples, raisins, etc., and add a little sugar and the juice of any of these fruits, or grape juice can be used. Stuff this mixture into the hollows in the bananas and bake for twenty minutes in a moderate oven. Serve in the skins and pour one tablespoonful of orange juice over each banana.

Banana Omelet.—Three bananas, three eggs, one-quarter cupful of bread crumbs and one-quarter cupful of sugar. Peel the bananas and mash the pulp. Separate the yolks and whites of the eggs. Beat the yolks until light, and add sugar, bread crumbs, salt and banana pulp. Finally fold in the stiffly beaten whites and cook in omelet pan.

Lemon and Banana Pie.—Cover the outside of a pie plate with rich pastry and prick with a fork. Bake a golden brown. When cool remove from tin and place in the plate. Make filling of one cup granulated sugar, one tablespoon butter, two rounding tablespoons cornstarch, yolk of one egg, juice and rind of one lemon, pinch of salt. Stir, then add one cup cold water. Place on stove and stir until thick. When cool add two sliced bananas and pour in crust. Cover with meringue made with the beaten white of one egg and two tablespoons sugar. Set in oven to brown.

Cranberry Recipes.

Cranberry Marmalade—Two pounds cranberries, one and one-half pounds brown sugar, twelve ounces stoned raisins, juice of one orange, one and one-half teaspoonfuls of mixed spices (cloves, ginger and cinnamon), one-half cup vinegar. Pick over the berries and wash them well, then put them into an agate saucepan together with the other ingredients. Bring very gently to a boil and cook slowly, until the consistency of a stiff marmalade. Put into sterilized glasses, seal and keep in a cool, dry place.

Baked Cranberry Pudding—One and one-half pounds cranberries, six ounces stoned raisins, one ounce butter or butter substitute, one egg, one-half pound brown sugar, one-half teaspoonful powdered cinnamon, the juice of one orange, lady fingers or sponge cake. Line a greased fireproof dish with the lady fingers or sponge cake, placing them very close together then fill in with the following mixture: Stew the berries until quite soft, using as little water as possible. Rub them through a fine sieve. Chop the raisins coarsely, add them and the butter to the fruit puree and stir well together until the butter is melted. Mix in the sugar, cinnamon, orange juice and well-beaten egg. Pour into the lined dish and bake for fifteen minutes in a moderate oven. This looks prettier if covered with a meringue of stiffly beaten white of egg and powdered sugar. As some cranberries are very much more acid than others, it is well to taste the puree before putting into the lined dish so that more sugar can be added, if desired.

Cranberry Pie—One and a half pounds cranberries, six ounces brown sugar, one ounce cornstarch, three tablespoonfuls molasses, three ounces chopped raisins, pastry. Wash the berries and chop them up, chop the raisins, too, and mix together; then add the sugar and molasses. Moisten the cornstarch with a little cold water and stir into a cup of boiling water, then pour over the fruit mixture. Cover with pastry and bake in a moderate oven. This same mixture baked in little three-cornered tarts of pastry is very good and serves as a little variety.

Cranberry Molds—Two pounds cranberries, two pounds brown sugar, two oranges, four ounces chopped raisins, four ounces chopped English walnuts. Wash the berries and cook them in a half pint of water together with the juice and pulp of the oranges and the raisins. When the cranberries are quite soft add the sugar, stirring over the fire until all the sugar has melted. Then add the nuts and put the mixture into small individual molds which have been rinsed in cold water. When cool set on ice and when chilled well turn out and serve.

Save the Fats.

A big waste takes place in many households through the failure to save and utilize fats. Not an atom of fat should be thrown out. It is valuable. To render fat carefully put the bits in the upper part of a double boiler. See that the water under it is really boiling, and as fast as the fat melts strain it into tin pails or clean, empty cans. The softer fats from geese, turkeys and chickens are good for fine cooking, and many other fats can be used in preparing or frying various foods. The dripping should be kept in a warm place. It is cold that makes it taste "tallowy."

Apart from cooking there are many excellent uses for fats, and one woman writes that she makes her own candles.

"I go so far," she says, "as to make my own candles—some white, some red, and others yellow or pink. They add to the warmth of the dinner-table. Four of these in dainty candlesticks around a tiny pot of ferns in the table centre add greatly to its charm, and I simply utilize the bits of suet usually thrown away. A candle mould costs but a dollar. Ten cents' worth of wick lasts a long time. Colored candles, to buy, are very expensive, and rather difficult to get good quality if one lives a long distance from market.

For household soap melt six pounds of clean, rendered fat in a large pan. Put one can of ordinary lye in a bucket; add a quart of cold water, and stir with a wooden paddle until the lye is dissolved. Remember this will boil as the water is added, but let it stand until it cools. Now pour the cold lye into the melted suet, stirring all the time. When you have added the last of the lye stir constantly, but slowly, for half an hour, or until you notice the soap is beginning to set. Then let it stand perfectly quiet over night and it is ready to cut into blocks and dry. You will have about nine pounds of soap at the cost of the lye.

Useful Hints.

A cabbage should always be boiled in two waters.

An excellent cake is made with boiled raisins.

The bone in real lamb chops is very small and short.

The house fern should not have the sun shining on it.

Linen pillow slips are a great comfort to an invalid.

A good and simple dessert is boiled rice and stewed figs.

Graham bread has in it three times as much iron as white bread.

Hot cornmeal mush with cream is a very good winter breakfast cereal.

Excellent gems can be made of oatmeal when ever one has a cupful of that useful cereal left.

Left-over fish can be creamed and baked in ramekins. This makes a very attractive supper dish.

When milk boils over on the stove sprinkle on some salt at once. This will counteract the disagreeable odor.

Gruel, when properly prepared, should be a little thicker than cream, and should be absolutely free from lumps.

After putting buttered paper in the cake pans, sprinkle in just a little flour. This will keep the cakes from sticking.

A little alcohol rubbed on quickly will clean a dirty window better than soap suds; ammonia in wash water is equally good.

AN APPEAL TO THE FARMER.

Hon. Mr. Burrell Says Agriculture of First Importance in Winning War.

For two years and a half, war, red and ruinous, has raged through the world, and still no decision has been reached. There is reason to hope that before 1917 closes the struggle for liberty will have been won, or greatly advanced. Amid the varying phases of this titanic conflict the fact stands out more clearly than ever that agriculture is of supreme importance. Extraordinary measures are being taken by the allied countries to increase and encourage production. It is earnestly hoped that every farmer in Canada will strive to increase the food supply of the Empire. A still powerful and unscrupulous enemy openly avows its intention to try and sink all ships carrying supplies to England during the coming year. In the tremendous strain yet to come a vital factor will be an ample and unfailing flow of food to England and France. No matter what difficulties may face us the supreme duty of every man on the land is to use every thought and every energy in the direction of producing more, and still more.—From the Agricultural Gazette for January, 1917.

Good Reason.

Teacher—Why are you so late?

Boy—Please, miss, I started late.

Teacher—Why didn't you start early.

"Please, miss, it was too late to start early.

SPRING WHEAT HELPS

Being the Second of a Series of Five Articles Specially Written by G. Bell, Agronomist.

Henry G. Bell.

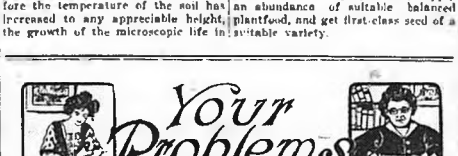
Many farmers are just now busily planning crop rotations and the definite areas of the definite crops which they purpose growing next summer. Not a few are considering the question of spring wheat. Many of those who have not grown this crop are studying the chances for possible returns for money invested in it. Those who have already grown acreages of spring wheat are interested in any suggestions as to how the yield per acre can be increased, especially so under the present enormously increased demand for food cereals. Food must be produced in greater quantities in 1917 if severe shortage is not to be felt by a large percent of society. There is no question about it. The London Statist, in a recent issue declares that on account of a shortage of feed, there is an under-supply of over a million pigs in the sties of England, resulting in scarcity and dearness of pork, bacon, ham and sausages. Even Ontario's figures show a relative shortage in the production of meat animals over years gone by. The shortage of food of every and all kinds must be felt, and everything that can be done to spur up the acreage yields of the food cereals will accomplish just that much to help solve the great and general problem of food shortage.

Ontario, with over 14,500,000 acres of cleared, cultivatable land, has an acreage of a little less than 110,000 acres of spring wheat. This is not one acre per farm. The yield of spring wheat over the whole province, varies between 18 and 19 bushels per acre. Now, there is reason to believe that with a little expenditure of labor, and with a little careful planning, it would be possible to considerably increase the acreage of spring wheat to the substantial profit of the farmer, and to the benefit of the inhabitants of this province and to the whole Dominion. The following few suggestions are offered:

(1) Get seed of a good variety, and then sow good quality seed. Possibly no one in Ontario has a better specific knowledge of relative varieties suitable for growing under Ontario conditions than Prof. C. A. Zavitz of Ontario Agricultural College. Prof. Zavitz, after testing a number of varieties for a number of years at Guelph, and after having members of the Ontario Agricultural & Experimental Union test 24 varieties of spring wheat throughout the province of Ontario, comes out in favor of two varieties; first, Marquis, and second, Wild Goose.

When Marquis wheat was tested out in 24 places in the province, it was found to yield a little less than 22 bushels per acre under actual farm tests. This variety was produced some years ago by Dr. Saunders of the Dominion Experimental Farms, Ottawa. It is a comparatively short-season variety and produces grain of high-milling quality. Altogether it has proven one of the most popular varieties throughout the province. Farmers who wish to locate seed of this variety will do well to write the Dominion experimental farms, Ottawa, and the Ontario Agricultural College, as well as to consult seed lists of well established seed companies.

In preparing the seed, the fanning mill should be used liberally. Fan out all the broken, light and diseased kernels and use none but good round material for seed. Like tends to beget like in the plant kingdom just the same as in the animal kingdom. If you plant weak immature seed, you handicap the future of your crop just as much as if you select the calves of weak immature cows, and expect to build up a good healthy dairy.



(2). The next point in increasing wheat yields is to look after the plant-food supply. The soil is nature's great store-house. It is from this that most of our farm crops get the foods which build up wheat, oats, barley, corn, apples, potatoes and other plant products. In early spring, before the temperature of the soil has increased to any appreciable height, the growth of the microscopic life in the soil, or bacteria, is very slow, and as a consequence not much soil material is broken down into such form that it will dissolve in the waters of the soil or the root juices, and can be taken up into the plant. It is just at this time that a little available plant-food gives the tiny sprouting seed a vigorous start, making it possible for the resulting crop to reach out and make use of plant-food that to a weaker crop would be unavailable. Two hundred to three hundred pounds of a well balanced fertilizer has been know to increase wheat yields from 40 to 60%. Not only does it increase the total yield, but it materially improves the quality of the resulting wheat. The fertilizer should be of an analysis to make up for the weaknesses of the soil and to supply a proper balance of plant-food most needed by the crop. For instance, for a grain crop, the fertilizer should emphasize phosphoric acid, as well as supply a fair amount of nitrogen, or ammonia, and potash. Necessarily, under present conditions, the supply of potash in fertilizers will be low, yet experiments of many of North American experiment stations have shown that material increases in crop yields have been brought about by the judicious application of plant-food containing only nitrogen and phosphoric acid.

Not only does the plant-food improve the immediate wheat crop, but if the wheat is seeded with clover and timothy, it almost insures a good catch of this following crop. It is significant to note, in connection with fertilizing wheat, that in the state of Maine, where climatic conditions are somewhat similar to those of Ontario, and where spring wheat is grown in rotation with potatoes and clover, farmers are getting a yield exceeding 26 bushels per acre. There seems good reason to believe that if careful attention is given to soil preparation, balancing of plant-food and proper use of selected seed, it should be an easy matter to produce 25 to 30 bushels per acre of good quality spring wheat in Ontario this coming winter.

Speaking generally, the yield of spring wheat is diminished on account of the attacks of rust and other diseases. In controlling many disease of some crops, it is possible to accomplish considerable by spraying, but this is not possible when it comes to the control of the destructive rust disease of spring wheat, which annually does so much damage throughout the great western area of Canada and the United States. In considering disease control, it is well to keep in mind that to some extent the same laws govern the plant kingdom as govern the animal kingdom. Those animals that are least susceptible to disease are the ones that are vigorous and healthy. They are also those animals that have proper living conditions. eneral observation of growing crops has lead to the conclusion that the proper preparation of soil and balancing of plant-food do a great deal to combat plant diseases.

The rust disease flourishes during the month of June, when temperature is highest and there is usually considerable humidity in the atmosphere. If the crop has been given a good, vigorous start, and the season is at all normal, it will be past the flowering stage by the middle of June; in fact the kernels of wheat will be pretty well formed so that the ravages of an attack of rust will not leave nearly so serious results on the crop as on a crop that has not had the early start and is not so vigorous. This is found to be the case on such crops as cabbages, tobacco, sugar beets, and the like.

For a study of the climatic and soil conditions of Ontario, it should be possible to produce good crops of spring wheat well up into New Ontario. When we consider that this crop does not take any attention through the growing period, and that a bushel and a half of seed on well prepared land should give an abundant seeding, it seems quite logical to advocate the wider sowing of this valuable cereal in the spring of 1917. Wheat prices are bound to be high and for a long time food products will be scarce. It is therefore to the financial advantage of every farmer who can spare a few acres for spring wheat, to give the ground thorough preparation, supply an abundance of suitable balanced plant-food, and get first-class seed of a suitable variety.

Under this heading will appear each week a new department of Questions and Answers on subjects of general interest to women.

The department will be conducted by a woman of wide experience, well qualified to offer helpful advice and counsel to our women readers regarding the problems which confront them in their daily life.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 25 Castle Frank Road, Toronto.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Professor Bell is particularly fitted for this work, as he has made a life study of soils and crops. He is a graduate of the Guelph Agricultural College, and for a short time taught in that splendid institution. From there he went to the Iowa Agricultural College as Assistant Professor of Farm Crops, later on becoming Professor of Agronomy at the University of Maine and Superintendent of the University Farm. He is the author of a large number of articles on agricultural subjects.

The object of this new department is to place at the service of our farmer readers practical and authoritative information that will help them to secure the best possible crops of every sort.

Is your soil as fertile as it should be? Does the partial failure of some crop puzzle you? Are you using the varieties of seeds best adapted to your soil and locality? Would you like some practical and scientific advice on the adaptation and use of manures? Are you losing hard-earned money through pest or blight?

The expert advice of Professor Bell is made available to you free of charge through this department.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Horse Sense

Give the colt industry a boost, and incidentally boost yourself a bit.

Horse breeders may well take courage by what has been going on in the world for the past year or two.

Horse men say that they can't get horses enough. Every farmer may put in an extra lick in this business.

When the great need is for heavy horses, it is like barking up the wrong tree to breed ponies. Watch your market.

Yelling or otherwise abusing a horse will make him sweat worse than a hard day's work. Wears him out, and you, too. Quit it.

When a horse won't eat just after coming in from a day's work, you have stuck to your job too long. Doesn't pay you nor the horse, either.

An old horse was braced up and made thrifty by soaking cut hay in diluted molasses. Soak in a tight box from one feeding to the next.

The Dairy

Cows that are turning a good profit with udders full of milk are sensitive and relaxed. A chill will often result in the loss of a part or all of the rudder and often the cow.

A setback like this always puts the balance on the wrong side of the bank account.

If a winter of loss is sustained it is up to the farmer and not to the cows.

Keep on milking twice each day, and regularly, if you milk at all.

Feed the cows so that it will pay to milk all winter.

Supply sufficient food in the stables to keep up the milk flow and condition.

Supply plenty of bedding, straw, shavings or sawdust. No cow can do well if obliged to lie on a bare cold floor.

Don't let the liquid manure run through cracks in the floor.

Sheep Notes

Castrate all inferior or grade buck lambs early.

An eighty-pound lamb or hog enough for market.

Exercise is important with the ewes and the coming lamb crop.

To get a good growth of wool, we must feed liberally. Narrow feeding, narrow margins of profit.

If fed properly, a sheep ought to gain from one-quarter to one-half pound in weight every day.

Exercise can be encouraged on fine days by putting feed at some distance from the sheep quarters.

If any weeding is to be done, you do it. Don't let the meat man take his pick and leave you with the culls on hand.

A narrow doorway or gateway is a menace to sheep that must be driven through it. Let all gates be wide.

Hogs

Buttermilk runs a close race with skimmed milk as a pork grower.

Soaking corn ten or twelve hours cents grinding. Lots cheaper, too.

Every drop of skimmed milk you give to the hogs they turn into good, sweet meat.

The colder the weather the more it costs to make pork. Hustle the hogs along and save expense.

A bit of ensilage is relished by the best of hogs, and there is meat in it.

Hogs fed on corn-meal, with linseed-meal, or middlings will not take so much feed and turn it into fat, as they will if fed on corn-meal and skimmed milk.

Wood-ashes and bone-meal double the strength of the hog's bones. They also save in the amount of other feed needed.

One great trouble with the hog business of this country is that it has been looked upon as a side show. Let's bring it over into the big tent; then it will mean more to us.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON FEBRUARY 11

Lesson VI. Jesus And The Woman of Samaria—John 4. 1-29 Golden Text.—1 Tim. 1. 15.

Verse 5. It must be observed that Jesus was out of his way. Jews always crossed the Jordan twice and traveled along its eastern side, to avoid Sarmaria. Jesus must needs pass through Samaria because of the work he had there. Sychar, if rightly identified, was a couple of miles from the capital. See Josh. 24. 32, and Gen. 48. 22 (margin).

6. Jacob's well—Still shown—of course all such identifications must be taken with reserve. Wearied—Though the traveler were not too tired to go another four miles. So Mark 4. 38, where they were rowing and he was asleep. These are two among many indications that he wore his body out with toil for men, long before his last ordeal. Sat thus (margin—so John 13.25), without a meal or other refreshment.

7. Her coming at high noon has sometimes been connected with her life of sin (verse 18), which made her avoid the hour when other women would come.

9. It is not at all certain that the concluding sentence is the author's parenthesis; it may just as well be the tail end of the woman's little sarcasm.

10. Living water—An ambiguous term, for the woman would understand it simply as "running water." The well is significantly called a spring (margin in verse 7), which would accordingly produce "living water." For Jesus everything had "its parable" (Mark 13. 28), and here he finds "books in the running brooks." There may be an allusion to Isa. 55, 1 in the gift of God, thus combined.

12. Note the proud challenge—and other Jew would have flred up at the claim to father Jacob on the part of these bastard Samaritans!

13. Drinketh—There is a most significant difference in the Greek here and in verse 14: there it is really whosoever shall have drunk—one draught is enough, for he takes into himself not one draught, but a well!

14. The water of eternal life, here and in Rev. 22. 1, has its Old Testament suggestion in the vision of Ezekiel, in which a river flowed from the temple and everything lived wherever the river came (Ezek. 47. 9). Jesus teaches that the believer's heart is like the temple, and "streams of living water" pour from it (John 7. 38).

24 In spirit and truth—And not in a temple made with hands, which at best was only a means of grace. "Speak to Him then, for he heareth, and Spirit with spirit can meet."

25. The Samaritans thought of Messiah primarily as the Prophet "like unto" Moses, in conformity with their entire dependence on the Pentateuch as their canon of Scripture. Of course the explanatory parenthesis is due to the author.

26. As already explained, we may reconcile this with the Synoptists' clear denial that Jesus revealed his Messiahship only at the end, by regarding this as the Evangelist's paraphrase of a saying which could only be understood later.

RESPONSIBILITY IS HERE.

Stay-at-Homes Must Keep Faith With Men at Front.

The responsibility that rests upon the stay-at-homes to maintain the efficiency of the Canadian Patriotic Fund is the responsibility of keeping faith with men and women who have trusted us—even without knowing us personally.

Every man enlisting for the front, whose family would be dependent on the Fund, went forward with a free mind because of his confidence in our promise to take care of his wife and babies. If we have to mortgage our houses that promise must be kept.

As a matter of fact, no Canadian voice has been raised to suggest any other course, but there have been expressions of opinion that the time has come for the fund to be maintained by other than voluntary contributions. Whatever the future may develop, the fund for 1917 must be raised on the voluntary principle. This being a fact, not a theory, there is but one thing to do—to go more it.

The Paisley Advocate

PAISLEY, FEB. 14th, 1917

—The Women's Institutes of Ontario passed a resolution at their recent convention to petition the Legislature to prohibit the sale and manufacture of ice cream as a luxury, until the scarcity of milk is over and prices are normal. They also intend to ask for better sanitary arrangements at stations, on trains and in churches and Sunday schools of rural districts.

—The Ontario Government announces that they are appropriating one million dollars to assist returned soldiers to go on the land. The money will be devoted to establishing training schools, to help the men clear the land in Northern Ontario, stock their farms and make whatever improvements may be necessary. The money will be advanced and paid back in instalments.

—The danger of an invasion of Canada by pro-Germans from the United States in the event of the republic going to war with Germany is more remote than at the outbreak of the war in 1914, and may be considered of little importance now. Within the past two weeks thousands of Germans in the U. S. have applied for naturalization, and this indicates that the men of Teuton birth are coming to a decision that shows they are not likely to assist the rulers of the Fatherland in carrying on this war of savage ruthlessness. The United States government, too, will not allow any depredatory movements towards Canada from the south. We are, therefore, now quite secure from trouble of that kind.

—The winter fuel situation in Canada and the United States has this season been more acute than perhaps ever before in the history of the continent. The coal miners, the dealers and the railways have come in for a heap of condemnation from the consumers. But who are really to blame? Coal is offered during the summer months at from 50c to $1.00 a ton less than winter prices, and why should the people not all take advantage of that circumstance and lay in a supply that would last them through the cold period? If a larger proportion of the household consumers did that there would be no such thing as a coal shortage in January and February. Storage is the key to the situation, says a coal man writing in the Black Diamond. Operators and dealers would require immense capital to store for all the people, and would involve an extra charge for the capital invested, we may be sure. Every man store his own supply and save money, is a simple method of meeting the difficulty. Not so very long ago there was such an unlimited supply of first-class and cheap wood in Bruce county that a coal dealer wasn't needed, but times have changed since the land is nearly bared of timber and we are asked to pay $3.00 for a cord of 16-inch wood, and we must adapt ourselves to these greatly changed conditions. Anyway, we always buy next winter's wood this winter, so why can't we purchase coal a few months ahead.

SOLDIER SETTLERS IN NORTHERN ONTARIO

In a memorandum to Sir Robert Borden with reference to facilities for settling returned soldiers on the land, Mr G Howard Ferguson ex-plains Ontario's proposals, some of which may be mentioned: Farms containing not more than 80 acres will be laid out in such manner as to bring the different farm houses as close together as possible. The work of the men will be directed to clearing on the front of each farm an area of ten acres. As soon as a soldier desires to go upon a farm and work for himself an 80-acre lot with a 10-acre clearing will be allotted to him. The 80 acres with 10 acres of clearing will be given the settler free of charge. For each day's work that is done from the time he enters the training school at Monteith until he goes upon his clearing he will be paid a reasonable wage. An advance up to $500 will be made to cover the cost of stock, implements, equipment and any assistance in building that may be given, for which a lien will be taken against the settler's holding and chattels. The lien will be repayable in twenty years at six per cent, but no payment on account of either principal or interest shall be required until after the expiration of three years. At the expiration of five years from the settler locating upon his land, and upon the due performance of certain conditions in the meantime, he will be entitled to receive a patent from the Crown. There are also facilities for co-operative marketing.

LOCAL AND DISTRICT NEWS

How It Happened

The wreck in which 19 of Train Bros.' horses were killed was caused while the train was standing on a siding at Pays Place station, 150miles west of Schreiber. A brakeman turned a switch the wrong way, allowing a through freight to crash headlong into the standing train. The horses were in the cars next the engine, which accounts for their destruction. A large amount of grain was lost from the wrecked cars of the other train. The men all escaped injury. This information was brought by Mr Rob Irwin, who has returned from the west.

A Cold Spell

For two or three nights the ordinary thermometer has had more than it can do to register the low degree of temperature The mercury retired to the basement early in the night, and had to stay there until after daylight next morning. It was 40 below or lower. The winter having been a comparatively mild one up to this time, most of humanity were caught rather tender for this frigid spell. Fuel is high priced, but there is not the scrimping scarcity that prevails in many other places. None of our industries are shut down for lack of coal!

A Veteran Soldier on Leave from France

Sergt Thos Hembroff was here for a few days last week visiting relatives. He is a nephew of Mr Wm Dudgeon, of Elderslie, and while in town was a guest at the home of his cousin, Mrs Thos Ellis. Sergt Hembroff went overseas with the first Canadian contingent in 1914, and went through the great crises of the pioneer period of the struggle, and had some most dangerous and trying experiences. He has been off duty for some months since being wounded by shrapnel, and now has three months' leave in which to recuperate before returning to France. His home is near Winnipeg and he leaves for the west this week.

Paisley 16, Port Elgin 5

Port Elgin and Paisley hockey teams played the return game here on Wednesday evening last before a good crowd, the visitors going down in defeat by a score of 16-5. The play, though a little one-sided after the first few minutes, was fast and the checking hard, but clean. The score by periods was 5-1, 11-2 and 16-5. Mr. Verne McLean, of Port Elgin, was a very efficient referee and only had to hand out one penalty during the game. The line-up:

Paisley—Goal, Cottrell; defence, Shoemaker and McGregor; rover, Murcar; centre, Stanley; left wing, Elwes; right wing, McKenzie.

Chesley Northern League team is expected to play here on Friday night of this week.

D. J. IZZARD

Reeve of Port Elgin and Warden of Bruce County for 1917

From Gunner Johnston

Writing from Witley Camp on Jan 12th, Gr Wm Johnston, in a letter to his mother, Mrs D Johnston, of east A. Elderslie, says: "We have just returned from Salisbury Plains, where we spent ten days shooting. We left here on Sunday morning, the last day of 1916, and worked good and hard every day while up there. The weather was very bad as it snowed and rained a great deal and on Sunday while there we got up at 4 in the morning and worked hard all day. It is a large camp but not as good as this one, and everybody longed to get back here. It was at that camp so many Canadians died, over a hundred a day. The mud is so sticky that you can scarcely pull your feet out of it, and it is not at all scarce. It is an Australian camp now, and they have several funerals each day. The Australians are just like Englishmen both in speech and actions, and they have enlisted much better than Canadians. When we returned from firing there was a bunch of mail waiting for me, including eight parcels. We expect to leave for France about the first of February, but we will not be up to the front for a while after that, so don't worry as all is well will be alright. I haven't been able to see any of the 16th boys since they left our camp, as it is impossible to get any close to myself. I think we will get a few days' leave before long and I may be able to see them then."

W. P. L. Gifts Welcome

France, Jan 10, 1917

DEAR MRS SHOEMAKER—I'm sitting in front of the "Brazier" writing this letter to Paisley, and believe me, wouldn't I like to accompany it to its destination. First of all, I want to express my sincerest thanks to the ladies of the Women's Patriotic League for so kindly remembering me by sending a Christmas parcel. I have been very fortunate this Christmas in being remembered by my friends, especially Paisley friends, and I must say that I appreciate it further here than I can express. It is now six months since I came to France, and in that time I have been most fortunate. I seem to have horseshoes hanging all over me, and what is most important I seem to be made of nails or some such substance. I couldn't even look sick, in fact, if I tried. This all helps to make the time pass very rapidly. I can scarcely believe that January is half gone; it seems as if it were only a few short weeks since I was last in good old Paisley. My work there is extremely varied, which probably accounts for the fact that it is also interesting—driving, despatch riding, laying cable, etc, sometimes one, sometimes another, but principally driving now. Our outfit contains a bunch of the finest boys in the land, so I suppose I cannot find very many grounds for complaint. I shall close for the present, and would like to say that any news from Paisley is very welcome.

Sincerely,
WILL MCGILL

SEVEN YEARS TORTURE

Nothing Helped Him Until He Took "FRUIT-A-TIVES"

ALBERT VARNER

Buckingham, Que., May 3rd, 1915.

For seven years, I suffered terribly from Severe *Headaches and Indigestion*. I had belching gas from the stomach, bitter stuff would come up into my mouth after eating, while at times I had nausea and vomiting, and had chronic Constipation. I went to several doctors and wrote to a specialist in Boston but without benefit. I tried many remedies but nothing did me good. *Finally, a friend advised* "Fruit-a-tives". I took this grand fruit medicine and it made me well. I am grateful to "Fruit-a-tives", and to everyone who has miserable health with Constipation and Indigestion and Bad Stomach, I say take "Fruit-a-tives", and you will get well".

ALBERT VARNER.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

People Talk About Economy

But how many really KNOW, have PROVEN that there is no economy equal to that of buying and eating healthful food?

This economy sometimes spends a few cents more a week on Groceries just to be sure.

This economy distinguishes between what is low priced and dear, and what is moderate priced and cheap.

This economy considers the health of a family, the most valuable of assets.

To people who practice this sort of economy we commend this Grocery stock of ours.

Our methods have stood and are standing the severest tests along this line.

If you appreciate the top-notch Grocery quality —investigate.

COUNTY ROADS

The Good Roads System being one of the most important matters before our County Council at present, and one upon which a decision is to be made at the June session, THE ADVOCATE here reproduces for general information almost the whole of the appendix to the annual report of the Provincial Department of Highways, in which Hon. H. G. McDermaid presents the subject very fully:

Organization for road improvement is a matter which at the present time should receive much attention, especially in counties which have not already a system of roads under the Highway Improvement Act. During the period of readjustment at the close of the war, it is important that industrial activity of all kinds be stimulated so as to give employment and prevent the commercial reaction which may otherwise ensue.

At the present time it is the part of patriotism to give every needed support to the men who so gallantly uphold the name of Canada in the annals of the great world conflict. When their courage is rewarded with victory, it will be an equally patriotic duty to show that adequate preparation has been made for peace, and that prosperous conditions await the return of the Canadian Over-Seas Forces.

Road-building may be made to play an important part in this regard, but to that end, organization should be carefully considered, and created now. County road construction under the Highway Improvement Act is generously subsidized by the Provincial Government, is essentially sound in principle, is not burdensome in cost, and is exceptionally favorable to the minor municipalities. Excellent results are being obtained in the 31 counties operating under the Act, but it is desirable that the remaining 16 counties should avail themselves of its advantages.

Counties now having county road systems are: Wentworth, Lanark, Simcoe, Wellington, Lincoln, Hastings, Oxford, Peel, Middlesex, Lennox and Addington, Prince Edward, Halton, Perth, Frontenac, Waterloo, Carleton, Leeds and Grenville, York, Haldimand, Welland, and Essex.

Road improvement under a county road system is a progressive measure which every progressive community can advantageously adopt. The general features of a county road system under the Highway Improvement Act are as follows:

A County Council may, by by-law, assume a system of roads for construction and maintenance. These become county roads and are under the control of the County Council.

Roads of the open country have ordinarily been under the sole control of township councils. Experience in every country which has achieved a system of good roads has shown the necessity of classifying the roads according to traffic, placing each class under separate municipal authority. By this means uniformity of construction is assured, and opportunity for permanent maintenance is provided. Roads radiating from towns and shipping points are the basis of a county road system.

The Provincial Government contributes 40 per cent of the total expenditure on construction, which is paid to the county annually, after the close of each year's work. It should be made clear that the provincial subsidy is 40 per cent of the total expenditure; not a percentage of the county contribution. Thus:

The County raises	60c
The Province contributes	40
The County spends.....	$1 00

Expressed in another way: For every $1,000 spent by the County, the Province contributes $666.66, and the County thus has to spend $1,666.66.

The Province also contributes 20 per cent of the total cost of maintenance, estimated on a similar basis.

The mileage of roads assumed in a county system is usually from 12 to 18 per cent of the total road mileage of the county, and therefore bears some proportion to the number of townships and area of the county. The improvement of 15 per cent of the roads will commonly serve 75 per cent of the traffic. The average county in Ontario has about 200 miles of county roads.

The roads assumed are usually such as will accommodate the greater part of local market travel, creating a system of main market roads for farm traffic. They are the roads radiating from local market centres and shipping points. They should be connected as far as practicable to serve the needs of through traffic of the locality. The county systems should not be continued with old county roads, many of which have ceased to be the roads of greatest travel.

The work is placed in charge of a superintendent appointed by the County Council. The superintendent is therefore an officer of the County Council, acting in co-operation with the Council. He should be an experienced construction man, well qualified to organize and direct labor. The average salary is $1500 yearly, of which the Province contributes 40 per cent, or $600, leaving only $900 as the cost to the county. There is no charge for services of engineers of the Provincial Department of Public Highways, and they are available at all times for consultation and advice.

Construction should be suited to local material and traffic. The standard type is a roadway well drained, graded to a width of 24 feet between ditches, with gravel or stone in the centre 10 feet wide. With very light traffic the gravel may have a less width; and for heaviest traffic adjacent to cities, may be 18 feet wide. Under special conditions for roads entering towns or cities a stronger type of construction may be permitted by the Department.

The roads commonly built under county road systems are not necessarily expensive. Certain districts have an abundant supply of gravel. Many of the roads have been gravelled from time to time and a good foundation has been made. In such cases the work usually consists of removing sod shoulders, improving the drainage, and adding a new surface of gravel—costing from $1000 to $2000 per mile for substantial work suited to local traffic.

County councils frequently desire to make the expenditure in each township proportionate to its equalized assessment, and on such a scale that there may be spent in each township an amount equal to what the township has contributed, plus the Provincial grant. The Act will permit a county to adopt this adjustment of expenditure if so desired.

The County Council may by by-law make grants to towns and villages not separated from the county, for the improvement of extensions or connecting links of county roads in such towns and villages, and certain of such grants may be included in the statement of annual expenditure. Grants are commonly proportionate to what the town or village has paid in the county rate, plus the Provincial subsidy. Grants eligible for a Provincial subsidy are those made to villages having a population of 1500 or less; and those made to municipalities with a population of over 1500 and under 20,000, provided the improvement is carried out on streets passing farm or sparsely occupied property. Streets may in case be assumed as county roads if so desired.

Road-building is necessarily a slow process. Ten or fifteen years is commonly required to complete a county road system. The work should therefore be financed on an annual basis, and may be carried on, if desired, without debenture issues. The total cost in a term of years should not deter counties from undertaking construction if the annual cost is not burdensome.

An annual rate of one mill, or one and one half mills on the county assessment, would enable most counties in the province to finance construction. This may be supplemented by a small debenture issue to meet the cost of bridges, special grading or other permanent work.

Statute labor along the county roads belongs to the township councils. This labor may be worked out on the side roads, or may be wholly commuted. On a county system of 200 miles this would commonly amount to 10,000 days, having a commutable value of not less than $10,000. Devoted to township roads it materially aids in raising the general standard of roads in the county.

The county road expenditure is by no means an added burden. No new roads are created. The roads are essentially those which are now most heavily travelled and therefore require a considerable township expenditure for maintenance in their present state. Bridges and culverts on them must be built in any event; the statute labor is a considerable offset to a county appropriation.

The machinery required varies with the type of road built and material used. A county is required to have at least one steam roller costing $28 0. The average county has gradually invested about $30,000 in machinery and plant. Of this the province pays 40 per cent. A judicious expenditure on machinery is one of the most profitable that can be made, as proper equipment will reduce the total cost of the work and will produce better and more durable results. When not in use on county roads, the machinery may be loaned to towns, villages and townships wishing to carry on special construction.

The Act is sufficiently flexible to meet special conditions on an equitable basis.

TO INVESTORS

THOSE WHO, FROM TIME TO TIME, HAVE FUNDS REQUIRING INVESTMENT MAY PURCHASE AT PAR

DOMINION OF CANADA DEBENTURE STOCK

IN SUMS OF $500 OR ANY MULTIPLE THEREOF.

Principal repayable 1st October, 1919.

Interest payable half-yearly, 1st April and 1st October by cheque (free of exchange at any chartered Bank in Canada) at the rate of five per cent per annum from the date of purchase.

Holders of this stock will have the privilege of surrendering at par and accrued interest, as the equivalent of cash, in payment of any allotment made under any future war loan issue in Canada other than an issue of Treasury Bills or other like short date security.

Proceeds of this stock are for war purposes only.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXII

We must return for a while to the kidnapped Leicester.

Gagged and completely powerless he was hurried along by his captors, through the ruins and down, by a circuitous path, terribly narrow and steep, to the beach.

Though his mouth was gagged he could still see and hear, and when they had reached the beach he saw the starlike signal which had often puzzled him and heard the sound of muffled oars.

Presently, amidst a dead silence, he was lifted into a boat, which instantly put about toward the open sea.

After some little time he saw the spars of a small schooner looming in the distance.

The boat reached it.

He was lifted from the boat and carried on deck.

There he was instantly surrounded by a crew of desperate-looking sailors, half of them Lascars, a few Spanish and one or two Englishmen.

Job who had remained on deck, drew aside with the captain and, after a few minutes' rapid conversation with him, returned to where Leicester lay.

"I am going, Maester Leicester," he said gravely, and almost sadly. "I be sorry to leave ye like this, but ye wouldn't come to terms and there was naught else to do. I'd advise ye to give in like a wise gentleman, an' ye'll come to nae harm if ye keeps quiet. Good-by, Maester Leicester. I be sorry, mortal sorry, and I'd give a sight of money if it was any one else as we'd had to play the trick on."

So saying, he turned and dropped over into the boat, which instantly rowed away.

Immediately afterward the order was given to crowd all canvas and put the ship about.

While it was being executed the captain of the motley crew strode up to Leicester and unbound his hands and removed the gag.

Leicester sprang to his feet.

"Stranger," he said, with a twang, "I guess we'd better understand each other. I'm captain of this here vessel, and what I say I mean, and no gentleman, whether he's an eternal Britisher or a free man born under the Stars and Stripes can mean more. You've been consigned to my charge under peculiar circumstances. I'm to take care of you, keep yer safe and sound, and drop you off in a [illegible] at a certain place. Them's my instructions and them's my intentions."

"I will offer no resistance to this [illegible] oppression," said Leicester, "on the condition that I am not kept in confinement and allowed to mingle with and [illegible] your crew."

The Yankee thought a moment and nodded.

"That's fair," he said. "And I agree, with this here stipulation, that you [illegible] no nonsense with my men, none of yer [illegible] or tempting to a mutiny."

Leicester smiled bitterly as he glanced at the villainous countenances of the crew.

"I give you that promise," he said.

Leicester took off his coat, waistcoat, boots and stockings and quietly joined the crew in their task of setting the sails.

It was the wisest course of action, for had he been left idle and fettered with nothing to do but think and dwell upon his position he must have gone mad.

* * * * * *

It was a beautiful spring morning, and the London season is, like the time of year, just at its greenest and most verdant state.

This afternoon the Lady's Mile in the park is tolerably full, and the loungers against the railings especially numerous.

At the corner, near the old elms, leans little Tommy Gossip, everybody knows Tommy, and, what is worse, Tommy knows everybody and everything.

"Who's that, my dear boy?" says Tommy, as a green chariot dashes by, in which are seated a stout elderly lady and a companion. "That's the Duchess of St. Clare," and he lifts his hat. "She's the queen of fashion, my boy, and can make or mar a reputation with a word. Jingo! how she rattles! Ha!" And here Tommy Gossip brightens up into a state of mild excitement. "Here she is!"

"Who?" asked the lady at his side.

"Who? Why the beauty of the day, the new belle, the Ice Queen, as Madame White called her. By St. George, she grows more beautiful every day—and more pale."

And as he spoke he raised his hat, with an emphasis of reverence and eagerness, to an open carriage which slowly passed by.

In the carriage were seated three ladies.

Two of them were old, but one was superbly beautiful, with a beauty that was not only captivating but absorbing in its expression of gentle, resigned and dignified repose.

"There she goes! Look at the men. There's not a head covered, and there's not a heart, my boy, that would not jump out of its place at a smile from her. Who is she? Why she is the beauty and the belle and the mystery of London. Her name is Mildmay, Violet Mildmay, one of the old ladies with her is her aunt, Mrs. Mildmay, the other is a Mrs. Dudson—a relation of the family, some say, others a mother of that singular fellow, Leicester Dudson, Bertie Fairfax's sworn friend, who cut his throat down at some outlandish watering-place. Look, you see those two gentlemen, those riding toward us on horseback? That is Howard Murpoint, Esq."

"Which," said the boy, "the old one?"

"No, the young one, the old gentleman is Mr. Dudson, poor Leicester Dudson's father. No, the young one, watch his face, my lad, for it is the face of a great man. That man can command millions. He is chairman of the great Confederation Credit Company and director of half a hundred companies besides."

At that moment, while Mr. Gossip was running on to the delight of the lad, a tall golden-haired man came slowly by.

Tommy Gossip caught his arm as he passed.

"Hello, Bert, back again! Dine with us at the Thespian tonight?"

"I can't, I'm busy," said our old friend. "I'm very sorry. Ah, there is Miss Mildmay," and, dragging himself from the gossip he made his way to the carriage.

Barely two years had elapsed since the time of that tragedy in the little watering-place at Penruddle, and wonderful changes have come about.

Captain Howard Murpoint, no longer known as captain, but as Howard Murpoint, Esq., M.P., is on the road to be one of the great capitalists of the day.

How he has made his fortune and found his position is a mystery and a marvel.

And what of Violet? Has she forgotten her love-passion? Has she forgotten her ill-fated lover?

Look at her face and see if it is the face of a woman that forgets.

None know how much she remembers, how much of the past she still clings to.

To no one, not even to Mr. Dudson, whom she loves as a daughter loves her mother, does she ever mention that familiar name.

"Leicester" may be graven on her heart, but it never passes her lips.

We shall see her tonight, for there is a ball, the first of the season at the Duchess of St. Clare's, at which she will be present, in company with the elite, including Bertie Fairfax.

Bertie Fairfax, the favorite of the club and the drawing-room. Still the handsome Apollo Belvedere, but not quite the light-hearted, free, laughing fellow of old.

He is a celebrated [illegible] author of great repute, whom men point out to their sons as a modern genius, and to [illegible] women will do much.

Bertie was fond of a dinner once and loved a ball, but it seems now as if man delighted him not, nor woman either—at least but women.

He will always go to a ball or a dinner if he is sure that Lady Ethel [illegible] will be present.

For the rest, he spends his life writing hard, in those very set of chambers which his dear friend Leicester shared with him and where his spirit still [illegible].

There is to be a crowd at Clare House tonight, and Bertie will see Ethel—perhaps speak to her.

As he leans against the Mildmay's carriage he tells Violet that he will be there, and he knows by the gentle smile with which she looks down at him that she knows why.

"I am so glad," she says. "Will you look out for me? Lady [illegible] will not be there till [illegible]."

There is indeed a crowd at Clare House. The huge staircases are one great crush, the saloons a scene of [illegible].

To dance is almost impossible save to those young and ardent votaries of Terpsichore who are willing to waltz in the most [illegible] of their own dresses and other people's toes.

Still, however, there is breathing and moving room in some of the corridors, and thither many have taken refuge.

Violet dances, and she sings, and laughs sometimes, but not as she did of old.

The earl and Howard Murpoint were alone in a corner.

"A great crush," said the earl stroking his white moustache. "The young people seem to be enjoying themselves, which brings me to the remark that you ought to be classed with the juveniles, Mr. Murpoint."

And he looked at the capitalist with a cold smile.

"I am not very old, certainly," said Howard Murpoint. "Some would call me very young."

"For so successful a man," put in the earl, with another smile.

The successful man bowed.

"I have had my fair share of fortune," said Howard Murpoint, "but—perhaps like Sempronius, I have done more than deserve success—worked for it. That reminds me, my lord, that you have not yet made up your mind to join us in the new Penwain [illegible]."

He glanced at the earl as he spoke, then looked away to the ballroom with a careless air.

"Eh—hem!" said the earl, "you wish my name to appear on the list of directors?"

"Exactly," said Mr. Howard Murpoint. "An earl pleases, and pardon me, my lord—soothes the [illegible], as you are aware."

The earl frowned, if a slight contraction of the eyebrows can be called a frown.

"I am already on the board of several of your companies, Mr. Murpoint, at your request."

"Certainly at my request, my lord, but you have not undertaken any responsibility, and I trust, have found your reward."

"Eh? Yes," said the earl. "To put it plainly, I have received certain shares as an equivalent for the use of my name, and they have paid tolerably well."

"Very well, I think," said Howard Murpoint, with quiet and smiling emphasis.

"Tolerably well," resumed the earl, as if he had not been interrupted. "But as you seem to attach so much importance to my—the fact of my name appearing on the list of the Penwain Mine Company, it has occurred to me that—ahem!—it may be worth more than I receive for it. I speak plainly."

"I am honored by your candor," said Howard Murpoint with a crafty smile. "You have forgotten while enumerating the equivalents received slight service which I have been enabled to render you."

(To be Continued.)

Mrs. Waldorf Astor,

who is indefatigable in her work at Cliveden Canadian Hospital on the Thames, which she donated early in the war. Her husband, son of Lord Astor, formerly of New York, has been appointed a Parliamentary secretary by Lloyd George. She was one of the Langhorne sisters, famous Virginia beauties.

REPAIRING RAVAGED FRANCE.

First Tentative Steps in Scheme to Restore Beautiful Provinces.

From the days of the Battle of the Marne, when clear-seeing Frenchmen first began to realize that it was only a matter of time when the enemy would be forced to relinquish all he had taken, France commenced to ponder the rebuilding problem.

In The World's Work for January Mr. Lewis R. Freeman has been given permission by the French Government to publish for the first time the official records of devastation. For considerably over a year, with every ounce of effort mobilized to the task of holding the enemy where he was, it was impossible to do more than ponder and plan; but with the stemming of the initial German onslaughts at Verdun, in the early spring of 1916, the time was deemed ripe for taking the first tentative steps in a comprehensive scheme of reconstruction that will eventually restore to these brave and beautiful provinces of Northern France much that the war has cost them, nor rebuild those glorious spires and towers, enshrined eternally in the traditions of France. History speaks still from every gaping wall, and from each shattered pillar; the only story that these rebuilt monuments can tell is the unspeakable tale of Prussian outrage.

In the same cool, methodical and painstaking way in which she has paved the way for her victory in war, France began paving the way for her victory in peace. The first thing to do, indeed, almost the only thing that can be done until the war is over—was, as far as possible, to take stock of the damage done. A commission for this purpose was formed last spring.

The departments in which destruction had taken place were the following: Nord, Pas-de-Calais, Somme, Oise, Seine-et-Marne, Aube, Meuse, Meurthe-et-Moselle and Vosges.

At the very outset it was evident that no statistics could be collected concerning (1) The communes still occupied by the enemy, and (2) the communes which, though on the French side of the Front were still so exposed to fire that they had been evacuated by the inhabitants and no civil administration was in force in them. The communes still occupied by the Germans are calculated to number 2,554, out of a total of 36,247 in the whole of France. The greater part of these are in the departments of Nord (640), Aisne (569), and Ardennes (503).

The number of communes evacuated by the civil population because of their proximity to the zone of fire is 247, of which 21 are in Pas-de-Calais, 27 in the Somme, 25 in the Aisne, 34 in the Marne, 88 in the Meuse, and 39 in the Meurthe-et-Moselle. The number of communes in which destruction had taken place but which were still in the hands of the French, and in which civil administration had been restored, numbered 754, distributed as follows: Nord, 23; Pas-de-Calais, 71; Somme, 34; Oise, 59; Seine-et-Marne, 85; Aisne, 61; Marne, 258; Aube, 2; Meuse, 89; Meurthe-et-Moselle, 109; Vorges, 63.

When a Serbian wants to say "Yes," he shakes his head, and when he means "No," he nods.

Some people actually break down from overwork, but this is one malady that never develops into an epidemic so that it is necessary to quarantine against it.

Give the "Kiddies" All They Want of CROWN BRAND CORN SYRUP

It is one of the delicious "good things" that has a real food value.

A slice of your good homemade bread, spread with "Crown Brand", forms a perfectly balanced food, that is practically all nourishment.

So—let them have it on biscuits and pancakes, and on their porridge if they want it.

You'll like it, too, on Griddle Cakes—on Blanc Mange and Baked Apples. And you'll find it the most economical sweetener you can use, for Cakes, Cookies, Gingerbread and Pies.

Have your husband get a tin, the next time he is in town—a 5, 10 or 20 pound tin—or a 3 pound glass jar.

THE CANADA STARCH CO. LIMITED
MONTREAL, CARDINAL, BRANTFORD, FORT WILLIAM.

Our new recipe book, "Desserts and Candies", will show you how to make a lot of really delicious dishes with "Crown Brand". Write for a copy to our Montreal Office.

ON THE FARM

How Farmers May Save.

The value of food and fuel, also the rent saved by the use of the farm house are matters overlooked by many in their farm bookkeeping, and some farms are really yielding a small profit when the figures made, show them to be a losing proposition. Food is nowadays the chief item of expense with the city dwellers, and even in small villages the supply of products of the surrounding country are only obtainable at a price that is a heavy drag on the pocket of the consumer, yet farmers are in a position to escape much of this great expense if they only take advantage of their opportunities by means of good housekeeping, added to a little work on the part of the farmer himself.

Time is not as precious on the farm in Winter but that home butchering of a beef and some hogs may be managed, and there are great opportunities for economy in the home consumption of poultry raised on the farm. The advice, so frequently given, to keep a really useful garden on every farm, should be followed in these days, and the proper stocking of the farm cellar with the best of potatoes, vegetables and roots should be well attended to. An account of the saving made by these practices, should be kept, and credit given to the farm.

The opportunity to save money by means of the use of fuel produced on the farm, is rapidly disappearing in the older districts, yet many chances in this direction are let slip with a resulting loss in two directions. Too often are unremunerative orchards allowed to encumber good land breeding disease that is carried to more promising fruit plantations, when by a little labor the tree could be turned into fuel that would take the place of the coal which is being purchased at a high price. This work would naturally be done during the Winter, when other farm operations are not pressing.

The matter of saving of house rent is one that should give the farmer great cause of thankfulness in these times of high values of urban real estate, as he would quickly realize if forced to maintain himself and family on double his present cash income were he removed to the city.

It was found, by means of a survey of 1,000 families representing widely separated sections in 14 states, conducted by the United States Agricultural Department that the average annual value of meats consumed per family (other than poultry) was $107.25; of poultry products, $55.40, and of dairy products, $98.36. The quantity of dairy products consumed per family was equal to 2,640 quarts of milk.

The total value of food consumed was found to vary directly with the per family amount of meat used. As the relative value of meat consumed increases, the total value of food consumed per family increases.

Families living on their own farms reported higher consumption of food and a larger percentage of food derived directly from the farm than of those living on rented farms. The average quantity of fruit canned annually per family was found to be 122 quarts, of vegetables 32 quarts. In spite of all these unquestionable savings, the credit for them is too often denied the farm; and it must be admitted that these savings in the cost of living can be increased by a determined effort.

Origin of Potato Diseases.

From the consumers' side, the question of marketing potatoes is of the greatest importance, especially so in years when the prices for this commodity are advancing daily. The officers of the Experimental Farms recently had an opportunity of inspecting quantities of potatoes in the consumers' own cellars. The potatoes had been purchased in the ordinary way from small dealers. The condition of the potatoes was most unsatisfactory. In three cases the amount of rot came up to 75 per cent. of the total quantity in storage. This rot was the common Late Blight rot, and was certainly present when the potatoes were dug, and before shipping.

The consumer is helpless in such cases, and rarely is there a way open to him for compensation. Nor is the small dealer to blame. The blame rests entirely with the shipper and the grower. In order that such losses may be avoided and the consumer be in a position to secure for his good money, good potatoes that will keep over Winter, it is necessary for the growers, on their part, to exercise more care in digging, sorting and handling potatoes. Late Blight is a preventable disease; every farmer should know this fact, since the Experimental Farms system has made every effort to demonstrate on many farms in the country the effect of spraying, with results showing the production of sound crops, and an increase in yield amounting to some 90 to 100 bushels per acre.

The sale of inferior potatoes is dishonest, if not illegal at the present moment. Farmers know from their own experience that storage rots cause great losses in their own cellars. It seems, however, the general practice to dispose of an infected crop immediately and shift the losses from the farmer to the consumer. The latter, however, has to pay the price of good potatoes.

In some instances, no doubt, the consumer is to blame by storing potatoes (or other Winter vegetables) in too warm cellars. Potatoes and similar vegetables must be stored in a cool place. They cannot stand frost, which causes a sweetish taste in potatoes; but the temperature should never rise above 40 degrees Fahr. Where such conditions are non-existent it is better not to lay in a Winter's supply, as losses are sure to result.

Farmers are cautioned that the attitude of consumers will eventually result in demanding grading of potatoes just like apples; and the farmer who does not control diseases in the field will have all rotten or diseased potatoes thrown on his hands. Diseased potatoes, when boiled, still make good stock food, it should be remembered. A letter or postal card addressed to the Publication Branch of the Department of Agriculture will bring by return mail all the required information relating to the growing of crops of potatoes free from disease.

Prosperous Year Ahead.

"Present conditions should be promising for crop production next year," says Prof. C. A. Zavitz. "It is true the land in many parts of Ontario was very dry early in September. Along about the middle of the month, however, there were some fairly good showers in most localities, and the wheat that was sown either before or after these rains came on very well, and in most instances made a satisfactory growth before the winter set in. In some localities the rain kept off so long that a smaller amount of winter wheat was sown than there would have been if the rain had appeared earlier. From what I saw through the Province in the latter part of the autumn, the land seemed to be in very good condition, and, in most places, the plowing seemed to be well ahead. If the snow fall is normal there seems to be no real reason why the land should not be in very good condition indeed for spring work.

GOOD DIGESTION

When your digestion is faulty, weakness and pain are certain and disease is invited.

Mother Seigel's Syrup corrects and stimulates the digestive organs, and banishes the many ailments which arise from indigestion.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London.—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind; could not see to read at all. Now I can read everything without any glasses and my eyes do not water any more. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note: Another prominent Physician to whom the above article was submitted, said: "Bon-Opto is a very remarkable remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances or refund the money. It can be obtained from any good druggist and is one of the very few preparations I feel should be kept on hand for regular use in almost every family." [illegible] Drug Co., Toronto, will [illegible] your druggist cannot.

Who's to Blame for the High Cost of Food?

It may be the farmer, it may be the middleman, it may be the weather—but never mind—you have **Shredded Wheat** at the same old price, the same high quality, the one perfect, complete food, supplying more real nutriment than meat, or eggs, or vegetables, costing much less and more easily digested. Cut out the high-price foods. Eat Shredded Wheat for breakfast with milk or cream. Eat it for dinner with stewed fruits and green vegetables. A deliciously nourishing meal for only a few cents. Made in Canada.

PAINTING ON GLASS.

How An Englishwoman Transforms Ordinary Glassware.

There is something supremely fascinating in glassware to women. They love it on their tables, their dressing-tables, and find its charm irresistible in lampshades, bowls and vases. But not many women have themselves engaged in the production of glassware—at least not in England, says London Answers.

One woman, however, is something of an exception. She cannot actually make glassware, for she has neither the plant nor the means, but she makes ordinary glass wonderfully beautiful. In an old little corner of London she has pitched camp in a little space, half studio, half shop, and here she works. She stains glassware with some secret material, flooding it with wonderful, rich colors. She catches the sunlight in her brushes, snatches the translucent tints from autumn berries, borrows ideas from the petals of flowers, and transfers all these lights and shades to her glass.

When she first started, people were sceptical of her art and craft. They thought such things could be done better abroad. Now they know better. Men who dealt in such things show long and keen interest in it. She is probably on the road to help capture a trade that belonged to the enemy. If the demand continues to increase, an attractive and lucrative new occupation for women may spring up.

In the cabinets in her studio is a very world of fairy coloring. There is the homely jam-jar on which she made one of her first essays, transforming it ultimately into a thing of beauty. This is a precious souvenir. Then there are winecups, goblets, beautiful bowls, slender-necked bottles and exquisite vases, all stained with luscious coloring.

You pick up a bowl to look at the deep, rich grapes staining its rounded sides, and somehow the soul in the craft of this woman sends its message to you. You forget the little studio. Instead you are in the South of France during the purple season of the vintage. You can see the women in white caps coming home from the vineyards, bearing their baskets of grapes.

Or from a fruit bowl, through which shines the deep yellow of clusters of lemons, you get a vision of the scented lemon groves in Italy; while in a quaint two-handled cup all the fragrance of an English country lane seems stored, so vivid is the impression given you of pure, unclouded beauty.

What amazes people when they see these hidden stores of light and color is that their creator never makes her designs beforehand. She takes her clear-glass bowl or glass and commences to work right away. Yet every detail is perfect, and every design is repeated with perfect exactness.

Nine pounds is the weight of the German rifle.

Before starting the youngsters to school give them a piping hot cup of

Instant Postum

School teachers, doctors and food experts agree on two points—that the child needs a hot drink, and that the drink shouldn't be tea or coffee.

Postum fills the need admirably and its very extensive use among thoughtful parents, coupled with the child's fondness for this flavory, nourishing food-drink, show how completely it meets the requirement.

"There's a Reason"

No change in price, quality, or size of package.

PETS, INSECTS AND HUMAN.

Interests of the Native Quarter of Japan.

In Japan if one will leave the hotel and the tourist office and the cocktail-drinkers and go out into the real native quarter, there are enough things to interest any one. One old man passes with his load of crickets, which sing in hot weather and are kept in cages like so many canaries. These gentle creatures make a noise like a squeaky axle and one hid under the hood of a twelve-passenger car would subject the most careful chauffeur to scorn. They are caught with bird-lime and make nice little pets, cheap to buy and not requiring gasoline for upkeep.

My rickshaw man is an old fellow whom I hired a year ago and who recognized me again. He is low-priced, speaks quite a little English, and has a sense of humor. I have him trained so that if we pass any one at unusual work or go near any novel scenes, he points out these things to me. He knows my fondness for Japanese children, who are the cutest tots on earth, with their gay clothes, slant eyes and bobbed hair, and if he sees an unusually bright dress or a fine child, he points them out with a sort of fatherly pride of race. At two years old the Japanese surpass all other nationalities in charm and attractiveness, and these sober, yet happy little folks look as though they had strolled out of a tayshop.—Christian Herald.

HOW TO CURE STOMACH TROUBLE

The Common Cause is Lack of Blood—Therefore You Must Build Up the Blood.

There is the most intimate relation between the condition of the blood and the activity of the stomach. The blood depends upon the stomach for a large part of its nourishment; while every act of digestion, from the time the food enters the stomach and is assimilated by the blood needs plenty of pure well-oxidized blood. The muscles, glands and nerves of the stomach work only according to the quality of the blood.

The most common cause of indigestion is lack of rich, red blood. Not only does impure blood weaken the muscles of the stomach but it lessens the product of the glands of the intestines and stomach, which furnish the digestive fluids. Nothing will more promptly cure indigestion than plenty of pure blood. Dr. Williams' Pink Pills are the safest and most certain blood-builder. A thorough trial of these pills gives a hearty appetite, perfect digestion, strength and health. Here is proof of the value of these pills in cases of indigestion. Mr. Daniel Dexter, Liverpool, N.S., says:—"For several years I was a great sufferer from indigestion. I was greatly troubled with gas on the stomach which caused disagreeable sensations. I was also frequently troubled with nausea and vomiting, which were very distressing. As a result of my trouble my appetite almost completely failed, and what I did eat caused me constant pain. I was continually doctoring but did not get any benefit, and had about made up my mind that I would suffer for life. One day a friend asked me why I did not try Dr. Williams' Pink Pills, and while I had not much hope of a cure I decided to do so. I had only taken a few boxes, however, when I found they were helping me. Very gladly then I continued the use of the pills, and in less than three months I was as well as ever I had been, able to eat a hearty meal, and to feel that life was again worth living. I had also been troubled from time to time with attacks of rheumatism, and the use of the pills cured this as well as the indigestion. It is now over a year since I took the pills, and in that time I have had no return of the trouble."

Dr. Williams' Pink Pills are sold by all dealers in medicine or may be had by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

EVOLUTION OF THE GROCER.

"Engrosser" Was First a Dealer in all Kinds of Merchandise.

Nothing is so necessary in any community, nothing so unescapable as the grocer. It is the first business of the frontier settlement, and it plays the most important role in the business drama of any town. One can hardly imagine a city, in any age, in which there were no grocery stores, and yet the institution is a comparatively modern one. Do you know how groceries originated?

Only a few hundred years ago certain foresighted tradesmen in France went about the country buying up bargain lots of merchandise. They bought fire damaged goods, bankrupt stocks, all sorts of commodities. They bought these things "en gros" and made money out of them. The trade was carried to England, where a man who bought hardware, thread, furniture, vegetables "en gros," or in large quantities, called himself an "engrosser." This was later shortened to "grocer," but the term was still applied to the proprietor of a general business. The grocery was a sort of racket shop, like the modern 10-cent store.

Gradually, it appears, the "grocer" found it more profitable to deal in tea, coffee, spices, fruits and non-perishable foodstuffs, and he confined his attention to these things. He took over the business of the "aucer"—and in France the shop we call a grocery is still known as an "epicerie." So far was the original meaning of the term lost sight of that a man who deals exclusively in fresh vegetables came to be known as a "green grocer."

Fashion Fads

Each day unfolds something new in the world of fashion, for many interesting novelties catch the eye of those who observe the women of fashion, from whose apparel may be gleaned every little detail and item of interest which create the atmosphere of good style.

Some of the new collars are large affairs rolled high at the back and low in front. These have been given the demure name of monk collar, and one is illustrated in the sketch. Sometimes they are fastened with little buttons and loops at the front, or the closing is made invisible. They are usually made of satin or the new figured silks to contrast with the dress material.

The loose side panels on skirts, with large pockets on each side, are also recognized as one of the newest style notes in skirts. The panels being loose flap about in the wind, often disclosing a bright lining of contrasting material on the reverse side. From the front, these side panels seem at first to be nothing but the familiar

7668

With New Monk Collar and Loose Panels.

tunic which appears quite often in the new dresses showing the narrower underskirts.

Another treatment of side panels appears in some skirts where the panel extends to the lower edge of the skirt, is attached there, and falls softly over the edge in puffed or draped effect. Puffed all around in imitation of the Turkish trousers effect, are some of the skirts of evening dresses. In the supple taffetas and silver tissue cloths, dresses in this style are extremely graceful, the skirts devoid of any trimming whatever and the bodices fitting rather snugly in contrast. The bodices are in reality hardly more than deep bands suspended by straps of ribbon over the shoulders. Sleeves there are none, unless the bands across the upper part of the arms are so called. In other styles of evening dresses, however, sleeves begin to be more favored than they have been for some time. The flowing sleeves which form a kind of drapery reaching almost to the edge of the skirt is a style with great charm.

These patterns may be obtained from your local McCall Dealer or from the McCall Company, 70 Bond Street, Toronto, Ontario, Dept "W."

Bound to Find Out.

"A man came into my store the other day," said the druggist, "and handed me seven prescriptions to put up.

"These, I see, are all for the cure of a cold," I remarked to him casually.

Lurid.

Asked to define the word "deficit," a youngster replied: "It's what you got when you haven't got as much as if you just had nothin'."

"Yes," he returned, "kind of thick cured by cods last winter, but I'se hagged if I cud reboher which wud."

To Every Woman Who Is In Pain

Mrs. Williams Says Use Dodd's Kidney Pills.

She Suffered for Two Years, but Three Boxes of Dodd's Kidney Pills Made Her a New Woman.

Adamsville, Kent Co., N.B., Jan. 29th (Special.)—"I can recommend Dodd's Kidney Pills to every woman who suffers." So says Mrs. Williams, a well-known and highly respected lady residing here. Mrs. Williams was a sufferer for two years till she used Dodd's Kidney Pills. She found in them quick relief and complete cure. That is why she is so enthusiastic in her praise of them.

"My troubles started with a cold," Mrs. Williams states. "I never seemed to get over the effects of it. I had cramps in my muscles and my joints were stiff. There were dark circles under my eyes which were puffed and swollen. I had a bitter taste in my mouth and I suffered from severe headaches.

"I felt weary and sleepy after meals and had attacks of neuralgia. Heart flutterings and rheumatism were soon added to my troubles. I took just three boxes of Dodd's Kidney Pills. I cannot be too glad that I did so."

Every one of Mrs. Williams' symptoms was a symptom of kidney disease. That is why Dodd's Kidney Pills cured her.

Awkwardly Put.

The other day a gentleman farmer having some pigs for sale offered to dispose of them to a pork butcher. The latter called at the farm where, before proceeding to the yard, he was hospitably treated and introduced to his host's daughter.

A gallant man is that porkist, and one who never lets pass an opportunity of paying a compliment.

"Now, sir," said he, on leaving the room, "I've seen your young ladies and I'm going to see your young swine, and if the two's much alike there won't be no difficulty about bringing off a deal."

"Hurry up, Tommy!" called mamma. "We're late. Are your shoes on?" "Yes, mother; all but one!"

The publisher of the best Farmer's paper in the Maritime Provinces in writing to us states:

"I would say that I do not know of a medicine that has stood the test of time like MINARD'S LINIMENT. It has been an unfailing remedy in our household ever since I can remember, and has outlived dozens of would-be competitors and imitators."

Twenty times between 1910 and 2000 Easter falls within the month of March.

Minard's Liniment Cures Diphtheria.

The deepest rivers flow with the least sound.

Sore shoulders, lame back, stiff neck, all pains and aches yield to Sloan's Liniment.

Do not rub it. Simply apply to the sore spot, it quickly penetrates and relieves. Cleaner than mussy plasters or ointments, it does not stain the skin.

Keep a bottle handy for rheumatism, sprains, bruises, toothache, neuralgia, gout, lumbago and sore stiff muscles.

At all druggists, 25c. 50c. and $1.00.

SNAIL'S WONDERFUL FEATS.

Can Cling in Any Position to the Smoothest Objects.

That snails can pass over such sharp instruments as a razor's edge without the slightest harm has been demonstrated by a French scientist. The snail walks with the whole under-surface of his body, and it is provided with means to lubricate the road on which it travels. A peculiarly complex system of muscles enables it to cling in any position to the smoothest objects. In lifting itself over the razor's edge it clings with the hind part of its walking surface to one side of the blade and extends the fore part and bends it down over the other side. Then it draws itself over gradually and without exerting any pressure upon the edge of the blade. It could not, however, crawl along the sharp edge of a razor or knife.

It is a fact that while the common snail has lungs, heart and a general circulation, being in every respect an air-breathing creature, it is, nevertheless, able to live indefinitely without inhaling the least bit of air. Experiments have clearly demonstrated that any or all of the usual life conditions may be removed in the case of the snail without terminating its existence or indeed impairing its functions. The snail retreats into its shell on the approach of frosty weather, and causes the opening or mouth of its shell to be hermetically sealed by a secretion of silky texture absolutely impervious to air and water. In this condition, therefore, it is plain that the little creature is deprived of three of the four elements of life—air, water and nourishment.

GUARD THE BABY AGAINST COLDS

To guard the baby against colds nothing can equal Baby's Own Tablets. The Tablets are a mild laxative that will keep the little one's stomach and bowels working regularly. It is a recognized fact that where the stomach and bowels are in good order that colds will not exist; that the health of the little one will be good and that he will thrive and be happy and good-natured. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

An epidemic of thrift and economy is sweeping over Canada. The man who contracts it will find it has been no misfortune, during the adjustment days after the war.

SECOND CON. ELDERSLIE

Chesley and Paisley hockey teams play a match in the Paisley rink on Friday night.

Monday morning the temperature fell to 34 below zero.

The bear surely saw his shadow, for February thus far has been unusually rough. Nevertheless, the mail carrier has made the trip with the exception of one day.

The Tp. snowplow is kept busy going the rounds the last couple of weeks.

Mr and Mrs Thos Nicol entertained a number of their friends on Friday evening week, when a very enjoyable time was spent.

Miss Flora Bell, is visiting friends here for a couple of weeks.

W J Allen is confined to the house with a severe cold.

Mr and Mrs Clarke, of Hamilton, spent their honeymoon here last week, visiting the latter's sisters, Mrs. T. Snaith and Mrs. A. Campbell.

Died—at the residence of her son, Mr And Green, on Feb 6th, Mrs Alexander Green, aged 81 years. Another good mother has been called to her reward in the person of Mrs Green. Although only a resident of this con for two years, she had won her place in the hearts of all her neighbors and friends in this community, and her death is deeply lamented. On Thursday afternoon the remains were laid to rest in Chesley cemetery. The funeral services were conducted by Rev Mr Hiltz, assisted by Rev Mr Leslie. She leaves to mourn her loss a family of three sons—Alfred and John in Chesley, Andrew on 2nd con Elderslie; also three daughters—Mrs McLean of Chesley, Miss Green of Shelburne and Miss, teacher in S S No 12. The bereaved family have the sympathy of the community in their time of sorrow.

FOR FLETCHER'S
CASTORIA

GLAMIS

Hockey match in Paisley rink on Friday night—Chesley vs Paisley.

The marriage of Mr Chas Graham to Miss Lottie McNally, daughter of John H McNally, of Sarnia, takes place at the bride's home on Wednesday, the 14th.

Rev De Mille and wife left on Tuesday for Sarnia, to attend the Graham-McNally wedding.

Mrs McKeeman returned on Saturday from Beamsville and Toronto, where she has been spending some weeks.

Miss Alberta Kirkton, of Paisley High School, Sundayed at her home here.

Miss Margaret Campbell came up from Harriston on Saturday to attend the funeral of her uncle, the late Kenneth McLennan.

In the passing away of Mr Kenneth McLennan the community and church has lost a valued member and one whose place will be hard to fill. His death took place on Friday morning after a few weeks' illness. The funeral service was held on Sunday afternoon in the Baptist church, where for many years he faithfully filled the office of deacon, also taught in the Sunday School, and never missed a service or prayer meeting which he was able to attend. The large crowd that turned out to pay their last tributes to the departed showed the respect in which he was held by all. He was laid to rest in Purdy's cemetery. The late Mr McLennan was in his 80th year, and leaves a widow, two sons and two daughters—Duncan and Margaret at home, John K. on the next farm, and Mrs Wood in Superior.

Rev Donald McLennan, of Walkerton attended his brother's funeral on Sunday afternoon.

PINKERTON

Chesley vs Paisley hockey match in Paisley rink on Friday night.

We were sorry to learn last week that our teacher, Mr Godfrey McKee had sent in his resignation to take effect at once. Mr McKee has enlisted and though sorry to lose him we honor and admire him for his patriotic spirit. Mr McKee left on Tuesday night. Miss Florence Diehl, of Paisley, has been engaged and began her work here on Monday.

Mr Albert Pinkerton attended the meeting of the Agricultural Society in Toronto last week.

Senator Donnelly returned from Ottawa on Saturday.

The Red Cross Society is very grateful to Mr Wm. Alexander for his donation of $25.

ORESHAM

Another hockey match in Paisley rink on Friday night, between the Paisley and Chesley teams.

Mr Alex Shipley has bought Mr A Sinclair's farm on the 10th, and will move by March 1st.

Born—On Feb 10, to Mr and Mrs David McKinnon, a son.

Born—At Kincardine, on Feb 8, to Mr and Mrs Geo Fletcher, of Viceroy, Sask., a daughter.

Miss Bessie M. G. Young, who has been teaching for the past three years, left last week for Chicago, to take the course of nurse-in-training at the Cook County Hospital.

TWELFTH CON BRUCE

Hockey match, Chesley vs. Paisley, in Paisley rink on Friday ev'g.

Snow and storms are the order of the day.

Miss Margaret McKay, of Paisley, was visiting on the 12th.

Mrs Stewart (nee Bell McKinnon) is home from the west accompanied by her two little sons. She was calling on her old neighbors here last week.

The Misses Matheson gave the young folks a party last week

Mr George Scott is drawing pressed hay to Port Elgin.

Mr Dugald McArthur was up from Port Elgin this week.

Mr Peter McArthur, from Saskatchewan, is visiting at Alex McLeod's.

WALKERTON

With cattle selling at the highest price in many years, Mr Henry Hossfeld, the well known stock breeder of Carrick, has a grade cow that rivals the goose that laid the golden eggs. On three occasions during the last twenty-six months this cow has given birth to twin calves. All six were dandies and are shaping up into good beef cattle. With live beef selling around the hundred dollar mark, Mr Hossfeld should have no difficulty in figuring a profit on this cow's progeny.

Rev Thos Wilson, pastor of Knox church, received a call last week to a large church across the line, the Church of the Covenant at Williamsport, Pa. Mr Wilson is taking two weeks to consider the call and will announce his decision to his congregation next Sunday morning. On Wednesday night of last week he informed his session of the call. The members of session spoke strongly against allowing Mr Wilson to go, and among the congregation the same feeling prevails. Rev Mr Wilson came to Walkerton from King St, London, fourteen years ago. He is not only beloved by his own flock but among citizens of all denominations he is highly regarded as a citizen of solid worth. His sympathies have been broader than the four walls of his church and he has taken an active and hearty interest in all movements for the betterment of Walkerton and its citizenship. The least attractive feature of the call is no doubt that it means removal from the land of the Union Jack, and this, to one who is such a thorough going Britisher, having children serving in France as Mr Wilson has, is no small matter. The call came indirectly through Mr Wilson occupying the pulpit of a Philadelphia church last August. An official member of the Williamsport church inquired from a Philadelphia friend as to where his church could find a good pastor. The Philadelphia friend mentioned Mr Wilson, who was thereupon invited to preach at Williamsport and the call promptly followed. Williamsport is a city of about forty thousand population. The salary paid by the Church of the Covenant is about double Mr Wilson's present salary.

At Harriston last Thursday Mr John A Rowland ran into a case of disloyalty so rank that he decided to report the matter at once to the authorities. It is an excellent opportunity for the government to make an example of this sort of an offender. Mr Rowland's letter to Col Percy Sherwood, Dominion Police Commissioner, explains the circumstances: When in the town of Harriston, in the county of Wellington, this morning there was a man having a load of old rags weighed on the public scales. I asked one of the gentlemen present what was done with such stuff and he told me did not know. One man named Alexander Stewart, who was present said that for drinks the old rags would be made into clothes for the soldier boys, and even at that it was too good for them as they were only a lot of bums and loafers living on the country. When I asked him what he meant he said it was the truth and he had to help to keep them. I then asked him what he had given and in reply he asked me what I had done. I told him I had given a little money and the only two boys I had were gone to the war, and I asked him if he had sent any boys. He said he had not and that he had some boys but would not let them fight for England. When I asked him if he did not know that England had protected him and given him all the liberties he enjoyed and told him he ought to be ashamed of himself for talking as he did, he said he could fight his own battles and get along without the Old Country or any of the soldiers helping him because they were no good. Himself being vice-president of the Preparedness League and taking an interest in recruiting in our northern country, I think this kind of man ought to be seen at once and be told by some one in authority that if he still talks as he has been doing before the public he will be interned. A man like him, talking as no doubt he has been talking, is a great detriment to getting any recruits, and I do hope that you will see that there is some person sent to him at once and read him the Riot Act as it ought to be read to such men. This man is a farmer in the Township of Minto, 13½ miles from Harriston, and has 200 or 250 acres of land. He is not a German. —Telescope.

ELDERSLIE COUNCIL

Gillies Hill, Feb 5th, 1917

Council met on above date, all the members being present.

A certificate was received from the Dep Registrar General showing that in 1916 the clerk had registered 30 births, 11 marriages and 28 deaths, 69 in all.

Messrs D A McIntyre and W T Thompson, municipal auditors, presented their report in duplicate, which shows a balance on hand of $1120 04. On motion of Messrs Lewis and Thomson the report was adopted and the clerk instructed to have the usual number of copies printed.

Allen—Thomson—That the tender of Robt Christie for cedar at $32 per M be accepted.—Carried.

Applications for the office of assessor were received from David Walks, Michael Maurer and James Robinson.

Lewis—Fraser—That the application of David Walks be accepted.—Carried.

Applications for the office of tax collector were received from Calvin Crawford, S K Ewart and Adam Henderson.

Thomson—Allen—That the application of Calvin Crawford be accepted.

Fraser—Case—in amendment—That the application of S K Ewart be accepted. Motion carried.

By-laws were passed confirming these appointments.

Fraser—Allen—That the reeve and Councillors Lewis and Thomson be a committee to arrange for tp printing for current year.—Carried.

Thomson—Lewis—That orders be issued for the following accounts—Carried: D A McIntyre, services as auditor, 1916, $8; W T Thompson, do, $8; R C Pearce, registration fees, 1916, $13 80; The Municipal World, municipal supplies and subscription 2 copies Municipal World, $17 20

Fraser—Thomson—That this board do now adjourn to meet again the first Monday in March at 1 o'clock p.m, to appoint pathmasters, poundkeepers and fence viewers, and for general business.—Carried.

R C PEARCE, Clerk

500 BAGS POTATOES FROM 5 ACRES

W J CRAIG, Sarnia, Ont, says:

"This year I planted 5 acres of potatoes on clay land; applied 600 pounds Homestead Bone Black Fertilizer to the acre broadcast. The piece was cultivated six times and Spring plowed. It was harvested August 20th and yielded 500 bags fine merchantable potatoes. I have used Homestead Fertilizer for five years and always get good results. I would not plant potatoes without it."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

GREENOCK COUNCIL

McNab's hotel, Glenpatrick, Feb 5, 1917

Council met as per adjournment, all members present, the reeve in the chair. Minutes of last meeting read and adopted.

The following accounts were presented for payment: W Alexander, drawing timber from Church St to con 20, $5; A Kunkel, gravelling 1 1/6, con 10, $12 60; A McKinnon, postage and telephone, $3 40; Jas McKinnon, bal on concrete on Church St bridge, $13; I Shoemaker, telephone re Church St bridge, 45c; Thos H Purdy, reg 51 births, 17 marriages and 29 deaths, $19 40; A Thompson, Church St bridge, $432 00; M L Fairbairn, bal printing contract, $13; M McNab, hall for British Red Cross meeting, $2; M McNab, room for Preparedness League meeting $1; contingent, $2.

Sawyer—Campbell—That the foregoing accounts, being found correct, be paid, and that the reeve sign checks for same —Carried.

Communication was read from the Sec of Glamis Red Cross Society, stating they had received from Bruce $35 and from Kincardine $30.

Check was issued in favor of Laura Cunningham, Sec, for $30, in accordance with motion No 51 of Dec 15, 1916.

Sawyer—Symon—That the Auditors' Report be adopted and auditors be paid. —Carried.

Checks were issued to J B McKinnon for $6 80 and T Houston for $6 60.

Symon—Gilchrist—That this council go into committee of the whole to appoint assessor, collector and printer.—Carried.

The following applications were received: Thos Fullerton, Wm Ritchie and J J Cassidy for assessor, and Archie McKinnon for collector of rates.

Sawyer—Gilchrist—That Wm Ritchie be appointed assessor and Archie McKinnon collector, and that the clerk draft by-laws confirming the same.

Symon—Campbell—amendment—That John J Cassidy be appointed assessor and Archie McKinnon collector, and that the clerk draft by-laws confirming the appointment.—Carried.

By-law No 535 was drafted and read a first time, appointing John J Cassidy assessor for year 1917.

By-law No 536 was drafted and read a first time, appointing Archie McKinnon collector of rates for the current year.

The following tenders were received for township printing: The Bruce Times $160; Telescope $160; Teeswater News $135.

Sawyer—Gilchrist—That the tender of the Telescope be accepted for ordinary printing at $150 for year 1917.—Carried.

M M Schuster made a strong appeal to the council for an increase in salary.

Campbell—Gilchrist—That the treasurer's salary be increased $10, and that the clerk draft a by-law confirming change. —Carried.

By-law No 537 was drafted and read a first time, amending part of by-law No 551 re treasurer's salary, increasing same to $160 per annum.

Gilchrist—Symon—That By-laws Nos 535, 536 and 537 be now read a second and third time and finally passed.—Carried.

The council was addressed by Mrs Cameron of Cargill in the interests of the Women's Patriotic League, also a letter was read from Miss McCoy, secretary of League, asking for grant

Gilchrist—Sawyer—That this council grant $50 to the W P L of Cargill, providing Brant council supplement with an equal amount.—Carried.

Communication from Wm Nicholls was read, he offering to fill mudhole opposite lot 17, con 16, for the sum of $200 and guarantee same for three years—Ordered filed.

Campbell—Gilchrist—That this Council do now adjourn to meet at Pinkerton on Monday, March 12th, to appoint pathmasters, poundkeepers, fence viewers and valuators of sheep worried by dogs, and for general business.—Carried.

THOS H PURDY, Clerk.

Rod and Gun

In the February issue of Rod and Gun, now on the news-stands, Bonnycastle Dale, the naturalist writer, describes in "Hunting with the Kodak in Canada," the methods by which he gets near enough to the forest birds and beasts to take some of the remarkable photographs with which his stories are illustrated. "The only danger is from falls and falling trees," he says. "There is not anything in the woods of North America that will attack you if unmolested." "The Wood duck," by F V Williams, supplements the cover picture for this month which reproduces in colors that are true to life this rarely beautiful and comparatively scarce species of duck. "Old Frying Pan," a best story by H C Haddon, "Hawks and Other Game Destroyers," by Reginald Gourlay, "With a Watch and Compass," "With the Timber Wolves in Northern Canada," etc, etc, along with the regular departments which are well maintained, make up a particularly interesting number of this premier Canadian magazine of outdoor life. W J Taylor, Ltd, Woodstock, Ont, is the publisher.

J. H. STEELE

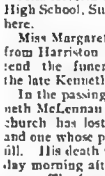
WOMEN OF CANADA.

Fort Coulonge, Quebec.—"I am happy to tell you that your medicine did me wonderful good. I was troubled with weakness and I tried wines and other things but received very little benefit. I was young at the time and knew very little about medicines till a lady friend came to me with a bottle of Dr. Pierce's Favorite Prescription. I became strong and a year afterward had twins."—Mrs. J. Brady, Fort Coulonge, Quebec.

Thousands of women right here in Canada who are now blessed with robust health cannot understand why thousands of other women continue to worry and suffer when they can obtain for a trifling sum Dr. Pierce's Favorite Prescription, which will surely and quickly banish all pain, distress and misery and restore the womanly health.

Young mothers who preserve the charms of face and figure in spite of an increasing family and the care of growing children are always to be envied. "Favorite Prescription" gives the strength and health upon which happy motherhood depends. It enables the mother to nourish the infant life depending on her, and enjoy the happiness of watching the development of a perfectly healthy child.

A GREAT BOOK THAT EVERY WOMAN SHOULD HAVE.



Over a million copies of the "The People's Common Sense Medical Adviser" are now in the hands of the people. It is a book that everyone should have and read in case of accident or sickness.

Send fifty cents (or stamps) for mailing charges to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., and enclose this notice and you will receive by return mail, all charges and customs duty prepaid, this valuable book.

I OWE MY HEALTH

To Lydia E. Pinkham's Vegetable Compound.

Washington Park, Ill.—"I am the mother of four children and have suffered with female trouble, backache, nervous spells and the blues. My children's food talking and romping would make me so nervous I could just tear everything to pieces and I would ache all over and feel so sick that I would not want anyone to talk to me at times. Lydia E. Pinkham's Vegetable Compound and Liver Pills restored me to health and I want to thank you for the good they have done me. I have had quite a bit of trouble and worry but it does not affect my youthful looks. My friends say 'Why do you look so young and well?' I owe it all to the Lydia E. Pinkham remedies."—Mrs. ROSE STOPPEL, Moore Avenue, Washington Park, Illinois.

We wish every woman who suffers from female troubles, nervousness, backache or the blues could see the letters written by women made well by Lydia E. Pinkham's Vegetable Compound.

If you have any symptom about which you would like to know write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for helpful advice given free of charge.

The People's Popular Store

Stock-Taking Finished

Now for Spring & Summer Goods

In finishing our stock-taking we find many odds-and-ends in all departments and in Overcoats, Furs, Heavy Rubbers, Overshoes, Horse Blankets and Heavy Wool Goods we find some sizes left. Even if all these lines were advanced from 10 to 25 per cent., they would still be better value than can be bought now to sell next fall.

When we have reduced all Heavy Goods from 20 to 33 per cent. off last fall's prices, this makes extra good buying, even if not used till next winter and much better quality than will be offered for some time. When you can get a new $20.00 Overcoat for $15.49, a regular $15.00 one for $9.98, a first quality Heavy Rubber with 12-inch leather top for $2.89, a pair of Men's regular $1.85 Overshoes for $1.19, a regular $3.50 Bed Comforter for $2.39, a regular $3.00 suit of Men's Heavy Wool Underwear for $2.40, a $1.00 Shirt or Drawers for 69c, a choice set of regular $57.00 Sable Furs for $39.00, a choice set of $70.00 Black Fox Furs for $43.00. A few ends of Scotch Wrapperettes, regular 18c to 30c, reduced to 10c, 12½c and 18c, and so on through the entire stock.

Prints 12½c, 15c and 20c for yd. wide Indigo Blues, Silks, Wash Goods, Dress Goods, Gloves, Hosiery, Cottons, etc. are being placed in stock at very much lower prices than can be replaced at factories to-day. Owing to the enormous prices of all kinds of farm produce, the absolute necessity for some months past of placing orders with manufacturers and taking delivries long before required necessitates selling now for cash or farm produce at time of sale. The nimble sixpence is much better now than the slow shilling.

In taking stock of our books we find a lot of small amounts, as well as large ones not settled. All these old accounts must be settled up. You will save big money by coming early and often, not only for your Spring and Summer Goods, but on your wants for next Fall and Winter, 1918.

—Coal is likely to be higher in price, instead of lower.

—Mrs. Ed. Dudgeon, of Lovat, visited in Walkerton last week.

—Miss Kate McHeath has gone to Guelph to take a position.

—Miss Rose Woodcock, of Palmerston, is spending a week with friends here.

—Miss Hazel Webb of Port Elgin, is visiting her aunt Mrs A Bain for a few days in Greenock.

—Mrs J A Logie was called to Lancaster on Friday, on account of the illness of her mother at that place.

—Mr and Mrs Chas Sergison came up from Listowel to attend the funeral of the latter's sister, Mrs Petrie.

—Col Hay and Lieut Eckel attended the annual meeting of the 32nd Bruce Regt at Walkerton on Friday.

—Miss Margaret Bain is attending the millinery openings in London, before returning to her position in New Dundee.

—Bernard Butchart, of the Royal Bank staff at Lions Head, is spending holidays in Paisley, a guest at Mr J R Laidlaw's.

—A meeting of the Woman's Patriotic League will be held in Putnam's hall on Friday afternoon, Feb 23rd, at 3 o'clock. A full attendance is requested.

—The members of the W C T U wish to thank the ladies who contributed so generously with quilts and clothing for the destitute Indians at Port Arthur.

—Mrs D Stewart, of Deepdale, Man, who has been visiting friends in Paisley and Bruce Tp, left on Thursday for her home in the west. While in town she was the guest of her cousin, Mrs Neil McArthur.

—Fifty five per cent of the pupils in the primary and first grades of Sarnia public schools are suffering from defective eyesight, according to the report of Public School Inspector Henry Conn to the Board of Education.

—Miss Isabel Mackay, student at Toronto University, is visiting at the home of her grandfather, Mr. Geo. Grant, having been obliged to take holidays, as the big institution of learning has been closed because of the shortage of fuel for heating.

—Rural route carriers have an unenviable task when snow blockades exist and severe weather prevails. Even when the patrons do their part loyally, as regulations call for, such as tracking the road and keeping the parcel box easy of access, the job is decidedly uninviting.

—Pte Angus Russell, of the 241st Scottish Borderers, while up from Windsor on leave at the home of his father, Mr Neil Russell, 6th Bruce, was presented with a wrist watch and signet ring by his friends. Pte Russell was teaching near Windsor when he joined up.

—The hockey team, who drove to Ebenezer on Monday night, met defeat on the latter's ice by a 6 3 score. Though worsted in their game, the local puck-chasers were nevertheless well used by both the Ebenezer players and ladies, the ladies serving them with lunch after the game.

—Mr and Mrs I Stanley went to Black Horse on Friday to attend the funeral of the former's eldest brother, Mr Albert Stanley, who died after only a few days' illness from pneumonia. The deceased was in his 56th year, and leaves a family of eight daughters and two sons. He was one of the best known farmers in that locality.

—The Epworth League of the Methodist church held a very successful meeting Monday evening. The different churches were well represented. Good addresses were delivered by the different ministers, and others of the congregations also gave short talks. Two solos and a quartette were rendered in good style by some of the best local talent.

—ELDERSLIE CONSERVATIVE ASS'N—A meeting of the Liberal-Conservative Association for the Tp of Elderslie will be held in the Tp hall, Gillies Hill, on Friday, Feb 23rd, at 2 30 p m. Mr Birmingham, of Toronto, will address the meeting and arrange for organizing the Tp. Delegates will be appointed to attend the nominating convention to be held shortly at Tara. A good attendance is requested. C CRAWFORD, Pres.

—Miss Long, from Southern Alberta, was a caller at The Echo office this week. A number of years ago she lived in this town. Her brother Hugh, who went west with her, died last year. Miss Long states that there are farmers in Southern Alberta who had 50,000 bushels of wheat this year. She had 10,000 bushels, which she sold at $2 05 at the elevator. At this distance raising wheat would appear to be a better job in Alberta than to be Premier of Canada, so far as money is concerned.—Wiarton Echo.

COALS OF FIRE

"Beastly rough luck on you, Maisie, being saddled with a useless log of a husband and sick child! Upon my soul, when I think of the future, I wish at times the Huns had put another bullet in me!"

"Don't, Dick!" protested the young wife, with a cry of pain. "And don't look at the future—anyway, not till after Friday."

"Sketched your play-bills yet?" inquired the young man after a pause, his face pinched and white above his scarlet neckties.

At the question the girl's delicate pencilled brows met in a frown.

"There's something wanting, Dick—in the play-bills, I mean. Exactly what, I don't quite know. It's the mischief, to be nobody. I need puffing—cracking up! What's in a name? Bless you, just everything! I'm not afraid I couldn't pull the thing off once I was started, but a name's the 'Open sesame!'"

She broke off as if struck by a sudden thought—grey eyes narrowed to pin-points. She drew her breath sharp between her teeth.

"Dick," she burst out, "I believe I'll risk it!"

"Risk what, dear heart?"

Feverishly she forged ahead, unheeding his question.

"How'd it do to describe myself as 'Maisie Maughan, pupil of the world-famed whistler, Tom Tapper'?"

Tom's name would be a "draw"—dead certain!

"But, my darling girl, you never had a lesson from Tapper in your life!"

She didn't hear him. It wasn't exactly "straight," maybe. Thus she reflected. But for Dick and the child! Heavens! She'd do more than that! And it wasn't cheating—not quite! She could whistle as well as Tapper any day. They'd get their money's worth, whoever came to the concert on Friday.

"Maisie!"

"Yes, dear!"

"You should have married Tapper, confound him! Why didn't you? He was as keen as mustard in the old days!"

"Because, dear boy, as it happened I preferred you."

"Funny taste, upon my soul! Tapper hated me like poison," proceeded the speaker. "You'd have done a lot better for yourself if you'd married Tapper."

"Depends on what you mean by 'a lot better.'"

"Plain as a pike-staff. He's at the top of the tree!"

"He's at the Front," she rejoined absently. "So I've heard!"—then drew a pencil and paper to her and scribbled a rough draft of a play-bill.

"How does this sound?" She addressed her husband. "'Maisie Maughan, artiste, pupil of the world-renowned Tom Tapper.' That ought to fetch them! Why, 'Dick Tapper's' a name to conjure with!"

He nodded approval.

"Better get them thrown off at once," he counselled, "and placard the place with them!"

She obeyed, going out thrilled with her own inspiration. By next day Mudbury blazed with the announcement. The public had never heard of "Maisie Maughan." But to a man, to a woman, they had heard of Tom Tapper! The hall engaged for the occasion bade fair to be packed.

"Maisie"—alias Mrs. Richard Sellars—wheeled out her invalid child the same afternoon. If she had conscience pricks, she stilled them. The deception, she told herself, was an innocent one, and she would do her best on Friday.

And then, of a sudden, the child in the pram piped out an ejaculation:

"Mummy, man!"

"What is it, ducky?"

The baby's finger pointed.

"Black man!" she reiterated.

Mechanically Maisie turned. Then, of a sudden, her heart seemed to stop, the blood drummed in her ears and hammered on her brain. Did her senses play her false, or was it reality? The world-famed whistler—her one-time lover! Impossible! Incredible! He was coming towards her. Her pulses pounded. Her eyes, starting from her head, stared blankly at the apparition. She went ashen white and clutched at the pram to steady herself.

On he came. He was in khaki. He had seen her. He recognized her.

"You!" he ejaculated, and looked from her to the child.

His dark eyes blazed on her. How well she recalled him—his every feature, the trick of his eyes, the twitch of his lips beneath his moustachios when, as now, he was mightily moved!

"Wh-where did you spring from?"

Her shaking lips would scarcely frame the question.

"Somewhere in France!" he answered.

"I—I——"

She stammered hopelessly and broke down, her eye at the moment lighting on one of her glaring play-bills.

"Wh-what do you think of me?" she forked out at last.

"What do I think of you!" he echoed, puzzled. "I once told you what I thought of you!" he answered, dropping his voice.

"I don't mean that!" she cut across him.

Try as she would, she couldn't control her eyes. They flickered over to the play-bill. It was impossible its glaring scarlet headline could have escaped him—his own name blazing in capitals—impossible! She rushed into apology—abject, grovelling.

"We—we do things for people we love we wouldn't do for ourselves!" she panted, incoherently. "Dick has come home a wreck! He needs things. I hadn't got them to give him. And baby, she's been at death's door. I was desperate! And—and I whistle still, but I'm nobody, and they want a name."

She stopped, out of breath. Against her will, and forced by the mesmerism of his eyes, she nodded in the direction of the blazing play-bill. "You've got a name. I thought if I put 'Pupil of Tom Tapper,' it would double—treble my chances of getting an audience. And—and it wouldn't hurt you!"

It rushed through her brain, here was her companion's chance of wreaking his vengeance on her, and he would take it!

He had always hated Dick. The two had never hit it off—never! And Dick had rather "rubbed it in"—his triumph over him. He had made it glaringly plain to his defeated rival that he felt himself "top dog."

She trembled as she realized that the man at her side held her in the hollow of his hand, so to speak—held Dick and baby as well—and that he would be merciless.

She had fallen silent. There was a pause—a pause that seemed an eternity to the woman.

"Where's your husband?"

She nodded in the direction of a row of dingy tenements.

"We've got rooms there for the time being."

"Take me to him!" he commanded, and there was no expression in his eyes that brought her heart to her mouth. Did he mean to humiliate her before Dick, to include Dick in the "slating" he meant to give them both? She wondered, distracted, what was the penalty she'd have to pay for this thing she had done. She cowered at the thought of possible prison! Tapper might resent to the uttermost farthing when she recalled how in the past she had humbled his vanity and tossed him aside. Her own soul had been mirror-clear at the time, but he had passionately characterized her as a "flirt," "a coquette."

Mechanically she turned the pram towards their dingy lodgings. Her companion paced at her side in silence. It grew more than she could bear. She would beseech, implore, supplicate, humble herself if need be, if so be she might turn away his wrath.

They paused at the shabby wicket-gate, and at that moment the baby, with a shrill crow of "Man!" thrust out her hand in invitation to the stranger. He covered the tiny fingers for a moment with his great brown ones. She laughed up in his face. The next they were in at the gate and up the gravel path. Her hand was on the knocker.

"Stop a minute!" he commanded.

Her hand dropped to her side. Her eyes stared up at him. There was something in his face, gaunt, worn, haggard-eyed—that arrested her. (He was like a man who has been looking daily face to face at death.)

"It's too late to alter the handbills!" He put the question. Almost his voice seemed changed.

"Too late!" she echoed, and her knees began to quake. Her lovely eyes sought his anew, mute, imploring.

"Then there's only one way out of it!"

"One way out!" she echoed stupidly.

"One way out!" he reiterated.

She waited.

"And that is," he added, "to prepare an additional lot."

"If you knew!"—she broke across him, distracted—"how—how I was tempted——"

He raised his hand as if to stop her. The baby, with a crow of delight, clutched at it wildly.

"Look here, let's go one better!" he pursued, ignoring her interruption. "How will something like this do?

"Tom Tapper, having returned unexpectedly from the Front, will contribute a couple of solos and join his pupil in a duet."

Maisie stared up at him, speechless, spellbound, her lovely eyes wide, her lips apart.

"I—I don't understand!" she stammered.

"And yet it's plain as daylight!" he told her, the ghost of a smile flickering over his gaunt features, as he stood above her.

"You—you don't—you can't mean it, Tom?" she breathed, in an awed, incredulous whisper.

"I mean it right enough!" he assured her, nodding. "And now, look here, you've got to take a lesson from me before Friday if you don't mean to cheat the public—though, upon my soul, I'm blessed if there's anything I can teach you! Even in the old days, you know, you could knock spots off me. Besides, when you've been looking death in the face daily, hourly, as I've been doing of late, you forget even how to whistle!"

"Tom!" she cried. "Oh, Tom!" And a lump rose in her throat and a mist before her eyes. "Somehow"—incoherently—"it doesn't seem as if you were quite—quite you—the old Tom!"

"I'm not, my girl! I'm free to confess it! See here, you go out there one chap, and you come back another."

. . . . . .

Next day flaming orange-colored handbills fluttered down in an avalanche on Mudbury, being scattered over the place by industrious young maidens engaged for the purpose, announcing that:

"Tom Tapper, the world-famous whistler, had unexpectedly returned from the Front, and would support his pupil, Maisie Maughan, at the Town Hall on Friday evening."

"Dick—Dick, wasn't it splendid of him?" demanded Maisie, her lovely face aglow, the clapping and stamping still ringing in her tingling ears, as she perched herself on the edge of her husband's couch when the thing was over.

"If only you could have been there! I believe Tom was as delighted as I was. Oh, and at the end—what do you think? Tom's agent was there, and offered me a London engagement for next week. Dick, I'm made!"

"Jolly decent!" agreed the man. Then, after a pause, and with a queer laugh: "Gives me a feeling here, don't you know"—he tapped his chest as he spoke—"of—of coals of fire!"—London Answers.

STORMY WEATHER HARD ON BABY

The stormy, blustery weather which we have during February and March is extremely hard on children. Conditions make it necessary for the mother to keep them in the house. They are often confined to overheated, badly ventilated rooms and catch colds which rack their whole system. To guard against this a box of Baby's Own Tablets should be kept in the house and an occasional dose given the baby to keep stomach and bowels working regularly. This will not fail to break up colds and keep the health of the baby in good condition till the brighter days come along. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

Cheerfulness is the duty of every person in time of war. Every man and woman who wears a cheerful face in time of war is performing a national duty. There is no reason why you should not be cheerful if you have a clear conscience. You will have that if you feel you have done your duty.

THE LATE MR. ANSON McKIM.

As Seen By His Pastor.

The following striking tribute to the late Mr. Anson McKim was recently given by Rev. Frederick B. Griffin, pastor of the Church of the Messiah, Montreal, where the deceased worshipped for so many years and with which he was so closely identified, sharing the responsibilities of office with his accustomed zealous care:

"The true wealth of a nation is its men. That nation is rich which has citizens of large and generous nature of gifts trained by high purpose and faithful industry, men of unerring rectitude and unimpeachable integrity of character. Mr. Anson McKim, whose death was announced recently, was such a citizen. He came from the best stock in our Canadian life, being endowed with those exceptional abilities which enabled him to take by sheer merit a foremost place in the business life of the country, and with those dispositions and ideals which won for him such affection and honor as come to few men.

"He continued in his nature the contrasts which mark the well rounded and balanced life. The sagacity which made him successful in large and exacting business enterprises was no more striking than the sympathy which made him a generous supporter of scores of humanitarian interests. The strength which enabled him to organize and develop large undertakings was not more conspicuous than the gentleness and friendliness which endeared him to an astonishingly wide circle of friends, young and old. A list of the positions which he held in business life, in clubs, in the church and in public welfare movements would show the versatility of his talents and would indicate in a measure the confidence and respect in which he was held.

"He loved music and pictures, he rejoiced in the beauties of nature, was fond of healthful sports, was a reader of good books, and delightful in the companionship of friends; he took his life work seriously, but felt that the great work of life was to spread abroad a larger and more generous happiness among his fellowmen.

"He made Montreal and Canada richer through his living and has left them poorer by his death."

Making Sure Of It.

"It's a fine morning, Mike," said the squire.

"It's a fine mornin', your honor and ladyship. An' sure, I had a foine drame last night."

"What did you dream, Mike?" enquired the lady.

"Sure, I didn't his honor gave me a pound of bacey, and your ladyship gave me a pound of tay!"

"Oh!" laughingly replied the squire, "but you know, Mike, dreams go by contraries."

"Shure, then, your honor can give me the pound of tay, and her ladyship can give the pound of bacey."

Figures Gross.

Guest—Good gracious, waiter! Nine and nine makes eighteen, not nineteen!

Waiter—Ah, but monsieur must remember that everything has been augmented by the war."

Three parts, by weight, of corn and one part wheat fed twice a day in litter, together with a mash mixture of two parts meat scrap added to two parts of ground corn and one part bran, fed in self feeding hopper, furnishes a well balanced ration, according to the Ohio Experiment Station.

The AUTOMOBILE

Some Cold-Weather Suggestions.

With the advent of efficient starting devices and such comforts as convertible bodies, tonneau heaters, etc., the all-year-round use of the high-grade motor car has become an almost universal practice. At this season a few suggestions may be in order as to the easiest and best methods of assuring the most pleasant and effective winter operation.

As the quality of the gasoline on the open market is continually decreasing, it is becoming more and more important to obtain the desired warm-weather operating conditions in the motor at all times. The automobile motor, equally as sensitive to the cold as the human organism should have extra covering in cold weather. An ideal warm-weather operation can be secured by having the power plant and the surrounding air under the hood kept warm, as in summer. Fortunately this is comparatively easy to accomplish since the motor is itself constantly generating heat. It is well to use a radiator cover with an adjustable opening so as to prevent excess cooling in extreme weather. It is also well to see that the carburetor has a hot-air connection to the intake manifold, so that the cold air is preheated when going into the carburetor. The newer cars are also provided with an air-choking device which gives an over-rich carburetor mixture to aid in starting and rapidly warming up the motor.

With regard to the quality of gasoline: In some localities the gasoline commonly offered for distribution is of poorer quality than in others, but it is now almost always possible to obtain a higher test gasoline, which, generally speaking, will prove more efficient in cold weather than a low test. In this connection bear in mind, however, that high-test gasoline does not necessarily mean better gasoline. In some cases a very light grade of fluid known as "casing head gasoline" is used, which has such a low boiling point that it cannot be handled in an ordinary carburetor, and it should be avoided.

The bad effects produced on motors in cold weather on account of low-test gasoline are difficult starting, missing fire, inefficient running for some time after the engine is started, fouling of spark plugs, and sometimes the presence of gasoline mixed with the oil in the base on account of condensation in the cylinders. On this account extra care should be taken to see that the oil base is frequently drained and refilled with fresh oil. In very cold weather this should be done at least every 1,000 miles. The grade of oil to use in cold weather is a medium heavy grade.

To prevent freezing the water-circulating system we recommend simply the addition of either denatured or wood alcohol to the water. In order to make a solution which will not freeze up to ten degrees below zero, remove two gallons of water from the circulating system, and replace it with two gallons of alcohol. It must, of course, be borne in mind that alcohol evaporates somewhat more rapidly than the water, so that in order to keep the solution at its original strength it is desirable when refilling during the winter weather to use half water and half alcohol.

Radiator Curtain for Winter.

During the winter months the motorist will find his car much easier to start if a radiator curtain is provided. Keeping the motor reasonably hot will also add to the fuel economy. A convenient curtain may be constructed as follows: Take a strip of lumber a half inch thick and two inches wide, and as long as the width of the radiator. Near each end mount a shade-roller bracket. Cut a curtain roller to fit the brackets and fasten the curtain to it. Attach the strip near the bottom of the radiator with two small bolts. Fasten a string cord to edge of curtain and run through radiator and under hood and pass through a hole in the dash. Now fasten a small ring to the end of cord. To provide for different adjustments, screw several hooks into the dash at intervals, over which the ring may be slipped. When going toward a brisk wind the curtain may be set to shut out most of the air.

Make Gardens Productive.

The Ontario Education Department have issued a circular to Inspectors and teachers that in order to assist in meeting the shortage of foodstuffs the teachers who are giving instructions in agriculture and horticulture in provincial schools should grow plants of food value in school gardens. Home gardens should also be enlarged for this purpose and vacant lots cultivated. Inspectors are also advised to demonstrate more fully the important bearing which agriculture has upon the welfare of the people. It has been estimated that if this is done the food products of Ontario would be increased by $10,000,000.

Preparedness.

Captain—What arrangements have you made in case Zeppelins come?

N. C. O.—If any bombs are dropped on the town, sir, the camp will be roused by three blasts on a whistle.

Habits at first are cobwebs and at last chains.

Green cut bone is a good egg producer, nourishes the feathers and keeps hens in good health.

FOR A BAD COUGH

Here is a fine old-fashioned recipe for coughs, colds or catarrh troubles that has been used with great success, just from your druggist 1 oz. of Parmint (Double Strength); about the worth and add to it 1 pint of hot water and 4 ozs. of granulated sugar. This will make full half a pint when mixed. Take one tablespoonful 4 times a day.

No more racking sour which body with a cough. Clogged nostrils should open, air passages of your head clear up so you can breathe freely. It is easy to prepare, costs little and is pleasant to take. Anyone who has a stubborn cough, or hard cold or catarrh in any form, should give this prescription a trial.

Any druggist can supply you, or a bottle will be sent on receipt of 75c postal note or money order. Address: International Laboratories, 14 St. Antoine St., Montreal, Canada.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pretaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Summer Pasture

F. J. R.—My pastures played out just when milk was selling best last summer. Can you suggest any way of keeping up summer pasture?

Answer:—I would advise your trying the O.A.C. temporary pasture mixture. It is:—

Oats ..... 51 lbs.
Early Amber Sugar Cane ..... 30 lbs.
Common Red Clover 7 lbs.

88 lbs. per Acre.

Prof. Zavitz says to sow this early in May. The oats and Early Amber Sugar Cane seed can be drilled in through the regular grain drill and the clover seed through the grass and clover seed division of the drill. At Guelph they found this pasture ready for cattle pasturage late in June. This pasture carried more than one steer to acre, and in 1911 was successfully used for milk cows.

Potato Yields Low on Account of Blight

G. B.—My potatoes were a failure last year. So were those of my neighbors, to a large extent. They were planted about the middle of May and seemed to come along well till early July when they seemed to die down. Some sent up single stalks which were short and weak. I scarcely got back seed. What was the matter, and how can I get better crops next year?

Answer:—Without seeing the field or sample of the crop, it is impossible to say with exactness, what the trouble was. From your description I am assuming that it was the deadly Late Blight disease of potatoes. This disease sometimes sweeps down upon what looks to be a healthy field and destroys great areas in a short time.

Moist weather is best for the spread of Late Blight. It is usually indicated by the development of indistinct, dark, watery spots on the leaves. As the disease develops the leaves turn a sickly brown color and the disease may extend to the branches of the plant. The rotting potato tops give off a characteristic disagreeable odor.

Late Blight is a fungus disease which winters in the stored potatoes. It sends its threads up through the inside of the potato plant and blossoms on the surface of the potato leaves, giving off millions of spores or seeds. These are easily blown about by the wind and in damp weather they stick to moist potato vines and leaves and attack new plants.

The cure or preventive is to spray the potato crop with Bordeaux mixture or some commercial fungicide just as soon as the first leaves are well spread out and continue spraying till the crop begins to ripen, giving in all 5 to 7 sprayings. Bordeaux mixture is made of 5 lbs. of copper sulphate, 5 lbs. of quick-lime and 50 gallons of water. The 5 lbs. of copper sulphate should be dissolved in 2 gallons of water and the 5 lbs. of lime should be dissolved in another 5 gallons of water, then the two should be dumped into a clean water-tight barrel and 40 gallons of water should be added.

The solution of sulphate of copper and lime is deadly to the scores of seeds of the Late Blight disease.

If there is a small infection anywhere near your farm, it will spread very quickly during damp, warm weather. Late Blight stops growth and causes dry rot in the stock that is dug. The biggest and best potato growers on this continent always spray their potatoes to control this disease.

English Society Ladies Join in Tommy's Games.

Lady Charles Bentinck (left) playing dominoes with Lady Kathleen Hill (right), and some of her soldier-patients in the Mapperley Hall Hospital, Nottingham, of which she is the commandant. As a Lady of Grace of the Order of St. John of Jerusalem, she nursed in the South African War.

The Dairy

It is hard cash sifting out of the pocketbook if the liquid manure is not saved by absorbents, or by being drained from tight floors to a cistern outside the stable.

Be sure that the rats are not robbing the cows of their grain.

Keep a good cat in the barn, and give it warm milk in its own dish—and keep the dish clean.

Comfort is the key-note to success. No cow can be comfortable if half starved and cold.

Cows sometimes get so smart that they can lift the latch of their stanchions with one horn. Pretty good argument for a sawing match. If you do not resort to that measure, fasten the latch down tightly every night and tie it.

If a cow has to be taxen any distance, it is far cheaper in time and in beef to carry her on a wagon or sled, using a pair of horses, than to drive or lead her unwillingly.

The barn should be as quiet as a Quaker meeting. Many men get into the habit of yelling at the stock without being conscious of it, and keep the animals stirred up when they should be quiet for their own and their owner's good.

Hogs

Cold floors can not be covered deep enough with straw to make the hog comfortable. He is a great rooter and will get clear down to the bottom of his straw bed. Su cement or stone floors are not so good as plank.

Old-fashioned hog-pens had altogether too much light on one side, being all open to the weather. Then they went to the other extreme and were shut up, close and dark. Windows are just as good for the hog's health and comfort as they are for yours and mine. Money spent for window-glass for hog houses is money well invested. Just watch the porkers as they lie where the sunshine comes in good and warm. Then is when they are putting on fat.

Salt and sulphur and charcoal should be kept in every pig-pen and pig yard so the pigs can help themselves.

This is a corrective and a preventive of worms.

Do not confine the brood sows in a small dark pen. Give them plenty of room, and a yard to go out to every fine day. Brood sows must have exercise to insure strong healthy litters of pigs.

Whatever makes the feed taste better increases its value as growth ration for pigs.

Since new telegraph cables to Ceylon have been opened messages have been transmitted from London within half an hour.

Horse Sense

If a horse takes a chill, followed by colicky pains, shows stiffness and soreness, stands all the time, groans if made to move, is sore if pressed between the ribs which are fixed, and has a short, dry, painful cough, he probably has pleurisy.

If much pain at first, give colic drench, apply mustard to sides, give nitrate of potassium in 2-dram doses in water 3 times daily. If pulse becomes weak, give 2 or 3 oz. doses of sweet spirits of nitre in a pint of water every 3 or 4 hours as indicated.

Horses that have been fed highly on grain for a long time, and begin to run down, can and have been toned up by the molasses and hay treatment.

The horse should be shod regularly or not at all. Shoes may stay on longer in Winter than in Summer, provided the shoes keep in condition.

Many a man has become bankrupt by thinking he could make his fortune in horses, when as a matter of fact there was no horse in him. To succeed with horses a man must love horses, he must have a lot of horse sense and he must be willing to study and learn.

Something wrong when a horse eats his own bedding. Leave out the straw and use sawdust or some such thing; then correct the ration. Give a better, all-round line of feed.

A quiet voice of approval and a gentle pat occasionally make the horse more tractable and serviceable.

One great reason for boys leaving the farm is that Willie's colt grows up to be papa's horse.

Never strike an animal when you are angry, nor when he is. If you do not, you will never strike him. This advice is as good when applied to striking a man in anger.

Empress Eugenie's Work.

The Empress Eugenie is heart and soul with the allies, and is showing her sympathy in a very practical way. Every day she is suggesting and carrying out new schemes in the hospital which she established in a large wing of her house at Farnborough Hill. She has put up revolving huts in the park at points where the finest views are obtained, and when these are occupied by the officer patients she likes to see that they are properly adjusted to catch the most of the sunshine, and the least of the wind if it is chilly. There are tennis courts in the grounds, too. Despite her great age—she was 86 last May—the Empress calls at the hospital every morning to inquire personally of the patients if they are going on well. She brings them the latest books, and also puzzles, the working out of which is her own favorite pastime. The wounded men look for her coming, and she leaves smiles and gratitude behind her when she departs.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON
FEBRUARY

Lesson VII. Jesus Heals a Nobleman's Son—John 4. 43-54.

Golden Text—Matt. 8. 13.

Verse 44. He said this about Nazareth (Matt. 13. 57; Mark 6. 4; Luke 4. 24), but this Evangelist is applying it to Judaea, the Messiah's true "country."

45. There is a sharp contrast between the Galilaeans who welcomed the Lord even because of his drastic treatment of the traffickers in the temple, and the Judaeans whom that action had moved to impotent wrath.

46. King's officer (margin)—The word thus rendered is common in vernacular documents, especially official, where it denotes the "royal secretary". In Roman Egypt he was deputy for the district commissioner.

47. Was come out of Judea, repeated in verse 54, takes us back to verse 45ff.—it is not the mere chronicle of a journey. Jesus had done a Messianic act in the royal capital: it had been only resented. As a prophet, he was winning more disciples than even John; in his "own country," this had brought him no recognition. So he solemnly changes the scene of his ministry, and Galilaeans joyfully claim him as their own. Jerusalem would yet be his capital; there he would be crowned with glory and honor" and "reign from the tree".

48. Signs—A technical word—tlecls which are credentials. The temper of the people, again for wonders, is suggested by the next word.

49. The intense earnestness of the father ignores the Lord's and general station, which he really uttered to draw out the man's faith; only a very powerful faith could achieve such a cure.

50. There is a resemblance to the story of the centurion, which has even been regarded as an independent version of this—a most improbable view.

51. The man seems to have started at once—like the lepers in Luke 17. 14—without another word. He had got on to the hill road that led down from the highlands to the town on the lake shore, when his hurrying slaves met him.

52. Began to amend is inadequate; the phrase answers exactly to our "got better." Seventh hour—This is the only New Testament book in which these precise time notices are given: see note on John 1. 39 (January 21). The watchers observed then—as we should put it—a sudden drop of the temperature to normal, the patient falling (we may suppose) into a quiet, natural sleep.

53. Believed—He "believed" before, as strongly that he went off to realize the promise. But faith always lives on new impulses, and the instantaneous result of his first venture lifted faith on to a yet higher level. Whole house, as in Acts 16. 15, 31. This gathering by families is very suggestive and characteristic. (It makes one think further of the gathering by villages we are seeing in India today.) A very attractive guess would recognize the mother of this grateful family in Johanna the wife of Chuza, Herod's steward.

54. The Evangelist closely connects the two Cana "signs," which may be combined under the great word, "I came that they might have life, and might have abundance."

The hottest place in the world is the interior of the Great Sahara Desert, Africa, where the thermometer rises to 122 degrees.

To have clean nests in the most scientific condition in the poultry house is the best cure for the habit some fowls (especially pullets) have of laying their eggs on the floor. A couple of pullets took a notion early last month to deposit their eggs in a corner of the scratch pen. There were nests in the inner house, but they would not look at them. Then a nest box was placed near the spot where they were in the habit of laying. They laid in it the first day. When it was later transferred to a more suitable location they immediately located it and continued to deposit their eggs in the nest.

Sheep Notes

Fine wool is more scarce right now than it has been in years. It may be more so a year from now. Stands us all in hand to do what we can to meet the demand.

It is no joke to say that there is more clean money in a pure-bred sheep than in a scrub. The why and the wherefore are not half so important to know as the actual fact.

See to it that you have the pay as soon as the meat man has the sheep or lambs. He gets his pay down-town the moment the goods are delivered. He should not ask you to wait. Many have done that and are waiting yet.

Be sure the sheep quarters are dry and cheery.

A cold, dark, damp place for sheep is death to them.

The sheep barn should be tight, tight with the proper ventilation, with big doors opening to the south.

These doors should be open on pleasant days, so the sheep can exercise in a sheltered yard.

Sheep do not mind cold when there is no draft, and the fold is dry and tight.

Do Insects Migrate?

One of the unexplained phenomena of animal life is the annual migration of birds, though the lines of their great flights have now been accurately mapped in both hemispheres. Mr. Howard J. Shannon, in an article in the Scientific Monthly, entitled Insect Migrations as Related to Those of Birds, maintains that many insects as well as birds make annual migrations southward in the autumn, following well-defined routes that correspond to those taken by the birds of the same regions. The insects include certain North American species of Diptera, butterflies and and dragon flies. Mr. Shannon believes that there may be a return migration in the Spring, but he is not sure whether such migrants are the same individuals that flew south in the fall or a new generation, bred in the southern winter quarters. Some idea of the magnitude of the migrations may be gathered from the statements of the author in regard to the monarch butterflies (Danais archippus), which "in mingled myriads move forward in swarms, forming a veritable crimson cloud miles in width, and streaming backward for equal distances, fasting below them as they go perceptible shadows."

Had A Tongue Like A Woman.

The bell of a Scottish church was giving out a very pour tone, and a committee was appointed to inquire as to what was wrong and to report on the best means of putting it right. After an examination the members were divided in their opinion, and the kirk officer, who was in attendance with the keys, was asked his view. "Fine A ken what's wrang wi' the bell?" he remarked; "it's a she yin" meaning that it was of the feminine gender. Pressed to explain, he added, "It's tongue's nae lang it's needle" to be clippit." And this turned out to be really the fault. The tongue had become lowered to the extent of an inch or so, and was overlapping the curve at the rim, and therefore not striking truly.

If paint and grease can be made to take the place of buildings without extra expense, then the only construction needed will be that of a fence to keep farm animals from doing damage to the machines left outdoors. As the long run there might be a loss of time in greasing a machine every time it has to be left idle, compared with the easier method of running it under a shed, but a careful man is likely to grease all parts that are liable to rust in any case, so if money can be saved by foregoing building, why not? The chief trouble is that one man, as a rule, uses both means of protection and another uses neither.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 25 Castle Frank Road, Toronto.

Mrs. G.-H.:—May I ask three questions? 1. How can I open a fruit sealer that refuses to unscrew? 2. What will prevent mustard from drying up? 3.—Is it possible to make a fireless cooker at home?

1. Set the jar upside down in sufficient hot water to cover the metal rim and in a minute or two it will unscrew with ease. 2. Mix with vinegar, add a little salt, and it will keep fresh for several days. 3. Take a packing-box with well-fitted cover on hinges. Fill box with hay well packed down, leaving hole in the centre for saucepan, fill a sack with hay and place on top of saucepan, and close lid. A granite pail with a close-fitting lid and a handle is the best cooking utensil for use in a fireless cooker.

Miss Pelly:—1. When a girl introduces a man to a married couple whose name should be mentioned first? 2. Should a letter of introduction be sealed and how should it be delivered?

1. You should introduce a man to your married friends in this wise: "Mrs. Blank, may I present Mr. Brown", and "Mr. Blank, this is Mr. Brown". 2. It should be unsealed. If a letter of introduction is written for a woman who is moving to another city she, on her arrival, mails it, together with her card containing her new address, to the person to whom it is addressed, who thereupon calls on the new comer. If a man has a letter of introduction to a woman he may call and deliver it in person.

Mrs. W. J. M.:—1. What is the best way to treat a kitchen floor? 2. What color scheme would you advise for a girl's bedroom with a large south window?

1. Cover it with a plain dark-colored linoleum and give a coat of polish once a month. 2. Blue is the best color for a sunny room. Combined with ivory it would be ideal for a girl's apartment. In the shops are many lovely chintzs in blues which could be used for over-curtains and cushions with charming effect.

School Girl:—I have to write an essay on Thrift, could you please give me a good definition?

Thrift is care and prudence in the management of one's resources, foresight, getting true value for what one spends, personal efficiency, looking out that nothing is wasted, proportioning expense to income. True saving is only a better form of spending. To save is not to hoard, which is one of the worst and meanest forms of waste. To save is to lend our resources to those who can make more profitable use of them. If we lend to the Government it can use these resources for national ends. If we lend to the banks, they do not hoard the money, they makes it serve, they invest it in trade and enterprise of all kinds. It is capital and capital means factories and mines and cultivated lands, the means of further production, the source of future wealth.

Stenographer:—Can you tell me the correct use of the comma, that is to say, which of these sentences is correct, "Tom, John, and Henry are coming," or, "Tom, John, and Henry are coming."

It depends on what meaning you wish to convey. In the first sentence, Tom's attention is called to the fact that John and Henry are coming; in the second, it is stated that Tom, John, and Henry are all three coming.

ODD FACTS.

Damage by hailstones to crops throughout the world is said to average $200,000,000 a year.

The orifice of the whale's ear is scarcely perceptible, yet it is said that the whale's hearing is so acute that a ship crossing its track half a mile distant will cause it to dive instantly.

An addition to the flora of the British Islands has been found the montbretia, a near relative of the iris and a native of South Africa, which recently was seen in blooms between the stones of the beach at Cobb, near Lyme Regis, in Dorsetshire.

Once a year the hillsides of the Malabar coast of India are the scenes of great commercial activity when the lemon grass harvest is under way. Oil extracted from the grass is employed in the manufacture of artificial perfumes. The hillsides are burned over to destroy the old and useless grass. Six months later the fresh crop is ready to be cut, and at once the countryside is dotted with furnaces and stills.

The Starvation Point.

To the question, "If there were a siege, how long do you think the soldiers and civilians could live after the food supplies gave out?" an English paper answers. Science tells us that, if he can get drinking water, an ordinary man can exist for thirty days without food. At the end of that time, the machinery of the body will not be spoiled, and can be brought back to its former strength by careful feeding. About a quarter of our body weight is fat, and it is mostly this fat that is absorbed as food during the period of starvation. We can absorb and burn up our muscles until sixty per cent. of their weight is gone. We can do the same with from thirty to forty per cent. of our livers and digestive organs, and twenty per cent. of our lungs. Our hearts can lose ten per cent. and our brains and nervous system can lose five per cent. It will be seen that the more vital organs—brain and heart yield least of their valuable substance for the life of the body, while the less essential substances—fat, muscle fibre and so forth—are consumed first.

A weather-tight shed offers the advantage of some comfort to the owner in repairing or refitting his farm machines, and if forethought is used in the erection of the building space can be provided for a great number with the use of a comparatively small amount of building material. Provision should be made for hoisting some of the lighter parts, such as hay racks, wagon boxes, etc., while flooring that is high enough to avoid all danger from water should be arranged for the placing of heavy gear thereon. The machine shed may be floored above the rafters, so as to make a place for the storing of hats, lots or other lightweight matter and if a workroom is needed for making up crates or putting handles on hoes, such an upper storey can be divided and a portion made comfortable for working on cold days by the use of a small heater.

Alberta farmers met in convention in Edmonton, Jan. 23rd.

One thousand hogs were sold in Calgary for $12.65 each recently.

Prince Albert, Sask., made one hundred per cent. registration response.

Edmonton has sent forty-seven recruits to the Royal Canadian Naval Service.

Calgary Y.W.C.A. have largely attended classes in English for the foreign-born.

Thirty-nine men from Regina have joined the Royal Canadian Naval Volunteers.

John Crawford has been re-elected president of the Board of Trade of Moose Jaw.

A large quantity of wood has been cut from the forest reserves near Prince Albert, Alta.

W. J. Vancise was recently elected to the Saskatchewan Legislature from Lumsden district.

A Junior branch of the Red Cross Society has been organized in the High school at Yorkton, Sask.

The Municipal Council of Forty-Mile Municipality is considering levying a land tax for patriotic purposes.

The Women's Auxiliary of the Grain Growers' Association held a successful convention at Brandon.

Calgary militare headquarters are calling for thirty nursing sisters for Queen Alexandra Imperial Nursing Service.

A committee of representative citizens has been appointed at Moose Jaw to investigate the subject of civic taxation.

Charles H. Wheeler, for the past twenty-five years dramatic and music critic of the Winnipeg Tribune, is dead, aged 70.

The Daulhaber community near Yorkton, Sask., has promised a monthly payment of $250 to the Red Cross Society.

Lieut.-Col. Harwood, of Edmonton, has been appointed president of the board to inquire into the administration of Tuplow Hospital.

About 200 farmers attended the opening meeting of the Manitoba Cattle Breeders' Association held at Brandon, Manitoba, recently.

Col. J. Stewart, M.P.P., for Lethbridge, commanding an artillery brigade at the front, has received the Distinguished Service Order.

Charles Thomas, whose four children were left motherless as the result of a street car accident at Winnipeg, is suing the street railway for $25,000.

Bank clearings for the week ending Jan. 18 in principal western cities were as follows: Brandon, $437,098; Edmonton, $2,332,258; Winnipeg, $42,587,679, for the corresponding week last year $32,468,106, and in 1915 $23,810,765; Moose Jaw, $1,089,713; Regina, Sask., $3,561,785.

The Paisley Advocate

PAISLEY, FEB. 21st, 1917

—C. M. Bowman, M. P. P for West Bruce, is about the last man that any rational person in this big county would think of denouncing as a pro-German. His name sounds German, to be sure, but there is not among our thousands of Scotchman one whose loyalty is less open to aspersion. Yet, when Mr. Bowman took a hand the West Simcoe bye-election some of the most prom nent politicians of the opposite party publicly attacked him as a pro-German and "a dangerous man." The real rub is that C. M. is a very langerous man in a political fight. There's a "punch" to his campaign dows, and that's what makes the other fellows holler and attempt to "put him out" by raising a cloud of German "gas." In the Legislature on Friday last Mr Bowman made a reply to Col. Currie's Simcoe attack upon his loyalty. Mr. Bowman showed how he is taking a loyal man's part in the war.

LOCAL AND DISTRICT NEWS

Soldier Dangerously Ill

Pte M V Switzer, a son of Mr and Mrs ThosSwitzer township Sarawen and Bruce, is dangerously ill in a hospital in France. A message to this effect was received by the parents a few days, but no particulars were given as to the nature of the illness. Pte Switzer enlisted at Winnipeg, and had been in France for some months.

Home Burned Out

Mrs P McDougall had her home on lot 3, con 5, Bruce Tp, destroyed by fire on Wednesday afternoon of last week. The fire started from a stovepipe in the attic, and burned so fast that only a few organs and a few other articles were saved. The insurance company allowed $200 for the loss. The farm is rented by Mrs McDougall.

Conservative Convention Soon

The North Bruce Conservative Association will shortly hold a nominating convention at Tara, to select a candidate for the Legislature. There are five names mentioned as most likely to be proposed for the honor of carrying the party standard at the next election. These are Ian Rushton of Elderslie, Jos F Grant, C H Statt and H A Vandusen of Tara, and Dr Foster of Wiarton.

Pte. Sam Fleming Home

After a seige of rheumatism, which rendered him unfit for further service, Pte Sam Fleming arrived home last week from overseas. He has received his discharge. Sam went across in 1915 and about a year ago was in the trenches at the front until rheumatism got him and put him out of the ranks of the Hun destroyers. Having been through the South African campaign and done all he could in this emergency, he is now more than entitled to being credited with doing his bit for king and country.

These Old Boys are Prosperous

Mr John A Campbell, of Shaunavon, Sask, remits his subscription and adds this: "I hope the year will be a happy and prosperous one for you and yours. Our family is well with the exception of whooping cough. Mrs King is with us here. Billy King is running a bakery in Shaunavon and has a large trade. Of course there is a large territory here, and a number of bachelors who don't bake. His town trade is good for from 35 to 400 small loaves per day. We had a fairly good crop this year. It ran about 20 bushels per acre and I sold it for $1 65 per bushel."

Death of John S. McDonald at Ripley

On Friday there passed away one who a couple of decades ago was an outstanding figure in the political life of Old Centre Bruce. Mr McDonald was a native of Ayrshire, Scotland, but came to Canada in his youth, and more than sixty years ago settled in Huron Tp, near Ripley. He passed through every phase of backwoods life, and climbed into political prominence by the municipal route. He served first as councillor, then as reeve, and eventually warden. He was a Liberal in politics until the Patrone of Industry loomed up as a political party, when he became their candidate for Centre Bruce and was elected to the Legislature, defeating the late W M Dack, and served one term. He was 88 years of age.

Tie Game

One of the fastest and cleanest games of hockey seen in the local rink in a long time was played here on Friday evening, when Chesley and Paisley teams played to a tie 6 6. Only for a few minutes in the latter part of the first period did either team have a lead of more than one goal during the hour's play. For nearly ten minutes after play commenced neither side was able to get the puck past the opposing goal-keeper. Chesley notched the first by batting in a rebound directly in front of the nets. They added two more to Paisley's one before the expiration of the first 30 mientes, making the half-time score 3-1. The second period opened faster than ever, with both teams backchecking hard. The Paisley youngsters now began to show up to better advantage and soon had the score tied 3-3. Then Chesley forged to the front again, only to have the locals tie it up and go them one better, and incidentally taking the lead for the first time during the night. But their lead was of short duration, as Chesley once more evened up. With six minutes to play the locals again drew ahead, but the visitors were not to be denied and two minutes before full time they secured the last goal, leaving the final score 6-6, the teams deciding not to play overtime. Referee Harvey Finn, of Chesley, gave the best of satisfaction. The line-up:

P Chesley		Paisley
Ryan	goal	Cottrill
Blair	right defence	McGregor
Stewart	left defence	Shoemaker
Green	rover	Stanley
Bondin	centre	Murray
Johnston	right wing	McKenzie
McLean	left wing	Bluce

Stock-Judging Course at Paisley

On Thursday and Friday, March 8th and 9th, a stock-judging course will be held in Mr. Geo. Craig's sale stables, Paisley, under the au-pic s of the Centre Bruce Board of Agriculture and the County Branch of the Department of Agriculture. The programme includes classes for judging of horses, cattle and sheep, to be in charge of W. J. Bell, of Toronto, H. King, O.A.C., Guelph, and John Gardhouse, Weston. The importance of thorough knowledge of live stock on the part of those who make a business of raising them, was never so great as at present, and our farmers have in this course a means of gaining knowledge. If you are at all interested be sure and see the bills and programmes issued.

Death of Mrs. Petrie

There passed away at her home on Road 30 on Feb 16th, Mrs Kohl Petrie, a highly respected old resident of the district. Mrs Petrie was born in Peterboro in Dec, 1840 and spent her childhood there, removing with her parents, Mr and Mrs Jas Smith, to Mornington Tp, where she lived for some years before coming to reside on the Hlora road north. She was married there in 1876 to the late Robert Petrie, of North St. They retired in 1906 to Paisley, where Mr Petrie died over seven years ago. Mrs Petrie was a true helpmeet, a kind and loving mother. She was a member of the Presbyterian church, having the true graces of a christian character of rare perfection. She leaves to mourn her loss one son and one daughter, Harry S on the homestead, North St, and Miss Jennett at home. Three brothers and two sisters are also living—Thomas, in California; Robert, of Burk's Falls; Harry, of Saskatchewan; Mrs Sergison, of Listowel, and Mrs Stewart of Manitoba. The funeral was held on Saturday afternoon to the Paisley cemetery, Rev Mr Little conducting the services.

FORESTERS RE-ADJUST RATES

The Canadian Order of Foresters have for years occupied a prominent position as one of the leading Fraternal Insurance Societies operating in Canada.

It was instituted in 1879 by 488 members who seceded from the American Order of Foresters. To-day it has a membership of over [illegible] which is the largest purely Canadian mutual benefit society of the fraternal insurance societies doing business in the Dominion.

The Society has had a most successful record, and has accumulated funds, which at the present time amount to between five and a half and six million dollars. Last year was apparently one of the most successful years in the history of the institution. The amount added to the insurance funds for 1916 was between four and five hundred thousand dollars. Notwithstanding this success the management decided to ascertain what the actuarial standing of the society was, and secured the services of one of the most competent actuaries on the continent. Acting on the advice of the actuary, the Society decided to readjust its rates and place itself upon a basis which will give it at least 100 per cent of actuarial solvency.

By taking this course, while its funds were still going up it has been able to treat its members much more favorably than many of the societies which have readjusted their businesses during recent years.—London Advertiser.

BRUCE TP. COUNCIL

Feb 10th, 1917

Bruce Tp Council met in the Tp hall on the above date, pursuant to adjournment. Members all present. Minutes of previous meeting read, adopted and signed.

A number of communications were read and dealt with one by one.

McNeil—Baker—That whereas a number of ratepayers of the township have been inquiring if the council would store valuable papers, etc, belonging to private parties in the Tp vault, expressing a desire to store such for better fire protection, and whereas this council deems it expedient to grant the request upon certain conditions and will store papers under the following regulations:

1. Papers or other valuables to be enclosed in a tin, metal or wooden box (preferably tin or metal), not larger than an ordinary cash box, to be provided with a good lock, owner to lock the box, retaining the key, also to place his or her name plainly on the end of box.

2. All papers or other valuables stored to be strictly at the owners' risk, the Tp assuming no responsibility whatever except to use reasonable precautions.

3. All papers, etc, stored to be handed in or out by the clerk, the owner not to have access to the vault.

4. Should the clerk at any time be under the necessity of making a special trip to get any papers, etc, out of the vault for any person, that person to pay the clerk for lost time at the rate of fifty cents per hour.

5. All persons storing boxes to come with or for said boxes, as far as possible on council meeting days.

6. Any person wishing to store a box of papers or other valuables may be required to satisfy council as to the contents before it will be received.—Carried.

Dobson—Baker—That the tender of W G Cole for disking Goderich road from con 1 to con 10 for the sum of $4 per trip, and And Smith's tender at $1 50 per trip for disking from con 10 to 14 be accepted.—Carried.

McKenzie—Baker—That we pay J H McGillivray $22 on contract bill 35.—Carried.

McKenzie—Dobson—That the auditors' report as read be adopted.—Carried.

A number of accounts were ordered paid and council adjourned to meet on March 10th, when pathmasters, poundkeepers and fenceviewers will be appointed.

J. G. MacKAY, Clerk.

B—for Best Battalion, for Britain, for Bruce,
R—for Robust men who had no excuse,
U—for the Unit to which we belong,
C—for Canadians, stalwart and strong,
B—for the Empire which we're fighting to save,
We come from the land of the true and the brave.
C—for the Colonel we love so dear,
O—for the officers, I think they are all here.
U—is for us, the men of rank and file,
N—for the No-goods who don't think it worth while,
T—for the Tears they are shedding at home,
For the men in the Trenches and the ones on the foam.
Y—for Yon Victory which we're training to win,
Give the 160 a chance and we'll get to Berlin.

—N B Webb, 160th.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel As If Walking On Air

ORILLIA, ONT., Nov. 28th-1914.

"For over two years, I was troubled with *Constipation, Drowsiness, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *now I feel fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".

DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

BRANT COUNCIL

The Municipal Council of the township of Brant met at the Tp hall on Monday, the 5th day of Feb., 1917. Members all present; minutes of last meeting read and declared correct.

Rowand—Gregg—That the application of Sidney Parker for the position of assessor for the township of Brant for the year 1917 be accepted and that the clerk prepare a By-law validating this resolution.—Carried.

Findlay—Johnston—That this council accept the tender of the Bruce Herald and Times for the township printing for the current year at the sum of $150 00, being the lowest tender.—Carried.

Rowand—Johnston—That the customary grant of $10 00 be made to each of the Cargill and Elmwood Public Libraries.

Johnston—Rowand—That By-law No. 91 A. D., 1917, confirming the appointment of Sidney Parker as assessor of the township for the year 1917 be now read a first, second and third time and passed, signed and sealed.—Carried.

Gregg—Johnston—That the collector's roll be accepted and that Joseph Monk be paid $100 00, his salary in full.—Carried.

Findlay—Rowand—That the auditor's report be received and adopted and the Reeve have two copies printed for distribution.—Carried.

Johnston—Rowand—That the reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried.

Hydro Electric Power Commission for construction and blue prints	12 25
Joseph Monk, salary as collector of taxes	100 00

People Talk About Economy

But how many really KNOW, have PROVEN that there is no economy equal to that of buying and eating healthful food?

This economy sometimes spends a few cents more a week on Groceries just to be sure.

This economy distinguishes between what is low priced and dear, and what is moderate priced and cheap.

This economy considers the health of a family, the most valuable of assets.

To people who practice this sort of economy we commend this Grocery stock of ours.

Our methods have stood and are standing the severest tests along this line.

If you appreciate the top-notch Grocery quality —investigate.

SELECTING SEED CORN

To Secure Good Crop, Select Good Seed

If a good crop of corn is expected good corn must be planted. The crop depends so largely upon the seed that no farmer can afford to plant anything but the best. Those who save their own seed are urged to carefully select it from the field crop and to give it the best of care. Those who have to buy should purchase only carefully selected seed. The Virginia Department of Agriculture conducted tests in connection with field selection and crib selection and found that ears selected from good yielding stalks in the field (field selection), produced 16 bushels more per acre, or 20 per cent. more than good ears of the same variety selected from the crib. Selection in the field enables one to see under what conditions the ear was produced and to note the character of the stalk and leaves of the parent plant, earliness of maturity, size, weight and strength. Where husking is done while the crop is standing a box can be attached to the back of the wagon and the best ears from the most suitable stalks can be plucked and placed in this box. If, however, the corn is to be cut and shocked before husking, enough for seed can be quickly gathered just previous to cutting by going into the best portion of the field and pulling the best ears from the desirable stalks. This should be carefully handled and thoroughly dried before the severe frosts. More than enough should be selected as outlined above and the poorest of the ears should be discarded.—F.C.N., in Conservation.

FOR RETURNED SOLDIERS

Canadian Pacific Railway Houses and the West

The houses which the C.P.R. is building in the West for the returned soldiers will cost them about $1,000 each, with out offices. They will consist of four rooms each—two bedrooms, dining room and kitchen. Each farm will consist of 160 acres and there will be $0 additional acres which may be availed of in the course of time, and as the settler concludes that he can work it. The C.P.R. has several designs for homes which will be submitted to the intending settlers. These offer a variety of design to suit different tastes and different pockets, it may be said. The settler can choose a house which will cost him $2,000, but the payments will be made exceedingly easy. In all there are probably 1,000,000 acres of land held by speculators in the West; but, apart from that, there are literally hundreds of millions of acres of cultivable land lying idle over the West—not close to the tracks, of course, but good land which many have longed for so ardently that they have sat on the steps of the land office all night to be the first in the morning to get their application in. The C.P.R. is going on on its own account with the colony homes; but it is expected that the Government will shortly outline a plan of a comprehensive nature which can be generally applied to the situation.

TO INVESTORS

THOSE WHO, FROM TIME TO TIME, HAVE FUNDS REQUIRING INVESTMENT MAY PURCHASE AT PAR

DOMINION OF CANADA DEBENTURE STOCK

IN SUMS OF $500 OR ANY MULTIPLE THEREOF.

Principal repayable 1st October, 1919.

PLAYING WITH THE SOULS OF MEN

Published by Request

Our duty, now, as Christians, must be to seek to counteract the fearful doctrines that are being spread abroad "that death in battle saves the soul." Everywhere this doctrine is gaining. A Christian worker tells me that after giving a Testament to a soldier he asked him, 'Are you sure of going to heaven?" His ready answer was, "Yes, because I am fighting for my country." He had been taught that his self sacrifice would save his soul. And Christ need never have died for him.

An earnest Christian soldier to whom I had sent a parcel, says: "What opportunities there are out here, and yet some of the preachers are telling the men twaddle, simply playing with the souls of men. What a state of things.' Tens of thousands of men here, and scarcely anyone to tell them the real true gospel. Surely God will require the blood of these at the preachers' hands?" Yes, the day of requisition will come, for God is not mocked.

Another writes me: "Your tract, 'The Sin against the Soldier and the Saviour,' is very necessary. At the beginning of the year I spent two months among the men at Boulogne, and heard this doctrine frequently. It seemed an awful thing to hear these dear fellows simply and innocently, it would seem, putting themselves on a level with our crucified Lord."

Another dear soldier from the front writes me: "It is enough to make one sad when one thinks of it all—how grand to look away from the mere speculations of men to our blessed Lord, and find in Him all our resources. May our blessed Lord deliver these brave men out here from being deceived and deluded by the devil. May the continued supply of Testaments come along, so that all the brave boys may have a Testament of their own. I need your prayers that amid the false hopes which the devil is spreading abroad in the army, there may be raised up servants who will be faithful and loyal to Him . . . to declare the gospel of Christ to the lost and perishing amongst our brave men."

Thank God for these faithful men who are standing for the truth of God. I wonder that fire and brimstone does not come down from heaven upon the nation for the deep dishonour done to the Son of God in our midst, very where His atoning work is being set aside, and His precious blood trampled under the feet of men. Some of the very men who are supposed to lead us in intercession to God now, on behalf of our Country, are leading a crusade against Christ. Honouring God (?) and dishonoring His Son.

A dear worker says: "The little tract 'The Sin against the Soldier and the Saviour,' has been very useful in refuting the damnable heresy preached by enemies of the Cross who would dare to suggest a salvation some other way. They attempt to 'juggle' with such a profound fact as the atonement, and in doing so belittle the grand work of redemption on Calvary. May God's richest blessing rest upon your efforts during the coming months."

A writer says: "The soldier dying in the trenches has no more merit than the engine driver killed in the collision or the meth r dying of heart disease brought on by years of strain. These things do not remit sins, nor win salvation. One death alone avails for these, and in none other is there salvation."

A friend writes to me and asks me if I have seen a very large "In Memoriam" card, about fourteen inches square, to be sold to people who have lost relatives at the front. There is a space on the card for the insertion of the soldier's name, and underneath is printed these words:

"His Country has written his name upon her Roll of Honour because he died for her, and God has written his name in the 'Book of Life' because he died for Him."

"It is the most terrible thing we can imagine, and it is the most insidious device of the devil to belittle the atonement of our Lord."

What is the remedy for all this? What can save our dear, brave soldiers from falling into this delusion of the devil? We must give them the Word of God to read themselves. They are wiser than their so-called teachers; they know they need a Saviour.

MADE FROM A TIN CAN

Useful Little Articles Manufactured From Waste Material

Being in need of a cheese grater and finding it inconvenient to go many miles to town, I constructed a satisfactory makeshift. I took a heavily tinned can and cut it in two, as shown in the sketch. By punching holes through it from the inside a

practical grater resulted. From the remaining half of the can I made an ash tray, as shown at the right of the sketch. The semi-circular ends were bent over to form a rest, and by cutting portions at the sides and bending them in, a convenient rest for a pipe or cigar was afforded.—Gus Hansen, Peachland, B.C., in Popular Mechanics.

Clever Plants

The cleverness of some plants is indisputable. A sundew, or fly-eater, deceived by a piece of cloth, seized it in its tendrils, but upon discovering the fraud immediately withdrew them. A fly, held just out of its reach, did not tempt it to move, but as soon as it was brought a little nearer the plant prepared to take possession of it. Darwin showed that a begonia had a habit of searching for a hole to insert its tendrils into, and evens of withdrawing the tendril to insert it in another hole, if the first proved unsuitable. Nor is this power of selecting confined to any particular class. Climbers like the lianas will refuse to coil round a branch not strong enough to bear their weight.

Health Hints

Don't neglect to take daily exercise in the open air. It's almost as important as daily food.

One of the best forms of exercise is walking. Every day when the weather permits walk to or from your work, and certainly during noon hour.

A half hour's brisk walk in the fresh, clean, outdoor air every day will bring its own reward. If chilly or cold when walking take deep breaths. Walk with the chest high and head up and you cannot feel blue and despondent.

Prevention of Fires

Keep waste paper, packing material and rubbish cleaned up. Make frequent personal inspections from a fire standpoint. Have all smoke pipes and chimneys inspected and properly repaired before starting fires for the winter. Be careful about the use of matches. Provide safe receptacles for them both before and after use.

— OF THE —
DOMINION LIFE
are unexcelled.

A Typical Case

The holder of Policy No. 21 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 13 per cent. in each of the years 6-10, by 26 per cent. in each of the years 11-15, by 40 per cent. in each of the years 16-20, and a reduction of 50 per cent. in the years 21-25. In the 22nd year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

"Loans, my dear sir," said the earl, "loans; which, of course, I shall pay. Merely loans."

It was Mr. Murpoint's turn to "ahem!"

"My dear lord," he said, in his sweetest voice, "we men of business know a great deal more than most people give us credit for knowing. One little bird—pray don't think I wished him to whisper secrets—came to me one day and whispered your name and that of a certain well-known money-lender."

The earl's face grew more fixed, but he did not move a muscle or show the slightest anger or surprise at the captain's knowledge of his embarrassments.

"Do not be afraid, my lord," said the schemer, in his softest voice; "the secret is safe with me. I shall not tell any-one that Lackland Hall is mortgaged to the neck; that there is a lien on every house your lordship holds; that there is a bill of sale upon the furniture, and that Lady Lackland's diamonds are at the jewelers, being repaired. I shall not tell all this because it is not to my interest to do so."

The earl sat stroking his mustache and looking straight before him.

"You do indeed speak plainly, Mr. Murpoint," he said, "and, while I will not endeavor to disprove or deny your assertions, I must at least confess that they startle me. Granting, merely for argument's sake, that I am er—er—somewhat embarrassed, I cannot see how it can be to your interest to help me."

There was a pause.

Presently a couple—a handsome man and a beautiful woman—passed them as they promenaded after the dance.

"What a couple they make. My ward is beautiful and well-bred, my lord, and Lord Boisdale and she are good friends."

The earl scrutinized the sleek, serene face of the speaker with acute anxiety.

"I see," he said, "I see. You are right, you are right, Mr. Murpoint; they would make a handsome and suitable pair. It is a capital idea."

"Which requires capital," said Howard Murpoint.

The earl flushed.

"Your ward is wealthy——"

"And your son must needs be noble, my lord," continued the captain. "A match between them is a thing to be desired."

"You would give your consent?" said the earl, almost feverishly.

The captain smiled.

"Let us talk of something else," he said. "It is a shame to dispose of the young things without their consent."

Then suddenly he said:

"Did you hear that the prime minister had spoken of my scheme for negotiating with the Swedish mines with much favor?"

"Yes," said the earl, not understanding why the conversation had been so rapidly changed.

"A friend told me that I deserved a baronetcy for it, hah! hah!" and he laughed softly. "Fancy plain Howard Murpoint made Captain Sir Howard Murpoint Bart., M. P.!"

"I see!" said the earl as a sudden light began to burst in upon him. "Let me follow your excellent example, Mr. Murpoint, and speak plainly. Do I understand that you will give your consent and bring about a marriage between my son, Lord Boisdale, and your ward if I obtain for you through my influence the baronetage which seems to cause you so much amusement?"

"My dear lord!" exclaimed the schemer, with a deprecating smile, "that is indeed speaking plainly. I am very grateful for your good intentions, very, but if I am anything, my lord, I am disinterested. From my boyhood I have worked for others; I am working for others now. It is enough for me that I can see my ward—my dearest friend's daughter!—happy. Be assured that if I thought a marriage between her and the admirable Lord Boisdale would tend to increase that happiness I would use every influence I possessed to bring about such a match, which would do us so much honor and would, I hope, be beneficial to the interests of your noble house."

The earl held out his hand and his cold, icy eyes glittered.

"You are a clever man, Mr. Murpoint, and a generous one. England is blessed indeed in the possession of such men as you! I am honored by your confidence—and—ahem—I think you really deserve the baronetcy!"

"Shall I," he said, as the earl took up his crush hat and prepared to depart—"shall I have the pleasure of adding your name to the list of directors of the Penwain Mining Company?"

"Certainly, certainly, I shall be delighted," said the earl; "I will go on to the club, I think," and after shaking hands warmly he departed.

CHAPTER XXIII.

So Bertie had declared love, and won an acknowledgement from Ethel that his love was returned.

"Ethel," he said, and the name sounded wonderfully sweet as he dwelt upon it with loving tenderness, "Ethel, I must go to the earl and ask for my pearl of price. Shall I go to-morrow?"

Ethel turned pale and sighed.

"To-morrow?" she said. "Yes, must it be so soon?"

"Yes," he said, quietly and gravely, "the world will say that I should have asked him first; but we cannot always control our hearts, they will have their way sometimes, and mine has been under bolt and bar so long—so long."

"So long?" she murmured, blushing and turning away from him.

"Almost from the day when I first saw you—do you remember the time? Poor Leicester was alive then, and I poured all my hopes and fears into his ears. Ethel I thought it hard that I should be debarred from hope; you were an earl's daughter—as you are now—and I was penniless, struggling, unknown."

"But it is all altered now," breathed Ethel, pressing his hand. "You are famous, and—and not poor."

Ethel rose, intoxicated with her new born happiness, to meet Lady Lackland, who was seen approaching.

"Ah, Mr. Fairfax," said the countess, eyeing him suspiciously with a cold smile. "How good of you, to take care of Lady Boisdale. I suppose you have been cooling yourself. Ethel, my dear, the carriage is waiting; I don't know where your papa is."

There was a crush in the street, and while Bertie, bareheaded, was placing the ladies in the carriage, the earl and Lord Fitz came up.

Mr. Murpoint was with them, serene and self-composed as usual, though the crush and confusion were bewildering.

"Here you are!" said the earl. "We were just going to look for you. Fitz had been seeing the Mildmays to their brougham."

Howard Murpoint closed the door as the two gentlemen entered the carriage and stood with his dark eyes, half closed, fixed on Ethel.

Then the carriage was on the move, and Bertie and Howard Murpoint stood looking after it.

Howard Murpoint regarded Bertie with a smile.

"You do not fear influenza," he said, nodding at the other's bare head.

"Eh? Oh, no," said Berite. "I'll get my hat now, though."

And with a cool nod he strode into the hall again.

Howard Murpoint turned to make his own brougham, and in doing so nearly knocked down a gentleman who was standing near him.

"Ha, Smythe," he exclaimed, "you here?"

"Eh? Yes," said the man, a short, nervous-looking creature, with fair, insipid face and timid, restless eyes. "Yes; just passing on my way to the club and—and stopped to look in."

"Club!" said Howard Murpoint. "Better come home and coffee with me."

And he linked his arm within that of his acquaintance.

Whilhelm Smythe, for that was the name, or rather improved name—it had been William Smith—of the stranger, was the son of a retired tea merchant.

His father had left him an enormous amount of property and a very small amount of brains.

The captain—or rather Howard Murpoint, as he preferred to be called, had met at a club some few months previously and had found out all about him.

He had won the good opinion of the half-cunning simpleton, who thought Howard Murpoint the nicest and most disinterested of friends.

All the way home Howard Murpoint gave a glowing description of the ball, to which, of course, Whilhelm Smythe had received no invitation, and the poor fellow was in agonies of envy.

"Delightful!" he exclaimed. "And she was there, for I saw her."

"Whom?" asked the captain.

"Can you ask me?" sighed Mr. Smythe, "when you know that I am madly in love with her."

The captain smiled.

"'Pon my word, I've heard nothing," he said, encouragingly.

(To bee ontinued)

FOR HEADACHES, BILIOUSNESS CONSTIPATION,

INDIGESTION

Nearly all our minor ailments, and many of the serious ones, too, are traceable to some disorder of the stomach, liver, and bowels. If you wish to avoid the miseries of indigestion, acidity, heartburn, flatulence, headaches, constipation, and a host of other distressing ailments you must see to it that your stomach, liver and bowels are equal to

TRY

the work they have to do. It is a simple matter to take 30 drops of Mother Seigel's Syrup daily, after meals, yet thousands of former sufferers have banished indigestion, biliousness, constipation, and all their distressing consequences in just this simple way. Profit by their experience. As a digestive tonic and stomach remedy, Mother Seigel's Syrup is unsurpassed.

MOTHER SEIGEL'S SYRUP.

[illegible]

Planting Trees to Shelter Crops.

In order that soil may do its best for the average farm crop it is necessary that it contain about half of the water that it is possible for it to hold. When saturated a heavy clay soil will hold 40 pounds of water, and it is generally agreed that 18 per cent. of water in soil is more favorable to plant growth. A practical farmer needs no measure or scales to tell him when his land is in fit condition for sowing, but many a one fails to attach sufficient importance to the necessity for this fit condition, and as a result much good grain and other seed is sown in mud that allowed it no chance of developing into satisfactory crop.

The season of 1915 was proof of the fact that in the matter of commanding moisture supply, two points have to be considered, namely, dispersion and retention of moisture. To attain both ends drainage and mulching have to be practiced, and it is a question if anything more or better than drainage can be made use of or the removal of excess moisture from the soil, but in the matter of retaining moisture or supplying it there are other means than cultivation of the top soil, possible of being used: irrigation is one of these, and another not very often considered, is the provision of tree belts that will help to retain a certain amount of moisture in the atmosphere an so affect the soil beneficially in times of drought.

In sub-tropical countries, where the people are more concerned in preventing the evaporation of moisture than in its conservation in the soil, it is recognized that there are two ways by which loss of water from the soil happens. In the first place the water absorbed by the root diffused through the cell system of stems and leaves, and evaporates through the breathing pores of the leaf. In the next place water is also lost by evaporation, from the surface of the soil. Both kinds of evaporation are increased by high temperature, dryness of the atmosphere or a high wind. In short, evaporation is most rapid in hot, dry weather, and on a windy day, and is slowest in cool, moist weather and calm air.

In order to overcome the loss of water through diffusion through stems and leaves of the plants, the advantage of shelter belts in the form of trees, is pointed out by scientists, the tree belts obviously cooling and moistening the air and breaking its force.

The total removing of forest trees, from a country that is naturally wooded is a mistake from more than one point of view, and is a sign of too much desire for immediate cash returns through cultivated crops, on the part of the farmers, without consideration for the future. There are few people that prefer a treeless stretch of country, as a place to live in but, nearly all, wish to have the benefit of the presence of trees within view, at the expense of a neighbor.

The planting of wind breaks is becoming more general in the North-West because farmers in that section recognize, at least, the comfort that results from such shelter, while those who take note of the results of such practice see that their crops benefit from the presence of the trees. Sheltering belts of trees are now needed in many parts of Old Ontario, and in order to maintain comfortable and safe farming conditions the land owners should start planting as soon as possible.

The Farmer's Home.

A letter from a farmer appeared in a recent issue of a farm paper. He asked whether farmers have not the right to remove to town to take life a little easier, and that their wives may have some of the conveniences and facilities that are not available on the farms. Surely, the farmer has as much right to all the modern household conveniences as has any person, and if his object in moving to town is to make life easy for his wife he is to be commended. But there are several phases of the subject that are not to be passed over so lightly, for the community has an interest in the matter that the retired farmer seems disposed to overlook entirely.

To begin at the beginning, the farmer has not made the most of his opportunities on his farm, or it would have all the facilities that are available to him in town. If he has reached the period of retirement with money enough to live on his income while availing himself of all the conveniences of the modern village or city, he surely has enough money to provide his farm house with heat, light, and water systems, to displace the old oil lamp, the woman-killing pump and the back-breaking coal stove and kitchen range. This would mean that in the kitchen would be found hot and cold water available at faucets, and a sink for dishwashing, and, in another part of the house or a detached building, laundry tubs, with power-operated washing machine, mangle and gas iron, power-operated cream separator and churn; and, in the house, a bath-room with lavatory and sanitary closet. All there he could place in the farm home for less cost than to buy or build and equip a home in the nearby village.—American Lumberman.

Tramp the Snow Around the Trees.

If no protection has been afforded the young trees against mice and vermin of this kind, it would be well from this on to keep the snow firmly tramped around the trunks. Towards spring when the mice began to get quite active and burrow through the snow long distances in search of food the bark of the young tree is very likely to suffer if it happens to come in their way. When the snow is tramped about the stem, the mice are more inclined to divert their channels where the burrowing is easier, and the tree is spared. It would be a good plan after every snowfall to take a trip through the young orchard and make the snow firm about the trunks of the trees. Watch for injury wrought by rabbits also. Sometimes a few fresh twigs cut from the branches and left on the ground will attract the rabbit and spare the tree.—Farmer's Advocate.

Thought The Colt Was Inside.

Several years ago there were remote mountain districts where motor cars were not only never seen, but had never even been heard of. One day a resident in such a district was very much astonished to see a large touring-car go by without and visible means of locomotion. His eyes almost started, out of his head, however when a motor cycle followed closely in its wake and disappeared like a flash round a bend in the road. "Great Scott!" he said, turning to his son. "Who'd 'a' s'posed that thing had a colt?"

Japs Can Make Dyes.

Japanese manufacturers have made themselves independent of German dye producers. Dye users suffered after the war began, and many factories were built to make colors. Now, it is declared, there is an over-supply and manufacturers are seeking to have an export ban removed so that any surplus may be sold abroad.

If some people were to speak their minds it wouldn't take them long.

YE GOODE OLDE DAYS?

Contrast Between The Days of Long Ago and Present Time

Yes, so we always speak of them. But were they really so good, after all?

Let us look into the matter. To-day your travelling is done in a comfortable train. In goode old days you sat, blue-nosed and benumbed, on a stage-coach, which as likely as not, broke down.

The gallant highwaymen, we know, is a romantic figure. But would you really like to meet him?

In the "goode olde days," if you feasted too well and not too wisely, you might be fortunate enough to find a doctor close at hand, but in all probability many miles of snow and slush would separate you from the nearest leech.

No telephones! No telegrams!

And do you not prefer your present-day costume? Of course you do! Do you not appreciate the many messages you receive from relatives and friends, delivered to your door, no matter from what corner of the world they have had to travel? Naturally!

One last point. The "gay dog" of the "goode olde days" did not ask a girl's permission before he kissed her; nor was it a vital matter to him whether he had imbibed too freely or not.

So be satisfied!

CHARMS THAT CURE.

Curious Health Superstition Current In Old Land.

One would almost think that the superstitious age had passed, but the many races of mankind that we now harbor in England have, probably, been partially responsible for a revival in health charms and amulets, says London Answers.

The Belgians have introduced a very queer remedy for the relief of rheumatism to our British chemist. Wear a little strip of catskin 'neath your coat and, so says the Belgian, you will become immune from gout or rheumatic pains. Flints for gout and bones for neuritis are among their "health cures."

A well-known Old English remedy for rheumatism is to carry a raw potato in your pocket, but this latter belief really has something to be said in its favor, for the potato plant contains properties which are distinctly beneficial to man and these benefits can be absorbed through the skin.

Even the rich do not escape the fascination of health charms. At the high-class chemist's shops in London one may buy sealed bottles of mercury in dainty wash-leather cases as "cures for rheumatism."

Blue beads, not for personal adornment, but to ward off bronchitis, are seen on many a pretty girl.

But perhaps, of all health superstitions, the acorn theory is the most amusing and incredulous. An acorn belt, so a customer was solemnly assured the other day, would protect him from attacks of indigestion and the like! It was to be worn next to the skin, round the waist.

Whether the acorn had its virtues put to the test is not recorded.

The National Service cards were distributed in Calgary by the Boy Scouts.

CANADIANS WANTED FOR THE ROYAL NAVY

Canadians wanted for the Royal Naval Canadian Volunteer Reserve for immediate overseas service. Only men of good character and good physique accepted.

Pay $1.10 Minimum per day—Free Kit. $20.00 per Month Separation Allowance.

Experienced men from 38 to 45, and boys from 15 to 18 accepted for service in the CANADIAN NAVAL PATROLS for defence of the Coasts.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London.—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. [illegible]

Bigger Yields, Better Crops and Increased Profis

"The big reason for the growth in the consumption of fertilizers lies in the fact that commercial fertilizers increase profits wherever properly used," says a government bulletin. If your land is losing its available fertility you can easily build it up and increase your profits by using

Harab-Davies FERTILIZERS

They will give your crops a good start, stimulate growth and increase the yields. Even if you are getting good results from your lands, Harab-Davies fertilizers will produce still bigger and better crops. They are prepared from blood, bones, trimmings, etc., in just the right proportions to supply the plant food your soil lacks. Let our experts help you select the correct fertiliser for your own particular needs. Write for our free fertiliser booklet and bulletins.

Ontario Fertilizers, Limited, West Toronto.

Redpath SUGAR

2 and 5 lb. Cartons—10, 20, 50 and 100 lb. Bags.

From "Ye Olde Sugar Loafe" of grandmother's day, to the sparkling "Extra Granulated" in your own cut-glass bowl, Redpath Sugar has appeared three times daily, for over half a century, on thousands of Canadian tables.

"Let Redpath Sweeten it."

Made in one grade only the highest!

Watch Your Sneeze!
It may be the forerunner of bronchitis or a bad cold. It is nature's warning that your body is in a receptive condition for germs. The way to fortify yourself against cold is to increase warmth and vitality by eating **Shredded Wheat**, a food that builds healthy muscle and red blood. For breakfast with milk or cream, or any meal with fresh fruits.

Made in Canada.

Fashion Fads

Tussur and pongee have few rivals among the materials for suits and dresses. With splashes of bright colors in huge dots or squares against a white or natural background, they make the most fascinating sports suits. The striped and dotted designs are very striking and introduce an entirely new note. Some of the designs are distinctly Oriental in effect. Silk and wool jersey are other important fabrics which in spite of having been used over and over again are still counted among fashionable materials.

Green seems to be good for early spring wear and ranges from the pale chartreuse to the deep forest tone.

One of the fortune tellers of fashion predicts that queer and intricate cuffs, large collars, straight up and down lines, and a lifted waist will be features of spring styles.

In the new suits, skirts fall from the waistline in many pleats, arranged in clusters, while large pockets, huge collars—often of contrasting material—bright embroidery and cable stitching form the trimmings.

Crepe de Chine Negligee with Angel Sleeves

For the Boudoir

A negligee with angel sleeves is one of the latest offerings for the woman who loves to be daintily and becomingly attired in her boudoir. A sketch is shown here. The negligee is of crepe de Chine, with fine lace edging around the collar and pockets, and sleeves of deep lace flouncing. The pockets and sleeves are weighted with silk tassels.

Boudoir caps of net, chiffon and lace trimmed with ribbon are still seen in great numbers. A very pretty cap of blue chiffon with a pleated net ruffle and long streamers of blue ribbon is a recent importation from Paris. A large pearl ornament was placed in front. Another cap of cream net was trimmed with narrow blue ribbon in lattice effect around the edge. Tiny pink rosebuds held down the lattice where the ribbon crossed itself. A ribbon bow on the crown and a soft ruffle to frame the face completed this dainty trifle. Such caps are easily made from scraps which you may have left over in the house.

These patterns may be obtained from your local McCall dealer or from the McCall Company 70 Bond St., Toronto, Dept. W.

PALE, FEEBLE GIRLS

Weakness Generally Comes On as Womanhood Approaches.

Girls upon the threshold of womanhood often drift into a decline in spite of all care and attention. How often one sees girls who have been strong and lively become suddenly weak, depressed, irritable and listless. It is the dawn of womanhood—a crisis in the life of every girl—and prompt measures should be taken to keep the blood pure and rich with the red tint of health. If the blood is not healthy at this critical stage the body is weakened and grave disorders follow. Dr. Williams Pink Pills have saved thousands of young girls from what might have been lifelong invalidism or an early death. They are a blood-builder of unequalled richness, strengthening weak nerves and producing a liberal supply of red, healthy blood which every girl needs to sustain her strength. Dr. Williams Pink Pills have proved their great value over and over again to young women whose health was failing. Miss A. Sternburg, Haileybury Road, New Liskeard, Ont., says:—"I have much reason to be grateful to Dr. Williams' Pink Pills as they restored me to health, if, indeed, they did not save my life. In 1914 I began to feel run down, and the doctor who was called in said that mine was a bad case of anaemia. I lost flesh, always felt tired, and I got so nervous that I could scarcely hold a cup to take a drink. My heart would flutter alarmingly. The doctor did not seem to be able to help me at all and my family and friends all thought that I was in a decline and could not recover. I was in bed for some weeks when an aunt came to see me and urged that I try Dr. Williams' Pink Pills. My father got a supply, and by the time I had taken three boxes there was a noticeable improvement, and from that on I steadily progressed toward recovery. I continued using the pills for some time longer, and they restored me to my old time health and strength. I shall never cease to praise this medicine, and to urge all weak run-down girls to give it a fair trial as I have proved in my own case their great merit."

Dr. Williams' Pink Pills are sold by all dealers in medicine, or you can get them by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

MERCHANT NAVY'S UTILITY.

The Country With Largest Merchant Marine Will Lead Post-War Trade.

That British exports in 1916 should have been of record volume, about $2,500,000,000, speaks with clarion note of the war-time service of the British merchant marine. The British Admiralty had under requisition a month or two ago about 60 per cent. of the merchant tonnage. The Government has compulsorily purchased many vessels. Government orders require 80 per cent. of space on British freighters in ordinary service, to be reserved on home-bound trips for Government material—foodstuffs and munitions. British freighters are forbidden to carry neutral freight between neutral ports without special permit. German submarines and raiders have destroyed two million tons gross of British shipping. In fact, the British merchant marine has had to undergo a most extraordinary combination of losses from enemy activities, of requisition for military service, and of cargo restrictions in the national interest. That it should have also carried record British exports demonstrates a capacity and endurance little short of marvellous.

Serving British and Allied interests magnificently in war-time, the British merchant marine will be Britain's main dependence after the war to recuperate its economic strength. German shipping interests are calculating on extraordinary building, to restore Germany's lost trade. The rivalry in warship construction being ended by Britain's unchallengeable supremacy, Germany will undertake rivalry in merchant ship construction. But the British shipping firms have to face, not only the burst of German energy, but formidably strengthened neutral lines. The shipping firms of Denmark, Norway, Sweden, Holland and the United States, notwithstanding losses, have grown fat and powerful on war rates, without heavy taxes or requisitions. Britain's future supremacy depends on whether she can keep pace in the construction of ships with its competitors in the peninsulate. The intimation from British naval authorities that no soon as the immense energy devoted to warship construction can be turned to building merchant vessels, remarkable output is assured, may well be believed. During the war a million tons of new war-ships, from giant super-Dreadnoughts mounting 17-inch guns, to destroyers and submarines, has been launched. This energy, applied to the turning out of standardized merchant vessels, would speedily distance German and neutral competition.

In the grand race for markets, for commercial recuperation, the country with the dominant merchant marine, able to seize the carrying trade of most of the world, will triumph. It is of utmost consequence that Britain specialize in heading off German ambition in this direction.

Revival of Jet Industry.

An industry in England that began a thousand years before the Christian era and was practically given up half a century ago has been revived since the war began. It is the making of ornaments out of jet. This material is believed to be wood that has gone through an age-long process, perhaps a slow burning. It is a cousin of coal, a second cousin of bog oak. Sometimes the tracing of a primeval fern is ground in its grain. Jet necklaces are now, it is said, in special demand. Arthur Machen, an English writer, says that jet ornaments "passed out of popularity with horse hair sofas and crinolines with the paintings of Landseer and Frith, with all those brave mid-Victorian things." The Victorians reveled in funerals with heavy plumes and hatbands and lavish crape and jet, which is black, fitted with a scheme of things that has passed away. But it is coming into its own again, though where once 1,500 or 2,000 workmen were employed in cutting and polishing ornaments of jet there are now scarcely one-tenth of that number, and these are mostly men too old for service in the army.

For Stiff Neck

Apply Sloan's Liniment without rubbing to the sore leaders and the pain will soon be relieved.

For rheumatic aches, neuralgia, gout, lumbago, bruises, strains, sprains and muscle stiffness, have a bottle handy.

Quickly penetrates and soothes, cleaner than musty plasters or ointments, does not stain the skin.

At all druggists. 25c. 50c, and $1.00.

Sloan's Liniment KILLS PAIN

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

He Stopped 'Em.

The following story comes from the front. At one point of the lines, where No Man's Land was merely fifty yards or so in width, the Germans one night happened to be in a very talkative mood, and the wind blowing towards our lines their jargon exceedingly irritated one of our men. The latter, a fine old soldier, absolutely without fear, bore it for a time, but finally informed the sergeant that he was going out for a walk. The sergeant gave a knowing smile as he saw the man disappear over the parapet with a bomb. He landed the missile right in the midst of a batch of Germans, and after the firing had died down reappeared on his hands and knees. "That's stopped their bloomin' talking!" was his only comment. It had.

BISURATED MAGNESIA
For Dyspepsia, Indigestion,

Heartburn, Belching, Sour Stomach, Gas in Stomach etc. take a teaspoonful of Bisurated Magnesia in a half glass of hot water after eating. Is safe, efficient, and harmless to use and gives instant relief from all forms of stomach disorder. Sold by druggists everywhere.

ZAM-BUK CURED IN 2 MONTHS

After 3 Years' Useless Treatment.

The healing power of Zam-Buk is so much greater than that of other ointments, that it has cured in many cases when all other ointments have failed. One such instance is that of Mr. Earle E. Gardiner, of Marquis, Sask., who writes: "For two years I suffered with a bad attack of salt-rheum on my foot. During those two years I tried every known remedy, but could find nothing that would cure the disease. Then I heard of Zam-Buk, and commenced using it. After the first few applications I noticed an improvement, and this encouraged me to continue. Although I had suffered for two years, after only two months' treatment with Zam-Buk I am completely cured."

Zam-Buk is equally good for eczema, ulcers, abscesses, blood-poisoning, piles, cold sores, chapped hands, chilblains, eruptions, etc. At all drug stores, 50c. box, or from Zam-Buk Co., Toronto.

COCOANUT BUTTER.

An Excellent Substitute for Butter Comes From Cuba.

The Cubitas Valley, on the north shore of Cuba, is not a dairy country, and butter at fifty cents to a dollar a pound, and scarce at that, has made us look round a bit for a substitute, says a writer in The Country Gentleman.

This is what we have found: Butter made of cocoanuts is entirely as good as, and some people think better than, that which is made of cow's milk.

Grind the meat of the nut as fine as you can with a good grinder, and to each nut add a pint of boiling water; put it in a press to separate the milk from the pulp, and you have a milk very much like cow's milk in looks and taste.

It can be used on cereal, in coffee, for custards or anything for which one would use cow's milk.

From this stage the treatment that we follow is just the same as that ordinarily used for cow's milk—let the milk stand and the cream rise; sour it and churn. After washing out the buttermilk, salt and make into rolls or moulds. I always color it, otherwise it will be white; any butter coloring will do. I use the annatto seeds that grow here in abundance and from which most butter coloring is made.

Our friends from the North who visit us frequently are delighted with our cocoanut butter and sometimes carry a jar of it home with them. It takes from six to ten nuts to make a pound of butter. It should be churned at a temperature of seventy degrees or below. This butter took the premium over cow's butter at the Cubitas Valley Fair in the year 1905.

Guard Your Baby's Health

Cheerful, Chubby Children Make the Home Happy

Weak, puny babies are a constant care to tired mothers and are subject to many diseases that do not affect healthy children.

Keep your children in good health. See that their bowels move regularly especially during the teething period. This is a distressing time in the life of every child and the utmost precaution should be taken to keep them well and strong.

By the consistent use of

Mrs. Winslow's Soothing Syrup

it is possible to avoid many childish ills now so prevalent.

It is a corrective for diarrhoea, colic and other infantile ailments. It soothes the fretting baby and permits the child to sleep well and grow healthy. It brings comfort and relief to both child and mother.

Mrs. Winslow's Soothing Syrup

Makes Cheerful, Chubby Children

Is absolutely non-narcotic. It contains no opium, morphine nor any of their derivatives. It is soothing, pleasant and harmless. For generations mothers in all parts of the world have used it and millions of babies have been benefited by it.

Buy a bottle today and have it handy

Relieve and Protect Your Children

MIRACLES OF DEVOTION.

Amazing Sacrifices Made by the Women of France.

French women, particularly the poor, were represented by Ernest Lavisse in his report to the French Academy on the distribution of virtue prizes as having during the war honored France by the virtue they have shown. "Women—nearly all poor—school mistresses, working women, domestics, have worked miracles of filial piety, devotion and charity," said he. "Servants, faithful to their employers, fallen into distress, serve them without wages, and even in cases aid them by sacrificing slowly accumulated economies to pay their debts. One of them is raising seven children of her dead employer. Another 80-year-old servant is raising five orphans. A widow, mother of three children, has taken charge of six orphans. One mother of thirteen children has extended her maternal care to fifteen orphans."

From Up Among The Yukon Snows

Comes Advice to Sufferers to Use Dodd's Kidney Pills.

Glacier Creek Lady Says They Have Been Her Stand-by for Sixteen Years and She Has Never Known Them to Fail.

Glacier Creek, via Dawson, Yukon, Can., Feb'y 5th (Special.)—"North of fifty-three where doctors are long distances apart and those remedies that are a very present help in time of need are the reliance of the settlers, Dodd's Kidney Pills have established an enviable reputation. Hear what Mrs. A. Armstrong, a well-known resident of this place, has to say of them:

"Dodd's Kidney Pills have been my stand-by for sixteen years," Mrs. Armstrong states. "Both myself and my family have the greatest faith in these medicinal qualities. When any of my friends complain of even headache I treat them with Dodd's Kidney Pills and they never fail to do good.

"It always gives me pleasure to say a good word for Dodd's Kidney Pills."

Dodd's Kidney Pills cure all kidney ills from backache to rheumatism. Bright's disease and heart disease. The trouble come from sick kidneys. That's why Dodd's Kidney Pills cure them.

WOMEN'S WORK IN WAR TIME.

In Britain and in France Women Serve in Freedom's Cause.

In England there are four hundred thousand women directly engaged in munitions work, and six hundred thousand in work connected with the war, not to mention those on street cars, etc. There is scarcely a position in England to-day filled by a man whose work could be done by a woman. In one munitions plant in England 19,000 women are working; in another 10,000. In one plant, where there are 5,000 workers, 4,400 are women. There was a prejudice at first against women working in manufacturing plants, but this prejudice has entirely disappeared, and manufacturers who objected now agree that the results have been highly satisfactory. In some sections the women did most of the harvesting. In Picardy, in the battle fields, no men were to be found, just women. Great Britain could never have successfully prosecuted the war but for the magnificent co-operation of the women, and also of the laboring men, who have co-operated with the Government in an admirable manner. The labor men have given themselves and their best vitality, and in the future nothing can be too good for them in Canada and the old country, for they had earned every consideration.

Minard's Liniment Cures Diphtheria.

Delicately Eliminated.

"How did you get Mrs. Bounce out of your bridge club? Did you ask her to resign?"

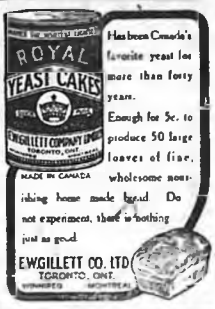
"No, we didn't like to do that, but we all resigned except Mrs. Bounce, and then we all got together and formed a new club."

The Nova Scotia Lumber King says: "I consider MINARD'S LINIMENT the best LINIMENT in use.

I got my foot badly jammed lately. I bathed it well with MINARD'S LINIMENT and it was as well as ever next day.

Yours very truly,
T. G. McMULLEN.

Urgent Business.



"Your honor, I admit that I was exceeding the speed limit, but I was afraid of being late at court."

"What was your business at court?"

"I had to answer to a charge of exceeding the speed limit."

The most expensive way to buy anything worth while in this world is to get it for nothing.

Minard's Liniment Cures Distemper.

Has been Canada's favorite yeast for more than forty years.

Enough for 5c. to produce 50 large loaves of fine, wholesome nourishing home made bread. Do not experiment, there's nothing just as good.

E.W.GILLETT CO. LTD
TORONTO, ONT.

At the Opera.

Rich Lumberman (at the opera)—By jinks, Mame, that's music such as I calls music.

City Niece—I hardly thought you would appreciate it, uncle.

Lumberman—Why, by jinks, Mame, it sounds just like my three sawmills on Beaver Creek all runnin' at once.

Minard's Liniment Cures Colds, Etc.

Telegraph Message.

Assistant (to old lady, who has bundled in a badly spelled telegram)—What's this word, please?

Old Lady—Never mind that, miss; it's none of your business. They'll know at the other end.

Minard's Liniment Cures Garget in Cows.

Fortune smiles on some men merely because they paid no attention to her frowns.

A Woman's Problem

How to Feel Well During Middle Life Told by Three Women Who Learned from Experience.

The Change of Life is a most critical period of a woman's existence, and neglect of health at this time invites disease and pain. Women everywhere should remember that there is no other remedy known to medicine that will so successfully carry women through this trying period as Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs. Read these letters:—

Philadelphia, Pa.—"I started the Change of Life five years ago. I always had a headache and backache with bearing down pains and I would have heat flashes very bad at times with dizzy spells and nervous feelings. After taking Lydia E. Pinkham's Vegetable Compound I feel like a new person and am in better health and no more troubled with the aches and pains I had before I took your wonderful remedy. I recommend it to my friends for I cannot praise it enough."—Mrs. Margaret Grassman, 780 N. Ringgold St., Philadelphia, Pa.

Beverly, Mass.—"I took Lydia E. Pinkham's Vegetable Compound, for nervousness and dyspepsia, when I was going through the Change of Life. I found it very helpful and I have always spoken of it to other women who suffer as I did and have had them try it and they also have received good results from it."—Mrs. George A. Dunbar, 17 Roundy St., Beverly, Mass.

Erie, Pa.—"I was in poor health when the Change of Life started with me and I took Lydia E. Pinkham's Vegetable Compound, or I think I should not have got over it as easy as I did. Even now if I do not feel good I take the Compound and it restores me in a short time. I will praise your remedies to every woman for it may help them as it has me."—Mrs. E. Kiessling, 931 East 24th St., Erie, Pa.

No other medicine has been so successful in relieving woman's suffering as has Lydia E. Pinkham's Vegetable Compound. Women may receive free and helpful advice by writing the Lydia E. Pinkham Medicine Co., Lynn, Mass. Such letters are received and answered by women only and held in strict confidence.

Three New Departments

Helpful, Interesting and Entertaining Features that will make each issue of this paper worth the full year's subscription price. Each department is in charge of a specially qualified writer.

Prof. Henry G. Bell will conduct a question and answer department called "FARM CROP QUERIES," and Mrs. Helen Law will have charge of a splendid Department for Women entitled "YOUR PROBLEMS." Then comes one of the best comic serials published. You will thoroughly enjoy the "DOINGS OF THE DUFFS."

Full particulars will be found elsewhere in this issue. Turn to them now and read about the valuable and interesting information that will be supplied to you each week.

PINKERTON

The Red Cross box social held in the hall here on Friday night was a splendid success. The weather was very unfavorable until Friday afternoon when it cleared up and it was a beautiful night, and a very large crowd gathered. Mr Harvey Clark officiated as chairman in his usual efficient manner. The program was lengthy and each number was well rendered. It is difficult to discriminate as to which number was best rendered, as all were excellent, but special mention must be made of Miss Hazel Webb of Port Elgin, who sang very charmingly, as also Mr. Jas. Scott of Dunblane, whose solos were very much appreciated. Mr. McLean Young of Gresham gave several selections. Mention must also be made of little Margaret Porter, whose mouth organ solos were received with much delight. An amusing dialogue, "An Economical Boomerang," received great applause, as also did "The Farmer Boys." Piano duetts by Misses Aileen and Jennie Pinkerton and a violin solo by Miss Kathleen Pinkerton were beautifully rendered. Senator Donnelly gave a short but interesting speech. After the programme the boxes were sold by Mr Pearce, auctioneer, of Paisley. Some of the boxes commanded very large prices, one reaching the dizzy height of $12, bought by Mr H G Clark. The proceeds amounted to $119. The ladies of the Red Cross Society are very grateful to all who took part to make the social such a success. They are greatly indebted to Mr Reynolds, of Eden Grove, whose artistic printing of the bills and whose advertising in various ways helped materially to attract a crowd.

The Red Cross Society here shipped the following articles to headquarters last week. These articles were all made since the shipment three weeks ago. Hospital supplies —13 suits pyjamas, 2 hospital suits, 6 pillows, 2 pillow covers, 3 quilts, 140 mouthwipes. Soldier comforts —4 pair wristlets, 9 shirts with collars, 27 shirts without collars, 39 pair socks.

We are sorry that Mr R M Gale is suffering with an attack of the grippe. We hope for a speedy recovery. He was unable to occupy the pulpit on Sunday. There will be no service next Sunday, as anniversary services are being held in the sister congregation in Cargill.

Miss Sharpe, of Paisley, visited her friend, Miss Myrtle Garland, last week.

Mr Wes Caswell visited his sister in Bervie last week.

Anniversary services will be conducted in Cargill Presbyterian church next Sabbath, the 25th, at 11 a m and 7 p m, by Rev W D McDonald, B.A., of Atwood.

FOR FLETCHER'S
CASTORIA

LOYAT

Mr John Geo McKay has been laid up with lagrippe, but is able to be around again. Mr Wm J Nellarge, son is suffering from the same complaint.

Mr Duncan Currie was home from Kincardine for a few days, where he was working in a factory for two months past.

Mrs Jas McDonald arrived from the west this week on a visit at the home of her sister, Mrs Wm Rose.

Quite a number took in the box social at Pinkerton on Friday night, and had a good time.

Miss Mamie Brown, of Tantallon, Sask, who has been visiting friends in this vicinity since November, left for her home in the west on Wednesday.

Mr John McKay was home from Pinkerton over Sunday.

We are pleased to learn that Mr Peter McArthur, who was seriously ill, is somewhat better at present.

Mr Jack Groves, of Saskatchewan, was a guest at J G McKay's over Sunday. He leaves for the west on Wednesday, accompanied by a lady life partner.

Mr Dave Lamont is fully recovered from the operation he underwent a few weeks ago for appendicitis.

Mr John Rose made a trip to Listowel last week.

TURNERS

Mr John C Pollock of Port Elgin spent a few days with his relatives here.

James Christie, son of the reeve, who underwent a serious operation at Walkerton hospital, is improving nicely.

James Hyde and daughter of St. Helen's spent a few days at Archie Pollock's.

BURGOYNE

Robt Gowanlock got his feet badly frozen on Sunday night of last week. Cold feet, Bob?

Miss Jean and Mr McKerracher, of Paisley, visited at Mr and Mrs Reany's on Saturday.

Our mail carriers have got out again.

Miss Bessie Henderson has been visiting her mother.

Some of our homes have got new Edison gramaphones.

Miss Hogg of Carrick, niece of Miss Sang, has gone to Scotland to visit a brother who is ill with meningitis. He enlisted and went over some time ago from Canada.

Mr and Mrs John Gowanlock and Miss Bessie are likely to go west for the summer.

ELORA ROAD NORTH

One of our young sports has been taking early morning drives for the good of his health. He reports that the concessions are badly in need of ploughing.

Mr John Ewing left for his home in the west last Wednesday. Mr Ewing purchased a Clydesdale stallion from Mr Moulton of Kingarf, and will have it shipped out to Alberta in March.

The bean social held at the home of Mr S Winch on the 9th of this month was quite a success in spite of the stormy weather. A good supper and programme were provided and almost $40 was realized for the use of the Patriotic League.

Miss Morton, of London, is visiting at Mr John McDougall's.

TWELFTH CON. BRUCE

Messrs Eli and Edwin Barnes were up from Port Elgin over Sunday at their home here.

Mrs John Cumming was out to Elderslie on Saturday to see her aged father, who is just recovering from a serious attack of congestion of the lungs.

Mr Ed. Gibbon is moving to his new home near Stitton's Bridge this week.

Mr and Mrs Arthur Smith Sundayed at the home of her uncle, Mr Cottrill Morris.

We extend our sympathy to Miss Jennie and Mr Harry Petrie in their recent bereavement by the death of their aged mother.

It seems something new to see freight trains running again on Sunday, but owing to the blockade of last week it was doubtless quite necessary to do so in order to make up for lost time.

CASTORIA

BRUCE TP.

Gr. Victor Kidd, who enlisted in the 65th Battery at Toronto, was honored by his old neighbors and friends when about 75 assembled at the home of his parents, Mr. and Mrs. John Kidd, 4th con., and presented the young soldier with a fountain pen and purse. The following address was read by Miss Flossie McLennan and the presentation made by Miss Margaret Symons:

DEAR VICTOR—We have assembled here to-night to spend a few social hours with you to show our appreciation of you before leaving for overseas service. We are sorry to lose you, yet we feel proud at the step you have taken with so many others to defend our King, Country and homes. We hope that the Almighty Hand which guides us all will, after the great struggle is ended, permit you to return to us in health and strength. We all know the hardships and dangerous life the soldier has to contend with but we know that you will perform your duty with unfailing courage and true manliness. We therefore ask you to accept this fountain pen and purse as a slight token of esteem in which you are held by us. Signed on behalf of friends and neighbors.

Albert Wrightson
John Downey

CANTIRE

(Intended for last week)

Those who were hugging the delusion that old Ontario had a salubrious climate, are getting a slight jar these days.

Mr D A McIntyre recently delivered a bunch of hogs that were money makers. These were just six months old and averaged 257 pounds. They made $35 apiece. Who can beat it?

Dr. Will Eason, of Lannigan, Sask, spent a few days last week at the home of his brother and sister here.

Mr and Mrs Neil McAllister of Paisley visited at the home of the latter's parents Mr and Mrs J C Johnston on Sunday last.

Mr and Mrs Henry Winch and family, Miss Esther and Miss Jennie Long, all of Bawano, Alta, were looking up their Cantire friends last week. It is twelve years since Mr and Mrs Winch went west and are highly satisfied with life in the province of their adoption. They have a half section of land and have been very prosperous, especially since the good prices of the last two years have come. They have for neighbors Joe, John and Cunningham Long, George Greaves and Tom and George Scott, all old 4th of Elderslie boys.

Mr John Ewing, who has been for a time the guest of his brother-in-law, A D McKay, went to Walkerton last week to visit an old school mate, Inspector McCool.

700 BUSHELS WHEAT FROM 20 ACRES

HENRY FRAZIER, of Forest, Ontario, says:

"I have used your Homestead Fertilizer for four years with good results. Last fall I sowed 20 acres of wheat with no other dressing, 300 pounds to the acre. The yield was 35 bushels to the acre. My neighbor did not use fertilizer and his wheat will yield only about 25 bushels per acre. My wheat ripened better, filled better, consequently produced more bushels."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

WALKERTON

Mr Ninian Crawford, the veteran division court clerk and tax collector of Walkerton, celebrated his 86th birthday on Tuesday. Mr Crawford is probably the oldest publican in the province, and decidedly the oldest active official in Bruce.

Col Weir, who is in command of the 160th (Bruce) Battalion, has received instructions that the battalion is to go to the front as a unit, and in a letter received by Mr John Rowland yesterday says that "Probably before this letter reaches you we will be part of the much-talked-of 5th Canadian Division." As this division is now forming in England for the front, and will have to do a lot of field practice and manoeuvring together, it is not likely to reach France for several weeks yet. In his letter Col Weir further says: "In spite of so many reports to the contrary which have come to my notice through the different county papers, we have not yet been called on for a draft. Our only contribution so far has been two N C O's, who were very anxious to go and went in a draft."

Mr Andrew Rae, an old pioneer of Brant and one of the best known men in the township, passed away on Tuesday evening last, in his 82nd year. The deceased had for years been subject to angio spasms of the blood vessels of the body and brain, and it was during one of these spells, coupled with a severe attack of la grippe, that death ensued. Born in Perth Scotland, the late Mr Rae came to Brant township at seventeen years of age, and settled on lot 23, con 8, which he cleared and on which he continued to reside until his death. The deceased was a good farmer and a splendid citizen. He was married to Miss Annie McNaughton, daughter of the late Daniel McNaughton, sr, of Brant, and who survives him with a grown up family of three daughters and three sons as follows: Maggie, Belle, Sarah, James and William Rae, at Rome, and John, formerly of the Merchants Bank, Walkerton, who left last week for overseas with the 228th New Ontario regiment. The deceased is also survived by two brothers, Alex and James of Brant, and five sisters, Mrs Stephen Little and Miss Beasie Rae of Brant, Mrs Chris Murrell of Euphrasia tp, Mrs Gray of Chatham, and Mrs Wm Young of Sullivan. The funeral will take place to the Chesley cemetery on Friday afternoon.—Herald and Times.

Rev Thomas Wilson, pastor of Knox church, who on receiving a flattering offer to accept the pastorate of a large Presbyterian church at Williamsport, Pa, announced to his congregation on Sunday morning that he had decided to decline the call. His decision was received by his congregation with much satisfaction Mr Wilson briefly outlined his reasons for and against accepting the call, his main reason for deciding to remain in Walkerton being that he did not care to leave Canada and the British Empire in these momentous times. He dealt with the points in favor of accepting the call first. (1) He had been here 14 years and he did not believe in long pastorates. (2) The call was to a growing field of service. (3) He would be going to a great church, the American Presbyterian church being strong and agressive, in men furnishing the outstanding leaders in small Presbyterianism. (4) It was a call to the Eastern States, to a portion of the United States where the people are conservative, where ideals such as ours prevail largely. But he had decided not to accept because (1) While he had been here fourteen years they had been years of unbroken peace. No man had been happier with his congregation than he had been. (2) He did not care to leave the Canadian church while there was need for workers here was great and the church was calling for more men. (3) He did not care at a time like this to leave his country where he felt that every citizen should be on hand to do his duty. Two weeks ago the great American eagle, sitting on the fence, had raised its wings and fluttered, Would it fly off on the right side or would it settle down again? (4) The speaker took great pride in the Honor Roll of the church. He had helped to recruit three boys. He had wished them Godspeed and told them he hoped to be here to welcome them home again. He intended to stay and "Keep the home fires burning."—Telescope.

Most Eminent Medical Authorities Endorse It.

Dr. Eberle and Dr. Beithwaite as well as Dr. Simon – all distinguished authors agree that whatever may be the disease, the urine often fails in furnishing us with a clue to the principles upon which it is to be treated, and accurate knowledge concerning the nature of disease can thus be obtained. If backache, scalding urine or frequent urination bother or distress you, or if uric acid in the blood has caused rheumatism, gout or sciatica or you suspect kidney or bladder trouble, just write Dr. Pierce at the Surgical Institute, Buffalo, N.Y.; send a sample of urine and describe symptoms. You will receive free medical advice after Dr. Pierce's chemist has examined the urine—this will be carefully done without charge, and you will be under no obligation. Dr. Pierce during many years of experimentation has discovered a new remedy which he finds is thirty-seven times more powerful than lithia in removing uric acid from the system. If you are suffering from backache or the pains of rheumatism, go to your best druggist and ask for a 50-cent box of "Anuric" put up by Dr. Pierce. Dr. Pierce's Favorite Prescription for weak women and Dr. Pierce's Golden Medical Discovery for the blood have been favorably known for the past forty years and more. They are standard remedies to-day—as well as Doctor Pierce's Pleasant Pellets for the liver and bowels. You can get a large trial package for 10c. of any one of these remedies by writing Dr. Pierce.

Doctor Pierce's Pellets are unequalled as a Liver Pill. *One tiny, Sugar-coated Pellet a Dose.* Cure Sick Headache, Bilious Headache, Dizziness, Constipation, Indigestion, Bilious Attacks and all derangements of the Liver, Stomach and Bowels.

Subscription, $1.50 per Annum

The People's Popular Store

Stock-Taking Finished

Now for Spring & Summer Goods

In finishing our stock-taking we find many odds-and-ends in all departments and in Overcoats, Furs, Heavy Rubbers, Overshoes, Horse Blankets and Heavy Wool Goods we find some sizes left. Even if all these lines were advanced from 10 to 25 per cent., they would still be better value than can be bought now to sell next fall.

When we have reduced all Heavy Goods from 20 to 33 per cent. off last fall's prices, this makes extra good buying, even if not used till next winter and much better quality than will be offered for some time. When you can get a new $20.00 Overcoat for $15.49, a regular $15.00 one for $9.98, a first quality Heavy Rubber with 12-inch leather top for $3.89, a pair of Men's regular $1.85 Oversboes for $1.39, a regular $3.50 Bed Comforter for $2.39, a regular $3.00 suit of Men's Heavy Wool Underwear for $2.49, a $1.00 Shirt or Drawers for 69c, a choice set of regular $57.00 Sable Furs for $39.00, a choice set of $70.00 Black Fox Furs for $43.00. A few ends of Scotch Wrapperettes, regular 18c to 30c, reduced to 10c, 12½c and 15c, and so on through the entire stock.

Prints 12½c, 15c and 20c for 3d. wide Indigo Blues. Silks, Wash Goods, Dress Goods, Gloves, Hosiery, Cottons, etc, are being placed in stock at very much lower prices than can be replaced at factories to-day. Owing to the enormous prices of all kinds of farm produce, the absolute necessity for some months past of placing orders with manufacturers and taking deliveries long before required necessitates selling now for cash or farm produce at time of sale. The nimble sixpence is much better now than the slow shilling.

In taking stock of our books we find a lot of small amounts, as well as large ones not settled. All these old accounts must be settled up. You will save big money by coming early and often, not only for your Spring and Summer Goods, but on your wants for next Fall and Winter, 1918.

Ladies' Tailoring a Specialty

I. S. Cruickshank

Desirable Village Property for Sale

LARGE frame house with kitchen and woodshed attached; good cellar; hard and soft water in house; large stable and hen house; good water well in stable. About 2 acres of land, first-class garden. Will be sold on reasonable terms. J. H. GEORGE, Prop.

For the death of Rev. C. E. Stafford, superannuated Methodist minister of Elora, the C.P.R. has agreed to pay his widow $2000 damages. He died after being in a wreck near Belwood. Rev. Mr. Stafford was pastor of Paisley Methodist church for a number of years.

Paisley Has Greatest Horse Market

MORE HORSES SHIPPED FROM HERE THAN FROM ANY OTHER SMALL TOWN IN THE WORLD

There is always something doing in the buying and selling of horses in Paisley. In one week there may be from three to five carloads delivered to the dealers here and shipped out to distant points, west or east. Or a farmer buys one or more steeds for which he would have no earthly use for working purposes, takes them home, and a few weeks or months later the same animals are brought to town again for sale. These incidents are what the observer notes and are merely the surface showings of the great horse-dealing trade, of which Paisley has become a positive centre. Some twenty-two years ago Mr Geo. Craig, then a young farmer on Elora road north, became dissatisfied with the state of the local horse market as it then existed, and when he had a bunch ready for market, decided to buy up a few more head and take a carload to Toronto. This was the beginning of his career as a dealer, and in the intervening years he has become a wholesaler in live horse-flesh. Paisley has become the most noted market for horses in Canada, and it is safe to accept the statement that more horses are shipped from this station than from any other in the world. Mr. Craig has handled eighteen carloads since the 1st of November last, nearly all loaded for shipment here. On Saturday he sent out a carload and on Tuesday another. Mr. Craig is the most extensive dealer, but not the only one. Irwin Bros. took in 36 head on Monday, and drove them to Walkerton for shipment by C.P.R. to the west. This firm has also extended buying operations over a wide area of country.

The establishment of this ever-active market for horses at Paisley has been a great boon to the farmers for at least forty miles from the town, as they can dispose of either young or surplus stock at the highest prices at any season of the year. A great many farmers always have a horse or two that they have bought, and are making a turnover by feeding and fitting up for market, thus adding to their yearly profits.

—Marriage licenses issued and money to loan. T. H. GEORGE.

—Plates for Fleury Grinders, also iron Pumps and repairs. J. A. Howes.

—How about your last year's account? We are the money. Ballachey, Laidlaw & Co.

—FOR SALE—Ayrshire cow, milk test 4.3, or Jersey cow, milk test 5.1. J. C. GIBSON.

—Full lines of fine engagement and wedding rings at I. Shoemaker's jewellery store

—**Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.**

—Parties requiring repairs for the Melliotte cream separator may obtain them at Fisher's flour Mill.

—New spring goods now coming. We are now preparing for early season's business. Ballachey, Laidlaw & Co.

—Highest price for beefpelts, horse hides, calfskins, sheepskins, tallow, &c. F. OLTSHER, Paisley Meat Market.

—FOR SALE—Two Shorthorn bulls, 13 months old, also a few feeders. J. Scott, Post Elgin, R. R. No. 1, Hume 'phone.

—All makes of pianos, organs and sewing machines, also small musical instruments. P. McKinnon, agent, Paisley.

—FOR SALE—New two-storied stucco house. Bath, furnace, good spring well, in good location. Will be sold at cost. Robt Irving.

—FOR SALE — A quantity of Timothy seed, Canadian Variegated Alfalfa seed, and O. A. C. No. 21 barley. Apply Miller, Elora road north.

—All persons indebted to the estate of the late Adam McGillivray requested to settle their accounts not later than March 5th next. D FOURNIER.

—Remember, that at all seasons of the year you can get from Paisley Dairy a full supply of choice whole milk, cream, buttermilk, or sweet milk, by ordering a day ahead. JAS MILNE.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—Red Cross Box Social at McGillivray's school, No 15 Bruce on March 9th, Best programme being prepared. Admission 15cts. Ladies with boxes free. Mr J. Johnson, Reeve of Bruce, will occupy the chair.

—The Women's Institute of Williscroft have postponed their social at Ebenezer rink to Wednesday evening, March 7th. Refreshments will be served. Hockey match between Dobbinton and Ebenezer. Proceeds in aid of Red Cross. Everybody come. Admission 15c.

—Five Roses, Rainbow, Purity, Cream of the West, and Stock's high-grade flours, also Bran and Shorts, Blatchford's Sugar and Flax, Calcwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. E. G. ECKEL.

—Mrs J B Fleming is visiting in Toronto.

—Mr and Mrs S P Ballachey were in Toronto a couple of days last week.

—Mrs Robt. Bell returned last week from Walkerton where she had undergone an operation.

—Mr Rich. Bates went to Toronto this week for treatment, and may have to be operated upon.

—Mr. Norman McLean, of Parr, Alta., has been visiting his old home and friends on the 2nd of Bruce.

—Knox church class donated to the W P L Red Cross 7 pairs socks, 1 dozen housewives furnished, 9 personal property bags.

—Mr F W Arlesmith, a former teacher on the Paisley public school staff, has been engaged as principal of Port Elgin public school, to begin his duties this week. Our sister town has been fortunate in securing so capable a man for the position.

—There was a large delivery of hogs to Paisley buyers on Tuesday. The price was $15. There was nothing but box cars to ship them in, but the drivers were fortunate in securing this accommodation at present, as the railroad is overtaxed by traffic congestion yet.

—Back yard gardening will not become the vogue in Paisley, except in certain quarters of the town. There are too many brick-yard clay lots in this burg to make the raising of vegetables either enjoyable exercise or profitable occupation. We will excuse the owner or occupants of these lots from gardening, however, if they will only keep the weed forest down this summer.

—Mr A Bannerman, after thirteen seasons on Great Lakes boats plying between Montreal and Duluth, has given up the engine business, and has secured a good position as engineer in the Canadian Northern Railway Co's large grain elevator at Port Arthur, where he is to assume his duties March 1st. Mrs Bannerman and daughter Marguerite will leave here in a few weeks to join him and they will take up housekeeping in their home on Brodie street north.

—Private funds and loans on farm property. T H GEORGE.

—TO RENT—House on Goldie St. J. C. Gibson.

—FOR SALE—New six-roomed brick house. J N Collins.

—Millinery apprentice wanted. Ballachey, Laidlaw & Co.

Speeding Prizes at the Rink

Ice racing will feature the next two or three nights of skating. I. C Spofford will donate a $3.50 hat to the fastest skater in Paisley, and I myself will give $1 worth of skating tickets to the second. Race to be run in relays, one race each skating night until a winner is decided. Wednesday, Friday and Monday following are nights. Come, boys, and see who is the speed king of Paisley. J S DEWAR.

Consider This Interesting List!

GREAT BARGAINS

HERE is the list, and it is safe to say that it is below the prices being asked by any retail merchant doing business to-day. It is also, as may be noticed, far below the wholesale price at which these goods are selling. A GUARANTEE OF FRESHNESS and full weight. There is no attempt to defraud by weight---such action is punishable by law.

But consider this interesting list. No one line can be chosen, and the order must be as below.

Every article is guaranteed to be strictly fresh, full weight and exactly as represented, or money refunded.

	Retail Price	Our Price
3 cans of Peas	15c	10c
3 " Corn	15	10
3 " Tomatoes	23	12
1 lb. Cowan's Cocoa	50	40
1 large pkg. Robbin Hood or Quaker Rolled Oats	30	25
7 bars Fairy Soap	35	25
4 large cans Maple Leaf Salmon	1.20	1.00
3 " Summit "	60	36
5 lbs. Green Tea	1.50	1.05
5 lbs. Mixed, Black and Green	2.50	1.65
4 bars Infants' Delight Soap	40	25
Kellogg's Corn Flakes, Gusto, Wheat Flakes or Triscuits	10	7
3 pkgs. Japanese Shoe Dressing	45	30
1 box 2-in-1 Shoe Polish	10	5
3 quart jars Baking Powder	81	60
1 large box Christie's, Perrin's Biscuits	28	22
1 can Dutch Cleanser	13	8
½ lb. Ground Black Pepper	25	20
½ lb. Mustard	25	20
2 lbs. Currants (new fruit)	50	40
2 lbs. Raisins, Seedless	36	25
	$11.11	$7.90

Saving $3.21 on $7.90 investment.

Things are going higher!

CANADIAN ORDER OF FORESTERS HAS SPLENDID RECORD FOR 1916

WILL READJUST ITS RATES

Society Proposes to Place Its Business on a Basis of 100 Per Cent. Actuarial Solvency.

The Canadian Order of Foresters has had a record possibly without parallel in the history of Fraternal Insurance Associations operating in Canada. This Society was instituted in 1879. In 1895 it enacted a table of monthly assessments which has been in force from that time down to the present without a single change. During that period all other Fraternal Insurance Societies, it is claimed, have found it necessary to revise rates, until this Society stands as the only prominent Institution operating upon a remarkably low schedule of rates. In 1916 the Society paid out in death claims over $226,000.00. Notwithstanding this large payment, it added to the Insurance Fund, for the year, over $422,000.00. The balance standing to the credit of the Insurance Fund on the 31st of December last was $5,628,348.00. In spite of this most unusual record, the Society decided to have a most thorough and comprehensive investigation made of its actuarial standing. This course was thought wise on account of the legislation passed by the Ontario Legislature at its last session.

The Legislature in 1910 passed an Act which requires that all Fraternal Insurance Societies shall, on or before the first day of April, 1918, file a report with the Registrar of Friendly Societies, which report shall contain a valuation of all its Insurance Certificates in force on the 31st December, 1917. This report must not only show the Insurance Liability which the Society has undertaken to pay, but also the Assets which the Society has available, in the way of accumulated Funds, and future assessments for the payment of the Insurance Liabilities as they mature. The object of this statement is to show the degree of actuarial solvency which each Society has, as of December 31st, 1917. The Act provides further, that at the end of each three-year period, after 1917, a similar statement of valuation shall be filed in order to ascertain whether or not the Society has maintained its degree of actuarial solvency. The object of the Act is, that where a society shows at the end of the first three-year term that it has not maintained its degree of actuarial solvency that there shall be such an increase in rates as will insure that the society shall maintain the degree of solvency which it had on 31st December, 1917, or improve that condition.

In view of this legislation, the Canadian Order of Foresters decided not to wait until the 31st December, 1917, to ascertain the facts required by the Act, and, shortly after the Act was passed in 1910, this Society engaged Mr. Alvin Landis, of Nashville, Tennessee, for the purpose of instituting the actuarial standing, as of the 31st December, 1915. Mr. Landis is one of the leading actuaries on the American continent to-day, and is so recognized throughout the world. His experience extends over a term of twenty-five years, eighteen years of which has been devoted exclusively to Fraternal Insurance Associations. In these eighteen years Mr. Landis has advised with one hundred and eighty-six societies, six of these societies being Canadian. He has also been for fifteen years on the Committee of Statutory Legislation of the National Fraternal Congress, and has been prominently identified with the drafting of all bills dealing with Fraternal Insurance legislation. Mr. Landis is also the author of eight books on Insurance, which are accepted as authorities to-day.

The Actuary has found that during the whole experience of thirty-six years, the Canadian Order of Foresters has had an exceptionally favourable mortality experience. Because of this favourable mortality experience, and the large amount of accumulated funds, Mr. Landis has been able to prepare unusually favourable monthly assessment rates, which will enable the Society to provide for the payment of all future claims. These rates of assessment, as compared with rates deduced from other mortality tables, is very much to the advantage of the members of the Canadian Order of Foresters.

In constructing a mortality table on the experience of the Society, Mr. Landis has eliminated the first five years of membership in Canada. The object of this course is in order to insure the death rate under more nearly normal conditions than would be possible by taking the first five years of duration into consideration. During the first five years there is a gain from recent medical selection. He has recommended a schedule of rates, which, based upon the results which will be filed as of the 31st December, 1917, should show more than 100 per cent. of actuarial solvency, because of margins of safety which may be classified as follows:—

First: There would be gains from actual interest earned in excess of 4 per cent., which is the amount the Actuary fixes as the basis of calculation. As a matter of fact, the average interest earned by the Society, upon its Insurance Fund, as at present invested, is 5.44 per cent. As the securities held by the Society are mostly for long terms, there should be a substantial gain on interest account.

Second: There would be a saving from a lower death rate by reason of the fact that the first five years of membership has been eliminated by Mr Landis in constructing his mortality table.

Third. There would also be gains from accumulation forfeited through lapses. No allowance was made for such gains in fixing the schedule of rates.

Fourth. There would be a surplus in contributions owing to the fact that, after eliminating the first five years of membership, the Actuary loaded the subsidiary rates by an additional sum to make assurance doubly sure.

Notices of motion have gone out to the membership providing for this readjustment, and this legislation will be considered at the next meeting of the High Court of the Order in June.

The rates for members who are now in the Order start at sixteen, with a monthly assessment of 65c; at twenty the rate is 69c; at thirty, 85c; at thirty-five, $1.05; at forty-five, $1.53, with gradually increasing rates for the older ages. The rates for new members start at sixteen, with a rate of 65c; at twenty, 75c; at thirty, $1.02; at thirty-five, $1.25; at forty, $1.62; at forty-four, $1.83.

Two options are given to those who are already members of the Order. One option provides that all members who are between the attained ages of sixteen to forty-five, inclusive, ages elect to take term insurance, which will entitle them to carry their present insurance at their present rate until they have attained the age of sixty years. Members between the attained ages of forty-six and forty-five, inclusive, may elect to continue the present amount of their insurance, at the present rates, as term insurance for a period of fifteen years. Those members who are between the attained ages of forty-six and sixty-nine, inclusive, can carry their present protection as term insurance, at their present rate, for ten years. Term protection of members between the attained ages of seventy to seventy-six gradually decreases from nine years at the age of seventy to three years at the age of seventy-six and over.

The second option insures to all members no matter when admitted, who they attain the age of seventy, and over, the right to paid up insurance for amounts set out in the schedule prepared by the Actuary, where such members do not desire to continue to pay the life rates. This schedule entitles the members from sixteen to eighteen to paid up insurance for $100 at the age of seventy, which amount gradually decreases as the attained age of the member increases.

The adoption of the proposed readjustment will place the Society on a basis of absolute solvency from an actuarial standpoint, and enable it to maintain its splendid position in the world of Fraternal Insurance.

Sent It Home.

Over the garden-fence the conversation had suddenly turned acrimonious.

"An' if yure boy, 'Erbert, ties any more cans to our pore dog's tail," was Mrs. Moggins' stern ultimatum, "I'll 'ave about it, that's all. Oh, an' perhaps you've done wiv that saucepan wot you borrowed last Monday."

"Erbert!" asked Mrs. Grubb shrilly, "wot 'ave you bin doin' to Mrs. Moggins' dog?"

"Nothin,' ma!" replied the small boy, unhushingly.

"There!" said his mother triumphantly.

"An' you returned 'er saucepan yesterday, didn't you, dearie?"

"Sent it back by 'er dog!" said 'Erbert calmly.

New Crate For Poultry.

For shipping poultry a crate has been invented that folds a quarter of its extended size when empty, for convenience in handling.

PRACTICAL FARMING

Farm Land Manure And Acid Phosphate

The essential constituents of plant food—nitrogen, phosphoric acid and potash—are first found in Nature's great storehouse, the soil. When the founders of the country first began to till its soils they could produce heavy yielding crops of excellent quality simply by planting the seed and harvesting the ripened crop. This, indeed, is the story of Western Canada at the present time, where another generation of pioneers are fast depleting the store of plant food which Nature has stored up. There comes a time, however, when by continuous cropping both the supply and the balance of the plant food are seriously interfered with, and the result is that smaller yields of inferior quality are produced. For a hundred years past farmers in general have recognized the value of plant food in stock manure. Yet, as I go up and down various parts of this continent I observe farmers throwing stock manure out under the eaves of the barn where every rain can wash through, carrying off its brown stream from the manure heap. This brown stream contains over half of the soluble nitrogen and potash of the manure. In order to get best results from manure it should be carefully protected from rain and snow, and composted to prevent burning.

Manure is weak in one plant food constituent. You will notice by the analysis, as shown on the chart, that it has a considerable amount of nitrogen and potash, but it is deficient in phosphoric acid, the plant ripener. For a cereal crop—that is for wheat, oats, barley, corn, etc.—manure should be supplemented by acid phosphate. Director Thorne, of Ohio, whose careful work has extended over a quarter of a century, reports in his Bulletin 144 that the use of 40 pounds of acid phosphate per ton returns a good profit on investment and results in a larger yield of better quality crop.

A great deal is being said these days about the discovery of Helliriegel and Wilfarth, announced to the world in 1886, demonstrating that the legumes by virtue of the bacteria living within the nodules on the roots, have the power of absorbing nitrogen from the air that circulates between the soil particles, and of fixing this nitrogen in the soil so that the soil is richer in nitrogen after growing legumes than it was before. This is serviceable knowledge, yet the limitations of legumes to affix sufficient nitrogen for normal large crops of cereals and other crops should be recognized. Some farmers are saying: "If we can get clover or other legumes to grow, we need not buy nitrogen to apply to the soil." For the last two or three years we have been in communication with the leading experiment stations of this continent and Great Britain, and have obtained the expressions of leading scientists relative to the question of the amount of nitrogen fixed in the soil by bacterial action on the roots of common farm legumes.

Penny and MacDonald, of Delaware College of Agriculture, state in their bulletin No. 86: "How much of the nitrogen found in the clover is 'now' and how much drawn from the soil we have not tried to determine by direct experiment, if indeed it be possible to determine it on the large agricultural scale, that is, in open field work. But it should be emphasized that by no means all of the nitrogen in clover is to be credited to clear gain; a portion and probably in some cases more than half is 'old' nitrogen taken from the soil. There is every reason to believe, however that the richer the soil in nitrogen the less the amount of 'new' nitrogen taken from the air. ".

In presenting this opinion, I do not wish to appear to be discouraging the growth of legumes. I heartily believe in their use and advise the incorporation of legumes in a rotation of crops. Yet, I believe it is in the interests of the whole world that farmers recognize the limitation of legumes, and realize that there are many factors which may greatly diminish the amount of nitrogen fixed by legumes.—Henry G. Bell, in address to Ontario Experimental Union.

Why Clover Does Not Thrive On Some Soils.

As the soil gradually looses its base materials, like calmium and magnesium, by cropping and leaching, such lime-loving plants as clover and alfalfa ceases to thrive.

Cultivation and cropping hasten the removal of the basic materials; this is one reason why some soils become acids, and do not grow good clover even when fertilized.

As a means of determining the need of the soil for lime, the litmus paper test when properly made is probably as good be any chemical test, declare the Ohio Experiment Station chemists after several years of experimentation with different methods of detecting soil acidity. This test consists in placing blue litmus paper, which may be bought at drug stores, in contact with moist soil for half an hour. Tests at the Experiment Station indicate that soils which turn the blue litmus paper red in this time will be benefited by liming. Land that does not need lime to increase crop yields will have but slight tendency to change the color of the blue paper.

Corn and Oats For Work Horses.

Contrary to popular opinion the horses fed oats have more life, keep in better condition and endure work better, especially during hot weather, than horses given a grain ration consisting largely or exclusively of corn. An experiment conducted for 28 weeks at the Ohio Experimental Station with work horses showed, it is claimed, that oats are not superior in efficiency to corn, and economy in feeding is generally in favor of corn.

Three teams of mature geldings were used, one horse in each team being fed oats and the other an equal weight of ear corn in connection with mixed clover and timothy hay. There was practically no difference in the changes in weight during the year between the two lots. No difference due to the feeds used was observed in the spirit and endurance of the horses.

The cost of feeding the corn-fed horses, with corn at 80 cents a bushel, oats at 60 cents and hay at $10 a ton, was $55.65 for the 28 weeks, as compared with a charge of $122.19 for the horses given oats.

Sartorially Disappointing.

First Girl—So you met Mr. Blank, the famous writer, at the reception. What do you think of him?

Second Girl—Not much. His clothes are quite old-fashioned, and I understood he was celebrated for his style.

An inventor has employed a turbine motor in a new silencer for automobile exhaust pipe.

The AUTOMOBILE

Helping Service.

In the old days automobiles were sold without anything about service being mentioned, but at the present time, the wide awake motor car agent not only handles machines of standard make, but also organizes a system whereby he can give to his clients a measure of careful and regular attention that will not only keep them in good humor, but save them an immense amount of money. This service system generally includes monthly inspections for a definite period. It has been truthfully stated that a manufacturer can guarantee a car, but that he cannot guarantee the driver of it. We are all very apt to make mistakes, but the expense incident to these errors, can be minimized if the agent from whom you buy your automobile looks over the car at regular intervals, and advises you regarding any acts of omission or commission you may be committing. These owners who enjoy the greatest satisfaction from their machines are generally men and women who not only take advantage of all the service that is accorded them by the agents from whom they have made purchases, but actually in addition, give to their motors studious and painstaking attention in order to help it and to help the dealer also.

Let us state that you should remember that some of the present grades of gasoline are responsible for many troubles. Some gas has recently been marketed that was distinctly injurious to any internal combustion engine, and even the best available gas contains some small quantities of kerosene. Now it is an accepted fact that kerosene requires more heat for perfect combustion than pure gas, and so the degree of heat must be increased in direct ratio to the amount of kerosene in your fuel. If you are burning a gas under conditions of complete combustion, a certain quantity of the unconsumed mixture is bound to get into the crank case and have a bad effect upon the lubricating quality of the oil. This, in turn, affects the working parts of any engine. Speaking of oil, it might be well to mention that it is always an excellent idea to drain the crank case and re-fill it with fresh oil every five hundred miles, and the necessity for this operation is greater in the winter than in the summer months. If you constantly keep an excelling grade of clean oil in your crank case, you will find diminution in your troubles over valve grinding, defective piston rings, etc.,

The winter weather has a tendency to make an owner run his motor with the water in the radiator and around the jackets at a comparatively low temperature. When the cooling fluid is at too low a temperature it causes condensation on the inner walls of the cylinders. This results in a number of minor troubles, such as, loss of power, worn pistons and rings, loose bearings, and knocks. We would suggest that it might be well for you to provide a curtain for the radiator. Such a contrivance can be installed so that by rolling it up any desired condition of heat may be obtained. These adjustable curtains are offered for sale by a number of different firms, but any handy housewife can very easily make one at small expense. Many cars are to-day being fitted with thermometers or motor meters attached to the radiator caps. These appliances indicate the temperature being maintained by the cooling system and incidentally give the driver a constant supply of valuable information. When the water is steaming, immediate steps are advised, and when it falls to too low a temperature, accurate data is also at hand. Of course you are cognisant of the fact that compression is produced through the valves on one side and piston rings on the other side of each cylinder. If the valves become leaky, they allow the oil to get past them. We write these introductory remarks because at this season of the year it is well to impress upon car owners and others to provide a rich mixture in order to overcome certain inconveniences in connection with the cooling system falling below normal temperature. When a rich mixture instead of a lean mixture is used, there is bound to be a heavy carbon deposit and this seldom fails to result in sticky and leaky valves. We point this out, not to advise the use of a lean mixture, but rather to definitely acquaint you with the condition which must inevitably obtain when a large percentage of gas is being utilized. The weather often produces circumstances that must be constantly coped with. If your car is being started from a warm garage, it will quickly get underway with a lean mixture, but should you leave it some time in the open under anything like zero conditions, a rich mixture is essential, and then you must make up your mind that carbon is being deposited upon the working parts.

The main purpose of this article is to her familiarize owners and drivers of motor cars with the season's conditions in order that they may be prepared and ready to surmount any difficulties that may arise, and in order also to assist the agents from whom they purchased their machines to give them better service.—Auto in Farmer's Advocate.

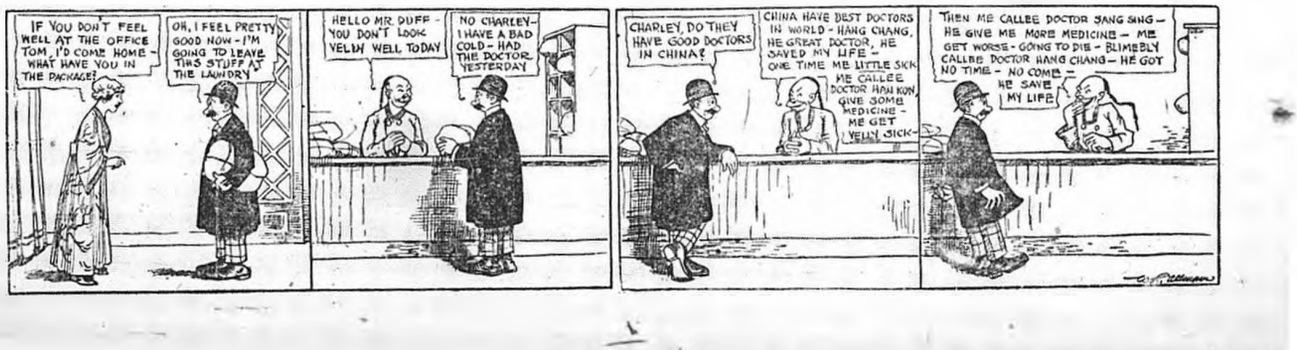
Being Kind To Her.

A colonel's wife, who is doing real nursing at a certain London hospital, was recently offered a tip of sixpence by an honest old couple in gratitude for her care of their soldier-son. Tact personified, she slipped the sixpence back into the father's hand, saying, smilingly, that nurses weren't allowed to accept gratuities.

"Oh, that'll be all right, sister. I'll not say nothing about it. Just take it, and get yourself a drop o' gin in your off-time!"

The largest settlement in Greenland has a population of less than 600.

Misleading.



The unfortunate man had been induced to relate a portion of his life history.

"I have seen changes," he said. "Once I was a doctor with a large practice, but owing to one little slip my patients began to leave me, and now I am just living from hand to mouth."

"What was the slip?" was the natural question.

"It was a slip of the pen," he said. "In filling in a death certificate for a patient who had died, I absentmindedly signed my name in the space, 'Cause of death.'"

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell.

Question.—H. C.—Would it be profitable to put a piece of land into spring wheat this spring, and would it be alright to use artificial fertilizer if no manure is used? What are the best varieties of seed? The soil is gravelly loam?

Answer.—If the price of wheat remains anything near what it is at present, spring wheat should be a very profitable crop in 1917. Prof. Zavitz of Ontario Agricultural College advises using from 1½ bushels of seed per acre. He recommends the Marquis wheat which has done best of its type in tests throughout the various parts of the province. Another good spring wheat is Wild Goose, which produces an exceedingly hard kernel but one not of very high quality. Early Java spring wheat is another variety which is also successfully grown.

I believe it would be advisable to apply at least 250 lbs. of fertilizer per acre in order to insure a good vigorous start of this money-crop. For a gravelly loam, I would apply a fertilizer carrying from 2 to 3% ammonia, at least 8% phosphoric acid and 1 to 2% potash. This can be broadcasted with a manure spreader, but is better applied through the fertilizer dropping attachment of the grain drill.

W. H. H.—The Maples—I have 500 acres pasture land and 700 acres meadow. Am carrying a little over 100 head of beef cattle, 100 hogs and 50 sheep at present. Am anxious to make my land carry more. What can you suggest?

Answer—If water stands on your meadows or pastures late in spring, obviously drainage is necessary. See that surface drains are kept open, and add tile drains as you are able until all the land drains freely. Valuable pasture and meadow grasses and clovers will not thrive in water-logged soil.

If clover is scarce in the sod and sheep sorrel grows freely, it is likely your meadow or pasture land is sour. Apply two to four tons of finely ground limestone per acre, or its equivalent of burnt lime or marl. This can be spread on the land as soon as it is dry enough to drive over it in spring. A broadcast limeswoer is best to use in spreading the lime.

It may be the plantfood of your grass land is getting scarce or inactive. If so, spread from 5 to 10 loads of manure on your meadow next spring just as grass growth is starting.

Finally, the kinds of grasses growing in your meadow may be naturally low yielders. If so, let your next seeding be of high-grade seed of good varieties. Prof. Zavitz of Ontario Agricultural College, after 10 years' tests, recommends the following mixture.

Grasses.	Lbs. per A
Orchard	3
Meadow Fescue	4
Tall oats	3
Timothy	2
Meadow Foxtail	2
The average 10-yr. yield was 4 to tons per acre.	
Legumes.	Lbs. per A
Alfalfa	5
Alsike Clover	2
White Clover	1
Yellow Trefoil	1
Total 24 lbs.	

PIGS IN CLOVER.

POTATOES FOR ONTARIO

The Third of a Series of Five Special Articles by Prof. Henry G. Bell.

If Ontario produced its 49,000,000 bus. per acre of potatoes on the acreage devoted to potatoes last year, she could provide one pound of potatoes a day for a whole year for a population of 80 million people. Can she do it? I believe she can. Such an accomplishment is but the result of applying methods which have "proven out" no further removed from Ontario than Aroostook Co., Maine. The yield per acre obtained in this county has frequently exceeded 300 bus. for areas not of 5 or 10 acres but on whole farms of 75 to 150 acres.

Ontario for the most part has a good potato soil. The range of temperature and rainfall during the growing season is usually such as favour good yields of potatoes. Labor is very scarce, and potatoes probably require more labor than most farm crops. Nevertheless, if Ontario farmers would individually or co-operatively equip themselves with modern potato machinery, a great deal of hand labor could be avoided, and large areas handled with little more labor than it now takes to work the common 3 to 5 a. potato patches. There are at least five great essentials in growing this crop, each of which must be carefully observed if big yields of first quality are to be harvested.

1st—Potato soil must be fairly open, friable, and must be well drained.

Potatoes will not thrive in waterlogged soil. See that the open drains are clear and the tile drains are doing their work. Plant your crop on sod land that was deeply plowed. Tubers swell rapidly in July. They must not be constricted by heavy, closely packed soil. Disk and harrow the seedbed till it is mellow.

2nd—Potatoes must have an abundance of moisture, especially when the tubers are filling.

"Ah, yes!" you say, "that is just where we cannot control conditions."

Are you sure you cannot control the moisture supply, at least to a considerable extent?

Is your soil deeply fall plowed, so that it can catch and retain the great amount of water that falls upon it in the shape of snow and rain during winter and early spring?

Is your soil well stocked with decaying plant material—stubble, second crop clover, strawy manure, humus? It acts like a sponge, catching and holding the moisture till it is needed.

3rd—Suitable well-bred varieties always outyield mongrel stock. Seed stock, whether early or late, should be pure, otherwise there will be unequal ripening, and frequently a variation in size and quality which greatly discounts the product when it is ready for market.

4th—Potatoes require an abundance of well-balanced plant food. Remember, potatoes have to be fed not like your hogs, or calves, or poultry, if you are to get largest yields of best quality.

Manure is the great farm plant food supply. It will supply much necessary food to potatoes as well as to other farm crops. However, in many of the large potato growing sections, the growers prefer to put the manure on land set apart for other crops such as wheat or meadow, and to give the potatoes their additional food in the form of fertilizers. Stock manure, especially of fresh, forms a splendid lodging place for the spores or tiny seeds of the potato scab diseases. A good fertilizer for potatoes should carry from 2 to 4 per cent. of ammonia. It is the nitrogen which forms 82 per cent. of the mammoth, which greatly aids the rapid and sturdy growth of the potato vine. The potato fertilizer should also supply from 8 to 10 per cent. of available phosphoric acid. It is the phosphoric acid which encases the plant to ripen and form its tubers. Before the war potato growers were using from 5 to 6 per cent. of potash in their potato plant food. It is this important food which aids the starch to form and fill out the tubers. Under present conditions potato fertilizers had best carry 1 to 3 per cent. of potash.

How much shall you use?

Prof. Zavitz at the recent convention of the Ontario Experimental Union reported that as a result of 97 tests of potato fertilizers throughout the province during the last 5 years, the experimenters obtained an average yield of 122.4 bus. per acre without fertilizers, and 111.3 bus. per acre where 320 lbs. of fertilizer was applied, and 163.6 bus. per acre where 640 lbs. of fertilizer was added.

Dr. Woods of Maine has been in charge a special fertilizer experiment in 1915 testing low potato fertilizers for Maine potatoes. On one test where potatoes followed sod he applied from 1bs. of fertilizer to the acre, and harvested the following.

[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]

In applying fertilizers as a rule not less than 160 lbs. should be sown in the potato drill or furrow. Amounts in excess of this should be sown broadcast over the potato seedbed and carefully harrowed or disked into the soil before the potato drills are "struck" or the crop is planted. Of course the potato planter, with fertilizer dropping attachment deposits the fertilizer in the row, to best advantage.

Proper potato fertilization is undoubtedly the secret of big yields. It is the measure that British agriculturists are so strongly advocating at this moment. As long as they were able to obtain available phosphoric acid, potato fertilization was what made it possible for Britain's enemy to produce such quantities of potato food for man and beast.

5th—Control potato disease.

This is the great requisite that together with the foregoing means largest yields and best quality potatoes. This paper is already long, hence we shall delay discussion of this large subject for a subsequent article.

Remember that well drained land, plentifully supplied with humus, enriched with suitable available fertilizer produces largest crops of best quality potatoes, if good seed is planted and care is taken to control disease and insect pests.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 75 Castle Frank Road, Toronto.

Business Girl:—1. It is impossible to mix business with pleasure successfully. All day in an office and all evening at the social game burns the candle at both ends, and spells disaster. An occasional dissipation is stimulating to all of us, and the temporary loss of sleep it entails can be made up; it is the constant drain that tells. 2. If a girl who is entertaining another girl at her home receives an invitation to a party, she may with perfect propriety ask the hostess for permission to bring her guest.

Violet:—1. A cup of hot water or cocoa taken before retiring will sooth the nerves, and induce sleep. 2. For a sallow skin, eliminate sweets, pastries, rich gravies, fried foods, fat meats, and use fruits and green vegetables as much as possible. Drink two glasses of water (hot) on rising, two more about 11 o'clock, two in the early evening and two before retiring.

Mrs. L. B.:—1. Probably lack of flavor in the meat is due to the manner of cooking. Have the oven very hot at first, then the meat will be seared on the outside, and this will keep the juices in. After twenty minutes the temperature of the oven can be considerably lowered. Steak and chops should be put into very hot pans, and turned quickly, then temperature lowered. Meat should be seasoned just before it has finished cooking. 2. Scrambled eggs become watery when they are allowed to cook too long.

Teacher:—The "Teutonic" territory occupied by the Allies is about 748,000 square miles, including captured colonies. The "Allied" territory occupied by the Central Powers is about 125,000 square miles.

Mrs. B. K.:—An emery wheel on a sewing machine is most useful for sharpening knives and lead pencils. Get a roll of half-inch adhesive tape from the drug store, cut off a strip just long enough to reach around the small wheel of the machine and press it firmly to the metal. Next, cut a strip of fine emery cloth the same length and width and glue to the tape, then wind the wheel all around with a strip of tape or muslin to hold in place until the glue is dry, which will take a day or so, when it may be removed. When worn out another strip of emery cloth can be glued over the first. When using the emery wheel adjust as for filling a bobbin.

Miss G. L. B.:—The colors for spring are pretty, navy blue, and all shades of grey, a new green called spruce green, and Copenhagen blue. Wood and silk embroidery in bright lines of gold yellow, chinese blue, Persian pink, and jade green are used on hats and dresses. Pockets are large and appear in pairs, one at either side of the skirt or coat. Pleats and tucks are in favor. Skirts no longer flare but take an inward curve around the ankles.

The Dairy

If farmers were determined to raise as much of their feed as possible, perhaps dairying would not look so down in the mouth.

"Animal heat" is a term loosely used, but it means something when it comes to maintaining stock in mid-winter. It will never do to let the fire go down, however hard it may be upon the feed bin.

The best way to bring cream to the right temperature for churning in cold weather is to put the pail in a tub of very warm water.

Stir the cream constantly so it will get warm evenly. If it is overheated the butter will be greasy and cheesy.

If cream is held too long it will become bitter and hard to churn.

No herd of cows can do well unless the supply of water is abundant and clean. If the herd can be watered in the yards, and help themselves, so much the better.

Sheep Notes

Certain breeds of sheep are distinctly more fertile than others.

Not a bit of the droppings of a flock should be wasted, and a flock wintered in roomy quarters under cover will give an increased profit.

The litter will absorb all the liquids, and the flock will keep the mass packed down so it will not heat. Sprinkle land-plaster over the pen frequently to keep down any odors.

Keep the pens well littered with clean straight straw, and keep them perfectly level.

Keep the ewes very thrifty by watchful, careful feeding.

Be sure that your ewes do not crowd though narrow doors. Crowding or jamming may kill an unborn lamb, and possibly the ewe.

Hogs

Many losses in pig breeding can be avoided by proper care of the sow during the gestation period.

If a pig has a cough give it some oil-meal in its feed. Oil-meal is laxative and it will often help a slight cold.

Wheat middlings made in a thick slop is one of the best foods for growing pigs. Never feed meal dry to pigs; make a thick slop always.

Don't forget to give the pigs lots of bright clover hay or alfalfa. They will eat it and it is the best thing in the world for them in connection with other feed.

Watch the bowels and if constipated give some succulence; roots are good in such cases.

Don't overfeed the brood sows and get them too fat. A fat sow never has a good litter of pigs. Keep the brood sows active.

Poultry

This is the time of the year that colds are most prevalent. Keep the front of the house open, but see that there are no openings in the back or side walls to cause draughts.

Everybody too busy to give the hens a fresh drink, yet there is no other little chore about the farm more important than watering the chickens.

Fix up a sheltered corner for the early broody. A newspaper in the bottom of the nest helps to keep the eggs warm.

A dry atmosphere is a pretty good insurance against canker and roup. Shun low, damp, foggy places for the poultry business.

Growing birds need mineral matter in their feed a good deal more than do those that have gained their full growth. Old birds are not making bone and muscle as much as they did once. But it stunts chicks and young hens to get short of grit and shells.

The hen never lays an egg until all the ingredients necessary for the complete development of a chick are present. Since the egg contains protein as well as carbohydrates, any amount of carbohydrates fed in the form of grain will not offset the necessity of protein. Milk given to the birds, either as a drink or in the form of wet mash, will double egg yields. Commercial meat scrap is of equal value, and may be substituted when milk cannot be obtained.

Horse Sense

If a horse shows meaniness, paws a little, looks around to the flank, has an irregular appetite, with evacuation of small quantities of dry feces, or little or no motion of the bowels, he is suffering from constipation.

Administer a moderate purgative as 7 drams aloes and 2 drams ginger. Feed on bran only until bowels act freely. Give 2 drams nux vomica 3 times daily, and give rectal injections of warm, soapy water every 5 or 6 hours.

The principal object in grooming a horse should be to stimulate the surface of the body by friction.

If you have a fall colt, get it to eating ground oats in a little manger by itself as soon as possible.

Keep the colts well bedded and clean. A manure-laden colt is a rebuke to its owner.

Never clean the stable at night until the mud and ice are all cleaned off the horses' legs.

I am wintering a mare and a three-year-old colt on the stubs left from the sheep and a small grain ration at noon.

A set of chains for use in an unexpected icy time or to get a smooth-shod horse to the shop, is a good investment.

The idle work horses should not be fed so much grain as when at work, but they should have a small ration.

A Counter Move.

A popular trooper in an Australian cavalry contingent owned a large tract of land on which his present colonel had worked for £1 a week before the war. That trooper went before his C.O. for a small offence, and the penalty was fixed at a severe reprimand and two days' pay stopped. "I'm sorry," the colonel told his late employer in a friendly way afterwards. "But war is war, you know, and I cannot overlook things." "All right," said the trooper. "I don't think I deserved it, so I have cabled to my foreman to stop the money out of your pay."

STRAW AS FODDER.

In effect, a recent bulletin of the United States Department of Agriculture asks why the American farmer cannot put straw to the same use as it is put by the European farmer. In Europe the farmer knows as well as the American farmer that straw is not liked by stock, but instead of burning it, or otherwise wasting it, the European farmer chops it up, mixes it with beets, mangels, silage, or other feeds, and makes it so palatable that it can be fed to good advantage.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON FEBRUARY 25.

Lesson VIII. Jesus At The Pool Of Bethesda—John 5. 1-15. Golden Text—John 5. 15

Verse 1. A feast. Some great solemnities have the feast, that is, Independent, clearly. In any case, the Evangelist sees no significance in the particular feast, which belongs to the old order thence of the Jewish. It gave Jesus an opportunity of meeting the people in the temple of worship.

2. By the sheep pool, the (pool) which. So read, without altering the pronunciation of the Greek text. Hebrew, Thai is, Aramaic, as often. Bethesda. There is considerable variation among the authorities. Bethesda. Covered shelters to keep the sun off. 3. The interesting gloss at the end of this verse seems to have arisen early and in Palestine. It is drawn from local folklore, and its omission does not cause the slightest doubt to the genuine character the Evangelist no longer guarantees an absolutely supernatural miracle. "Each in turn for himself" was the motto of the crowd, and the best legs carried off the prize. No doubt there were genuine cures there as at other holy wells; superstition as well as faith can influence the body witness. "Christian" "Science" today.

5. Sensible interpreters make much of the thirty-eight: like the Israelites of old, he had lived thirty-eight years in the desert before he came into his promised land! Unless we are out for discovering the narrative, it is better to ignore a little touch of detail such as no an eye witness knows.

6. The Lord's question seems exceedingly superfluous! But he asked the thing as one much like it. By such simple questions he drew out the man's state of mind: the very expression of the need was a preparation for meeting it.

7. Troubled. The Evangelist does not stop to explain the allusion, which does not concern him. It may have been an intermittent spring, or possibly (as Dr. Daniel Harris suggests) the world-wide notion of getting "the luck of the waters" on New Year's Day. (See Exposition, December, 1906.)

8. Compare Mark 2. 11. The pallet (*krabbatos*) might have been a mere mat, but the word itself (one from the vulgar tongue) rather suggests a light frame, such as we see in India.

10. People who could solemnly discuss whether a man with a wooden leg might carry that burden on the Sabbath—such was the national lack of humour—fastened on this breach of their law. Jesus could have told the man to fetch his property next day! But he regularly set himself to discredit a law which made the Sabbath a weariness instead of a delight.

11. One who could do such a deed must have God's authority to regulate the Sabbath. It is the same attitude as that of the blind man in John 9. 33.

14. In the temple. "Returning to give glory to God." This is a key to verse 15, where the man thinks he silences objectors by mentioning the name of him who had unlimited God's gift. Sin no more.—Not that sin had directly caused his trouble (John 9. 3). But sin would bring, here and hereafter, a worse thing than even all years of helplessness.

Fibre From a Flower

Fibre useful in textiles and cordage has been extracted from the aloe or hyacinth of Indo-China by a Frenchman.

The Bedtime Story

THE HAPPY CHICK.

Bum, bum, bim!

"Oh, Mother, dear! I hear some one knocking outside the coop. I must run out and see who it is."

Charlie Chick started from under his mother's wing with a rush.

"Wait, wait! Take it calmly. Let me peek out and see who it is. You must not be too hasty, especially when you are young," said Mrs. Plymouth Rock, cuddling Charlie under her wing as she peeked out of the coop.

"Ah! I told you so. It is Rover, the big dog, gnawing at a bone back of our house. You must beware of dogs and cats," Mrs. Plymouth Rock settled herself once more and Charlie closed his eyes for a nap. When he woke up he stretched his wing over his little leg and yawned. Then he asked:

"Mother, why does a dog have horns?"

"Horns? Horns? I did not know that a dog had horns—do you mean?" asked Charlie's mother, laughing.

"Yes; that must be it. But why haven't I horns or ears that stick out?"

"You do not need them, my dear. Mother Nature does not want us to be burdened with things which are of no use to us. A dog needs his ears to hear with. They are placed where they will catch all the sounds that come to him. He must hear the rustle of the grass which tells him that a rabbit is near." Mrs. Plymouth Rock looked lovingly at her son and cuddled him once more under her wing.

All was quiet for a time and then Charlie Chick poked his head out from under his mother's wing and said, "How may we know our enemies, mother, dear?"

"My child, you ask a lot of questions for a tiny chick; still, you will never learn if you do not ask. Beware of things which have four legs. Beware of birds that fly in the air, lest you chance to fall into the claws of a hawk. Keep your ears open, even if they do not stick out like a dog's, for the shrill cry of the hawk will warn you when you are in danger."

"Thank you," replied Charlie Chick, as he sauntered forth into the lot.

By and by he saw something moving toward him. Remembering what his mother had said, he looked and saw that the object had two legs. Sure enough! It was Biddie from the big house coming to feed the chickens.

Such a scampering in the hen yard! Charlie was soon surrounded by a lot of other chickens, all bent on having their share of corn. When he and his mother had eaten their fill, they both went back to the coop and Charlie said:

"I saw Biddie coming and I knew that he was a friend because he had two legs; but, mother, dear, he did not have ears like Rover."

"No," said Mrs. Plymouth Rock, softly, "but we must not try to tell our friends by their ears or eyes, but by the kindness which they show toward us." After saying this Charlie's mother pecked under her wing and found that he was fast asleep.

"How happy is childhood!" she said to herself. "That is the way to sleep etc."

The Paisley Advocate

PAISLEY, FEB. 28th, 1917

—For many years the two political parties took opposite sides whenever any measures relating to the liquor questions were introduced. Somehow they couldn't agree as to how it should be dealt with until the big war struck us. Then total prohibition came. Woman suffrage is another subject that is apparently going to be tossed about in party strife, and the strange thing about it is that both Liberals and Conservatives are in favor of allowing the women to vote. There is really no opposition to such measure, so probably it will be enacted. But why is it being held up?

THE BRITISH RESTRICTIONS

The immediate raising of barrier to prevent the importation of "non-essential" products into the British Isles, as announced by Premier Lloyd George, will be reflected at once in Canada. Not only will the serious purpose of the pronouncement and the underlying necessity for it cause Canadians to regard the situation with more gravity, but a further effort towards thrift and conservation will be certain to follow. A considerable amount of our export trade will be affected at once.

Prices in certain commodities such as paper, leather, fruit, lumber articles of wood, salmon and some vegetables, are likely to be reduced in this continent, but it is doubtful if the effect will be drastically harmful unless the restrictions become more extensive as [illegible]. Bull trains down to fighting form for the final round. Canada will still have a vast amount of supplies which the motherland is anxious to purchase.

Canada in 1916 sent agricultural products valued at $196,077,876 to the United Kingdom. Animal products thereof were sent over the ocean to the value of $67,821,789; fisheries for the old land were $6,731 794 (of which canned salmon amounted to $4,018,304), and products of the forest valued at $14,- 147,250 were included in our exports to the motherland. The restricted articles are a small part of our export in natural products.

Apples sent from this country to the British Isles in 1915 were valued at $2,594,561, and the value of total fruits sold there was $3,- 073,569. The vegetable exports amounted to $408,335.

The curtailment of the use of paper as proposed by Mr George would mean the temporary loss of a trade which amounted in 1915 to $593,038 while wood pulp to the value of $2,105,036 went into the hands of British buyers. Only a partial curtailment of paper importation is announced, however.

Our fur trade with the mother country was below normal in 1915, being $1,297,702, but in 1914 it amounted to $3,059,305. The loss of the old country market will be a vital matter to this trade.

Our British exports of agricultural machinery have been less than half a million, but our leather business with the British Isles amounted in 1915 to $4,669,680.

In one sense the determination of the British to get down to necessities will be a signal for Canada to produce greater quantities of the essential products. The British have less food than at any other time, and this country will be called upon to furnish enormous quantities in 1917 and 1918.

The premier's warning that disaster would face the nation unless the most drastic measures are adopted shows at once the serious possibilities of the German warfare and the determination of the British premier to be prepared for the worst results the submarine may achieve. It's a good sign when the British start to fight with such determination. They mean to consider the danger now, not when it is too late. Premier Lloyd George knows that drastic measures will save the situation, and without "waiting to see," he is striking while the iron is hot.—Advertiser.

New Principal

Mrs Borchill, a fully qualified teacher with seven years' experience as principal of continuation schools, has been secured to fill the vacancy caused by the resignation of Mr Mark. Mrs Borchill is well recommended by Inspector Hoag, both as teacher and disciplinarian. She will take charge of the classes at once.

Died at Vancouver

The death occurred recently at Vancouver B. C., of an old Bruce boy, T. A. Hopper, a well known citizen and former president of the Hopper Phillips Trust Co. He was 64 years of age and was born near Paisley. As a young man he taught in Chesley school which at that time stood a mile out of town. Soon after he gave up teaching and kept store at Ellingowan. Afterwards he lived at Chesley and later at Chepstow, from which village he removed in 1883 to Rapid City, Man. There he made a splendid success of business and before leaving for the coast eight years ago controlled three private banks. Besides his widow he leaves three sons and two daughters.

LOCAL AND DISTRICT NEWS

Lost Game in Chesley

Quite a number from here attended the return hockey game in Chesley on Thursday night, when the Paisley team met defeat by a 6-3 score. The Chesley team was considerable strengthened for this game. Paisley had their full share of the play all through, and but for the fine work of the home team's goal-keeper in the last period, the score might have been much closer.

To United States Subscribers

Owing to the tremendous increase in the cost of producing a weekly newspaper, it becomes more than ever necessary that the subscriptions to the Advocate be paid in advance. This applies especially to subscriptions in the United States which necessitate a weekly cash outlay for postage and but a few delinquents take all the profit. For that reason we will have to DISCONTINUE all subscriptions going to the United States not paid in advance for 1917 before April 1st. The great majority of our American readers have already renewed and we thank them heartily for their prompt-ness. If you have not renewed, remit today by postal or express order. The label on your Advocate tells the date to which it is paid.

Large Shipment for Red Cross

The following is a list of articles shipped in our February bale to Red Cross headquarters, valued at $326: 106 pair socks, 28 flannel shirts, 92 pillow slips, 28 Turkish towels, 113 buckwheat towels, 9 suits pyjamas, 12 furnished housewives, 15 personal property bags, 1 pair wristlets. We are asked to increase this if possible. The total monthly contributions of cash amount to $64. Donations given to collectors $57.25, also a very acceptable cheque from the I O O F lodge for $10, and a handsome electric reading lamp donated by Mrs A Sinclair for which the ladies are selling tickets. We would remind all our monthly contributors to leave their donations with the sec'y-treasurer by the end of the month. Mrs D McArthur, Sec'y-Treas.

High Price for Farm

Last week the Anderson farm of 150 acres, lot 32 west half of lot 33, con. 3 Elderslie, was sold by Geo Elliott to Mr William Pruder of Townline Elderslie and Brant for $13,500 or $90 per acre. We understand this is the highest price ever paid for farm land in Elderslie. This farm was sold by Donald Anderson in the spring of 1911 to Joseph Jackson of Sullivan, now of Chesley, for $11,000. It was sold 2 years ago to G. Elliott of Chesley for $12,500 after Mr. Jackson had put considerable improvements on the barn and now this fine property, which is one of the best in a Township noted for its excellent farm land, sells for $90 per acre. Mr. Elliott takes Mr. Pruder's farm, lot 24, con 1, Elderslie, in exchange at $6000 and already has a prospective buyer for it. Mr. Pruder gets possession on March 15th. Enterprise.

Death of Mrs. Peacock

Seldom has it been our duty to record so sad a cutting off of human life as in the case of the death of Mrs Thos Peacock (nee Miss Ida Grant), of con 13, Elderslie, who passed away on Saturday last, just nine days after giving birth to twin sons. The deceased was the only daughter of Mr and Mrs Wm Grant, of 14th Elderslie, and was in her 31st year. She was born on the farm home, where she played as a child, developed into beautiful womanhood, and in January of last year was married and went out to help establish a home of her own. In the life of the community Mrs Peacock had taken an active and useful part in social and church circles. Singularly beautiful in her home life, and possessing rare qualities which made every outside associate a friend, her sad death comes with crushing force to the young husband, the parents and brothers, also to a wide circle of friends and acquaintances. The funeral took place on Monday afternoon to Tara cemetery, and was attended by a vast throng of sympathizing friends.

FOR FLETCHER'S
CASTORIA

Patriotic Carnival a Success

The patriotic carnival held in the rink here on Friday night, under the auspices of the Paisley War Sale Girls, was a fine success in every way. A large number of masqueraders, nearly 600 spectators, and a good list of prizes donated by the merchants of Paisley, brought the proceeds up to $101.00. It would take up too much space to attempt a full description in these columns. Suffice it to say that they were many and varied, quite a number of them being from outside towns. A list of prize-winners follows:

Ladies' Fancy	1st, Miss Vida Sees
	2nd, Miss Agnes Pearce
Gents' Fancy	1st, Thos. Ryan
	2nd, Herb Barnett
Girls' Fancy	1st, Elfreda McPhail
	2nd, Mildred Irving
Boys' Fancy	1st, James Sutherland
	2nd, Ross McKenzie
Ladies' Comic	1st, Mrs. Ferguson
	2nd, Miss M. Stanley
Boys' Comic	1st, Howard Rae
	2nd, Reggie Beaton
Gents' Comic	1st, T. D. Muir
	2nd, Jos. Cavill
Youngest Couple on the Ice	
	1st, Bruce McKenzie and Lillian Pfaff
	2nd, Dave Leitch and Elfreda McPhail
Best Couple in Costume	
	1, S P Ballscheer and Mrs H Chesney
	2, P Shoemaker and Mrs D Forrester
Ladies' Novelty Race	Miss V. Rose
	2nd, Agnes Pearce
Couple Race	
	1, Alan Shoemaker and Miss M. Bell
	2, Wm Johnston and Miss E Dudgeon
Musical Keg Race	1st, Charles Rae
	2nd, Ross McKenzie
	3rd, James Sutherland
Clown Costume	Grant McArthur
Largest Load in Sleigh	W. T. Hopper
Lucky Ticket	H. Lyon
Married Men's Race	1st, T. Ellis
	2nd, Wm. Tooke
National, or Emblematic of Country	
	1st, Mrs. R. Skinner
	2nd, Miss Matheson
Boys' Race	1st, Fred Shoemaker
	2nd, Wm. McLennan
Character Costume	Grace Allen

The War Sale girls desire to thank Mr Dewar for giving the rink entirely free of charge, also the judges and other gentlemen who assisted in various ways to making the event a success.

THE CHIEF CHARM OF LOVELY WOMAN

Soft, Clear, Smooth Skin Comes With The Use Of "FRUIT-A-TIVES".

NORAH WATSON
86 Drayton Ave., Toronto.
Nov. 10th, 1915.

A beautiful complexion is a handsome woman's chief glory and the envy of her less fortunate rivals. Yet a soft, clear skin—glowing with health—is only *the natural result of pure blood.*

"I was troubled for a considerable time with a very *unpleasant, disfiguring flush*, which covered my face and for which I used applications and remedies without relief. After using "Fruit-a-tives" for one week, the rash is completely gone. I am deeply thankful for the relief and in the future, I will not be without "Fruit-a-tives".

NORAH WATSON.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

NEWS FROM THE SOLDIERS

Norman Allen, who went to England with the dental corps, tells in a letter home of meeting Sergt Jack McLeod, of Calgary, who is with the 216th Batt., and expects to rejoin the Princess Pats in France. There are few Canadians who have had more exciting experiences and narrow escapes than Jack McLeod. He has been wounded three times, but looks well and is as game as ever. Normen also met Sergt. Wm Giles (formerly of Elora Road north), who is with the 187th. Bob Laughleen, of Cargill, is now with the dental corps.

Mr and Mrs Thos Switzer, of Saugeen, were advised by wire on Saturday that their son Pte M. V. Switzer, who was reported seriously ill in France, is progressing towards recovery. Pte Switzer went overseas with the 79th Batt. from Brandon in April, 1916. In England he was an instructor in musketry, and then on the Lewis machine gun in a reserve battalion. He had been promoted to Sergt., but in Sept. last he reverted to the ranks at his own request so that he could get into the trenches. After going to the front in France he took trench fever. He had just recovered from two months illness and gone on duty again, when the cable came telling he was dangerously ill.

Pte. John McArthur, of the 147th Grey Batt., son of Mr. and Mrs Neil McArthur, Elora road north, in a letter from Shorncliffe Camp, dated Feb. 7th, says: "The weather this week is cold and frosty with about two inches of snow. They say this is the coldest here for about 30 years, but it's nothing compared with Canada. Our Battalion (the 8th Reserve) is composed of three battalions, and out of the whole bunch there have been about 150 men gone to France, and it is expected there will be about 300 more go within the next week. Also there were about 300 left for France to-day to work at construction work. Most of these were 159th men from South Bay and Cobalt, only about 10 of the 147th going with them but the next draft will take up a lot of the 147th. This 8th Reserve Battalion reinforces the Canadian units on the firing line in France. I am transferring from this battalion to the Canadian Field Artillery, and I expect to go to Shorncliffe for training by the last of this week or the first of next, and I will be there some time before going to France. As soon as the weather picks up there is going to be the biggest drive yet in France. The heavy guns are lined up there wheel to wheel, with tons of ammunition and all kinds of men, so there is going to be something doing there before long. I think, if this big drive comes, it will about finish the Germans—that is, if they do not give in before it comes off."

In a recent letter home, Spr. Elroy McKenzie speaks of the pleasure experienced in meeting Capt. Rev. John McNeill at Crowborough Camp Y.M.C.A. and hearing the inspiring address delivered to the meeting of soldiers. We have no doubt that many more of the Bruce were also privileged to meet and hear Capt. McNeill under similar circumstances at the other camps in England and in France. Our own John McNeill has that sympathetic soul and magnetic manner that will attract and impress not only the man from his home town, and county and the city of his adoption, but thousands of others to whom he was hitherto a stranger. He is one among a thousand to carry the uplifting and sustaining message to soldiers. In a personal letter to The Advocate editor Capt. McNeill writes:—"What men we have put into this fight! The very cream of Canada. I call them men, for they are boys in years many of them, they have become men in a day—serious minded, disciplined, capable, with a grasp of life that can only come through sacrifice. What a comfort it is to know that they will not give themselves to the cause in vain. Everywhere in England, especially since the turn of the year, there is an encouraging confidence, without superficial optimism, that we will win through. The whole Empire has breed itself for victory, knowing its cost but never shrinking from it, and never doubting the issue. It is great to be British! and Canadian! and to have a share in this struggle for liberty."

SHOES! SHOES! SHOES!

Old Shoes, New Shoes, Big Shoes, Small Shoes, Heavy Shoes, Light Shoes, Plain Shoes and Fancy Shoes!

PERSONAL.

St. Catharines, Ont.—"Two years ago I was in a very nervous, generally run-down condition, so that I awoke in the morning more tired than when I retired. The doctors thought I had heart trouble and advised me for it but I got no benefit. I heard of Dr. Pierce's remedies through a friend who had been to your Invalids' Hotel for an operation (which proved entirely successful) and I at once got the 'Favorite Prescription.' I took three bottles altogether and at the end of three weeks I felt entirely cured and have been well and strong since, without a single bad spell. I stopped taking it about three months ago and am glad to tell any one how splendidly your medicine has healed me."—Mrs. JOHN LEWIS, 53 Niagara St., St. Catharines, Ont.

The mighty restorative power of Dr. Pierce's Favorite Prescription speedily causes all womanly troubles to disappear and brings back health and strength to nervous, irritable and exhausted women.

It is a wonderful prescription prepared only from nature's roots and herbs with no alcohol to falsely stimulate and no narcotic to wreck the nerves. It banishes pain, headache, backache, low spirits, hot flashes, worry and sleeplessness surely and without loss of time.

Get it now! All druggists.

A Great Book Every Woman Should Have.

Over a million copies of the "The People's Common Sense Medical Adviser" are now in the hands of the people. It is a book that everyone should have and read in case of accident or sickness.

Send fifty cents or stamps to Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and enclose this notice and you will receive by return mail, all charges and customs duty prepaid, this valuable book.

ONTARIO FARMERS

Existing war conditions demand that you give the question of Seed special attention this year. Seed of desirable varieties and high germination power will be factors influencing yields.

If you have not secured your Seed, let the Ontario Department of Agriculture help you.

Farmers having Seed Grain or Potatoes for sale may forward samples to this office, stating variety and quantity, and an effort will be made to put them in touch with farmers having Seed for sale.

Farmers wishing to purchase Seed are also invited to communicate with this office, stating variety and quantity, and an effort will be made to put them in touch with farmers having Seed for sale.

Dist. Representative, Walkerton

A Bad Spot in the Wheat Crop

Mr. R. W. McMorrow, of Somerset, Man., in a note to The Advocate says: —"This has been an exceptionally cold winter on the Prairie, the thermometer registering below on different occasions, though at present it is 30 above. The wheat crop last year may be considered a total failure in this locality, owing, many farmers say, to the extreme heat of the sun. Many fields that were cut, were left in sheaves, stooks and stacks, unthreshed until after my own shot out. I considered some of it would yield 40 bushel to the acre. Two weeks after it was a mass of black rust. But, when everything is averaged up, good farmers are making money and many of them growing with the country.

THE WOMEN'S PATRIOTIC LEAGUE

MR EDITOR—Certain facts have come to our notice recently which have caused us to think that many in our village do not understand the purposes and objects of the Woman's Patriotic League. Indeed, some may be hardly aware that such an organization exists at all. Permit us, then, through your valuable medium to make a few explanations for the benefit of those who in the past have not been interested. We will be as brief as possible. In the first place the W P L is an organization of women who have associated themselves—for patriotic purposes during the war. They are not organized under government charter, but are just free to act according to their own judgment. Any woman contributing to or assisting the League in any way becomes a member. It is not affiliated or responsible to a higher league or any other branch, but the League of each municipal corporation stands alone, is a complete unit in itself. There is no membership fee or subsequent dues. All contributions are entirely voluntary. Our League is more suitable for small places than the Red Cross Society, which is chartered by Act of Parliament and has a very firm constitution and strict by-laws. This entails membership fees and council dues which would prevent many from joining.

The League works for anything of a patriotic nature on which it may decide, from time to time, to extend its energies and devote its means. Up to the present time it has chiefly worked for the Red Cross Society and has sent in its contributions of all sorts of R C articles such as socks, shirts, etc, through the Canadian branch of the British Red Cross Society. A report of these contributions is published in The Advocate each month as they are sent away. The average value of a shipment the way prices are now is not less than $300, which when figured out would mean $3600 per annum for the R C S. We are now asked to double this, which will take some financing. We believe this the most worthy object to work for, as the Red Cross supplies necessaries and comforts to our soldiers at the front, in the hospitals, convalescent homes or retreats, and supplies aid to St Dunstan's Institute for training blind soldiers. The C R C S is the only means by which Canadian prisoners of war in Germany can receive food, each prisoner receiving two parcels a week. This requires cash contributions.

This is the work the League is doing in response to the many urgent appeals for our suffering soldiers at the front. There are other societies, such as the Canadian Patriotic Fund and various Preparedness Leagues that have been organized to take care of soldiers' dependents and the soldiers themselves when they come home. As men have largely to do with these organizations, together with the annual Trafalgar appeal and other patriotic contributions through taxation, we have not made any appeal to men generally. But any contribution or support from them would be thoroughly appreciated, particularly on account of the greatly increased cost of material that we use, which in some cases has nearly doubled. All the material we have used so far has been purchased from our own merchants.

This year we have adopted the system of monthly contributions, which in the total fall short of our requirements, and we may still have to resort to other means of raising funds in order to keep an increased number of workers busy. There is a great advantage in turning our money into material to be made up at home. In the first place it does not leave the village and in the second place every dollar's worth of material when made up is worth about two dollars to the R C S. In this way many of our faithful patriotic workers, who realize the importance of the cause, are contributing in work alone as much as thirty or forty dollars per annum. Thus you see the good work they are doing. We have a good buying and cutting committee, a work committee and a packing committee, each attending to their own particular work assigned them, and the work goes on without a jar. Our work committee consists of eight women who take charge by giving out work at the library on Saturday afternoons and evenings. Each and every woman is in duty bound to answer the call and do her share. A complete honor roll is kept of all workers and contributors and those doing the work will receive the credit later on.

The urgent appeals for supplies are owing to an increased demand on the Red Cross stores in England and France, which were depleted to such an extent that in the month of last month's supplies were left. Therefore the B R C S could not supply the French stores and hospitals with more than half their full allowance which was 5000 cases per month.

Any person interested in the work will find copies of the Canadian Red Cross Society Bulletin of recent publication at the library when the work is being given out. It explains the work thoroughly.

We thank you for your generous space.

—Canada's pension bill is now $3 600,000 a year.

A severe frost, the worst in 23 years, recently visited parts of Florida, completely ruining the orange crop. However, they grow several crops of oranges a year down there, so the growers are not disheartened over their loss.

Mr. and Mrs. Shouldice, who gave up farming at Vesta last fall and went to live in Walkerton, will move next month to Toronto, where some of their family reside, and they intend to make their home in the city in the future.

To City, Town and Village Dwellers in Ontario

A Vegetable Garden for Every Home

IN this year of supreme effort Britain and her armies must have ample supplies of food, and Canada is the great source upon which they rely. Everyone with a few square feet of ground can contribute to victory by growing vegetables.

Four Patriotic Reasons for Growing Vegetables

1. It saves money that you would otherwise spend for vegetables.
2. It helps to lower the "High cost of living."
3. It helps to enlarge the urgently needed surplus of produce for export.
4. Growing your own vegetables saves labor of others whose effort is needed for other vital war work.

The Department of Agriculture will help you

The Ontario Department of Agriculture appeals to Horticultural Societies to devote at least one evening meeting to the subject of vegetable growing; manufacturers, labor unions, lodges, school boards, etc., are invited to actively encourage home gardening. Let the slogan for 1917 be, "A vegetable garden for every home."

Organizations are requested to arrange for instructive talks by practical gardeners on the subject of vegetable growing. In cases where it is impossible to secure suitable local speakers, the Department of Agriculture will, on request, send a suitable man.

The demand for speakers will be great. The number of available experts being limited, the Department urgently requests that arrangements for meetings be made at once; if local speakers cannot be secured, send applications promptly.

The Department suggests the formation of local organizations to stimulate the work by offering prizes for best vegetable gardens. It is prepared to assist in any possible way any organization that may be conducting a campaign for vegetable production on vacant lots. It will do so by sending speakers, or by supplying expert advice in the field.

To any one interested, the Department of Agriculture will send literature giving instructions about implements necessary and methods of preparing the ground and cultivating the crop. A plan of a vegetable garden indicating suitable crops to grow, best varieties and their arrangement in the garden, will be sent free of charge to any address.

Write for Poultry Bulletin

Hens are inexpensive to keep, and you will be highly repaid in fresh eggs. Write for free bulletin which tells how to keep hens.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXIII.—(Cont'd).

"Why, all the fellows have been chaffing me," said the simpleton.

"And who is the lady?" asked the captain.

They were ascending the stairs to the smoking-room as the question was asked, and Mr. Smythe flung himself into the most comfortable lounge of the great man's luxurious sanctum ere he answered.

"Don't you know? Can't you guess?"

"Not an idea," said the captain handling him the cigars. "Come, who is she?"

The little fellow sighed, and replied, with due solemnity:

"Lady Boisdale!"

The captain's eyes flashed. He had wanted a lord! Here was one, ready made to his hand.

"Come," said the captain, pushing the bottle, and eyeing his dupe keenly, "if you have set your heart on marrying Lady Ethel Boisdale I think I can help you."

"You can!" exclaimed the young fellow.

"I can, and I will," said the captain, quietly, "on one condition—that you will never mention that you are indebted to me for your success."

"I promise that," said Mr. Smythe, eagerly; "and you really will——"

"Do my best to recommend you to the earl and his peerless daughter, and, what is more, I will venture to bet you something, that I succeed."

"Eh?" said Mr. Smythe, scarcely catching the idea.

Then suddenly he saw what Mr. Howard Marquint meant.

"I see!" he said. "I'll bet you—you a——ree thousand."

The captain raised his eyebrows.

"I never bet," he said, "unless the stake is worth something. If I am to enter it in my book it must be twenty thousand."

Mr. Smythe hesitated—only for a moment.

"Twenty thousand be it," he said. "If I marry Lady Ethel I pay you twenty thousand, and if I don't——"

"I pay you," said Mr. Marquint, softly. "It's a wager."

And he held out his long, clawlike, white hand.

Mr. Smythe rose, clasped it eagerly, and, after a fervent and excited "Good-night," took his departure.

* * *

Bertie was very happy that night as he sat in his solitary chambers and smoked his favorite pipe.

He dressed himself with unusual care, and surveyed himself in the glass.

Would the earl, proud Lord Lackland, accept him as a son-in-law?

He dared not answer his own query, but whiled away the early hours by pacing to and fro, doing a little work, smoking at intervals and thinking all

* * *

At the clock struck eleven he took up his hat and started on his important business.

While he was on his way to the Lackland mansion in Grosvenor Square the earl himself was seated in the breakfast-room munching his toast and sipping his coffee.

Lady Lackland was seated at the table.

Pitt and Ethel were out in the park at their morning gallop.

At that moment, while the countess sat with a look of annoyance and distress, silent and dismayed, a servant entered with a card.

The earl glanced at it, and handed it to the countess.

"Bertie Fairfax!" she breathed.

"Show Mr. Fairfax into the library," said the earl.

Then, when the servant had withdrawn, he smiled over his cup quite calmly and unmoved.

"Bertie Fairfax," said the countess, with a frown.

"What is to be done? Of course he comes to ask for Ethel."

"Not having seen, him, I cannot say."

"What shall you say if he does?"

"It all depends," said the earl, wiping his mustache. "I may have to order him to leave the house, or I may——"

"Be careful!" said the countess.

The earl smiled coldly, and left the room.

Bertie rose as the earl entered.

"Good-morning, Mr. Fairfax," he said, fixing his cold, steely eyes on Bertie's face, and holding out a cold, impassive hand.

"Good-morning, my lord," said Bertie, who had determined to remain self-possessed and unembarrassed whatever might be the issue of the interview, or, however the question might go. "Good-morning. I am afraid I am rather early, but I have come on a matter in which impatience is permissible."

"Pray sit down," said the earl, seating himself as he spoke in a hard, straight-backed chair, and looking as straight as the chair itself. "Nothing has happened, I hope."

"Nothing of harm, I hope," said Bertie, gravely. "I have come, my lord, to ask you for the hand of Lady Boisdale."

The url raised his eyebrows, assuming a surprise which, of course, he did not feel.

"I had thought it best to declare my purpose and put my request as plainly and as straightforwardly as I could. I do not undervalue the prize which I pray for at your hands, my lord, and I am humbly conscious that I am not worthy to receive it from you. I can only plead that I love her with all my heart and that I have loved her for years. But, a few months ago, I should have deemed my request presumptuous to the extent of madness, but now, although I am not one whit more worthy of her, I am, perhaps, in the eyes of the world a little less presumptuous."

The earl listened with an unmoved countenance, as if he were listening to some passage from a book which in no way concerned him.

"May I ask, Mr. Fairfax," he said, "if you have made Lady Boisdale acquainted with the state of your feelings?"

Bertie flushed the slightest in the world.

"I regret to say I have, my lord. No one can regret it more than I do. I know that I should have come to you first, and have gained permission to place myself at your daughter's feet. But the depth of my devotion must plead for me; may I hope that it will?" We are all, the best of us, the slaves of impulse. There are times when the heart asserts itself and enslaves the will, which, perhaps for years, has ridden its vassal be silent, as mine has done."

The earl bowed.

"May I ask," he said, "in what way Lady Ethel received your advances?"

"I found that, for once true love had won its best return."

"She consented, do you mean?"

Bertie bowed.

"Then, doubtless, Mr. Fairfax," said the earl, as coldly as ever, "you were kind enough to place her in possession of facts of which I am in ignorance?"

Bertie did not understand, and looked as if he did not.

"In such matters as this," said the earl, "it is best, as you say, to speak with candor. I refer to your position in the world, and your ability to keep Lady Boisdale in the society which, all my friends tell me, she so greatly adorns."

Bertie bowed.

"My lord, I should have shamed her by any such allusion, and lost all hope of winning her heart. To you I may say that I am not poor in the eyes of many, though I may seem poor indeed to one of your lordship's position and wealth."

The earl winced inwardly, but showed nothing of it outwardly.

"I have an income of two thousand pounds a year, and I trust that I may be able before long to own with gratitude that it is doubled. It is not a large sum, my lord."

"I may not know that the sum you mention is the whole—in fact, that you are not prepared to make any settlement?"

"All that I have shall be hers," said Bertie. "The richest man in England can do no more."

"No settlement!" said the earl, coldly. "Under the circumstances, you would not, therefore, expect a fortune with her?"

Bertie crimsoned.

"Your lordship forgets," he said, with quiet dignity, "that I came to ask for your daughter and not for your money."

The earl showed no displeasure at the stern retort, but took it simply as an assent, and nodded.

"Mr. Fairfax, to be candid, as we have been all through, Lady Lackland and I have had higher hopes for Ethel, much higher. It is true that you are famous, and that you are well descended; the Fairfaxes run with ourselves, I think. It is usual—nay, it is the duty of a father to endeavor to place his daughter in a higher station than the one which she inherits from him. If I ignore that duty and consent to give up that hope, I trust I shall be pardoned if I make one suggestion."

"My lord, I am in your hands," said Bertie, with simple dignity and earnestness.

"And that is that you will give me, both of you, a formal quittal of any fortune or estate that may be due to her. I simply suggest it as a fair and honorable thing. You may be aware, or you may not, that Lady Ethel has some small fortune of her own; under the circumstances I must make the condition that should I give my consent you will agree to let the money remain in the estate, vested, as to speak, in the family."

Bertie smiled.

"As I said before, my lord, I ask only for Ethel. What money she may have is at her own disposal. I don't wish to touch one penny of it, directly or indirectly."

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time in Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London—Do you wear glasses? Are you a victim to eyestrain, or do you need them? If so, you will be glad to know of the following, for many of those who use it report that the prescription has strengthened their eyesight fully fifty per cent in one week's time in many instances. Eye troubles of many descriptions may be wonderfully benefited by the simple prescription. Here is the prescription: Go to any active druggist and get a bottle of Bon Opto tablets. Dr. Bon Opto tablets are sold in a guaranteed to relieve eyestrain in half the time and also to benefit any form of eye trouble in from one to three days, or your druggist is authorized to refund your money. Even a blind person may quickly benefit. If your eyes are a blur, take steps to save them now before it is too late. Bon Opto tablets might have been saved if they had been used in time.

Another prominent physician to whom the above was submitted, said: "The ingredients are well known to me and are of the highest possible quality. The manufacturers guarantee it to strengthen eyesight in half the time mentioned in their literature, or refund the money. It can be obtained from any druggist and is one of the very few preparations I feel safe in recommending to my readers."

PRACTICAL FARMING

The Best Hours for Winter Feeding.

Considerable has been written regarding the feeding of horses in so far as hours of feeding are concerned. Some would feed twice a day, some three times daily, others would give the regular daily allowance in four different lots. We must, in horse feeding, always remember that the horse's stomach is rather a small affair, and that the horse's digestive system is not equipped to handle large quantities in a short time sufficient to last for many hours thereafter. The nature of the horse's digestive tract is such as to indicate that smaller feeds and more frequent, but always given with regularity, would be more desirable at more widely separated intervals. On the average farm during the winter season the feeder does not rise very early, and it is safe to say that the horses in the average farm stable do not get their first feed before seven o'clock in the morning; get their second feed around about twelve, and either one or two other feeds later in the day. Where three feeds a day are relied upon, we would favor giving one-half the hay in two feeds; one somewhere around six or seven o'clock in the morning, the other at noon, the other half of the hay to be fed when chorring up for the night, which may be done some time between six and eight o'clock. The grain ration could very well be divided into two feeds, one in the morning after watering, and the other at night, after watering. At noon a turnip, a couple of carrots, or a mangel might be given to good advantage.

But we believe there is a better method of feeding than this. Where the horses get their morning feed about seven o'clock and a noon feed about twelve, both representing fairly small quantities of hay, and where they are watered in the afternoon around four or five o'clock, as is usual on these short days, we believe they would do better to have a very small allowance of hay just after this evening watering and sufficient to keep them quiet until seven or eight o'clock at night, when they can be very well fed a regular night feed of hay, composing the bulk of the hay ration for the day and their oats, and be bedded down for the night. The horse is a restless animal, and the quieter he can be kept the better. We would favor this latter system of feeding, with the roots at noon as previously mentioned. We would water twice a day, and the late feeding at night takes the attendant to the barn where he can see that everything is all right, and tends to keep the horses quiet until morning.—Farmer's Advocate.

Start Pruning Now.

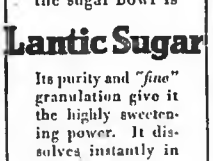
It is necessary to start the pruning of the apple orchard some time in February at the latest. There are some other jobs for which the farmer wishes to pick good days about this time of the year, such as drawing the ice, sawing up the woodpile and killing hogs, and with all these attended to there is not too much time left for pruning before Spring's work begins to crowd in.

No matter what the system of pruning, or whether the cutting be heavy or light, one thing should always be remembered when pruning in Winter in a country where snow is to be expected frequently, that is, to pick up the brush as you go; only a person who has had to straighten out and burn tangled branches and twigs after they have been drifted over, knows fully the satisfaction afforder by having his work up-to-date every evening.

If more than one man is to work on the pruning job let it be decided beforehand which one is to be the boss; this saves time, and goes some way toward ensuring an even appearance of the orchard when the work is finished. With three or more men it pays to have the boss on the ground all the time, so that he can see that no mistaken ideas are introduced by the workmen.

A reasonably fine saw, in good shape and of the regular carpenter style, with a handle that will not cramp the hand of the worker, is about the only tool needed, except the small pruning shears, which can be carried in a pocket. A long-handled pruner may prove useful and can be used all the time by a man on the ground, but the saw and shears are sufficient on a one-man job where a ladder has to be moved about anyhow.

The good condition of the saw-teeth is the most important matter in regard to the pruning tools, and a man who can file his saw properly is worth as much more than another, as it will cost to have the saw filed every day.



A green hand can be put to work on the removal of dead branches until he begins to understand the practice of a more experienced worker; the points to be emphasized in giving him first instruction being the making of clean cuts and the avoiding of leaving stubs. Where heavy branches have to be taken out because of their being dead or having received severe injury it is better to make two cuts rather than run the risk of the heavy branch splitting and carrying the split down beyond the point of cutting; this trouble can, however, be avoided if an undercut is put in to a fair depth before cutting from above is started.

Phenomenal Strides Made By Canadian Northern Railway System In First Year As Transcontinental

New System in the Past Year Carried Approximately 131,000,000 Bushels of Wheat, an Increase of 125 Per Cent. Over Previous Year. Company's New Mileage on Pacific Coast and Northern Ontario Makes Astonishing Showing Right from Commencement of Operation. Company's Lines Most Favorably Located.

From Our Own Correspondent.
Toronto, February 9th.

The phenomenal gains that the Canadian Northern Railway reports for its year as a transcontinental line makes the statement one of the most important that has ever been issued by any railway in Canada. It is even doubtful whether the tremendous increases in business handled have ever been duplicated by any system in the world. There are many features to the report that make it of special import to every Canadian, owing to the interest the country has in the building up of this important transcontinental line and the attractive territory that has been developed through the completion of the system. The feature of the report that will help be especially gratifying is that which shows the prominent part the Canadian Northern, with its transcontinental system, has been able to play in handling such a large proportion of the grain requirements of the Mother Country.

Right along it has been the contention of Sir William Mackenzie and his associates that it was only a matter of a short period before Canada and the Empire would enjoy the benefits of the big system that had been built up across the Dominion, and the showing made in the report indicates that these hopes have been realized much earlier than it would have been thought possible when the transcontinental system was set in operation a little over a year ago.

Important Gains of Year.

A few of the outstanding features of the report are as follows: An increase in freight traffic during the year of 88,252,412, equivalent to a much as 45.87 per cent; increase in passenger traffic, $715,246, of a gain of 13.25 per cent.; an increase in total operating revenue of $9,564,169, or 36.93 per cent. over the previous year. That over 131,000,000 bushels of grain is proof positive that the railway has been located in the best grain growing area of the West.

The exact grain traffic handled amounted to 131,978,809 bushels as compared with 58,675,520 bushels in 1916, or an increase of 73,403,289, equivalent to an increase of as much as 125.31 per cent.

That the Company has been able to make such striking gains in the amount of traffic handled over its lines will undoubtedly be more readily appreciated when it is remembered that it was only operated as a transcontinental system during the last seven of the twelve months of the fiscal year, and when it is recalled that last winter the weather conditions in the Western provinces, and more particularly in British Columbia, were the most severe that had been experienced in a great many years, in fact, in some instances, were the most difficult that Canadian railways had ever to meet in that part of the country. It should also be pointed out that the Company had the disadvantage, owing to the conditions arising from the war, of being without its own terminals in such important centres as Vancouver in the West, and Montreal in the East.

Company's Earning Power.

The development that is sure to be most favorably looked upon by everybody who is following the growth of the larger Canadian railways will come from the fact that the Canadian Northern Railway has come within hailing distance of earning its total fixed charges, the deficit for the year being brought down to less than a quarter of a million dollars, a reduction from the previous year of almost $1,400,000. As was to be expected, great proportion of the increased revenues come from the large crop gathered in the Canadian West in the fall of 1916, but since that time there has been a marked increase in the general freight traffic handled over the lines, and during the first four months of the current fiscal year gross earnings have continued to show large increases over the corresponding periods of the year now being reported on.

Perhaps the most striking development in this connection is that it is in the month of October that the greatest grain movement occurs, and yet in October, 1916, the gross earnings showed a gain over those of the same month in the previous year. As the grain crop was very much lighter this evidently indicates that the growth in the traffic in other commodities has more than offset the lighter grain movement of the year now being reported on.

Some of the interesting features of the Board of Directors' report as indicating the position of the line and the progress it has made include the following:

An agreement of great importance in the development of the System's freight and passenger traffic was made with the Canard Steamship Co. In future the Canard Line and the Canadian Northern Steamship will be, in fact, a single transportation unit between Europe and Canada.

The possession of such favorable grades as those on the System's lines has given the Canadian Northern an already important advantage in the economy of operation, particularly in carrying the two commodities offering in largest volume, viz.: lumber and grain.

The main line of the Canadian Northern Railway from Quebec to Vancouver is superior to any line crossing the continent of America in points of grade and curvatures favoring traffic.

The lines of the Company's system are now serving 2b per cent. of the aggregate population of the cities and towns of all Canada, having 6,000 inhabitants and over.

The present situation emphasizes the fact that the Railway is not as dependent upon grain crop movement as in the past, and in becoming transcontinental has acquired a highly diversified traffic. The developments of the year confirm the Directors in the belief that they strongly hold, that the ultimate prosperity of the Canadian Northern Railway System is measurable only by the prosperity of the Dominion of Canada.

The Business of Being a Boy is a strenuous employment. Sturdy boys and girls are not built out of books alone. For Bright Spring Days

A sports frock in all its glory is here illustrated. It may be called a versatile design, for it is an suitable for the afternoon frock of plain and figured pongee or foulard as for the morning frock of plain and figured soplin. McCall Pattern No. 7643. Ladies' Blouse Dress. Pattern in 6 sizes; 34 to 44 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer or from the McCall Company, 70 Bond Street, Toronto, Ontario. "Dept W".

A Madagascar Industry.

One of the oldest native Madagascar industries is the curing and manufacturing of silk into what is called "lambamena"; "lamba" in Malagasy means dress shroud, or clothing, and "mena" means red. "Lambamena" is made from a heavy grey native silk principally in the Betsileo country, in the southern part of the Central Plateau. This material was originally used for wrapping the bodies of prominent natives for burial. The more celebrated or wealthy the deceased or his relatives here, the more lambamena was used, but this custom is being gradually discontinued.

POSTUM

"There's a Reason"

CANADA AS A PAPER MAKER.

Capacity to Produce Pulp Wood in Enormous Quantities.

Indications point to Canada as one of the most important pulp and paper producers of the world for many years. There is no reason, except apathy respecting fire-protection in the pulp producing regions, why Canada should not produce perpetually a large part of the world's paper. The large spruce forests in the east and north including the sub-arctic forest which has value chiefly for pulp, show Canada's capacity to grow suitable wood in enormous quantities, sufficient with any kind of protection and management, to supply the demand of all time. Pulp forests are, however, particularly susceptible to fire, and need careful protection.

It is gratifying to see that some of the most progressive pulp companies are successfully protecting their lands from fire. On account of the comparatively rapid growth of pulp timber to a commercial size it appears that pulp companies will be the first who can prove that scientific forest management is good business for a private concern.

The increasing production of pulp and paper in British Columbia continues, and it is announced that the plant of the Empire Pulp and Paper Mills, at Swanson Bay, 100 miles south of Prince Rupert, will be turning out chemical pulp in commercial quantities, the daily output when the plant is in full running order being between thirty-five and forty tons.

WOMEN WHO SUFFER

Can Obtain New Health Through the Use of Dr. Williams' Pink Pills.

Every woman at some time needs a tonic. At special times unusual demands are made upon her strength. Where these are added to the worry and work which falls to her lot, weakness and ill health will follow unless the blood is fortified to meet the strain.

Weak women find in Dr. Williams' Pink Pills the tonic exactly suited to their needs. Most of the ills from which they suffer are due to bloodlessness—a condition which the Pills readily cure. These pills save the girl who enters into womanhood in a bloodless condition from years of misery, and afford prompt and permanent relief to the woman who is bloodless, and there are weak. Mrs. Wm. H. Wagner, Rosenthal, Ont., writes:—"After the birth of my second child I suffered from troubles which most mothers will understand, without going into details. The doctor who was attending me said an operation would be necessary, but as I dreaded this and as Dr. Williams' Pink Pills had been of great help to my sister I decided to try this medicine, and I can truly say that after using the pills for some time they made a complete cure and made life more enjoyable than it had been for a long time. I think every woman suffering from the ailments of our sex should give Dr. Williams' Pink Pills a fair trial as I know from my own case the great benefit that follows their use."

You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

GERMANY MUST BE HUMBLED.

American Visitor in England States Attitude of British People.

The fact is that, whatever the British people thought at the beginning of the war, they are realizing more and more, every day, that there is something between them and Germany which cannot be compromised. The war began over Belgium, to be sure. There was never any jingo spirit in the people, no matter what the press was saying. But very gradually the real reasons of the conflict began to become common knowledge. Intelligent people may decide that there can be no solution in the field, or that it would be better to leave Germany and Austria intact. But the great mass of people believe that Germany has done unspeakable wrong. And they think that what they are doing is an unspeakable right. They never speak of it, at any rate. But they think of it, night and day. Life goes on almost as usual, getting harder and harder, of course. But they are not flinching.

The terms of peace are definite enough for the average Briton. He knows what he is fighting for and he is not concerned with territorial questions. He expects the Allies to pool their demands at the end and to adjust them. But one demand they will not adjust, because it is the same for all. That is that Germany shall not rule over central Europe. To them and to their people the war is the simplest, as it is the grandest thing in the world. They do not see that Germany, actual or potential ruler over everything from Berlin to Bagdad, will necessarily be satisfied with what she has. Nor do they see why they should allow the Serbs and the Montenegrins in Hungary and the Rumanians and the Slovenes and the Lithuanians and the other subject races of Hungary to become the subject nations of the new German Empire. They really believe that they are fighting for the liberty of Europe. The things which were only words in 1914 are terrible actualities now.

MICA AXLE GREASE

Makes your wagon run as if it had ball bearings. It is the Mica that does it. Mica makes a smoother bearing surface and a longer wearing grease. Dealers everywhere.

THE IMPERIAL OIL COMPANY Limited

BRANCHES THROUGHOUT CANADA

A SUCCESSFUL SOCIETY

Canadian Order Of Foresters Has A Splendid Financial Basis.

The Canadian Order of Foresters which has for years occupied a prominent position as one of the leading Fraternal Insurance Societies operating in Canada. Was instituted in 1879 by 188 members who seceded from the American Order of Foresters. To-day it has a membership of over 90,000, which it the largest purely Canadian membership of any of the fraternal insurance societies doing business in the Dominion.

The Society has had a most successful record and has accumulated funds, which, at the present time, amount to between five and a half and six million dollars. Last year was apparently one of the most successful years in the history of the institution. The amount added to the insurance funds for 1916 was between four and five hundred thousand dollars. Notwithstanding this success the management decided to ascertain what the actuarial standing of the Society was, and secured the services of one of the most competent actuaries on the Continent. Acting on the advice of the actuary, the Society decided to re-adjust its rates and place itself upon a basis which will give it at least 100% actuarial solvency.

By taking this course, while its funds were still piling up, it has been able to treat its members much more favorably than any of the societies which have re-adjusted their businesses during recent years.

The management is to be congratulated upon a course of action which will place the Society upon a splendid financial basis, and insure the future of the Order for all time.

Speaking of Appetites.

A huge eating competition had been held by some brawny sons of toil in a country town in Yorkshire, and one of the competitors had succeeded in disposing of a leg of mutton, a plentiful supply of vegetables and a plum pudding, the whole washed down with copious draughts of ale.

He was unanimously declared the winner and was being triumphantly escorted home when he turned to his admirers, and said:

"Ah say, lads, don't thee say nowt of this to my ole woman, or she won't gie me no dinner!"

When Your Eyes Need Care

Use Murine Eye Medicine. Refreshing Eyes Plan—Acts Quickly. Try it for Red, Weak, Sore Eyes and Granulated Eyelids. Murine is compounded by our Oculists—not a "Patent Medicine"—and has been used by Physicians' Practice for nearly years. Now dedicated to the Public and sold by Druggists at 50c per Bottle. First in Something.

According to their own account, the children were first in something at school: One was first in reading, another in arithmetic, another in sports. Bertie alone remained silent.

"Well, Bertie, how about you?" his uncle asked. "Aren't you first in anything?"

"Yes," said honest Bertie, "I'm first out of the building when the bell rings."

Minard's Liniment Cures Colds, Etc.

Stranger Than Fiction.

A shipping paper publishes a true story so remarkable that few writers of sea romances would dare to offer it as fiction. In January, 1904, a tidal wave left the British bark Avenger high and dry on a small island in the Gulf of Mexico. Last July another tidal wave swept the vessel back into deep water. Now, after a vacation of twelve years ashore, she is once more in the merchant service. The war has raised ocean freight charges to such a figure that the cost of repairing her was a small matter in comparison with what she can earn.

BISURATED MAGNESIA

For Dyspepsia, Indigestion,

Heartburn, Belching, Sour Stomach, Gas in Stomach, etc., take a teaspoonful of Bisurated Magnesia in a half glass of hot water after eating. Is safe, pleasant, and harmless to use and gives instant relief from all forms of stomach disorder. Sold by druggists everywhere.

To Relieve Catarrah Deafness and Head Noises

If you have Catarrhal Deafness or head noises go to your druggist and get 1 ounce of Parmint (double strength), and add to it 1 pint of hot water and 4 ounces of granulated sugar. Take 1 tablespoonful four times a day.

This will often bring quick relief from the distressing head noises. Clogged nostrils should open, breathing become easy and the mucus stop dropping into the throat. It is easy to prepare, costs little and is pleasant to take. Any one who has Catarrhal Deafness or head noises should give this prescription a trial.

Any druggist can supply you, or a bottle will be sent on receipt of the postal note or money order. Address: International Laboratories, 79 St. Antoine St., Montreal, Canada.

THE COOK-HOUSE CORPORAL.

Onerous Duties of the Officer Who Has Charge of Army Meals.

Out of sight of the rest of the camp, reeking with perspiration, hurrying from one man to another, urging them to fresh efforts, he is always at work.

Twenty-four men, hidden in clouds of steam, half deafened by a roaring, hissing, rattling racket, are doing their best. There is a mixture of odors. Onions fight for precedence with stewed apples, boiled cabbage with rice and pastry. The floor runs with water from the steam, grease from the cooking, and mud from the workers' boots. Hither and thither run these men, shouting, swearing, and then bursting into song.

The corporal has the responsibility of the cooking, and smiles through it all, admonishing this man, issuing an order to that one. He possesses the delightful knack of being obeyed without commanding. Yet this quiet little man becomes ruffled after the work is finished—that is, after the meals are served. Ignoring his own feed, he waits for the complaints to come in. Here are a few:

Hut X1—Porridge not cooked, tea like washing-up water.

Hut X2—Porridge over-cooked, meat like leather, tea too sweet.

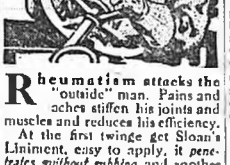
Hut X3—Tea not sweet enough, meat too fat, not enough butter.

So it goes on for half an hour, until, in sheer desperation, the unfortunate corporal seizes some food and rushes off to his noisy hut to try to get a "little rest" before he is needed to prepare the next meal.

AN EXCELLENT MEDICINE FOR LITTLE ONES

Baby's Own Tablets are an excellent medicine for little ones. They sweeten the stomach; regulate the bowels, break up colds and simple fevers, cure constipation and make teething easy. Concerning them Mrs. E. Quinn, Petaine, Que., writes: "Baby was troubled with constipation and nothing helped him till I began using Baby's Own Tablets. They are an excellent medicine for little ones." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

His Accident Policy.



"You stepped right in front of that automobile. If the driver hadn't turned sharply you might have been killed."

"True. Very true."

"Were you trying to commit suicide?"

"No. I took out an accident insurance policy yesterday, and I was just experimenting to see what sort of protection it would give me. By jinks, it worked like a charm!"

Some folks are satisfied to be just acquaintance and sometimes that arrangement is perfectly satisfactory to both parties.

Rheumatism attacks the "outside" man. Pains and aches stiffen his joints and muscles and reduces his efficiency.

At the first twinge get Sloan's Liniment, easy to apply, it *penetrates without rubbing* and soothes the soreness.

After that long drive or tedious wait in the cold rain apply Sloan's Liniment to those stiff fingers, aching wrists and arms.

For gout, neuralgia, toothache, bruises, sprains, cold feet, it is promptly effective.

At all druggists, 25c. 50c. and $1.00.

Sloan's Liniment KILLS PAIN

RATS LEAVING SHIP.

Austrian Imperial Family Storing Treasures in Neutral Countries.

A Swiss correspondent of the Agenzia Libera, of Rome, reports that a great sensation has been created at Vienna by revelations published in Austrian papers, to the effect that treasures and money to the extent of many millions of krunen, belonging to the Austrian Imperial family, have been deposited in banks in neutral countries. The despatch declares that the news has been fully confirmed. It appears that money, valuables and securities, worth more than 150 million krenen (over $30,000,000), belonging to the Emperor and certain Archdukes, have been sent into Switzerland and Holland. The "Corriere d'Italia" learns from Berlin that the news has caused a very bad impression even in Germany.

They Made Him A Different Man

What B. Draper Says of Dodd's Kidney Pills

His Troubles Were Numerous and of Long Standing, But Four Boxes of Dodd's Kidney Pills Drove Them All Away.

Sedley, Sask., Feb'y 12th (Special.)—"Dodd's Kidney Pills made me a different man." The speaker was Mr. Benjamin Draper, well known and highly respected here. He is a fine healthy representative of the prairie provinces and he says he owes his health to Dodd's Kidney Pills.

"I was in bad shape all round when I started to use Dodd's Kidney Pills," Mr. Draper continued. "My trouble came from hard work when I was young. My joints got stiff, my muscles cramped and I suffered terribly from a sore back. I was depressed and low spirited, I was always thirsty and I had flashes of light before my eyes.

"I had rheumatism and heart flutterings, my appetite was fitful, my memory was failing and I was troubled with shortness of breath. Four boxes of Dodd's Kidney Pills made me a new man."

Dodd's Kidney Pills cured all Mr. Draper's troubles because they all came from sick kidneys. If you have any of his symptoms Dodd's Kidney Pills will help you.

LAND OF MANY REPTILES.

Australia Has 100 Species of Snakes, But Only Five Deadly.

Australia has 100 species of snakes, three-fourths of them venomous, says the National Geographic Magazine. The big pythons and rock snakes are harmless, but as one travels from the tropics southward the dangerous varieties increase in numbers, and in Tasmania all are venomous, though only five are really deadly, and, fortunately, these are rarely seen.

The continent is also abundantly supplied with lizards. Three hundred and ninety species are recorded, and they may be seen not only in woods and prairies and deserts, in the water, among rocks, and in trees, but also in the less frequented city streets.

The Government of India will extend its wireless system until every army post has a station in the charge of a trained officer.

Fairville, Sept. 20, 1902.

Minard's Liniment Co., Limited.

Dear Sirs,—We wish to inform you that we consider your MINARD'S LINIMENT a very superior article, and we use it as a sure relief for sore throat and chest. When I tell you I would not be without it if the price was one dollar a bottle, I mean it.

Yours truly,

CHAS. F. TILTON.

Who's Afraid?

Messages had come to the office of a great illustrated paper that Zeppelins were approaching London.

The editor at once summoned his staff of photographers.

"Now, boys, we've got to have a picture of this Zepp. We were badly beaten on the last. The moment it approaches I want every man to rush to the roof with his camera and stay there, whatever happens, until he gets a picture. Let me know directly you get it. You'll find me under the head of cushions in the right-hand corner of the lower cellar!"

Minard's Liniment Cures Diphtheria.

Our Puzzling Language.

"Now," said a teacher to his class during a lesson in English, "can anyone give me a word, ending with 'ous,' meaning full of, as "dangerous," full of danger, and 'hazardous', full of hazard?" There was silence in the class for a moment. Then a boy sitting in the front row put up his hand. "Well," said the teacher, "what is your word?" "Please, sir," came the reply, "pious," full of pie!"

The finest harbor in the world is said to be that of Rio de Janeiro, Brazil.

Minard's Liniment Cures Garget in Cows.

FENCING THE HIGHWAYS.

A Conspicuous Evidence Of How Canada Is Being Rapidly Settled.

In a journey to-day across the Dominion, one is impressed by the miles of farm fencing, particularly in the far west. It seems but a day when the vast stretches of our Western territories from Manitoba to the Coast were one wide field. To-day, for hundreds of miles, in any direction you travel, railroad and other property is substantially fenced; it shows to what extent these vast areas have come under cultivation either for crops or stock. No better evidence of substantial growth could be had. It is also a tribute to the quality of fencing to be had of Canadian manufacturers.

Why Steel Ships Float.

Steel ships differ from those of wood in that their hulls are made of steel plates riveted together, instead of the old method of using wooden planking. They are enabled to float because, being hollow, they have what is called buoyancy. A steel ship displaces a volume of water equal in weight to its own. The principle of buoyancy may be tested by floating an iron pail in a bathtubful of water.

Minard's Liniment Cures Distemper.

The Difference.

"Well, George," said the president of the company to old George, "how give?"

"Fair to middlin', sir," George answered. And he continued to carry-comb a tiny horse.

"Me an' this here hoss," George said, suddenly, "has worked for your firm sixteen years."

"Well, well," said the president, thinking a little guiltily of George's salary. "And I suppose you are both pretty highly valued, George, eh?"

"H'm," said George, "the both of us took sick last week, and they got a doctor for the hoss, but they just docked my pay."

HAVE YOU ECZEMA?

Would you like to end that terribly itching, that burning pain to heal those horrid sores?

You have tried all sorts of fatty ointments, lotions and powders. Put them aside now and give Nature a chance as represented by Zam-Buk.

Zam-Buk is made from herbal essences; is a natural healer. Is not something you have to send to the end of the world for, and pay a heavy price. Every druggist will sell you Zam-Buk and for 50c. only. Just give it a fair trial and incidentally give yourself ease by the quickest route. See name on box:—

WOMAN HAD NERVOUS TROUBLE

Lydia E. Pinkham's Vegetable Compound Helped Her.

West Danby, N. Y.—"I have had nervous trouble all my life until I took Lydia E. Pinkham's Vegetable Compound for nerves and for female troubles and it straightened me out in good shape. I work nearly all the time, as we live on a farm and I have four girls. I do all my sewing and other work with their help, so it shows that I stand it real well. I took the Compound when my ten year old daughter came and it helped me a lot. I have also had my oldest girl take it and it did her lots of good. I keep it in the house all the time and recommend it."—Mrs. DEWITT SINCERBAUGH, West Danby, N. Y.

Sleeplessness, nervousness, irritability, backache, headaches, dragging sensations, all point to female derangements which may be overcome by Lydia E. Pinkham's Vegetable Compound.

This famous remedy, the medicinal ingredients of which are derived from native roots and herbs, has for forty years proved to be a most valuable tonic and invigorator of the female organism. Women everywhere bear willing testimony to the wonderful virtue of Lydia E. Pinkham's Vegetable Compound.

SECOND CON ELDERSLIE

Miss Mabel Dawson is a victim of lagrippe at the present time.

Edwin Priess is engaged with W J Allen for the coming season.

Dawson's sawmill is in full blast again after eight months' rest. Arthur will be the busiest man on the 2nd now.

Mr and Mrs Fred Schilling have moved to Port Elgin.

Mr and Mrs H Henderson and children spent Sunday with friends on the 2nd.

Mrs John McCullough visited Williamsford friends recently.

Thos Nicholl has taken Mr Gross' farm on shares and will move to Gillies Hill in the course of a few weeks.

Marv, the little four-year-old daughter of Mr and Mrs Wilson Patterson, is under the doctor's care.

Assessor Walks is out on his twelfth trip around the tp. The tp daddies know when they get a man from the 2nd con that they can rely on him.

Mrs Allen, of Saskatchewan, spent a part of last week visiting her cousin, Mrs Thos Patterson.

Blaine Fortune intends moving to Chesley this week, and Ezra Pfohl, who recently purchased the farm, is moving on to it.

Harry Priebe is engaged with Hugh Watt to take out ice.

Mrs Smellie is able to be out again after a seige of lagrippe.

Ezra Pfohl has purchased the fine hay team formerly owned by Henry Ankenman.

The February thaw is here. Next will be the crows and robins.

12th CON. BRUCE

Come to the Red Cross box social at McGillivray's school, March 9th.

Mr Wm Kissack is engaged cutting wood for the neighbors.

Mr and Mrs Harvey Neilly have moved to the 12th. We welcome them to our neighborhood.

Messrs D Beaton, W Howe, A McLeod and A McGillivray are delivering horses to Walkerton this week.

Mr Geo Gibbons gave the young folks a very enjoyable evening last Tuesday before taking departure from their old home here.

A number of young folks from this line took in the carnival on Friday evening and report a good time.

Children Cry
FOR FLETCHER'S
CASTORIA

ORESHAM

The Red Cross box social held in S S No 9, on Thursday evening last, was a grand success. The school, which is one of the largest and best in the county, was crowded to overflowing. The meeting was called to order by the chairman, Mr Geo Brown, and under his able management every detail of the program was carried out successfully. Great credit is due the teacher, Miss Megraw, and the program committee, who trained the pupils and secured the outside talent. Those taking part were: Miss Reta McKinnon of Glamis, Miss Young of the 12th, Miss Jean Fullerton of Paisley, Miss Helen Wittig of Underwood, Messrs Hector McLean of Glamis, Hector McKinnon of the 6th con, Walter McKay, T Brown, M Avis of Underwood, Geo Snowden, W Parker, John Geo Brown. Three dialogues were given by young people of the 4th, 6th and 8th cons, which were a real treat. Auctioneer Pearce sold the boxes, 108 in number, the highest going for $10.75. Miss Rosetta Giesz donated a centrepiece which was sold by ticket, the sum of $13 being realized therefrom. There were people present from Pinkerton, Paisley, Glamis, Underwood and Tiverton. The total proceeds amounted to $177.

TENTH CON BRUCE

The January thaw appears to be about one month behind the times.

Mr Geo Whyte is renewing acquaintances in this neighborhood.

Mr and Mrs Hughie McDonald left for the west last week.

Mrs J Yule has been confined to the house for the past week. At present she is doing nicely.

Mr Neil McDonald is leaving for the west this week, with a consignment of horses.

Quite a number from here attended the box social in Mewhinney's school and report a rousing time.

Mr and Mrs A McDonald visited at Mr W. McLean's, Eden Grove, last week.

GLAMIS

District Elder Allen, of Hamilton, is conducting quarterly meetings here for the Free Methodists.

Mr Chas Graham, who was married two weeks ago, arrived home last week with his bride from Sarnia.

While we have gained one in our village we are about to lose another. Miss Martha Kirktown is to be married to Mr Albert Woods of the west.

Misses Mabel and Alberta Kirktown are home to attend their sister's wedding.

We are sorry that Miss Minnie Howson is keeping quite poorly.

Mr McCauley spent the week end in Williscroft visiting his parents and sister.

Miss Mary Webb spent a few days in Paisley.

The funeral of the late Martin McKinnon was largely attended.

Miss Tessie Patterson is indisposed and under the doctor's care.

Mrs Jas McLennan was in Kincardine on Saturday to see her mother who is poorly.

Mr and Mrs Geo Webb had their silver wedding anniversary on Saturday, Feb 17th. Quite a number of their friends met and had tea and spent a quiet evening with them.

Mr and Mrs J C MacIntyre celebrated the 65th anniversary of their marriage on Feb 26th. Their son, Rev Donald of Toronto, and their granddaughter, Nurse Ethel Oliver of Winnipeg, who is on her way overseas, spent a few days with them. Mr J C MacIntyre is in his 96th year and Mrs MacIntyre in her 90th.

One of our popular young ladies decided to change her name from Miss Annie Currie to Mrs John Groves. The marriage took place at her home on Wednesday, the 21st, Rev M Neilson, of Paisley, officiating. After partaking of the wedding dinner they left, accompanied by a number of friends, for the station, where they took a train for the west, Mrs Groves travelling in a navy blue suit with hat to match. They will make their home at Kerrobert, Sask.

TURNERS

Mrs D McGillivary of Pense, Sask, who with her brother, Mr D. Muir of Yellow Grass, Sask, has been enjoying a fine holiday among old friends in Saugeen, left for their home in the west last week.

Mrs Gilbert Christie was visiting friends at Walkerton and vicinity.

Mr and Mrs J. J. Hillis spent a few days with friends at Hanover.

A number from here took in the party at Mrs Geo Gibbons', 12th of Bruce, last week and all report a good time.

Rev Mr Thynne of Palmerston, preached in St. Andrew's and North Bruce churches on Sunday.

BRUCE TP.

The friends and neighbors of Pte Angus Russell assembled at the home of his grandmother, Mrs. S. Russel, to spend a social evening with him on his last leave before going overseas. Pte. Russell is one of our stalwart young men who have offered to serve King and Country. He was teaching near Windsor at the time he enlisted in the 248th, and went to training in that City. The following address was read by Mr. Jas. Pace; Mr. Hadley presented the wrist watch, and Miss Minnie Schnittker the signet ring:—

To Mr. Angus Russell.—

Dear Friend,—We have met with you to-night to show our appreciation of your action in enlisting in the Volunteer Army which Canada has been raising, to stand shoulder to shoulder with the Motherland in the great crisis through which she and the world's civilization are passing at the present time. For over two and a half years Great Britain and her Allies have been fighting against the mightiest and most unscrupulous military organization the world has ever known. It was the expectation of the enemy that the British Empire would fall to pieces on the advent of war; but nothing has ever happened that has so knit the various sections of our wide-flung Empire together as this war has done. Even the Boers of South Africa, who were fighting against us fifteen years ago, are one with us in our present gigantic struggle and have been persistently and successfully fighting the enemy since the war began. We rejoice in the willingness to sacrifice you have shown in leaving more lucrative employment, and putting yourself at the disposal of our common country, so that the enemy may be overcome, and our liberties preserved. We desire you to accept this wrist watch and signet ring as tokens of our esteem and regard, and we assure you that we shall follow you, wherever you may be sent with our best wishes; and we feel sure that you in common with the others who have gone out from our midst to share in the struggle will show yourself worthy of the stock from which you have sprung. It is our earnest hope that when victory has been achieved—and there is good reason to believe that that will be before the expiry of this year—you may return and take your place among us unscratched from the yoke.

Signed on behalf of friends and neighbors.

Wm. Schnittker,
C. Helwig.

A short programme was rendered consisting of speeches by Arch. McLean and M. Avis, solos by Mrs. S. George and Johnnie Pace; Gaelic song by Arch McLean, instrumental music by W. Avis, recitations by C. Schnittker and Babe McDougall, and a patriotic song by the audience.

The report of the Red Cross Workers of S. S. No. 10 Bruce and Greenock for year ending January, 1917, is as follows: Receipts from section, $228.86; Grants from Bruce Twp Council, $70. Total, $595.58. Expenditures for material for Red Cross work, $382.86. Balance on hand, $213. The Society whipped 163 flannel shirts, 225 pairs socks, 40 pillows, 87 pillow slips, 27 sheets, 26 shirts, 34 Turkish towels, 23 crash wringers, 32 Turkish towelling, face cloths, 58 knit face cloths, 350 mouth wipes, 2 bed pan covers. Mrs. D. McGillivray, President; Miss Flora McDonald, Vice President; Miss Bella McGregor, Treasurer; Mabel Nelson, Secretary.

GLAMIS

Mr. Wilson Carr is working with Mr J. K. McLennan.

Mr. Martin McKinnon, second son of Mr. and Mrs. Donald McKinnon, 10th con. Kincardine, passed away at Kincardine Hospital on Feb 17th, after a few weeks illness. The deceased had been employed in Ford's automobile factory in Detroit during the past year, and his death is attributed to a cold on the lungs, which he contracted at his work. The funeral took place to the Presbyterian Cemetery, under the auspices of the I.O.O.F., of which order deceased was a member. The bereaved family have the sympathy of all in their deep affliction.

More young men from here are enlisting. Earl Percy, eldest son of Mr. and Mrs T. G. Percy, who has been in Alberta, joined the Ambulance Corps. Gordon Smith, who was employed with Jas. Ferris, signed up with the 256th Railway Construction Battalion of Toronto.

Pte. Ed Chapman, of the 256th, was here looking up recruits and bidding good-bye to his friends.

Miss Bertha McGregor, who was visiting friends on the 6th, has returned to her home at Sedgwick, Alta.

Miss Isabell Carr, of Port Elgin, is visiting on the 14th con. Greenock.

Mrs. Angus McLean has returned home from Southampton.

Mr. and Mrs. Herb Fisher have returned to their home at Didsbury, Alta.

The late Kenneth McLennan, whose death was referred to in a former issue, was born in Scotland in May 1837, and when a year old came with his parents to Prince Edward Island, where they remained for 15 years. In 1852 he came to Bruce County where he took up farming. For a number of years he taught school in Bruce and Kincardine boundary school, Kinloss and Bruce Mines. In 1867 he was married to Ann Campbell. He then settled on his farm, lot 32, con. 12, Kincardine Township, one mile west of Glamis, where he resided ever since. He leaves to mourn his demise a loving wife, two sons, John K., residing near his parents; Duncan, at home; two daughters, Mrs. Wood of Superior, Wis., and Miss Margaret at home. Besides these, two brothers, Rev. Donald of Walkerton, and James, Boundary West Glamis, and four sisters who reside in the States.

GRAIN MUCH BETTER FILLED

H. RICHARD, Dorchester, Ontario, says:

"I used Homestead Bone Black Fertilizer on four acres of oats last Spring with very good results. The field consisted of ten acres of sod, half of which had been manured the previous year, while in meadow, and was applied the fertilizer 200 pounds to the acre to the balance of the field. The growing crop showed much better growth all through the season where the fertilizer was used than where it had been manured, and at the time of cutting the grain seemed much better filled."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

CASTORIA

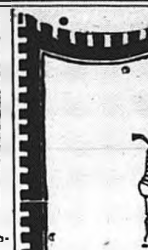
Notice to Creditors

In the matter of the estate of Adam McGill, late of the Village of Paisley, in the County of Bruce, implement agent, deceased.

NOTICE is hereby given pursuant to the Revised Statutes of Ontario 1914, chapter 121, section 56, and amending acts, that all creditors and others having claims or demands against the estate of the above named Adam McGill, deceased, who died on or about the 19th day of June, 1916, are required to send by post prepaid, or to deliver to the undersigned Solicitor for the Administrator of the estate of the said deceased, on or before the 20th day of March, 1917, their names and addresses and full particulars of their claims, duly verified, and the nature of the securities, if any, held by them.

And further take notice that after the 20th day of March, 1917, the said Administrator will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which he shall then have received notice, and that he will not be liable for the said assets or any part thereof, to any person or persons of whose claims he will not then have received notice.

Dated at Paisley, this 13th day of Feb., 1917.



D. FORRESTER,
Paisley, Ontario,
Solicitor for said Executors.

E. L. McGILL, Administrator, Galt, Ont.

WALKERTON

At a meeting of the officers of the old 32nd Bruce regiment held in the Armories at Walkerton on Friday evening last, a resolution was adopted and sent to Ottawa, requesting that in view of the 160th Battalion going in the trenches as a unit that a recruiting scheme be started at once in this county to enlist troops as a reinforcement for this unit. The idea is to conduct the proposed campaign in Bruce under the auspices of the 32nd Regiment, and to aim at raising and training drafts of 250 men to supply the wastage in the Bruce Battalion that the war is sure to make after the 160th get into action. By this means the Battalion would be kept up to full strength at the front, otherwise the 160th would run chances of petering out in time and would lose its identity as a unit and would be absorbed in other regiments Walkerton would, no doubt, be the headquarters of the proposed recruiting scheme, and the town would shortly assume a military aspect again. Those present at the meeting and who had a hand in adopting what promises to be a historic petition were: Major Thos. Hay, Commanding officer of the 32nd Regiment and Lieut. Eckel of Paisley; Capt. O. E. Klein, Major Henderson and Lieut. Harold Patterson of Walkerton; Capt. Langford of Port Elgin and Lieut. Gillies and Lieut. Nichol of Chesley. As soon as authority is received the recruiting campaign will open here.

Inspector James C. Mitchell of Chief Commissioner Sherwood's office, Ottawa, was in Walkerton on Friday last interviewing Mr. John Rowland regarding the disloyal statements, which Alex Stewart, a wealthy farmer of Minto Tp., was reported to have made to Mr. Rowland in Harriston recently. According to the story, Stewart, in conversation, described our soldiers as a lot of bums and loafers living on the country, and concluded a rank, disloyal talk by dubbing the English troops as no good. On being interviewed, however, on Saturday by Inspector Mitchell, who went from here to Harriston, and, along with Constable Johnston of that town, drove out to Stewart's farm, the accused farmer at first tried to persuade the officer that he was only joking with Rowland, and later disclaimed making any such statements at all. As a third party, who was present when the disloyal spiel was made in Harriston, corroborated Mr. Rowland in his version of the affair, the farmer would seem to have been caught proper, for after the visit of the officers he hiked to a prominent citizen of Harriston and in a badly scared state confessed, it is claimed, to the entire affair and after expressing sorrow for the sins of his tongue, asked the citizen to try and get the Inspector to excuse the offence and, as it were, call off the chase. But as disloyal utterances during wartime are a serious affair, and in some countries instant death, it is hard to foretell how the Harriston episode will terminate.—Herald and Times.

What's the Use of Missing So Much Pleasure that you Could Have ?

YES, you can live without music and brightness and happiness and friends. But why should you, when these things cost so little and mean so much ?

Lots of people, who said they "could do without an Edison Phonograph" before they owned one, now say they "could not do without it"—it has brought so much pleasure into their lives.

The appeal of the New Edison is universal. To those who love good music—to those who enjoy most the old airs—to those who prefer instrumental music—to the younger set and even to the children—the New Edison is a daily source of pleasure and recreation.

Great singers—famous actors and entertainers—bands, orchestras and instrumentalists—are ready to entertain you when you will.

And the prices for Edison Phonographs and Edison Records are so moderate—the variety is so great—that there can be no question as to our ability to suit you. What's the use of missing so much pleasure ? Get

The People's Popular Store

Spring Goods Are Now Arriving

We have during the last week received and placed in stock a fine range of Spring Goods, and particularly so in the Ladies' Department. We are showing a beautiful range of

Dress Materials

As there is a marked tendency for silk this season we have received a nice selection of the most popular lines such as Taffeta, Paillette and Crepe de Chene. Of these we have a good range of colors and good heavy quality. In other dress materials we have also a splendid range of Serges, Voiles, Foulards, Viyellas, Zephyrs, Chambrays and Ginghams in all the leading colors, and all of which, in spite of the big advance in the price of goods, we are offering at prices that should appeal favorably to our customers.

New Prints

We are offering a large assortment of Prints in light and dark colors at 12½c and 15c a yard, also a line of Percale 36 in. wide at 20c a yard.

We Have Still a few lines of Winter Goods

Which must be cleared during the next ten days at slaughtering prices, as below:

1 only, Set Ladies' Sable Furs, reg $57.00 for $39.50.
1 only, Set Black Fox Furs, reg $70.00 for $43.00.
A few Ladies' Winter Coats at half price.
A few Bed Comforters, reg $3.50 for $2.39.
5 Men's Heavy Overcoats, reg $20.00 for $15.49.
6 Men's Heavy Overcoats, reg $15.00 for $9.98.
A few pairs Men's Overshoes, reg $1.85 for $1.39.
A few pairs Men's Heavy Rubbers, 12 in. top, clearing at $1.89.
Men's Heavy Wool Underwear, reg $3.00 for $2.49 a suit.
Men's Heavy Wool Shirts and Drawers, reg $1.00 for 69c.

Our Millinery Rooms are well stocked with the newest styles in Ladies' Hats for spring and summer, and our milliners are busy preparing for the Spring Opening.

Our Grocery Stock is always fresh and replenished every week with new goods. Try our Black or Green Tea of which we make a specialty - 3 lbs. for $1.00.

Rush out your Butter and Eggs often, as the mild weather is sure to cause a drop in price. We will always give you full value for your produce.

An Open Letter

Economize! Economize!

Mr and Mrs Jacob Richer,
1094 Broadway Ave., Paisley, Ont.

DEAR FRIENDS—Your presence is requested at our humble home, 72 Anne St, next Sunday, March 11th, 1917. Dinner served at 1 p. m.

Mr and Mrs John Commenwealth

Mrs Commoncwealth begins to wonder, "What shall I have for dinner? Mr and Mrs Richer have been so kind to us. They were such a great help in our last sickness, and I must have a real good dinner for them. I will try to be as economical as possible, as everything is so dear to buy. I will get a few potatoes, a small roast of pork. A half pound of onions will be enough for the gravy. What kind of vegetables shall I get—parsnips, beets, cabbage, turnips, beans, but these are so hard to get. Probably I will be able to get a small head of cabbage for 8 or 10 cents. I will not need any eggs. I can settle up a few scouts or tea biscuits without any eggs. Then what shall I have for dessert? I have a few of those spy apples left and I will have apple pie and get some of that rich smooth ice cream from MacLachlan's. It is always so good. I must not forget to order my bread from the baker. That bread is so desperately dear. They charge 8c for one of those small loaves. It almost seems robbery on the baker's part. Let me think what this dinner will cost. Half a loaf of bread will be 4c; 4c worth of potatoes will never do; 4c worth of cabbage would not be a taste for each one of us. I imagine me going to the butcher shop and ordering 8c worth of pork to be nice, and me cutting it in half and roasting it. There would not be enough to make a grease spot on the frying pan. And 4c worth of onions—we can't get onions at any price. Would I dare put 4c worth of butter on a butter dish? It would be shameful. Even if I wanted to buy eggs all I would get for 4c would be less than 1½ eggs, and how would 4c worth of those homemade pickles look on a dish? It would never do. Now let me see—4c worth of pie and 4c worth of ice cream—it is ridiculous to think of it. Dear, oh dear, why do people talk about the high price of bread and the baker such a robber. They say if his loaves are found to be half an ounce under weight he is fined, and not one of the other business houses are bothered. How easy it is for the bread to dry out in the oven or by standing over night. The law must be ridiculous and unreasonable. Well, I have found out that bread is the cheapest article I can buy. Comparing it with other foods it should be 10 or 12 cents a loaf."

Fellow customer and our friend, the critic, can you not see the point? We are working the hardest, the longest hours and producing the cheapest article of food made in Canada, and we sometimes think we get the most abuse.

Yours for fair dealing,

F. S. MacLACHLAN, the Local Baker

—Mayor Johnston, of Walkerton, has been appointed issuer of Auto Licenses for Bruce County under the new provincial scheme. There are nearly a thousand auto owners in Bruce, it is estimated, and everybody who wants to drive a car will have to apply to Andy. The new official is paid by a commission of twenty-five cents on each license issued.

Must Not Shoot Muskrats

Ordinarily the open season for muskrats begins March 1st. This season, however, there is to be no open season for shooting these rats, though they may be trapped from March 1st to April 21st. The game laws warn fur dealers of heavy penalties for buying shot skins, and the hunters will likewise be prosecuted.

38 Tons of Honey

Mr A E Jones, of 10th Bruce, is one of the most extensive and successful bee-keepers in this section. Last season he had a bumper crop from 140 colonies. Mr Jones informs The Advocate that he and four other beekeepers of Bruce and Saugeen—Messrs Jos Seiffert, H McCulloch and John Schrenk—had in all 38 tons of honey from 1916 yield, and every can of this has been disposed of at good prices. The season was an exceptionally favorable one, both as to profusion of bloom and weather conditions under which the nectar-gathering insects could carry on their work. The result is that the intelligent and experienced apiarist received a rich return for his labors.

—Private funds and loans on farm property. T H George.

—TO RENT—House on Goldie St. J. C. Gibson.

—FOR SALE—New six-roomed brick house. J N Collins.

—Marriage licenses issued and money to loan. T. H. GEORGE.

—Marmalade oranges now on hand. Ballachey, Laidlaw & Co.

—Plates for Fleury Grinders, also Iron Pumps and repairs. J A Elwes.

—WANTED—A situation as housekeeper. Mrs Ann Park, Chesley P.O., Ont.

—Full lines of fine engagement and wedding rings at J. Shoemaker's jewellery store

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—We have a fine stock of Shoes—all kinds. Let us fit your feet. Ballachey, Laidlaw & Co.

—Parties requiring repairs for the Mellotte cream separator may obtain them at Fisher's flour Mill.

—FOR SALE—5 head young cattle rising 2 years, and 1 horse rising 4 years. H. McMorran, Paisley, P. O.

—Highest price for beefhides, horse hides, calfskins, sheepskins, tallow, &c. P. OLTSHER, Paisley Meat Market.

—FOR SALE—Two Shorthorn bulls, 13 months old, also a few females. J. Scott, Port Elgin, R. R. No. 1, Bruce 'phone.

—All makes of pianos, organs and sewing machines, also small musical instruments. P McKinnon, agent, Paisley.

—FOR SALE—New two-storied stucco house. Bath, furnace, good spring well, in good location. Will be sold at cost. Robt Irving.

—A few Ladies' Suits, not new stock, which must go. The cloth is worth four times the price. Each $3.75. Ballachey, Laidlaw & Co.

—FOR SALE — A quantity of Timothy seed, Canadian Variegated Alfalfa seed, and O. A. C. No. 21 barley. Apply Miller, Elora road north.

—Auction sale of farm stock and implements on lot 29, con 11, Bruce, on Monday, March 12th. Arch Sinclair, prop; R. C. Pearce, auct.

—Auction sale of farm stock and implements, on lot 28, con 6, Bruce Tp., on Tuesday, March 13th. Jos C. Shipley, prop; R. C. Pearce, auct.

—Auction sale of farm stock and implements, on lot 27, con. 6, Bruce, on Wednesday, March 14th. John Metcalfe, prop; R. C. Pearce, auct.

—All persons indebted to the estate of the late Adam McGill are requested to settle their accounts not later than March 8th next. D FORRESTER.

—E Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationary and school supplies. Agent for daily papers and magazines. Give us a call.

—Red Cross Box Social at McGillivray's school, No. 15 Bruce on March 9th. Best programme being prepared. Admission 25cts. Ladies with boxes free. Mr J. Johnson, Reeve of Bruce, will occupy the chair.

—Five Roses, Rainbow, Purity, Cream of the West, and Stark's high-grade flours, also Bran and Shorts. Blatchford's Sugar and Flax, Caldwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. R. G. ECKEL.

—Skating carnival in Paisley rink on Friday, March 16th. Watch for the prize list.

—Mr Caleb Crawford was in Toronto last week, at the United Farmers' Convention.

—Miss Zeta Rushton, who has been in the west for some time, has returned to her home, 12th Elderslie.

—Rev J R Crighton, Dr Allen and Mr J H Fleming are attending the prohibition convention in Toronto this week.

—Mr Lawson Poole, of Shellot, Sask, who has been visiting his uncle, Mr Jos H Poole, Elderslie, has returned to the west.

—Messrs Isaac and Robert Miller, of Monroe, Wisconsin, are here on a visit to their sister, Mrs Wm Beech, and brothers Albert and Jake in Saugeen. The visitors are former residents of Saugeen, who went west about 20 years ago.

—The annual consignment sale of the Bruce Pure Stock Breeders' Association which was to have been held in Walkerton on March 8th, has been called off, the Hon. Duncan Marshall, Minister of Agriculture for Alberta, having visited Bruce recently and bought up about all the show ring cattle that were to be exhibited.

Why the Darkness

Owing to a burn-out in the generator at the power house, the north end of the village has been in darkness for a few nights. Repairs will be made in a few days.

—BARGAIN PRICES — Balance of stock at cost. A McGill's agency, including litter carrier, hay fork cast, sheaf lifters, plow shares and other articles.

—Our millinery department is once more in operation under Miss Kerr, who was with us last year. All the newest ideas from London and Detroit. Ballachey, Laidlaw & Co.

—FOR SALE—Buckeye traction ditching machine, runs either gasoline or common coal oil. Only used about four months. As good as new, will sell cheap on account of illness. D. Phillips, Chesley, Ontario

St. Patrick's Tea

There will be a St Patrick's tea on March 15th, at W C Weinmeister's, 12th Bruce, under the auspices of the Red Cross of No 14, Bruce. Tea served from 6.30 to 8.30.

Sale of Cut Flowers

Special low prices on Carnations, Violets, Peerless Tulips, Daffodils, etc., also choice supply of Lettuce at 25c a bunch—Saturday next. H M Nuttall, Florist, phone 18, Walkerton.

Red Cross Benefit

On Friday, March 9th, Mr and Mrs Ballachey will open their home, "The Maples," for a Red Cross benefit. Refreshments will be served from 3 to 10.30 on the tea-room plan. Full meals, if desired, will be served from 5.30 to 7. Home-made taffy and candy will be on sale. Men, bring your wives, families and friends, and enjoy refreshments and a social hour. Boys and girls do your part for the Red Cross and the soldiers at the front by calling around for refreshments and a good time. Skaters come after the rink closes. Country friends of the Red Cross, please don't forget this event. Remember, every dollar of the gross proceeds will go to the Red Cross Society. Everybody come. Everybody heartily welcome.

WAR!

Other nations are joining our Allies, and and so sure as our Allies are bound to win, so sure is the ORDERED suit going to win against the FACTORY ones.

We have been fortunate in securing a fine line of patterns, which we can guarantee for color, and of all-wool materials.

Come in and look them over before buying. Prices right with quality of goods.

Campaigning Against the Household Pests!

THE time for the Spring Campaign approaches. Soon the double windows will be off and the sun will be warm and bright. You will be thinking of cleaning them. After the long months that the house has been closed it will need it, no matter how good a housekeeper you may be.

See that you have your ammunition ready. Be prepared for the big spring drive against the moth and the germ.

Here is the ammunition to help you to success. Lay in your supply now.

Powdered Ammonia

Softens the water and eases the work of rubbing the floors and furniture. Ideal and Handy brands. **10c per Package.**

Liquid Ammonia

Some prefer the ammonia in liquid form. Simply moisten the cleaning rag with it and it is ready for use. A good sized bottle for **10c.**

Lye

Another fine disinfectant is Lye. There are few houses that do not keep a plentiful supply on hand. It will take out grease and other dirt from the floors as quickly and easily as anything. Per tin, **15c.**

Soaps

Of course you will not attempt housecleaning without a good supply of soap. It is ever reliable. **5c** per bar.

Metal Polish

For shining up the brass knobs on the buffet and other furniture a good metal polish is necessary. **10c** per can.

Brooms and Brushes

Did you ever think how much time could be saved the year round by brushes that get behind and under the stove and radiators and between the strokes of the broom? Why not make your work lighter? A full supply of these to choose from.

Sink and Bath Cleanser

You know how hard it is to get the dirt cleaned off the sides of the sink and bath tubs. **Old Dutch** is a powder which does the work with the least amount of rubbing. Per can, **10c.**

BUTTER, 33c | EGGS, 40c

—Mr Alexander Russell, of 14th con Greenock, has sold his 50 acre farm to Wm Field of the same concession.

—Messrs J S Dewar and P McKinnon have bought the McGill shop buildings on Queen St.

PRACTICAL FARMING

A Few Words About Hogs.

There is no kind of live stock, we believe, so much affected by panicky conditions as are hogs. It is evident that fewer swine than usual will be fed this winter and fewer sows will be bred to farrow in the spring. There can be no doubt regarding the price of pork next spring and summer. It has been pretty well proven by investigation and practical farmers that a pound of gain can be accomplished with about four pounds of meal. In many cases a pound of gain can be accomplished with less, but, under average conditions, we are safe in saying that four pounds of millfeeds or chop will produce a pound of pork. This being true, it appears that even with the present price of feed, hogs can still be fed at a fair margin, when the farmer does not put too much value on his labor. If prices are as attractive next summer, as conditions indicate they may be, it is likely that the man who feeds hogs this winter may receive a good average return for his efforts.

Some farmers make a practice of wintering young pigs without making any attempt to finish them for spring delivery. They prefer to let them run a while on the grass and finish them in warm weather. It appears that cheaper gains result under summer conditions than in winter. It may be that many farmers with lighter stores than usual should carry their young pigs through the winter in a thrifty, growing condition, and then turn them to grass in the spring until the wheat is threshed if need be. They could then be finished off at weights averaging around 200 pounds, at moderate cost. Farmers should give this matter some consideration for it is poor policy to follow the crowd at a time like this.—Farmer's Advocate.

Winter Work.

One of the farmers' most troublesome problems is the equalization of labor throughout the year. Among the suggestions for winter work are the following: Repair each piece of farm machinery, make tools and do other carpenter and repair work, oil and repair harness, haul manure, sharpen all tools, sharpen mower sickles, sharpen post for fences, prune orchard and other trees, clean seed, repair buildings (particularly inside work), and market grain and hay. Where cows freshen in the fall, the larger care in milking them and caring for their calves comes during the winter months.—Farm and Dairy.

The Ice Harvest.

During February, the ice crop is at its best in the greater part of Canada. The farmer should utilize his spare time to secure a supply of ice for use during the summer months. With the advent of hot weather, regrets at the lack of ice to cool beverages and to preserve food will be, are often, heard. Action at the present time will result in much comfort and pleasure next summer.

POULTRY

Turkey Culture

Turkeys can not be raised like other fowls, nor by any set rule. Nature plays too important a part in the life of the young to expect any definite results. Turkey raising is a study, and a most fascinating one at that.

Patience of the rarest kind is absolutely necessary, and the industry can not be relied upon as an exclusive affair, for there are too many risks to be taken; but as a side issue, under proper conditions, it is profitable and interesting.

An ideal location is a farm of about fifty acres or more, high ground, partly wooded with pine, oak and chestnut trees, with an abundance of fair grazing land, and watered and drained by a brook or two.

Feed a good quality of oats, and when very cold weather sets in add whole corn well seasoned. About the first of March cut out the corn, and feed lightly on oats and soft feed exclusively. Have ground oyster-shell and charcoal within reach.

Turkeys must never be yarded with other fowls, as they don't agree, and the latter are apt to cause disease in the flock.

If kindly treated during the winter, turkeys are not so apt to wander very far away from home to lay their eggs. They seek their own nests in the under-brush or on the edge of the woods. It requires watchfulness and patience to locate the nests. Cautiously follow the turkey as she is about to lay. Keep an eye on her, and soon the victory will be won. Leave a nest egg in each nest.

Before the breeding season starts it is best to get rid of all young males, keeping over the hen turkeys that raised the most young the year before. Mate them up to last years mate another year. Every other year a new male should be added, so as to keep new blood circulating always. The best hen turkeys should be kept as long as they are profitable; about five years, however, is the limit.

Grow plenty of corn, potatoes, melons, squash, oats, rye,—anything to keep the turkeys contented during the summer and fall months. They won't then care to wander off in search of a neighbor's cabbages and turnips, of which they are very fond. They will clean up anything that may be on the home place, unless fenced in with four-foot poultry netting. The cornfield affords a dusting place during the summer, and a good place to forage in the fall.

Selecting Hens By "Lay Bone" Test

An expert says in speaking of the "Lay Bone Test": "It is no secret, but is nature's method of preparing the hen's body for reproduction. Just below the hen's tail at the end of the bone commonly called the backbone are two projections of a bony composition. They are called the 'pelvic or laying bones.' When the hen is not laying or nature is not preparing her body for egg laying, these bones are very stiff and so close that a finger can scarcely be placed between them. When the hen is laying or nature is preparing her body for the deposit of eggs these bones are two or three finger-widths apart. If this test is carefully studied it will be found very profitable and practical. The hens that produce many eggs during the Winter months should be kept for the breeding pens another year. In this way a strain of fowls may be produced that will be great Winter layers."

Neap to Her.

A travelling man one night found himself obliged to remain in a small town on account of a washout on the railroad caused by the heavy rain, which was still coming down in torrents. The travelling man turned to the waitress with:

"This certainly looks like the flood."

"The what?"

"The flood. You've read about the flood, and the ark landing on Mount Ararat, surely."

"Gee! Mister," she returned, "I ain't seen a paper for three days."

Unnecessary.

The town council of a small Scotch community met to inspect a site for a new hall. They assembled at a chapel, and as it was a warm day a member suggested that they should leave their coats there.

"Some one can stay behind and watch them," suggested another.

"What for?" demanded a third. "If we are all going out together, what need is there for anyone to watch the clothes?"

NEW ZEALANDERS' HEROISM DESCRIBED

INSTANCES OF BRAVERY OF MEDICAL CORPS AT COMME.

Malcolm Ross, War Correspondent, Tells of Work of Doctors and Army Nurses.

An interesting article written by Malcolm Ross, war correspondent with the New Zealand forces, and dealing with the work of the New Zealand Medical Corps on the Somme, has been issued by Sir Thomas Mackenzie, High Commissioner for New Zealand in England. The following are extracts:

"No account of the fighting on the Somme would be complete without reference to the splendid work done by the New Zealand Medical Corps. It was on September 13 that the corps took over from the English division that our troops relieved. In a German dugout at a place known to us as Flat Iron Copse the advance dressing station was established. It was all the time under shell fire. Two of the orderlies were killed on the first afternoon. Several bearers were killed in the vicinity of Thistle Alley, another station. Others were wounded. One night both doctors and men worked for hours in their gas helmets, and that is not an easy job.

Battle Was Raging Near By.

"Two thousand yards away was Flers, about which the battle raged for some time. From there the bearers had to carry uphill over sodden ground through a fairly heavy barrage of 5-9 high explosives and shrapnel. It was a long and difficult job, but rain or shine they never ceased their efforts. In many cases it took six bearers five hours to bring a wounded man from the relay post 500 yards south of Flers. A medical officer and twelve men were sent out there. The post was no sinecure. There it was that Major Martin and Capt. Boyle were killed. They were splendid fellows and very brave.

"During the whole of the first week the Germans kept up their barrage, with a view to preventing transport and troops getting up to Flers, but during the whole of the fighting not a single man ever hesitated to go forward when required.

Worked Without Sleep or Food.

"Some of the bearers worked for forty-eight hours, some for seventy-two, without sleep and with little food. One who brought a wounded man right down to Flat Iron Copse was at the finish almost worse than his patient. Another bearer was wounded, but went on carrying in other wounded till wounded a second time. He was shot in the leg. Later he was shot in the arm, but even then he picked up his stretcher and wanted to carry on, and would have done so were it not for the fact that a doctor had ordered him away. He now proudly wears the ribband of the military medal.

"Owing to the casualties in the New Zealand Medical Corps, orders were given by the army corps that regimental officers and other officers and bearers were to go out only at night. So far as I could see, there was no very laudable intention of carrying out that order.

"The New Zealanders saved their consciences by counting night as day. In this way they got one long night of twenty-four hours. In other words, they went night through, night and day; many instances of bravery and untiring devotion to duty in the big event might be given.

Worked 20 Hours at a Stretch.

"There were men who day and night went out under shell and machine gun fire, time and again, and at great risk of their own lives saved the lives of many wounded who otherwise would have died or been killed. Some of them worked continuously collecting wounded under fire for twenty hours at a stretch. But there is no need to multiply instances. Our stretcher bearers earned undying fame in Gallipoli. The Somme enhanced the lustre of their laurels.

"The work of the doctors from beginning to end was magnificent. They do not say much about it themselves, but those of us who saw something of it can estimate it at its true value, and the estimate is a very high one.

"At all the advanced dressing stations and aid posts they were under fire, but they stuck to their work day and night, with a heroism worthy of the best traditions of British doctors. Three out of our small band lost their lives on the Somme."

GOD AND HIS WORLD.

The Mystery of Human Suffering Solved by Life of Service.

How can there be a God of goodness and mercy and love when the world is full of agony? If He is all-powerful and all-loving, how can He let such things be? It is the question of tortured souls of every generation—never, perhaps, asked by so many hearts as during the past two years. Is there an answer? Does He prove Himself to men, or is He only a dream of the weak and credulous? Science cannot answer the question, for God is not measurable by mechanical devices but by human experience.

A certain man had become totally deaf and, in rebellion at his misfortune, had lost his faith. Looking at the world through the lens of his own bitterness, he saw only cruelty and injustice. After a while he learned by reading. It gave him back much of what he had lost, but did not soften his bitterness. He was still angry with the God in whom he did not believe.

One evening, sitting at his window, he saw a man and a woman in the little park in front of his house. Something in their attitude betrayed their misery. He got his glass and "listened"; he could read their words clearly. They had come to the end of their resources, and were saying that the only thing they seemed to be left was to end it all. A fierce anger swept the watching man.

"That," he cried, "is a specimen of God's administration! I can do better than that, at least. I'll take care of those poor wretches myself."

He sent for them and had a long talk with them. As a result of the talk he put the young woman into a school where she could learn to earn her own living and he found a position for the man. The experiment turned out so well that he began to search for other people to help, and still others. His life became very rich and full.

One day he began to think back. The trail led to his own deafness, which had been the direct means of his discovering the first two whom he had helped. Every step of the way was clear; the God he had denied had led him all the way. When he began to do God's work he knew that God was!

It is the proof that never fails. No man or woman can honestly try to live the life of love and service that Jesus Christ asks of His followers and not know that God is—that He is caring for His world to-day exactly as much as He did two thousand years ago, and that the reason there is still such endless pain and sorrow in His world is because there are still so few among the millions of earth who yield themselves to work with Him.

Mexico's Shape.

In shape Mexico is like an enormous cornucopia, with its opening towards the United States.

You will be surprised to find how much good there is in the world if you will only take notice.

The AUTOMOBILE

Cold-Weather Hints.

When you enter your garage on a zero morning, jump into the front seat of your car, almost exhaust the storage battery cranking the engine, and dislocate your vocabulary vainly trying to get a "fire" out of the engine, doesn't the easy starting problem strike you as being a logical one for you to study?

While the real fault may not be yours, you are as much to blame as the gasoline, the carburetor, the ignition, or what not, because you can, if you understand a little about these things, and all your cold weather starting problems, writes an expert motorist. The principal cause of hard starting is the quality of the fuel, and when you buy gasoline for your motor you accept it with all its limitations, and in self-defence you ought to know what those limitations are.

The whole subject of hard starting can be forgotten if the automobile owner will do one of three or four things, or all of them. The present grade of gasoline you are buying might be renamed "hard-starting gasoline," for it is such. Absolutely certain starting, 100 per cent. success, a fire each time (provided there is a spark), even if the thermometer shows 50 below zero, can be had if the engine is primed with 76 degree gasoline. As an alternative petroleum ether may be used as the priming fluid. Either of these substances may be obtained from a first-class oil dealer, or surely from the oil refiner, who usually has branches in the larger cities. The priming may be done in the regular way or by means of a dash priming outfit. There is no doubt about the action of these liquids being certain at low temperatures. The writer has repeatedly tried priming in this way, and each time the engine fired as soon as it was turned over two or three times.

A dash primer for using petroleum ether or the grade of gasoline mentioned, consists of an air-tight tank of about one quart capacity fastened to the dash under the hood; a pipe leading from this tank to the inlet manifold, and another pipe from the tank to a control or a pump on the dash within easy reach of the driver. Outfits such as these may be purchased.

In those cars fitted with acetylene tanks for lighting, it can be arranged so that acetylene can be used for priming. The concern supplying the tank is in a position to supply the necessary attachments for using acetylene in this way.

If one does not wish to use the substances named, although there seems no sane reason why he should not, there are others, but of far less efficacy. The old-fashioned method of draining the radiator and refilling with hot water brings results, but it cannot be used unless one is in the home garage, or near some place where hot water can be obtained. Thus it has restricted use. The application of heat to the inlet manifold or to the fuel in the carburetor bowl will bring results, but the difficulty lies in getting sufficient heat to these parts.

The gasoline you now are having has a high initial boiling point as compared with petroleum ether or 76 degree gasoline, and that is why it is so hard to get quick initial firing on a cold day.

A THEOLOGIAN'S REVENGE.

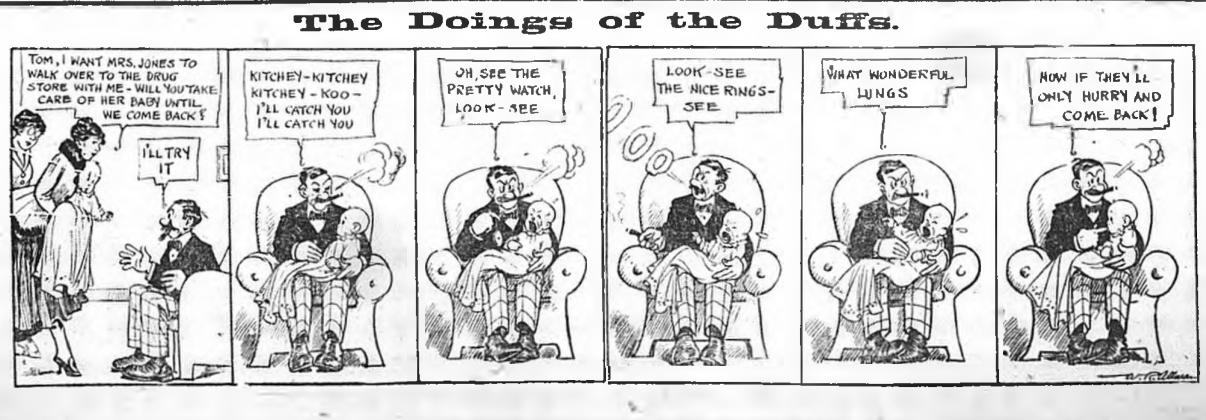
How a Russian Student Got Even With His Teacher.

Thirty years ago, Alexander Schmidt was dean of the university at Dorpat in the Russian province of Livonia. "The Bloodsmith," as the students called him because of his researches concerning the circulation of the blood, was noted for the severity of his diagnoses. An amusing incident is told of him by an army chaplain in the Zeitung der 30. Armee.

A certain theological student once wanted to get leave from the university to attend his sister's wedding. The dean refused the necessary permission on the ground that the reason was too trivial. The student was greatly offended both because he wanted to go to the wedding and because he suspected that Doctor Schmidt had not believed that his excuse was a true one. Accordingly he was determined to get some kind of revenge.

It chanced that on the day after the affair he was reading St. Paul's second letter to Timothy, when he suddenly saw a very clever way to get satisfaction. Laying down the Bible he wrote to the Dorpat newspaper and ordered an advertisement inserted in large type that said simply, "2 Tim. iv, 14-18a." Every reader of the paper, surprised by that line, reached for his Bible and looked up the verses. Imagine the amusement of the university students when they found that the passage was, "Alexander the coppersmith did me much evil: the Lord reward him according to his works of whom he thou ware also."

Build Ship in Month.



The new British Minister of Shipping, Sir Joseph Mackay, is expected shortly to outline his programme in connection with the construction of merchant ships. Already contracts have been placed for several vessels, and others will be given out as fast as arrangements can be made. In the United States and Japan standard ships have recently been built in about four months. One British shipyard expects to cut the time of construction to about three months, while another concern has agreed to deliver fifteen standard steamers in a year.

To The Doctor

"Um. Yes. Ah!" remarked the medico in his best bedside manner to his patient as they stood in the consulting room. "I'll give you the following prescription," and he [illegible] him three small packages.

"A powder for my liver," he said aloud; "a pellet for my liver," he continued; "and a capsule for my gouty foot." Then he stopped and pondered deeply for a moment. "I say, doctor," he queried, "how'll the little beggars know the right place to go when they get inside?"

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—W. W. M.:—Is there any quantity of spring wheat grown in Kent and Essex Counties? Would you advise planting spring wheat in Kent County on a good clay loam soil, tiled 8 rods apart, 4 in. tile? When should it be planted so that it will be sure to ripen?

Answer:—Spring wheat has been successfully grown in both Kent and Essex counties. In 1911 Kent County was growing 1,018 acres while in 1914 there were only 182. In 1911 Essex County was growing 1,345 acres and in 1914 there were reported only 177 acres. From a study of the climatic conditions, both the range of temperature and the rainfall, I see no reason why spring wheat cannot be successfully grown in these counties, if proper precautions are taken.

According to investigations at Ontario Agricultural College, spring wheat should be seeded as early as the ground can be worked. I note that your ground is clay loam and is well supplied with tile. This ground should not be worked while it is sticky, nor should it be left unworked until it plows up into a rough seed-bed. In order to insure a good stand of wheat, you would do well to apply 200 to 300 pounds of a fertilizer carrying from 2 to 3% ammonia and 8 to 10% available phosphoric acid. The ammonia will give the young crop a good, vigorous start, while the available phosphoric acid will hasten its ripening. At a recent meeting of the Ontario Experimental Union, Prof. Zavitz strongly recommended the use of Marquis wheat. If this is sown at the rate of one and a half bushels per acre on well prepared land, there is good reason to expect a profitable return.

Question—S. R. P.:—I had a bad case of smut in my wheat last summer. What treatment will make it safe to use as seed next spring?

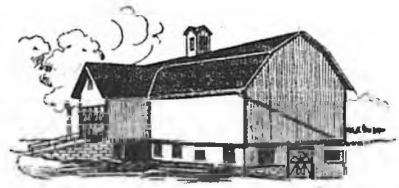
Answer:—The disease in your wheat last summer may have been either the loose smut or the stinking smut or Bunt. About the only cure for the loose smut is careful selection of seed from grain which is healthy, followed by soaking the seed for 4 hours in cold water and then 10 minutes in water at 130 degrees Fahrenheit. But it is most likely that the disease in your crop was stinking smut or Bunt. This attacks the young wheat seedling and the seeding parts or spores are carried in sacs which take the place of the wheat kernels. Experimental tests show that the best method of killing Bunt or stinking smut is to immerse the seed 20 minutes in a mixture of 2½ gallons of water to one-half pound of formalin. There are other treatments, but this is one of the handiest and most effective, as formalin can easily be purchased at any drug store. Some farmers prefer to sprinkle the mixture of water and formalin on the wheat and to cover the wheat-pile with bags over night, so that the formic acid gas, which is dissolved in the mixture of water and formalin, will be kept in around the wheat as long as possible. It is this gas which kills the tiny smut spores.

Question—K. G.:—We had 10 acres of alfalfa which we cut three times last summer. Am afraid it went into winter rather weak. I have a good supply of manure. Would you advise manuring this field? Would you advise liming it? If so, when?

Answer:—If alfalfa has gone into the winter in weak shape it should be given good care early in the spring, if its vigor is to be revived and a good crop is to be produced. If you have some fairly well rotted manure, I would advise spreading at least ten to fifteen tons of this to the acre on the alfalfa field. I would also advise applying from one to two tons per acre of finely ground limestone, evenly distributed over the field. When the ground is quite in the spring and the alfalfa has gotten a good start, it will greatly help it to top-dress the alfalfa with about 250 to 400 pounds per acre of acid phosphate or bone meal. The late Joe Wing, the great American alfalfa authority, said:

"The phosphorus generally stimulates the little alfalfa plants and makes them hustle to get ahead of the weeds and grass. On Westland Farm we have used raw bone meal and acid phosphate with about equal results, as far as the eye could see. It is our practice to put on 250 to 400 pounds per acre of 50% acid phosphate when the alfalfa is sown on soils well filled with lime. Acid phosphate is about the most soluble of the phosphatic fertilizers and thus is best for top-dressing when there is abundant lime in the soil."

On our farm we give the alfalfa meadows a heavy dressing of phosphorus (phosphoric acid), and this practice pays well."



If the alfalfa field is fairly heavy soil and it appears to be pretty closely compacted, it would greatly help the alfalfa to work the field by harrowing with the teeth of the harrow turned back so as not to tear the plants out. This also would stir up a soil mulch and help retain the moisture that is so necessary to big crops.

ROOFING FARM BUILDINGS

The Cedar Shingle, Standby of a Past Generation, Giving Place to Lightning-Proof, Spark-Resisting Metal.

By W. E. Clark

Fifty years ago, when good cedar stock was in abundance and labor cheap, the farmers used to manufacture their own shingles by sawing, splitting and shaving, and there are many roofs yet throughout the country where split or shaved cedar shingles were applied fifty years ago. These shingles were generally about ⅜ to ½" thick, but time and weather have reduced the thickness of the exposed portions to that of cardboard. Under the natural tendency of things, however, the days of split or shaved cedar shingles are passed, and in recent years the shingle became the product of the saw mill, and the manufacturers of shingles were not so particular as to the kind of stock they used as was the farmer who laboriously made his own supply. The outcome was that shingles were put on the market at a price which commanded trade but gave much less satisfaction, and many a farmer who could afford it replaced his cedar shingles with galvanized iron in one form or another.

Until recent years, however, a shingle-roofed iron roof was a luxury, but the introduction of modern machinery has reduced the cost of galvanizing to a minimum and it is now possible to get a substantial and almost everlasting roof in the form of metal shingles at a very moderate cost.

One feature of the Metal Shingle and Roofing is that it does not take an expert workman to apply it. Any ordinary layer with a moderate degree of adaptability, a pair of snips and a hammer can apply these up-to-date shingles as well as sheet roofings and siding.

Probably the greatest virtue of the metal roof is that the risk from fire and lightning is minimized by its use, inducements in the way of reduced insurance to encourage the use of galvanized covering, as a building with such a roof, properly connected to the ground by a water spout or a wire cable, is proof against a lightning peril applied should give satisfaction for half a century at least.

In the march of progress a rapidly growing number of farmers, realizing the merits of metal, are now adopting, as a safeguard against fire, lightning and decay, many forms of sheet metal products, such as metal roofings, sidings, ventilators, silo covers etc., thus reducing risk as well as maintenance cost.

When speaking of durability of a metal roof, galvanized materials only are referred to. Farmers in this country, nearly twenty years ago, applied painted roofing, and the repainting of this roofing, which in some cases should have been an annual affair, was neglected, and the consequence was that corroded, cut in, and the roofs rapidly deteriorated, but this is not the case with Galvanized Roofing. In the rural districts, where sulphurous acid gases are not prevalent, a Galvanized Roof made of good material and properly applied will give satisfaction for half a century at least.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON
MARCH 11.

Lesson X. Jesus The Bread Of Life.
John 12-40. Golden
Text—John 6. 35.

Verse 24. Capernaum. It does not say that they found Him there. In verse 17 the silence of motive is Capernaum. But Mark expressly says they aimed at Bethsaida, and then finally that they crossed to "Gennesaret." So here it is said vaguely they found him on the other side.

26. In the dialogues of this Gospel we regularly find Jesus going directly for the thought behind the words.

27. Persheth—Compare Col. 2. 23. Son of man, as elsewhere, recalls his ultimate function as Judge of men. He will judge us then according to our treatment of his offers now. Seal—As he accomplete Representative. The seal was the mark of ownership.

28. This verse and verse 29 summarize the New Testament doctrine of justification by faith, the recovery of which made the Reformation. In every religion men "chide into the treason" of thinking they can accumulate merit and claim God's supreme blessing of right. That is like trying apples on the boughs of a dead tree. What God wants is life, and that comes from the surrender of trust to Christ.

30. That the Jews were always seeking for a sign we know from many sources. On the occasion the demand seems purely stupid, when following a sign so much like that of the manna that they quote. It comes apparently from that half-witted conservatism that gives the past a sort of ex officio transcendence, and cannot imagine God himself outdoing his former deeds.

31. Written in Psa. 78. 24.

These Kiddies Depend Upon You For Milk

This group of refugees is typical of the bulk of the Belgian people to-day. Their faces show pitiably the hardships they have undergone in the last two years.

Most pathetic of all are the children. Thanks to the splendid work of unselfish philanthropists, they are being fed well. But apart from this there is little that can be done for them. It is impossible, for instance, to supply them with homes, or with those useless but delightful gifts that characterize the holidays in more fortunate lands. Least of all can these children know the joy that comes of making such gifts.

Surely in these circumstances the least the people of the British Empire can do is to see that the Belgians and their babies are fed. And this they have been doing. British, Canadians and Americans have responded nobly to the call, and have kept alive the nation that saved them from the Germans.

In full confidence that they will continue their generous gifts the Belgian Relief Committee is reminding us that every day of the year during the Germans are in Belgium it is necessary that food be supplied to the grown-ups and the kiddies of this stricken land. Contributions for this purpose may be sent to the Central Belgian Relief Committee, 59 St. Peter Street, Montreal, or to the local offices in each community or district.

Your Problems

Conducted by Mrs Helen Law.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 78 Castle Frank Road, Toronto.

Mrs. F. M.:—1. If lemons and oranges are placed in boiling water or in a hot oven for five minutes before squeezing the juice can be easily extracted. 2. Vegetables should not be served in individual side dishes, but should be placed on the dinner plate with the meat. 3. A child's Tam o' Shanter that after being washed should be stretched over a dinner plate to prevent it from shrinking and losing shape. 4. Cornstarch added to the flour for pie crust will make it more flaky. If you are using pastry flour add one tablespoon to every cup of flour; if ordinary flour add two tablespoons to every cup. 5. The task of washing a family handkerchiefs is easy according to the following method: In a vessel containing at least two gallons of warm water, put four heaping tablespoons of any good soap or powder dissolved and one tablespoon coal oil. Plunge soiled handkerchiefs into this and bring slowly to a boil, then put them into clean strong suds and very little rubbing either by hand or machine will make them snowy white. 6. Colored clothes should be ironed on the wrong side. 7. Boil a slice of raw potato in fat which has been scorched or has a burned taste and the flavor will be restored. 8. Sprinkle starched clothes with warm water to make them stiffer.

F. E. L.:—1. If you wake tired it is probably due to one of the following causes: (a) insufficient sleep; (b) the poisonous influence of stale air in the bedroom; (c) a late and heavy supper; (d) general nervous condition. Remedies for the first three are obvious. For the fourth it is usually sufficient to rise promptly, to dress briskly, thereby improving the circulation, and to take a nourishing breakfast. 2. To gain weight, eat raw eggs and milk, cream, rice, cereals, olive oil and grape juice, butter and starchy vegetables.

M. M. R.:—1. Towels which are to be given to a prospective bride should be embroidered with the initials of her maiden name, not that of her prospective husband. 2. Nothing you could give your college friend would be more highly appreciated than a knit or crocheted set of afghan and pillow in the university colors for the inevitable college couch. A pennon made of felt in the colors is also most acceptable.

G. H.:—1. David Lloyd George was born in Manchester, England, in 1863, of Welsh parentage. His father, a poor and invalid schoolmaster, died in early manhood, and David was brought up in humble circumstances by an uncle in Wales. 2. To ventilate a room without draughts, take an old window screen, stretch thin muslin or cheese-cloth across it and tack it in place, and put it in a window as you would a fly-screen. 3. A serretary "pro tempore" is a secretary "for the time being."

42. Guess—I offering you some? True is all. The only one that completely satisfies the name. The manna was only partially so, for those who ate it hungered again.

43. The World—As in John 3. 16, the outcome of the gift is that it has no limit of race or time.

44. The appeal is to be compared with that of the Samaritan woman in John 4. 15. Here it seems that a real, though blind desire, for the heavenly gift went with inexhaustible possibilities that made it impossible for them to receive it. A seed 30 is enough to prove it.

45. This is the outcome of John 20. 29. Yet is not in the Greek either hour or thine.

46. The form of this verse is often found in this Gospel, see John 17. 24, where the American Revision has put the true translation in the margin. The objects of redemption are first brought together about unity, and then distributed as individuals. Our doctrine of the church will come from the careful consideration of these passages. The Father giveth —Th. thought is developed in Rom. 8. 29. Such statements seem to leave no room for human free will, which is authoritatively asserted by our own consciences, and set forth by Paul in the same breath with the complement very truth, Phil. 2. 12, 13. The doctrine of God's immanence will solve the speculative problem, or fail to do it, finite intelligence can solve it here. The fact is what matters most. But "by his foreknowledge" are saving "his called [those of us who are saving] reject them.

Sheep Notes

Don't give the ewes time. Even mistakes them feverish and inflame the udders. Inflamed udders are a sure thing of bombing time.

Neither crowd nor push the sheep in fodder.

An unruly ram is a good argument for the meat shop.

A ewe that is soon to wean should not be too fleshy.

If your neighbor keeps sheep of the same breed as yours, be sure to have yours marked. Sheep will break and sometimes, and if two flocks become mixed it is a hard matter to divide them.

The right kind of sheep in a neighborhood when there are the right kind of dogs ought to be a winning proposition. Unfortunately opinions differ as to dogs.

Silage is sometimes fed in small quantities to sheep with fairly good results. Be sure the silage is of good quality, not moldy or spoiled. Start on a very small quantity daily and gradually increase. Start giving a pound or two to each matured sheep daily. Pregnant ewes have been fed up to four pounds per head and one-half pounds daily with no bad results. Of course, closer hay and a few oats and if possible a few roots should be fed as well. Be sure the silage is good. Under no circumstances feed sheep spoiled silage.

Cox's Soldiers in France.

The correspondent of the London Chronicle with the French armies, recently visited the fighting front held by the Russian soldiers. Most of these men come from the Siberian regiments, and for the many gaps now of the peasant class, warm, simple natures, but good fighters. The Russian front resembles closely the rough, boring line held by the French troops, and is held just as tightly as the Russians know to their sorrow.

Hogs

The destruction of a brood sow goes a long way in making her a profitable sow.

There was a noticeable decrease last year in the number of deaths from hog cholera in places where it was being prevented. We suspect that a closer attention to sanitation had a great deal to do with the change.

Milk, roots, and finely-ground oats make the best feed for young pigs, and very little is required the first few weeks after weaning. Care should be taken at all times to have the pigs clean up the feed in the trough after every meal. The feeder must use his judgment as to the amount of grain to feed.

Mixed grains make very suitable feed for hogs, and as oats are the most slightly higher than when these grains are ground separately. It may be necessary towards the end of the feeding period to add a little more barley or corn to the ration.

Rape is an excellent pasture crop for hogs. Alfalfa also gives excellent results and is considered one of the best perennial pastures. Sweet clover is coming more general, but it is advisable to pasture it the first year.

The Dairy

Sometimes a cow is thawing, steps or stands on one, before being milked see if there are any hairs on the udder that are being pulled. Remove them by the use of shears and see if the cow is more quiet.

Don't neglect to have the box stalls ready for the cows that are to calve in the early spring.

Don't we forget to me again urge that if the stables are not quite warm enough blanket the newborn calf. Pieces of old wool blankets washed clean are just the thing. This is important. Those blankets are easy to make. Leave them by stringed tied at the neck, around each hind leg, and under the belly by the fore legs.

As the calf grows these things can be let out. My calves have grown and worn these blankets until they were a mere patch on their backs.

"The dairy cow," says Professor Dean, "will help the farms solve the labor problem by furnishing remunerative labor all the year round, on high priced land we can secure other solution of the labor difficulties on farms."

Not His Fault.

The family were going to a picnic, and Bernard had been dressed first and told to sit on the porch until the rest were ready. As he afterwards told his mother, she discovered him playing in the dirt, with his clean clothes hopelessly ruined. After the gentle scene which followed, he was deposited forcibly on a chair and asked if he did not remember he had been told to stay on the porch and keep clean. "Why, he sobbed, "that play didn't count—somebody to watch me!"

Chief Justice Cross, of the most important criminal assizes in the world. He tries 200 miles long.

He was an old darky. He wore no overcoat, and the icy wind twisted his threadbare clothes about his shriveled body. "Wind," he demanded whimsically, "what wuz you do time las' July?"

Horse Sense

Impaction of the Colon may be present for some time without marked symptoms, then slight, colicky pains. Sitting on haunches, pressing croup against any solid object, little or no passages of feces, a general fullness of the right side of the abdomen, are other symptoms.

Give a purgative, follow by 2-dram doses of nux vomica 3 times daily, feed bran only. Give rectal injections. If pain be well marked give 2½-dram sulfi extract of belladonna.

Oats is the principal grain for horses, but a little bran or oil cake might profitably be added to put the horse in condition. Boiled oats might be fed occasionally, and care must be taken not to overfeed on hay.

Don't buy a field implement without a spring seat. Why? Because if you come in legweary from the field the chances are the horses will not get the attention they should have in the way of grooming after a dusty day in the hot sun.

Cribbing is a vice that is hard to be kept in a box stall without mangers or racks. In the majority of cases the vice can be checked by buckling a strap rather tightly around the horse's throat. Do not have it so tight as to interfere with breathing or swallowing.

Wheat must be fed carefully to horses in order to avoid digestive troubles and skin eruptions. As the kernels are small and hard they should be rolled for all farm animals. If ground too finely the meal must be mixed with coarser feed to avoid forming a pasty mass in the animal's mouth. Wheat has feeding value about equal to corn, but, for horses, oats are preferable.

"Bailey not do that, teacher," responded the youngster; "pop charges 25 a visit.

"Robert," said his teacher, sternly, "you are incorrigible. I shall certainly have to ask your father to come and see me."

Poultry

Cutscal sharpens a hen's grindstone. The colder the day the more corn needed.

A salad of chopped cabbage puts a good keen edge on the bird's appetite.

If you can't get milk maybe you can get whey. It isn't quite up to the mark of milk, but it makes a fair substitute.

Cracked corn should be sifted before being fed to the poultry; the amount of meal saved will more than offset the labor.

Growth and development require both quantity and quality of food, in order to build up good solid frames and give strength and vitality to the growing stock.

Don't let any cabbage or other roots go to waste. Tie a stout string around the roots of several cabbages, and hang them in the hen-house so that the hens can just reach them nicely.

Have you ever found hens on the floor under the roost, dead? Usually the hen which dies this way is rather well along in years and has been fed freely of food that makes fat. She became too fleshy and died of fatty degeneration.

It seems sometimes as if it makes little or no difference how dusty the windows of the poultry houses are. But it is a fact that clean windows tend to health and happiness. That makes it worth while to clean the darkened windows often.

When hens eat snow, somebody is not on his job. Water is what the birds need, not snow.

If you have customers who like rich brown eggs, that means that you should keep some Plymouth Rocks or Brahmas.

New Pumping Device.

New apparatus for filling automobile tires with air automatically cuts off the supply when the overinflation point is reached.

The woman of the Philippines make a very fine lace from the fibre of the pineapple plant.

The Paisley Advocate

PAISLEY, MAR. 7th, 1917

—Ontario women will hereafter have the same voting privileges as men in elections for the Legislature, while married women, widows, and spinsters owning property will have votes in municipal matters. These are the provisions contained in the bill of W. J. Johnston (west Hastings) which passed its second reading in the Legislature on Tuesday of last week. Premier Hearst at the same time declared for women's suffrage, and stated that an effort would be made to devise some plan whereby they will be entitled to record their vote at the next provincial election.

—Prof. Stephen Leacock, of McGill University, Montreal, addressing the Montreal Housewives' League at the Royal Victoria College last week, said: "We are in sight of a terrible food famine, such as the world has never seen. We must take steps betimes if we wish to avoid national and world-wide disaster. We must at all costs increase our own food supply. We, in Canada, are fortunately placed. We have boundless resources in land to draw upon. We must see that every available acre and every available day's labor is turned to use. It is gratifying to learn that our Department of Agriculture and our National Service Commission are wide awake to the situation. We must put behind them the force of public opinion and the effort of individual citizen."

War and Peace Prayer meeting

A big afternoon prayer meeting is to be held in Port Elgin on March 15th, when business places in the town will be closed for two or three hours and people from town and country will assemble at a service of prayer for the Bruce Battalion, for the nations engaged in the righteous cause, and for speedy and permanent peace. The plans for the meeting are the outcome of a suggestion made by Reeve Christie, of Saugeen, in his inaugural address to the council this year.

Wonderful Old Ladies

Mrs Ira Underwood, of Arkwright, is 94 years of age, and the Tara Leader says she is probably the oldest inhabitant of Bruce Co. Paisley has, however, a citizen who has seen a few more years. Mrs Devine, of Ross St, according to the best available information, is in her 100th year. She is still able to take care of herself pretty well. Since her grandson, who lived with her, went off to war with the 160th, she is left alone, but neighbors look in frequently and see that she is all right.

Too Many Knights

Speaking before the Waterloo County Farmers' Club at Kitchener recently, John Gaulthouse, of Milton, said emphatically that in the democracy of provinces such as those in Canada, there was no use for titled gentry, and he sounded a note of warning that there were too many knights and baronets being created in Canada today. "Politicians tell us," he continued, that the farmers are the backbone and sinews of the nation, but they forget this when they get to parliament. It was up to the farmer to see that the farmers were more directly represented in parliament so their interests might be protected. If we are the country's first citizens then we should be recognized."

Masonic D.D.G.M. at Aldworth Lodge

The Masonic membership was out in full force on Friday night to greet the genial D D G M of Bruce District, R W Bro A T Johnston, of Walkerton, on his official visit to Aldworth Lodge. A large delegation of visiting brethern was present from Moravian Lodge, Cargill. The ritualistic work of the Order was exemplified with the officers of the term in the chairs, viz: W M, John A Logie; I P M A A Sinclair; S W, Thos Muir; J W, Jas A McNeill; S D, Clarence Fraser; J D, John A Cumming; I G, J T Richardson; Treas, W R Barnett; Sec'y, H H Putnam; D of C, J Collins; Sr Steward, P C Kennedy; Jr Steward, Jas P McKay; Tyler, and Chaplain, Rev I. W Diehl. At the close of the Lodge proceedings all present adjourned to the town hall, where a banquet had been prepared, the caterers being a committee of the Masons' lady friends, who furnished the viands at so much per plate, the net proceeds to be devoted to patriotic purposes. It was a feast spread, without being what might be called extravagant, and was most satisfying to the brethern after their long session. When the menu had been disposed of a lengthy toast list was gone through, which brought forth numerous pithy after-dinner speeches. Those called to their feet were W Swain, J P Bainlon, Robt A Faulds, Geo Sirrs, J Loughteen, F Saunders, of Cargill; D H Campbell, W R Barnett, John McInnes, J B McArthur, C Briggs, G L Carter, J H Steele, Dr Houston, H McKercher, E G Rekel, J Collins, J A Logie, H Fletcher, W R Darltrop, Thos Muir, Rev I. W Diehl, Jas A McNeill, and the D D G M. A duet was sung by J M and W T Hopper, and solo by D McKenzie.

Newspapers Suspended

There were 800 country weekly newspapers suspended publication in the United States in 1916, owing to the advance in price of newsprint. Canadian weeklies are now experiencing hardships, as the advances have struck hard here. If country weeklies cannot make things go on the U. S., where times are good and money plentiful, what will happen to the average Canadian weekly publisher? The weeklies in this country see the trouble coming and advanced to $1.50, but already the paper makers have gobbled up the extra profit.

THE ADVOCATE will be a most welcome gift to absent ones of your family, whether in Canada or away to the fighting front in France.

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHIP HARBOUR, N. S.

"It is with great pleasure that I write to tell you of the *wonderful benefits* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

Mrs. MARTHA DEWOLFE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

SPLENDID PROGRESS

Standard Bank Annual Statement Shows Big Growth in Deposits

It is interesting to note that notwithstanding the recognized fact that business conditions during the past year have offered many new problems and generally that it had been a period in which it was necessary to exercise great caution, the annual reports of the Canadian banks have shown that splendid progress has been made in the development of our country.

This is very conspicuously reflected in the case of the Standard Bank of Canada as appears from the annual statement of the Bank presented to the shareholders on February 28th, and which appears in another column. During the year ending January 31st, 1917, the Bank after providing for all costs of management, paying interest on its deposits, etc. and providing for bad and doubtful debts, show profits of $[illegible] which is equal to 18.90 per cent of the capital, or 8.54 per cent of the capital and rest combined. The net profits of the previous year were $363,402, the increase therefore, being $16,323. The circulation shows an increase over the previous year of $1,247,750 and the loans to the public now stand at $36,068,885 as against $33,917,915 at the same date last year. The deposits show the remarkable increase of from $53,909,050 to $59,203,854, while the total assets now stand at $59,850,274 as against $53,282,121 the previous year, an increase of over $6,500,000.

The growth of the Standard Bank during the last five years has been particularly marked. In that period the deposits have increased over 70 per cent, while the total assets have increased from $37,311,327 in 1912 to $63,850,271 an increase of nearly 70 per cent. During the year the usual dividends of 13 per cent, amounting to $308,899 were paid, contributions to the officers' pension fund $10,000, to the patriotic fund and Kindred objects $30,000. The government tax on circulation was $30,483 75 and $51,917 was carried forward to profit and loss account, making that item $153,593 65.

A noticeable feature in the bank's statement is the quick assets which now stand at over $32,000,000, practically 50 per cent of the total deposits with $10,762,524 cash in hand.

The legitimate requirements of manufacturers, merchants and farmers have evidently been well taken care of as the loans to the public are shown as $36,068,885. The Bank's policy has always been to do its share in the legitimate development of Canadian industries and the amount appearing in the statement as loans to the public has been confined entirely to Canada.

Recruits Wanted for Production

Just as surely as lack of food is strangling Germany day by day, so plenty of food is winning the victory for the allies. The French armies, for instance, were never better fed than now, for France cannot forget the awful lesson of 1870—the failure of her food supply. To this she attributed the loss of that war

To feed the French soldiers around Verdun, more than 25,600,000 pounds of food a week were required. This gives a faint idea of the colossal task of feeding an army. Canada and Britain have a huge army of fighting heroes on the line; every man MUST have plenty of food, in spite of a world shortage. Upon Canada's food production all principally rely.

The Farmers of Ontario Urgently Need Help

The Department of Agriculture appeals to men and boys to enlist in the farm help campaign. The Department appeals to men unfit for military service, or who find it impossible to enlist in the army. Do your "bit" by helping to increase production of foodstuffs. This is your hour of opportunity.

The farmers of Ontario need the help of retired farmers, of men following no occupation (retired), of business men who can spare a portion of their time. We appeal to all who can so arrange their ordinary affairs to plan to help some farmer friend, particularly in seed time and harvest.

Confer with your county District Representative of the Department of Agriculture, or write, "Farm Help Campaign," care Department of Agriculture, Toronto.

Ontario Department of Agriculture

W. H. Hearst, Minister of Agriculture

Parliament Buildings — Toronto

ONTARIO FARMERS

Existing war conditions demand that you give the question of Seed special attention this year. Seed of desirable varieties and high germination power will be factors influencing yields.

If you have not secured your Seed, **let the Ontario Department of Agriculture help you.**

Farmers having Seed Grain or Potatoes for sale may forward samples to this office, stating varieties, price and **quantity.**

Farmers wishing to purchase Seed are also invited to communicate with this office, stating variety and quantity, and an effort will be made to put them in touch with farmers having Seed for sale.

W. H. HEARST, Minister of Agriculture — Write to N. C. McKAY, Dist. Representative, Walkerton

Notice to Creditors

In the matter of the estate of Adam McGill, late of the Village of Paisley, in the County of Bruce, implement agent, deceased.

NOTICE is hereby given pursuant to the Revised Statutes of Ontario, 1914, chapter 121, section 56, and amending acts, that all creditors and others having claims or demands against the estate of the above named Adam McGill, deceased, who died on or about the 16th day of June, 1916, are required to send by post prepaid, or to deliver to the undersigned solicitor for the administrator of the estate of the said deceased, on or before the 20th day of March, 1917, their names and addresses and full particulars of their claims, duly verified, and the nature of the securities, if any, held by them.

And further take notice that after the 20th day of March, 1917, the said administrator will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which he shall then have received notice, and that he will not be liable for the said assets or any part thereof to any person or persons whose claims he will not then have received notice.

D. FORRESTER, Paisley, Ontario, Solicitor for said Administrator

R. L. McGILL, Administrator, Galt, Ont.

EBENEZER

Miss Ida Burns, of Toronto, is here visiting her sister, Mrs Wm Grant.

Mr and Mrs John Rathwell, of Allenford, visited Mr Rathwell's parents at Mr Sam Fleming's on Sunday.

Miss Olive Quigley is visiting friends in Southampton.

Mr Geo Maxwell and sister, of Dunboro, visited at Mr Robert Quigley's for a few days last week.

Mr Geo Grant went to Peterboro this week to visit friends there.

Russell and Howard Fleming visited at the home of Mr Joe Rathwell, in Greenock, on Sunday.

Mrs Wm Alexander, of Pinkerton, visited friends here for a few days last week.

Mr and Mrs Jos Stoddart, of the 4th con of Elderslie, visited at Mr Sam Fleming's on Sunday.

One of the fastest hockey matches of the season was played here on Monday night with six puck-chasers who drove over from Tara. Right from the first ring of the ball both teams played at top speed. In the first period the blue and white notched two goals to Tara's one. In the second Tara seemed to get warmed up after their long drive and tied the score at 3 all. In the last period Tara notched one for the opener and the score stood this way until the last few minutes, when our boys made a desperate effort and tied it again. It was then agreed to play ten minutes to decide the game. With three minutes to go, the blue and white made a three-man rush down the ice and Will Martin scored the winning goal. Battle Grant made a very efficient referee. The next match is with Dobbinton on Wednesday, March 7th.

PINKERTON

Senator Donnelly paid a visit to his camp at Trout Creek last week.

Mr and Mrs Wm Caswell and babe who have spent the winter with Mrs. Caswell's mother, Mrs S. Garland, returned to their home in Swift Current, Sask., last week. Mrs Garland accompanied them to Toronto.

Miss Alma Reid, who has spent some months at her home here, returned to Toronto on Saturday to resume the practice of her profession. Mrs Reid accompanied her daughter to the city.

We are sorry that Mrs Murray, of the village, is ill with the grippe.

Mrs Wm Nicholls, of the 16th ear, has donated a plush and velvet quilt to the Red Cross here to be sold by ticket. It is a particularly beautiful quilt and the holder of the lucky ticket will be fortunate. Mrs Nicholls, whose 18 year old son is overseas, is an untiring worker for the Red Cross, and the society is very grateful for this last evidence of it, the quilt.

Mr Jim Gale, of Toronto, spent a few days at the Manse last week.

Lieut. Harold Pinkerton, of London, paid a flying visit to his home here last Thursday.

The machinery in Wiarton cement plant, which cost hundreds of thousands of dollars, has been sold to junk dealers for $8,650.

PERSONALS.

Well-known Women.

Chatham, Ont.—"I was sick for about four years. Got very weak, could not

eat to amount to anything. I got very thin and had no strength at all. I was very much discouraged at times—thought I was never going to get better. I could not walk a block without feeling all tired-out. I took different medicines but did not get the help I needed. A friend of mine advised me to try Dr. Pierce's Favorite Prescription. I began to take it with the 'Peasant Pellets' and by the time I had taken two bottles I was well on the road to recovery, and in six months I was entirely well. My appetite came back and I gained in flesh. Now I am as strong and healthy as any one could wish to be. I owe it all to Dr. Pierce's medicines and I am glad of the opportunity to give testimony in their favor; they have done wonders for me."—Miss THELMA PARKER, 141 E. King St.

Chatham, Ont.—"I have taken Dr. Pierce's medicine with good results. I was weak and run down, lost my appetite and got very thin. I took 'Favorite Prescription' and 'Peasant Pellets' and these two medicines built me up in a very short space of time and I felt as well as ever. I found them to be all that is recommended of them; they are good."—Mrs. Wm. WEEKS, Cor. Taylor & Grand Ave., E., Chatham, Ont.

Every woman who has backache, headache, low spirits, sleepless nights, owes it to herself to speedily overcome the trouble before a breakdown causes prostration.

Dr. Pierce's Favorite Prescription is a non-alcoholic remedy that any ailing woman can safely take because it is prepared from roots and herbs with pure glycerine, containing tonic properties.

MORTGAGE SALE

UNDER and by virtue of the powers of sale contained in certain mortgage, which will be produced at time of sale, there will be offered for sale by public auction, on **Thursday, the 12th Day of April, 1917,** at the hour of two o'clock in the afternoon, at the **Grand Central Hotel, Paisley,** by Richard C. Pearce, Auctioneer, the following property, namely:

All and singular that certain parcel or tract of land and premises situate, lying and being in the Village of Paisley, in the County of Bruce, and known as Lots Numbers Nineteen (19) North and Nineteen (19) South, and Twenty (20) North and Twenty (20) South on the west side of George Street South, in Howe's first Subdivision of the Village of Paisley.

On the land so described is said to be erected on stone foundation a two storey brick detached dwelling house.

TERMS AND CONDITIONS.—The property to be sold subject to a reserve bid, and subject to the conditions of sale to be then and there declared. The purchaser at the time of sale to pay 15 per cent of the purchase money in cash. The terms of payment of the balance and other conditions of sale will be made known at the time of sale or upon application to Mr. J. Tilbe, Paisley, or Messrs. Irving, HOLDEN & GROVES, 30 Toronto Street, Toronto, Solicitors for the Mortgagee.

Dated at Toronto this 5th day of March, 1917.

Notice to Creditors

In the matter of the estate of Robert Keyes, late of the Township of Greenock, in the County of Bruce, Farmer, deceased.

NOTICE is hereby given pursuant to Section 56 of chapter 121, R.S.O., 1914, and amending acts, that all creditors having claims against the estate of the said Robert Keyes, who died on or about the 25th day of January, 1917, are required to send by post, prepaid, or to deliver to the undersigned executors of the last will and testament of the said deceased, on or before the 5th day of March, 1917, their names and addresses and full particulars of their claims, duly verified, and the nature of the securities, if any, held by them.

AND FURTHER TAKE NOTICE that after the 20th day of March, 1917, the said executors will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which they will then have notice, and that they will not be liable for the said assets or any part thereof to any person or persons of whose claim they will not have received notice.

Dated at Paisley, this 16th day of Feby, 1917.

For application forms apply to the Deputy Minister of Finance, Ottawa.

DEPARTMENT OF FINANCE, OTTAWA,
OCTOBER 7th, 1916.

The Standard Bank of Canada

The 42nd Annual Meeting of the shareholders of the Standard Bank of Canada, was held at the Head Office of the Bank, 15 King Street West, Toronto, on Wednesday, the 28th February, 1917, at 12 o'clock noon.

A large number of shareholders was present.

On motion, the President, Mr. W. F. Cowan, took the chair, and Mr. E. A. Bog, Chief Inspector, who acted as Secretary of the meeting, read the report:

Your Directors, in presenting to the Shareholders the Forty-second Annual Report of the affairs of the Bank for the year ending 31st January, 1917, have pleasure in stating that the funds have been well employed during the past twelve months and a satisfactory increase is shown in all departments.

The Net Profits, after making provision for bad and doubtful debts, rebate of interest on unmatured bills under discount, exchange, cost of management, etc., amount to $540,230.10, being at the rate of 18.30% on the average paid-up capital of the Bank for the year. This amount together with the balance forward from last year and the sum of $132,242.14 for premiums on new stock issued during the year, makes the sum of $975,119.13.

This has been appropriated as follows:—

Four quarterly dividends at the rate of 12% per annum	$384,839.61
Contributed to Officers' Pension Fund	20,000.00
Contributed to Patriotic and kindred objects	26,000.00
War Tax on Bank Note Circulation to 31st December, 1916	20,483.75
Transferred to Reserve Fund from Premium on New Stock	132,242.14
Balance of Profit and Loss Account carried forward	153,553.63
	$975,119.13

During the year Branches of the Bank have been opened at Hardisty, Coalhurst, New Dayton, and Travers, Alberta; Rothiea, Sask.; and Schumacher, Ont. The Branch at Goodwater, Sask., was closed.

The usual inspection of the Head Office and Branches has been made and the staff have faithfully and efficiently discharged their duties.

W. F. COWAN,
President.

W. F. COWAN, President.
GEORGE P. SCHOLFIELD, General Manager.

AUDITOR'S REPORT TO THE SHAREHOLDERS.

I have compared the above Balance Sheet with the books and accounts at the chief office of The Standard Bank of Canada, and with the certified returns received from its branches, and after checking the cash and verifying the securities at the chief office and certain of the principal branches on January 31st, 1917, I certify that in my opinion such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information, the explanations given to me, and as shown by the books of the Bank.

In addition to the examination mentioned, the cash and securities at the chief office and certain of the principal branches were checked and verified by me at another time during the year, and found to be in accord with the books of the Bank.

All information and explanations required have been given to me, and all transactions of the Bank which have come under my notice have, in my opinion, been within the powers of the Bank.

C. T. CLARKSON, F.C.A.,
of Clarkson, Gordon & Dilworth, Toronto, Canada.

Toronto, February 13th, 1917.

The usual motions were passed, and the scrutineers appointed reported the following gentlemen elected as Directors for the ensuing year: Mr. W. F. Cowan, Mr. Wellington Francis, K.C., Mr. W. F. Allen, M.P., Mr. Cowan, Mr. H. Langlois, Mr. T. H. McMillan, Mr. G. P. Scholfield, and Mr. T. H. Wood. At a subsequent meeting of the Directors, Mr. W. F. Cowan was re-elected President, and Mr. Wellington Francis, K.C., Vice-President.

Toronto, February 28th, 1917.

G. P. SCHOLFIELD,
General Manager.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXIV.—(Cont'd).

The man rose and looked at him, but although he nodded his head in assent he made no allusion to their late period or made any attempt to thank his preserver.

They scrambled up the beach for some little distance, then Stumpy stopped.

"It's no use of my going any farther, sir; I can't indeed."

Leicester, fully appreciating the "sir," by which the man addressed him, stared in astonishment.

"Why, not, man? We must go on! Why should you be afraid to go on? This is Ireland, you say. Do you fear anything from the people on the coast? Ah, I forgot!" he added, as the remembrance of his comrade's occupation flashed on him. "You fear the coastguard!"

"That's it," said Stumpy. "I should be in good in half an hour."

"But how should they know you?" asked Leicester. "You need not proclaim yourself."

"No need for that, sir," said Stumpy, with a grin. "Look here," and he pulled up the bottom of his trousers and showed Leicester a mark branded upon his leg.

Leicester colored in spite of himself.

"You are a convict!" he said.

"That—it, sir; I am," said Stumpy, "and, what's more, I haven't served my time. That's the mark of the chain gang, and it will never come out. The first thing the guard will ask will be 'Show us your leg, mate,' and then where am I?"

Leicester thought for a moment deeply.

"All right," he said. "I've hit upon it. You put into that cave there, and I'll hasten up and hunt out some people. I can get some provisions, and will not be here until dark. We can creep away then and gain one of the towns."

So, without waiting for any more objections or refusals, he hurried up the beach.

When it grew dark the two strolled along the beach, and entered a village some miles farther along the coast than that against which they had been cast up.

Leicester had a little money with him—even in his greatest hurry, and Stumpy, having received his wages on the days of the storm, was similarly supplied.

The duty of guard watching and interference, they reached Paris uninterfered with, and here Leicester, without loss of time, commenced to put his plans into execution.

At a broker's shop he purchased a capital wig of white, or rather iron gray hair, invested in a pair of broad rimmed spectacles at an optician's, and purchased at a ready-made tailor's a suit befitting an elderly foreigner of modest means.

Stumpy was accommodated with decent clothes, his long black locks well oiled and combed, and a small pair of gold rings set in his ears.

After waiting about a week in Paris to accustom themselves to their disguises the two sham Spaniards crossed to England.

Leicester took tickets, second class, for himself and Stumpy to Penruddie. They arrived at night, and boldly determined to put their disguises to the test.

Leicester marched slowly down to the "Blue Lion," Stumpy walking at his side and carrying a small valise.

"Can we have something to eat and to drink?" asked Stumpy, in broken English.

Martha nodded irritably and waved her hand toward the parlor.

The two entered.

Leicester looked round the room and seated himself in a distant corner.

A thrill of indignation ran through him as the door opened and Job entered, and he could scarcely refrain from springing at the wily little rogue and securing him at once.

But he was slightly mollified by observing on Job's face, as on that of all the others, a peculiar look of dissatisfaction and discontent.

Job eyed him and Stumpy with suspicious glances, and nodding to the others, took his old seat, calling as he did so for some ale.

Presently Job rose to light his pipe, and instead of resuming himself in his old place, dropped into a chair near Leicester.

"Come far, sir?" he said, opening up a conversation.

Leicester raised his eyebrows and shook his head, waving his hand toward Stumpy, who interpreted the sentence, and replied, in broken English:

"No, not far; from London."

Then he commenced to talk of fine houses and big fees, and somehow drew from Job the story of the murder of Stanley and the fact that most of the people concerned in the tragedy had gone away.

"It is very strange," he said, "very! A murder is not what you would call common in Shetland! What did you do with ze Master Lauder, hang him up by ze neck?"

"No," said the man, shaking his head. "He died without that. He fell over the cliff with the chain he'd done for, and so the country was saved the trouble of that."

Leicester sat like a man in a dream, but gave no sign and soon that the story had affected him.

Stumpy, thinking that he had pumped out quite enough for the present requested Polly to bring cigars for himself and his master, and it was back with an air of enjoyment.

After a few words with Leicester, who was known as Señor Edgardo, Stumpy asked if they could have a bed.

Martha answered hastily and decisively.

"No! I haven't got any beds to spare."

Stumpy inquired where he could get one.

"Here, Will," and the talkative fish-monger, making Willie Sanderson, who had been asleep, "you'll have to this gentleman and he must have a couple of beds."

Willie rubbed his eyes and nodded. "I'll do—say," he said, staring about him.

Then the signor rose, bowed all round, and took his leave, followed by Stumpy, with Willie Sanderson to lead the way.

Slowly they tramped down to the Sandersons' cottage.

Willie opened the door and beckoned to his visitors to enter.

As they entered the small sanded room a lad rose from a chair and hobbled forward on a crutch.

He was a frail boy with a pale, intellectual and mournful face.

Willie nodded to him.

"Jamie, these gentlemen want a bed; show 'em upstairs to the best room."

The lad took the candle and hobbled up the stairs.

At the stairhead he stopped and looked hard at Leicester, who turned his face slightly and adjusted his spectacles.

Stumpy, who had been warned to be careful, took the candle and thanked the lad.

Then the two spaniards entered the room

CHAPTER XXV.

For the first few moments Bertie's sensations on reading Lord Lackland's letter were anything but distinct, then gradually, as he realized the blow which the earl's duplicity had dealt him, indignation predominated.

He had been basely deceived and betrayed, and his betrayal was rendered all the more bitter by the foretaste which he had been allowed to have of his happiness.

He walked listlessly down to his club.

In the smoking-room, to which he repaired, he found Fitz extended at full length, sipping a brandy and soda. He determined to be the spur of the moment to confide in him.

Fitz told Fitz of his acceptance by his father, and then, of the refusal which he had just received. Fitz, indignant at the treatment received by his old chum, advised an elopement, and only subsided on it being offered to sail round in the yacht.

That night Fitz was taken to Claridge's, and Bertie, who had called at Grosvenor Square, was told that the family had left town.

Meanwhile Fitz remained, and the consequence he had with Bertie had induced him to call on Violet.

They say that one marriage makes more, for example, and Fitz, seeing that Bertie had been brave enough to declare his love, determined to do likewise.

That night there was another conversation at Lady Merivales, and Fitz knew that the Maloneys would be present.

He had an invitation, as he determined to go, though such things were not in his way, hoping to find an opportunity of declaring his love for Violet.

The night was hot, and Fitz felt languid and nervous and faint, for he feared Violet as much as he loved her.

(To be continued).

NURSES WANTED

Pupil Nurses wanted for the Training School, Hospital for the Insane, Toronto. Three years' Course; $13 per month, with board and uniform.

Apply Miss D. West,
993 Queen St. West,
Toronto

Important Notice To Knitters.

Having heard that some soldiers have suffered blood-poisoning, caused by the dye from their socks, it is imperatively necessary that all wool should be thoroughly cleansed. The shrinkage of the wool, which is also necessary, can be done at the same time. The best way to do this is: Tie the skeins together so that they will not snarl, then put in basin and cover with boiling water; if no dye comes out, let the wool remain until the water is cold, then hang up and let drip until dry. Of course, if the dye comes out, keep changing the hot water until it becomes colorless.

Vegetable Water Soup.

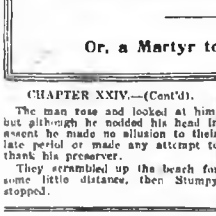
The basis was water in which a small cauliflower had been boiled, and which contained some of the best properties of the vegetable, a scrap of the cauliflower, a dash of pepper, a thought of prepared spice, a spoonful or so of dried celery tops, about a table spoonful of left-over gravy and a scrap of fried onion. The whole was thickened with ground bread crumbs from a gem jar, which is constantly replenished with all left-over crusts and crumbs. The water in which any vegetable has been cooked may be utilized in the same way."

Sovereignty Recognized.

Agent—"Is the boss of the house in?" Proud Father—"Yes; he's asleep up-stairs in his cradle."

It is not worth while to work yourself to death to make a living.

16 95 Upward ON TRIAL American FULLY GUARANTEED CREAM SEPARATOR



A SOLID PROPOSITION to send one, well made, easy running, perfect skimming separator for only $16.95. Guaranteed to skim hot or cold, thick or thin cream perfectly. Makes heavy or light cream. Has self-oiling bearings, easily cleaned. Different from picture, which shows more expensive machines. Has our name.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London.—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so you will be glad to know that according to Dr. Bates you can in most cases strengthen your eyes in one week's time by following a simple prescription. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man who had worn glasses a long time said: "I was also told could see to read at all. Now I can read everything without my glasses and my eyes do not water at any more. At night they would pain so I could scarcely keep them open at all. Now they feel fine all the time. It seems like a miracle to me." A lady who used it says: "The effect was simply wonderful, almost like magic." Another says: "I can see without glasses, but after using the prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and many also hope will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. The troubles of many people may be overcome, doubtless by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one tablespoonful in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note: Another physician to whom the above article was submitted, said: "The prescription mentioned is a remarkable one. Many of my patients are using it and obtaining splendid results. It is inexpensive and can be depended upon. In many instances it should be unnecessary to consult a physician at all. I shall prescribe it for certain of my patients who have been using glasses a long time. I expect to see some of them entirely discard their glasses before I am through with them. I feel sure others will find even a more pronounced benefit."

GOOD DIGESTION — Brings your children health, happiness and calm and sickness and disease is banished.

Mother Seigel's Syrup corrects and stimulates the digestive organs, and regulates the many disorders which arise from indigestion.

FOR 40 YEARS THE STANDARD REMEDY

MOTHER SEIGEL'S SYRUP

At all Druggists, or direct on receipt of price, 35c. and $1.00. The large bottle contains three times as much as the smaller. A. J. White & Co. Limited, Cindy Street, West Birmingham.

Hot Cakes For Tea.

Oven Scones.—Two pounds flour, two teaspoonfuls of baking powder, three ounces shortening, two ounces sugar, two ounces currants one egg, one pint sour milk, pinch of salt. Rub the shortening into the flour and baking powder, which has been sifted together, then add the salt, sugar, currants, well-beaten egg and milk. Stir into a soft dough that will not stick to the hand, and divide into four pieces. Roll each into a ball, then flatten out into a round cake about an inch thick. Cut across into four triangles, thus making sixteen scones. When risen in the oven and partly baked brush over with beaten egg, or water, dust with powdered or granulated sugar and finish the baking. These take a little more than half an hour to cook as a rule and should be split while hot and buttered. Serve at once. They can, however, be reheated or eaten cold.

Cream Scones.—Sift together two level cups of flour, three level teaspoons of baking powder and half level teaspoon of salt. Add ¼ cup of butter and work into the flour thoroughly with the finger tips, or cut in with two knives. Beat two eggs well, add ½ cup of cream, and add slowly to the flour, mixing with a knife to a dough. Lightly roll the dough out to about ½ inch in thickness, cut into diamond or triangular shapes, and bake in a hot oven twelve to fifteen minutes.

Soda Scones.—One pound flour, one teaspoonful soda, one-half teaspoonful cream of tartar, pinch of salt, one-half pint of buttermilk or sour milk. Mix the ingredients to a soft dough, roll out to a half inch thick and cut into rounds with a cookie cutter. Heat the griddle, grease a little and cook the scones. When one side is brown turn the other until both are a good even color, then split open, butter, and serve at once.

Buttermilk Scones. — Take one pound of flour, one teaspoonful of salt; about half a pint of buttermilk or milk, one small teaspoonful of soda, one small teaspoonful of cream of tartar. Mix all the dry ingredients together and add enough buttermilk to make a light dough, which should be turned on to a floured board and quickly kneaded until it is smooth. Press the dough into a round cake and divide crosswise into scones, which should not be much more than a quarter of an inch in thickness. Bake the scones in a quick oven, then split them open, butter and serve. The scones may be cooked on a griddle, and if this is done they should be turned once.

Soda Muffins.—Two cups of flour, two teaspoonfuls of cream of tartar, one teaspoonful soda, half pint of warm milk, one tablespoonful of melted butter, one tablespoonful of sugar, pinch of salt, one egg. Beat the egg lightly, yolk and white separately, add the warm milk, salt, sugar and oiled butter. Take the flour and mix into it the cream of tartar, soda and the other ingredients; stir into a smooth, soft dough. Bake in the oven in small round tins, well greased, or in sponge cake tins; cook from twenty to thirty minutes. Split open and butter hot.

Plain Tea Cakes.—When bread is baked at home it is a good plan to take a pound or more of the dough after it has risen and rub into it two ounces of butter, lard, or even dripping, and perhaps a beaten egg; then leave it to rise again. Then bake in shallow round tins, and butter hot as soon as it comes from the oven, or keep for another day, toast brown and butter.

Apple Cake.—One pound of flour, six ounces of lard, one teaspoonful baking powder, three ounces of brown sugar and six apples. Rub the lard into the flour and baking powder, add the sugar and the apples, peeled, cored and chopped the size of currants. Mix into a rather dry paste with a beaten egg and milk, or water is more convenient, and bake in a greased tin to the depth of one and a half inches, till nicely browned on top—about half an hour. Cut in strips and serve hot with or without butter.

DEPORTATION OF BELGIAN MEN LEAVES WOMEN AND CHILDREN MORE HELPLESS THAN EVER

Neutral protests do not prevent the Germans from continuing the deportation and enslavement of the able-bodied men who were left in unhappy Belgium—and we are powerless to stop it until we have won the war.

Meanwhile the Neutral Commission for Relief in Belgium, administered without pay by great-hearted Americans, is saving the women and children from starvation. Here we CAN help promptly and effectively, by giving generously to the Belgian Relief Fund.

More contributions than ever are needed, because the higher prices of foodstuffs, particularly wheat, have seriously increased the cost of feeding these millions of dependent Belgians. How much can you spare the victims of one of the blackest, most cold-blooded crimes?

Send whatever you can give weekly, monthly or in one lump sum to Local or Provincial Committees, or

SEND CHEQUES PAYABLE TO TREASURER

Belgian Relief Fund

59 St. Peter Street, Montreal.

The Greatest Relief Work in History.

The Workers of the World with hand or brain, in doors or out doors, under all conditions and in all climes, will find in **Shredded Wheat** the food that supplies all the material for building healthy tissue and good brain—a food that nourishes every organ of the body and keeps the bowels healthy and active—the one universal cereal food that appears on the breakfast table of most Canadian homes every day in the year. It is ready-cooked and ready-to-eat. For breakfast with milk or cream, for any meal with fruits. Made in Canada.

Sports Clothes

Nothing has been more talked of during the past seasons than sports clothes, so much so, that nowadays they have come to be an essential part of the modern woman's wardrobe. As a rule, bright coats or blouses are worn with white or light colored skirts. Included in the list of gay colors that are used, red is often found, which is rather unusual, as the color has been looked upon formerly as more appropriate for fall and winter than for spring and summer.

Sports clothes of silks and satins appear in greater numbers this season than those of cottons. There are, however, some novelties in cottons which promise to prove very popular. One of these is cotton gabardine brightly striped and plaided in colors. Basket weaves which have the new striped and dotted designs also have a fair showing, and the heavy linens will undoubtedly be worn.

The sketch shows one of the favorite models with the smart hip-length blouse. Stitched box pleats, start-

A Sports Frock Developed in the New Plain and Dotted Silks

ing from under a deep yoke and disappearing beneath the pleated pockets, give the Norfolk effect which has always been considered a good style for outing wear.

Separate coats of fuzzy white material, somewhat like blankets, with stripes of many colors around the edge, and also on the collar and cuffs, are among the latest offerings in sports attire. The colored stripes are also carried out in the same way in coats of oyster-white tussur.

Wide girdles crushed softly about the waist are quite often seen on the new dresses. They are generally of satin or silk in some bright contrasting color.

These patterns may be obtained from your local McCall dealer or from The McCall Co. 70 Bond St., Toronto, department W.

How To Relieve Catarrhal Deafness or Head Noises

If you have catarrh, catarrhal deafness or head noises caused by catarrh, or if phlegm drops in your throat and has caused certain of the stomach troubles you will be glad to know that these distressing symptoms may be entirely overcome in many instances by the following treatment which you can easily prepare in your own home at little cost. Secure from your druggist ounce of Parmint (Double Strength). This will not cost you more than 75c. Take this home and add to it 4 pint of hot water and 4 ounces of granulated sugar, stir until dissolved. Take one tablespoonful four times a day. Improvement is sometimes noted after the first day's treatment, the hearing should become keen, while the distressing head noises, headaches, dullness, ready tiredness, etc., should gradually disappear under the tonic action of the treatment. Loss of weight, taste, defective hearing and mucous dropping in the back of the throat are other symptoms which suggest the presence of catarrh and which may often be overcome by this effervescent treatment. If nearly fifty per cent. of all ear troubles are caused by catarrh there must be many people whose hearing may be restored by this simple home treatment.

Any druggist can supply you, or a bottle will be sent on receipt of 75c. postal note or money order. Address International Laboratories, 24 St. Antoine St., Montreal, Canada.

PLAGUES OF MESOPOTAMIA.

Discomforts of Campaigning in Land Where Plagues are Continuous.

Quite apart from the unhappy results of battle and disease, campaigning in Mesopotamia, says Mr. Edward Candler, correspondent of a London paper, is sure to be uncomfortable and discouraging.

Mesopotamia in May rivals Egypt in the matter of plagues. There is no respite or truce, and the only thing you can count on is that the plague cycle is unbroken and continuous. The plagues of May are dust, heat and flies, and the greatest of these is flies. The multitude of flies that swarm in the tents, dugouts and trenches, unless seen, are unbelievable.

You cannot eat without swallowing them. You wave your spoon of porridge in the air to shake them off; you put your biscuit and bully beef in your pocket, and convey them surreptitiously in your closed fist to your mouth; but you swallow flies all the same. They settle in clouds on everything. As I write, I cannot see the end of my pen. I overtook a squadron of cavalry the other day, and in that state of semicoma in which the heat wraps you I thought they were wearing chain armor. I had walked my horse beside them several minutes before I discovered that what looked like mail was a steel-blue mesh of flies.

It is a country of excess; nothing is ever moderate. There is something almost Biblical in the way the gods of this ancient land have conspired to punish us. There is malice in the sky and soil; malice of heat and drought, hunger and thirst and flies, damp and cold and mire, flood, hurricane and rain, fever and ague, and malice interwoven in the web of circumstance.

THE DOOR TO HEALTH

Is Through the Rich, Red Blood Dr. Williams' Pink Pills Actually Make.

The blood is responsible for the health of the body. If it is good, disease cannot exist. If it is bad, the door is shut against good health, disease is bound to appear in one form or another. One person may be seized with rheumatism or sciatica, another with anaemia, indigestion, heart palpitation, headaches or backaches, unstrung nerves, or any of the many other forms of ailment that comes when the blood is weak and watery. There is just one certain, speedy cure—Dr. Williams' Pink Pills. They make new, rich, red blood, and this good blood strengthens the whole system and brings good health and happiness. Thousands owe their present good health, some, life itself, to the pills. Mrs. Charles Goddard, Chatham, Ont., says:—"Four years ago my nervous system was so run down that life seemed nothing but a burden. I doctored for two years with little or no benefit. I could neither work, eat or sleep well. While in this condition a friend advised me to try Dr. Williams' Pink Pills. Before doing so I thought I would consult my doctor and he told me he knew of no better medicine for building up the nervous system. I started to take the pills and after a short while found they were helping me. I took the pills for nearly three months and am thankful to say that they completely cured me. Ever since I have kept a box of the pills in the house but have not found it necessary to take them."

You can get Dr. Williams' Pink Pills through any dealer in medicine, or they will be sent by mail postpaid, at 50 cents a box, or six boxes for $2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

BRITISH COLUMBIA MINERALS

Development of Mineral-bearing Lands in North Thompson Valley.

The following interesting letter has been received by the Canadian Northern Railway Company at Toronto, from Chu-Chua, British Columbia, regarding the development of the mineral-bearing areas tributary to its main line through the North Thompson Valley:—

"There are about twenty claims staked near here; the first car of gold ore taken from the surface of the Wind Pass Claim had a gross value of $1,648.00, and there is another car load ready for shipment.

"As soon as the Spring opens up so that we can build wagon roads, there will be large shipments during the coming summer. At present the ore is being taken down the mountain side by hand sleds. There is about $50,000 worth of ore in sight on these claims without very much development work.

"At the head waters of Boulder and Canyon Creeks, there are large bodies of copper ore that carry gold and silver values, and large deposits of magnetite iron ore that carry some gold values.

"At Blackpool there is ore being shipped that carries both lead and silver.

"From the Fog Horn Group at the head of Boulder Creek there were shipped 60 tons of Galena ore with a gross value of $1,000.00. A further shipment of this ore will be made this winter.

"In addition to this part of the North Thompson Valley being a fine farming and ranching country, it is destined to be one of the richest mineral-producing districts in B. C. All it needs is capital for development."

CANADA AND BEEF PROBLEM.

Farmers of Western Provinces Increase Number of Live Stock.

With the price of beef and other meats soaring to hitherto unheard-of heights, and every newspaper carrying stories about the future prices of boots and shoes and other articles made of leather, there may be a modicum of comfort to be taken from the fact that the farmers and ranchers of Western Canada are now turning their attention to cattle and stock raising to an extent that would not been believed possible a few years ago.

According to the figures given in the Census and Statistics Bulletin issued by the Department of Trade and Commerce at Ottawa, all three of the western provinces show large increases in the number of livestock raised in 1916, as compared with 1913 the year previous to the war. The figures for hogs show a decrease, due to the several large war orders received by some of the western packing firms from the allies. One firm alone is said to have received an order for ham and bacon that called for 350,000 head of hogs.

The increase in the number of sheep is one of the outstanding features of the government report. The increase, approximately 30 percent, is very gratifying. Many of the smaller flocks of sheep as they have found out that the climate was very suitable to them, provided a certain amount of shelter was supplied during the short periods when the weather might otherwise be too severe.

The report estimates that there are at present 2,048,354 cattle in the three western provinces, 565,700 being milch cows and the balance beef and other cattle. This shows an increase of nearly 15 percent over 1913, and also the very large number of beef cattle that have been marketed during the past couple of years must be taken into consideration. Many large war orders were filled in Western Canada.

The Dominion and Provincial Governments and the Canadian Pacific Railway, through its Agricultural and Animal Industry Branch, have all aided the farmers in every possible way, and have published broadcast literature showing the best results that have been obtained on the various experimental and demonstration farms. The Canadian Pacific has several of these farms throughout the West, with an expert in charge of each, and at every cattle sale these farms are represented by animals of a very high class, both for breeding, milch and beef animals. The experts in charge of these farms will at all times aid in any way they can the farmer who seeks advice with reference to the best stock to go in for and also the proper way to secure the greatest results.

While there is no prospect of an immediate reduction in the price of meat as a result of the increased interest displayed by the farmers of the west, the prairies of the Canadian West have unlimited room for the raising of all kinds of livestock, and with the farmers taking a greater interest in livestock than ever before, Canada is destined to play a large part in solving the meat problem which the world now faces, and which is likely to become still more acute at the close of the war when European countries will be buying animals to replenish their herds.

Clean up the Garden

Before ploughing the garden patch this spring rake together and burn all the dead vines, grass, sticks and any other sort of rubbish and save this season's plants from a host of plant pests. Scientists at the Experiment Station have found that cutworms and adult tarnished plant bugs, squash bugs, cucumber beetles, potato bugs, harlequin cabbage bugs, bean leaf beetles and other insects live during the winter in trash about the vegetable garden. Clean culture also tends to prevent many fungous diseases, as wilts and rusts from spreading.

Cold weather aches follow exposure. Soothe and relieve them with Sloan's Liniment, easy to apply. It quickly *penetrates without rubbing.* Cleaner than mussy plasters or ointments, does not stain the skin.

For rheumatic pains, neuralgia, gout, lumbago, sprains, strains, bruises and stiff sore muscles, have Sloan's Liniment handy.

At all druggists, 25c. 50c. and $1.00.

Sloan's Liniment KILLS PAIN

He Feels He Owes His Life To Them

Telegraphed 200 Miles for Dodd's Kidney Pills.

Sandy Goulette, Now Strong and Hearty, Tells How He Found Health After the Doctors Had Given Him Up.

Old Fort Bay, Labradore, Que., Feby 26th (Special)—"Do I believe in Dodd's Kidney Pills? Well, I telegraphed two hundred miles to get two boxes of them." The speaker was Sandy Goulette, an old settler here. Nor did Mr. Goulette require to be pressed to tell the rest of his story.

"I was swollen out of shape from head to foot. I was so short of breath I could hardly speak. The doctor could do nothing for me. The minister gave me the holy sacrament and a good priest came and told me I could not live much longer.

"Then I telegraphed for Dodd's Kidney Pills. I took three pills the night they came and I got relief before morning. Dodd's Kidney Pills cured me. I am able to do my day's work now as well as I was ten years ago."

Mr. Goulette offers to answer any letters written to him regarding his case. He feels that he owes his health, if not his life, to Dodd's Kidney Pills.

Spare the Birds.

Birds have sometimes eaten half their weight in insects in a day. Unmolested they would save the country millions of dollars annually. The natural average seems to be in every man and is shown by the desire to shoot and kill every living thing seen. Thoughtless parents give boys air guns and regular powder and ball rifles, and accidents and deaths frequently result; scores of useful birds and animals are wantonly slaughtered. Who will join the Let Live Association? No initiation fees, no dues. Only agree to let every useful thing live, as far as possible, to encourage others to do the same to lend a hand cheerfully to man or beast when help is needed. Wonderful how body and soul expand as soon as one becomes a member of this organization. Members are not restricted by location, race, creed, color or financial standing.

This Simple Rule Soon Strengthens A Delicate Stomach

If really in earnest about how you feel with pepsin pills or artificial digestives or in fact on a miserable nursery diet—if you will observe one rule and you can eat the hearty, nourishing foods that your appetite craves and your body needs. That rule is to take a teaspoonful of Bisurated Magnesia in a half glass of hot water after meals. Bisurated Magnesia is non-intoxicating and harmless and possesses medicinal qualities that promptly overcome impaired digestion, fermentation, acidity, catarrhal condition of the stomach and distress after eating and other stomach disorders. As Magnesia is required in various ways by the human system, Bisurated Magnesia is the most desirable form, especially recommended for stomach purposes. Sold by all druggists.

Advance in War Surgery

In surgery and sanitation the war has brought out many improvements. There have been no great epidemics, such as have marked other wars, and England is greatly pleased with the work of the Royal Army Medical Corps, which has solved great medical problems during the war. The Somme advance with its death grapple of mighty armies lasting months was a great test for the medical service, with many and serious wounds to treat and the danger of infection.

Minard's Liniment Cures Garget in Cows.

Canada and the Monroe Doctrine.

If the British navy were beaten, Germany next spring could send a large army on the east coast of Canada and there would be nothing to prevent it crossing the four thousand miles of the continent, leaving a trail such as was left in Belgium, in Poland, in Serbia and in Rumania.

Minard's Liniment Co., Limited.
Yarmouth, N. S.

Gentlemen,—It affords me great pleasure and must be gratifying to you to know that after using 36 bottles of your Liniment on a case of paralysis which my father was afflicted with, I was able to restore him to normal condition. Hoping other sufferers may be benefited by the use of your Liniment, I am,

Sincerely yours,
GEO. H. HOLMES.

Minard's Liniment Cures Diphtheria.

A Sign of Rain.

If ducks or geese are expecting bad weather they dash water over their backs. They do this to prevent the first few drops of rain penetrating to their bodies through the dry, open feathers.

AUSTRALIANS ON SKATES.

Canadians Try to Teach Anzac Pals How to Skate.

The unusually cold weather in England in February and the consequent revival of skating has proved a great novelty to the soldiers from Australia and New Zealand, many of whom tried to skate on the various safe stretches outside London. One man with one leg and two rubber-shod crutches made quite good progress at Richmond, with occasional lapses from the perpendicular. At Walton-on-Thames, where the New Zealand Hospital is, the men were enjoying the sport greatly.

There were some Canadians who were experts in skating, and at Regent's Park one wounded man from Montreal gave a good exhibition of figure-skating. Afterwards he tried to teach a Queenslander. Both were in full hospital kit, and their "blues" and scarlet ties made an effective note of color. At last the Queenslander retired baffled, contented to watch the experts, among whom was Princess Patricia of Connaught.

Many New Zealand and Australian soldiers have had their first experience of ice in large areas. On Sunday there were many Australians who wandered along the bank of the Serpentine gazing with interest at the frost-bound waters. To the man from Queensland or Western Australia this is particularly a new experience, and very few, if any, New Zealanders hailing from north of Christchurch have seen such large areas of water frozen over.

FRETFUL BABIES

Mrs. John M. Weaver, Blissfield, N. B., writes:—"I can speak very highly of Baby's Own Tablets. I have used them for my children and find they are the best medicine a mother can give her little ones. I would strongly recommend them to all mothers who have fretful babies." The Tablets regulate the bowels and stomach; break up colds and simple fevers; expel worms; cure vomiting and indigestion and make teething easy. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

CANADA'S TRADE WITH RUSSIA.

We Will Have Considerable Share in Development of Slavic Empire.

Not the least of the avenues of trade that will be opened up after the war, and of which Canada can naturally be expected to claim a considerable share, will be afforded by the harnessing of Russia's immense industrial and agricultural resources, says Bradstreet's Bulletin. The dormant condition of the peoples of Asiatic Russia, it is agreed by industrial and financial writers who have made first-hand investigation during the last eighteen months, has come to an end, and an improved social and economic life may fairly be said to be greatly hastened by the awakening shock of war.

With the realization of possession of practically inexhaustible mineral resources, and with many millions of acres of fertile farming country awaiting the introduction of improved agricultural methods, Russia will look towards Canada and the United States to supply a great part of the materials with which to bring her industries to a maximum of production.

That Canada has not lost sight of the opportunities of this post-war commerce is indicated by the fact that a special representative of the Department of Trade and Commerce made a thorough investigation of the condition of the people and the possibilities of the country, together with the articles likely to be most needed.

Negotiations for the construction of another transcontinental railway through Russia have been opened in the United States, and the raising of $250,000,000 has been proposed by an American corporation to meet part of the construction costs of the railway company, which will have its headquarters at Moscow.

While the present is hardly an opportune time for closing a contract of such magnitude, the fact that active preparation is already being made for the after-war period gives guarantees for the future in connection with the development of the Slavic Empire.

Name Cut On a Tree.

"Now, girlie, shall I cut your name and my name in the bark of his tree?"

"I suppose there will be nothing to criticize in that," said the dear girl, "provided you also cut the name of my chaperon."

Minard's Liniment Cures Colds, Etc.

Proper planning now will save time in seeding.

"The trouble with you, sir, is—if you will pardon me for saying so—that you think nobody is good enough for your daughter." "Yes, sir, and that is where we differ so radically. You appear to think anybody is."

Minard's Liniment Cures Distemper.

HUSBAND SAVED HIS WIFE

Stopped Most Terrible Suffering by Getting Her Lydia E. Pinkham's Vegetable Compound.

Denison, Texas. — "After my little girl was born two years ago I began suffering with female trouble and could hardly do my work. I was very nervous but just kept dragging on until last summer when I got where I could not do my work. I would have a chill every day and hot flashes and dizzy spells and my head would almost burst. I got where I was almost a walking skeleton and life was a burden to me until one day my husband's stepsister told my husband if he did not do something for me I would not last long and told him to get your medicine. So he got Lydia E. Pinkham's Vegetable Compound for me, and after taking the first three doses I began to improve. I continued its use, and I have never had any female trouble since. I feel that I owe my life to you and your remedies. They did for me what doctors could not do and I will always praise it wherever I go."—Mrs. G. O. LOWERY, 419 W. Monterey Street, Denison, Texas.

If you are suffering from any form of female ills, get a bottle of Lydia E. Pinkham's Vegetable Compound, and commence the treatment without delay.

GLAMIS

GROVES—CURRIE—The home of Mr Neil Currie, 2nd con Bruce, Glamis, was the scene of a very pleasant event on Wednesday morning, Feb 21st, when his eldest daughter, Annie Gertrude, was united in marriage to Mr John Groves, of Kerrobert, Sask. Rev Mr Neilson, of Paisley, officiated. They were married under an arch which was beautifully decorated. The bride, who was given away by her father, looked charming in her gown of silk Georgette crepe and satin, and wore the gift of the groom, a handsome pearl necklet. After congratulations were over, the bridal couple and guests, numbering twenty-five, proceeded to the dining room where a sumptuous repast awaited them, after which the happy couple left amid showers of confetti and rice to board the three o'clock train for the west, visiting relatives at Port Arthur and Winnipeg, thence to their home at Kerrobert, Sask. Mr and Mrs Groves are well known here, and their host of friends join in wishing them a long and happy voyage over the matrimonial sea.

GRAHAM — MCNALLY — The home of Mr and Mrs John E McNally of "Maple Lane Fruit Farm," Sarnia, Ont., was the scene of a very pretty wedding on Wednesday evening Feb. 14, when their daughter, Lottie May, was united in matrimony to Mr Charles T. Graham of Glamis, Ont., Rev E A Deville, of the Free Methodist Church Glamis, officiating. To the sweet strains of the wedding march played by Mr. W. L. Atkins, of Toronto, friend of the groom, the bridal party took their places under a beautifully decorated arch. The bride, who was given away by her father, looked charming in a gown of cream silk. The ceremony concluded, congratulations were extended to the happy couple, after which the bridal party and guests, numbering twenty five, sat down to a sumptuous repast. The wedding presents were beautiful, showing the high esteem in which the young couple are held. Mr. and Mrs Graham left Sarnia on Tuesday, Feb. 20th, for their future home in Glamis. The young couple have the best wishes of their many friends for many years of happiness and prosperity.

TWELFTH CON BRUCE

March came in like a lamb, guess it will go out like a lion.

The Box Social in S. S. No 13 proved to be one of the largest of the season. The proceeds of the can of honey donated by Mr Jones amounted to nearly $8o, and as the Red Clover was bid at $7. The total proceeds amounted to $283.

Mr Cottrill Morris, who is at present in Chicago, underwent an operation for appendicitis, but we are glad to report he is recovering nicely.

Mr Peter McArthur visited on this line last week.

Mr Dilman Stafford was drawing hay from James Archer's last week.

CANTIRE

(Intended for last week)

We are glad to report that Mrs Hen[illegible] Winch, who has been under the doctor's care for the past two weeks, is now able to resume her duties again.

Mr D. A. McIntyre is now certain that troubles never come singly. On Friday he underwent an operation for hernia And on Sunday pneumonia had also developed, which left the patient in a rather precarious condition. The danger point however has now been passed, and we hope to see Dan doing his work as usual.

TURNER'S

James Christie has returned home from Walkerton hospital and is doing nicely.

Henry Dier of Parkhead is spending a few days with his mother here.

Mrs Bell is at present quite ill with pneumonia.

ELORA ROAD NORTH

Mr Andrew Miller is moving across the river to his new farm.

Mr Neil McArthur, jr, is away to the west in charge of a car load of horses

Miss Lillie McDougall is visiting friends in Bruce.

Mr Wm Winch spent a few days in Toronto.

Mr John Rae is able to be out again after an attack of the chickenpox.

Mr J S Campbell unloaded a car of western grain last week.

Mr Clarence Fraser has been hauling logs to Port Elgin.

Mr Wilford Campbell is employed in Sinclair's hardware store in Paisley.

Mr Donald Armstrong is laid up with a sore back.

Mr John Walker sold a fine grey horse last week.

GILLIES HILL

On Friday evening, Feb. 21st, a large number of neighbors gathered at the home of Mr and Mrs Warren McGill to bid them good-bye and spend a happy evening with them before they left for their new home at Earl Grey, Sask. A delightful evg. was spent and there was a splendid program of vocal and instrumental music and after the presentation, program, and lunch, the guests whiled away a joyful evening in tripping the light fantastic. Donald Reid made an excellent chairman and gave a neat speech. The address to which Mr McGill replied thanking the donors for their beautiful and useful gifts, is appended:

To Mr and Mrs Warren McGill and Elmer:

We, a number of your friends and neighbors, have gathered here this evening to express to you all our great sorrow at losing you from our midst. We would like you to know we have appreciated your friendship and that your lives have not been lived among us in vain. You have been very kind to all who were in need, and were always ready and willing to give the helping hand to those who were requiring assistance. You gave us a welcome to your home and in all things were just ideal as neighbors. You have been amongst us long enough for us to thoroughly appreciate the sterling qualities of mind and heart which you all possess, In the work of the church you were always an interested and helpful adjunct, and we are going to miss you there. We feel especially sorry to lose you, as we need all the help we can get to carry on the work of our church. However, we sincerely hope that you may be very happy in your new home, and that your influence and helpfulness may be of greater help in your community. We hope for you that you may be so located that some christian church may always have your presence and help In this way you may continue to be unto others all that you have been to us. We hope and pray that the happiest and best days of your lives may still be before you. Before you take your departure from us we would like in some tangible way to express our good will and appreciation. And as a slight memento of what we feel we would ask you, Mr McGill, to accept this gold watch, and we hope it may remind you, as you look into its face, of the faces you have left behind you in Gillies Hill. We would like you, Mrs McGill, to accept this silver tea service, and as you pour out the tea, just think that many of your old friends would enjoy very much to have a cup of tea with you To you, Elmer, we take pleasure in presenting this purse of money, and we hope if you have not already started a bank account, that this will form a nest egg, and that some day your friends may hear that you have not only made a success in this life, but that you have also developed character that will cause you to be in favor with God and man. Signed on behalf of your many friends,

DUNCAN GRAHAM,
JAMES BOWER,
DONALD REID.

HOMESTEAD INCREASED WHEAT 50 PER CENT

G. E. MEADD, Park Hill, Ontario, says:

SECOND CON ELDERSLIE

Mrs Dan McGill has returned from a three weeks' visit with friends in Mitchell.

Mrs W J Allen is laid up with an attack of la grippe.

Mr Gohlieni and family, of Brant, have moved on to the Ankenman farm.

David Keith has purchased lot 12 on this con from Wm Robertson.

Mr Robertson and his sister, Miss Isabella, who have been respected residents of this con for a number of years, will be much missed here, but their many friends wish for them much enjoyment in their new home.

Mr John Rae, of Paisley, spent Sunday with his friend, S Patterson.

Mrs T Pepper has leased the grass farm, lot 21, con 2, to W J Allen, and the home farm, lot 25, con 3, the west 50 acres to J Case, and the east 50 to Geo Hope.

John Caldwell has been confined to the house with muscular rheumatism.

Mr and Mrs W Pepper and little Thelma spent Sunday with friends here

Hugh Watt has leased Mrs Price's 50 acre farm for the coming season.

On Friday evening of last week neighbors and friends to the number of about 30 gathered at the home of Mr and Mrs T Nicholl to bid them adieu before leaving for their new home at Gillies Hill and also to present to Mr Nicoll a leather Morris chair and to Mrs Nicoll a leather rocker, as a remembrance of their sojourn on the 2nd. Councillor W J Allen occupied the chair. The address was read by And Young, and Jas Vancise made the presentation, after which were some short addresses and a few patriotic songs by those present. After lunch was served the remainder of the evening was spent in a pleasant sociable way, the young people resorting to the favorite dance. Mr and Mrs Nicoll's many friends here wish them prosperity in their new home.

GLAMIS

We are glad to report that our sick are improving.

Mr and Mrs John Wittig, of Underwood, spent Thursday afternoon at J C McIntyre's.

Pte Clyde McKeenan is home from London for a few weeks' rest.

Rev H McIntyre of Toronto and nurse Ethel Oliver of Winnipeg, who spent a few days at J C McIntyre's, left on Thursday for Toronto.

Mr J C McLean, who was visiting his mother a d brother on the Boundary, returned to Saskatchewan last week.

Miss Alberta Kirkton expects to go west soon in company with her sister and brother-in-law, Mr and Mrs Woods.

The three churches in our village have had wood bees and have laid in quite a supply of fuel.

Some of our young people take great pleasure out of tobogganing down some of the big hills on the 2nd con those lovely moonlight nights. Last Thursday night one of our young ladies made rather a swift descent, but the wrong trail and came in contact with the hard crust, which disfigured her somewhat. We hope to see her looking her natural self in a few days.

WOODS KIRKTON—Miss Martha Kirkton, daughter of Mr and Mrs Alex Kirkton, was married on Tuesday night, Feb 29th, to Mr Albert Woods, of Lanigan, Sask. The marriage ceremony was performed by the Rev Mr De Mille, of the Free Methodist church Quite a number of relatives were present. The bride's dress was of Nile duchess satin, with an overdress of embroidered net. Her going away suit is navy blue with hat to match After a short trip to Markdale they expect to leave for the west where they will make their future home. The many gifts received show the esteem in which the bride is held. Their many friends here wish Mr and Mrs Woods a prosperous journey through life.

Children Cry
FOR FLETCHER'S
CASTORIA

CANTIRE

Cattle buyers are the busiest men these days. Farmers are realizing record prices for grass cattle this year.

We are glad to report that Mr Robt Stoddart who has been confined to the house for several weeks with a severe attack of la grippe is able to be out again.

Real estate has been changing hands in Cantire. This week Mr Alex Gowanlock has purchased John A McIntyre's farm. This is one of the best farms along the fourth. John A. has bought the Morgan farm on the county line 1½ miles east of Tara, and will move as soon as possible. We are sorry to lose such desirable citizens as Mr and Mrs McIntyre, but we hope they will prosper in their new home which will still be in good old Bruce Co

Many queries have been coming from farmers who have ordered salt. Patience is a virtue that is worth cultivating, and it is to be hoped by this spring there will be a host of characters more or less beautiful. However, we have been informed that this very essential commodity is expected next week, but in this day of wheezy old locomotives this may mean some time in the future.

Mr A. D McKay attended the convention of the United Farmers held in Toronto last week, as the delegate from Cantire farmers' club. As there was an attendance of five hundred farmers and among them many who were quite capable of championing their own cause even amongst the wiseacres of the Queencity, it is little wonder A. D has come back with a fresh vision of the possibilities of the farmers' organization. But success lies only in that one word, co-operation.

The trustees of this school section have bowed to the mandate of Inspector McCool and procured the equipment necessary to qualify for the Legislative grant. Those who attended old No 1 in the days when a piece of martingale supplied by one of the trustees served as a means of teaching the mischievous boys that the days of the transgressor is hard, on viewing this collection piled away in a corner are at a loss to know what use is to be made of all this haberdashery, and generally conclude their remarks with "All rubbish! Nonsense! Let the inspector go to pot," etc. All this may or may not be correct. We would not like to offer criticism on educational matters nowadays. The one thing that occurs to us is there is the teacher to make use of all this equipment in the limited time that teaching has to be done? As for the trustees, there was no alternative but to comply with the demand. The equipment cost in all some $35. The Legislative grant is $31. If that were cut off how long would we be in losing the cost of equipment? There is no use "kicking against the pricks." The inspector carries out orders from the department.

Mr Neil McKillop, V S, who has been in the west for several years, paid a visit to the old farm here last week. Neil is now engaged in the live stock business, and operates in a radius of many miles of Moosejaw. He brought down a couple of carloads of hogs which he disposed of in Toronto at $14.75 a cwt. Winnipeg, he claims, is just as good a market.

Children Cry
FOR FLETCHER'S
CASTORIA

BURGOYNE

A Sunday School "training course" has been organized, some 15 or 20 have signified their intention of taking up the course of study. There is a suggestion by Rev. W. J. Watt to have a Bible Study service on Sunday evenings instead of the regular church service, the object being to get more in touch with the young people and give them an opportunity to express their views on subjects which would be brought up from time to time. A vote was taken on the matter on Sunday evening after service recently, a majority voting for the change.

Mr and Mrs John Gowanlock and Miss Bessie left on Tuesday for the west where they will spend the most of the summer among friends.

Mr Gohlam of Aberdour is moving into the premises lately vacated by Mr Chappel, the old Keobke farm. This property has changed hands frequently lately. Mr Winslanton bought it from Mr H Keobke a few years ago. About a month ago he traded with Mr R. Begg for the old mill property in Port Elgin. Mr Begg has now sold it to Mr s Jos Ferguson of our burg.

Mrs McVittie and Miss Bessie are to move into Mr Groves' residence, lately occupied by Mr Currie.

Mr Palmer, of Arran, has rented the Herb Miller farm on Elora Road, the old McBride farm.

One of our well known and highly respected citizens passed away last week in the person of Mrs Adam Eagles, sister to Alex Geddes. Upon the death of the late Adam Esplen which occurred some time ago, Mrs Esplen took up her residence in Port Elgin with her sister, Miss Mary Geddes, where she resided until death overtook her on Wednesday evening. A large concourse of sorrowing and sympathetic friends followed the remains to the Burgoyne cemetery on Friday afternoon.

House and Lot for Sale

OFFERS may be made for the purchase of that house and lot lying south of Mr Reveler's, formerly owned by the late Alex McDougall. No tender necessarily accepted.

J. D. GIBSON

Four Seater
$1050
f. o. b. Toronto
Subject to change without notice

Style—Comfort Power—Economy

This new Overland Country Club Light Four is a distinctive and smart car in the low priced car class.

The rich gray body, with black fenders and trimmings, is set off to pleasing advantage by red wire wheels that give just the right flash of brilliant color.

The two comfortable front seats move forward or back, independently, and a spacious aisle between gives free passage to a roomy seat for two passengers in the rear.

For riding comfort, the Overland Country Club is a revelation.

An unusual demand for this model makes it necessary to place orders at once to secure spring delivery.

The People's Popular Store

Spring Goods Are Now Arriving

We have during the last week received and placed in stock a fine range of Spring Goods, and particularly so in the Ladies' Department. We are showing a beautiful range of

Dress Materials

As there is a marked tendency for silk this season we have received a nice selection of the most popular lines such as Taffeta, Pailette and Crepe de Chene. Of these we have a good range of colors and good heavy quality. In other dress materials we have also a splendid range of Serges, Voiles, Foulards, Viyellas, Zephyrs, Chambrays and Ginghams in all the leading colors, and all of which, in spite of the big advance in the price of goods, we are offering at prices that should appeal favorably to our customers.

New Prints

We are offering a large assortment of Prints in light and dark colors at 12½c and 15c a yard, also a line of Percale 36 in. wide at 20c a yard.

We Have Still a few lines of Winter Goods

Which must be cleared during the next ten days at slaughtering prices, as below:

1 only, Set Ladies' Sable Furs, reg $57.00 for $39.00.
1 only, Set Black Fox Furs, reg $70.00 for $43.00.
A few Ladies' Winter Coats at half price.
A few Red Comforters, reg $3.50 for $2.39.
5 Men's Heavy Overcoats, reg $20.00 for $15.00.
6 Men's Heavy Overcoats, reg $15.00 for $9.98.
A few pairs Men's Overshoes, reg $1.85 for $1.39
A few pairs Men's Heavy Rubbers, 12 in. top, clearing at $3.89
Men's Heavy Wool Underwear, reg $3.00 for $2.49 a suit.
Men's Heavy Wool Shirts and Drawers, reg $1.00 for 69c.

Our Millinery Rooms are well stocked with the newest styles in Ladies' Hats for spring and summer, and our milliners are busy preparing for the Spring Opening.

Our Grocery Stock is always fresh and replenished every week with new goods. Try our Black or Green Tea of which we make a specialty—3 lbs for $1.00.

Rush out your Butter and Eggs often, as the mild weather is sure to cause a drop in price. We will always give you full value for your produce.

Going Out of Public Life

According to the Athabasca Herald, Hon. A. G. McKay, formerly leader of the Ontario Opposition, is likely to withdraw from public life after the present session of the Alberta Legislature.

—Mr. H. Sellers reached his 78th birthday last week, and celebrated the occasion by entertaining a few friends at his home for the evening.

CARD OF THANKS

The undersigned beg to acknowledge with gratitude the sympathy, kindness and confidence shown upon them by the whole community, as well as by many distant friends since the recent bereavement by the death of Mrs Thos Peacock and her twin boys

Mr and Mrs Wm Grant and family,
Thos. Peacock.

—Private funds and loans on farm property. T H George.

—TO RENT—House on Goldie St. J. C. Gibson.

—FOR SALE—New six-roomed brick house. J N Collins.

—Marriage licenses issued and money to loan. T. H. GEORGE.

—Men's New Outfits. Hats, Suits, and Shoes. Ballachey, Laidlaw & Co.

—Plates for Fleury Grinders, also iron Pumps and repairs, J A Elwes.

—St Patrick's social in the Methodist church on Friday evening, March 23rd.

—WANTED—A situation as housekeeper. Mrs Ann Park, Chesley P.O., Ont.

—Full lines of fine engagement and wedding rings at T. Shoemaker's Jewellery store

—Millinery opening on Friday and Saturday, March 16 and 17. Ballachey, Laidlaw & Co.

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—Parties requiring repairs for the McDotte cream seperator may obtain them at Fisher's Hohr Mill.

—FOR SALE—5 head young cattle rising 2 years, and 1 horse rising 4 years. H. McMorran, Paisley, P. O.

—Lady's shoe and rubber exchanged at the rink on Saturday, March 3rd Please leave at the rink.

—Highest price for beefhides, horse hides, calfskins, sheepskins, tallow, &c. P. OLTSHER, Paisley Meat Market.

—All makes of pianos, organs and sewing machines, also small musical instruments. P McKinnon, agent, Paisley.

—FOR SALE:—New two-storied stucco house. Bath, furnace, good spring well, in good location. Will be sold at cost. Robt Irving.

—We have a good stock just now of Red Cross supplies, Flannel, Yarn, Flannelette, Sheeting, etc. Ballachey, Laidlaw and Co.

—A meeting of the Women's Patriotic League will be held in Putnam's hall on Friday afternoon at 3 o'clock. A full attendance requested.

— BARGAIN PRICES — Balance of stock at late A McGill's agency, including litter carrier, hay fork cars, wheel lifters, plow shares and other articles.

—Auction sale of 7 horses, 4 cows, 21 head of young cattle, 2 pigs, implements and hay, on lot 4, con. 4 Bruce, on Wednesday, March 21st, at 1 pm. W. G. Nicoll, prop; R. C. Pearce, auct.

—If Stevenson's quick healing salve is the best made, We have a choice line of tobacco and cigars, stationary and school supplies, Agent for daily papers and magazines. Give us a call.

—FOR SALE—Buckeye traction ditching machine, uses either gasoline or common coal oil. Only used about four months. As good as new, will sell cheap on account of illness. B. Phillips, Chesley, Ontario.

—Auction sale of live stock on Tuesday, March 20, at 1 o'clock on lot 29, con. 5, Elderslie, consisting of: 6 horses, 20 fresh calved cows, 10 steers 2 yrs old, 15 yearlings, 10 calves, a quantity of seed oats. Jas. E. Cass, prop; R. C. Pearce, auct.

—The awful tragedy of war is uppermost in the minds of men and women today. But there is great uplift and courage gained by reading good books, and a change of thought is really to be desired in Miss Marjory McMurchy's "The Woman, Bless Her," and Mrs Nellie McClung's "In Times like These," we have two excellent aids in this direction Please order early—$1 and $1.25 Orders by postcard promptly filled. Mrs Robt Conn, Special Agent.

Free Illustrated Lecture

Rev. J. H. Dyke, the Field Secretary of National Sanitorium Association will give a lecture in the Town Hall, on Sunday evening, March 18th, after church services, on the subject of Tuberculosis, its nature, treatment and prevention. Illustrated with instructive lantern views. You will find this lecture both interesting and instructive. Not only those afflicted with this dread disease will learn how to help themselves, but the information gained may be the means of preventing you yourself from contracting the disease. Collection taken in aid of the Muskoka Free Hospital for Consumptives.

—The late Jas Pearson, who died at his home in Toronto on Feb 21st, was well known to many Paisleyites, being a brother-in-law of Mr W J Scott of Toronto formerly of Paisley, and for a number of years had a barber-shop in Chesley. He is survived by his wife (Isabella Hill), one son and one daughter.

—The remains of the late Mrs Keith were brought from Ottawa for burial in the Paisley cemetery on Tuesday afternoon. The deceased lady and her family lived in Paisley but left here twenty years ago She is survived by three sons: John in Ottawa, William in Owen Sound and David in Elderslie.

—Miss Annie McBeath, of 4th Elderslie, is visiting in Owen Sound.

—Mrs Campbell, of Walkerton, is visiting her sisters, Miss McNeill, Paisley, and Mrs Hugh Mitchell, 8th Elderslie.

—Rev Alex Leslie, of Elmwood, preached very acceptably in Knox church on Sunday, in the absence of the pastor.

—Mr and Mrs Wm Johnston, from British Columbia, are here on a visit at the home of his mother, Mrs J. Johnston con. 12, Elderslie.

—Mr David Johnston, a resident of Bruce for many years, died at Pasadena, Cal., on March 3rd. When Mr Johnston left this part he went west, and later to Alaska, but his health failing he took up his abode in California. A sister of the deceased, Mrs Eliza Johnston, lives at Legrand, Mich.

Pay for What We Get

The council have taken a reasonable stand on the lighting question. At last meeting it was decided on motion to pay for electric lighting according to quality of service given. No person would like to be without the street lights altogether, but it is not right that we should be paying full price for half-power lamps.

Becoming Widely Known

Stratford Herald: Paisley has now an established horse market, considered by dealers the most noted in Canada, and is a great boon to the farmers in a circuit of at least forty miles from that town, who can dispose of either young or surplus stock at the highest price at any season of the year.

Making Great Hockey Record

Baxter Stanley, who learned the game in this, his home town of Paisley, is one of the shining stars in the Pacific Coast hockey league this season. He stands fourth in the list of western professional players, with 28 goals and 18 assists. The report notes that his unselfish play is proven by the fact that he leads the league in assists.

Died in Toronto Hospital

Mr R C Barss, who went to Toronto hospital a couple of weeks ago for treatment, died in that institution on Thursday last. After undergoing an operation for a tumor in the throat. The remains were brought home on Saturday and the funeral took place that afternoon to Stark Vale cemetery. A more extended notice will be given in next issue.

To be Tried for Sedition

The police magistrate of Guelph heard the evidence of Mr John Rowland of Walkerton and a Mr Pridham of Harriston as to the utterances of John Stewart of Minto Tp., in a conversation at Harriston with Mr Rowland, on Feb. 1st. The evidence was so strong that the accused man was committed to stand his trial at the spring assizes in Guelph. Stewart was required to give $1000 bail for his appearance at the coming trial.

Business Changed Hands

Mr and Mrs Walter Stark arrived here on Saturday night from Keewatin. They will become residents of Paisley. Mr Stark having bought out the flour, feed and seed business of Mr E. G Rebel. The new proprietor is a young man very well known to the majority of people here, and is thoroughly conversant with the handling of that line of trade, as he has had several years experience in the flour trading. His many old friends wish him every success.

Very Successful Patriotic Tea

The sum of $105.70 has been handed over to the Women's Patriotic League by Mr and Mrs S. Ballachey, this being the entire proceeds of the Red Cross benefit held at their hospitable home, "The Maples" on Friday last, afternoon and evening, on the plan of the tea-room. Meals and lunch served, candies and home made baking sold, all of which was provided at the expense of the host and hostess. Hundreds went to patronize the benefit, and enjoy the sociability of the affair, and all who attended pronounce it a great success. It's indeed gratifying in those who make such special efforts for the patriotic cause to find the public so ready to respond to an invitation. Mr and Mrs Ballachey desire to express their appreciation for the generous patronage extended upon this occasion.

Paisley Boys in the Ministry

Mrs (Rev) J C Seymour, of Bath, Ont, in remitting her subscription for THE ADVOCATE says: "We enjoy The Advocate. I am visiting at present with my youngest son Edgar, who has the unique experience of being the Methodist minister on the circuit in which he was born. He is baptizing children whose mothers were baptized by his father. The Ladies' Aid tendered us a fine reception when we arrived, three of the number having been members of the Ladies' Aid when my husband, Rev J C Seymour, was stationed here. Howard P L Seymour is the minister on the adjoining Melrose circuit, where he was born, and the Presbyterian minister is our own George Mitchell. Rowe M Seymour is the minister at Englehart, Ont, and has a fine charge there."

Campaigning Against the Household Pests!

THE time for the Spring Campaign approaches. Soon the double windows will be off and the sun will be warm and bright. You will be thinking of cleaning them. After the long months that the house has been closed it will need it, no matter how good a housekeeper you may be.

See that you have your ammunition ready. Be prepared for the big spring drive against the moth and the germ.

Here is the ammunition to help you to success. Lay in your supply now.

Powdered Ammonia

Softens the water and eases the work of rubbing the floors and furniture. Ideal and Handy brands. **10c per Package.**

Liquid Ammonia

Some prefer the ammonia in liquid form. Simply moisten the cleaning rag with it and it is ready for use. A good sized bottle for **10c.**

Lye

Another fine disinfectant is Lye. There are few houses that do not keep a plentiful supply on hand. It will take out grease and other dirt from the floors as quickly and easily as anything. Per tin, **15c.**

Soaps

Of course you will not attempt housecleaning without a good supply of soap. It is ever reliable. **5c** per bar.

Metal Polish

For shining up the brass knobs on the buffet and other furniture a good metal polish is necessary. **10c** per can.

Brooms and Brushes

Did you ever think how much time could be saved the year round by brushes that get behind and under the stove and radiators and between the strokes of the broom? Why not make your work lighter? A full supply of these to choose from.

Sink and Bath Cleanser

You know how hard it is to get the dirt cleaned off the sides of the sink and bath tubs. **Old Dutch** is a powder which does the work with the least amount of rubbing. Per can, **10c.**

BUTTER, 36c — EGGS, 36c

L. C. SPOFFORD

Both 'Phones — Paisley Bargain House

—Pte Ed McLaughlin, of a Toronto battalion, spent a short leave visiting here at the home of his brother, Mr Irwin McLaughlin.

—Stewart McDonald, son of Mr and Mrs John McDonald of Ethel, has joined the C. A. M. C. and is training at London. Stewart was born in Paisley.

PRACTICAL FARMING

Some Feeding Suggestions

"For hogs, beef cattle and even dairy cows barley is worth more per ton than buckwheat, emmer or oats, and approaches very closely to corn, wheat or rye as a food for hogs."

The aforegoing statement is made by Prof. Geo. E. Day in bulletin 246 of the Ontario Department of Agriculture.

Prof. Day goes contrary to another rather general belief when he says that with the use of judgment other grains may be substituted for oats in the feeding of horses. In the United States, he says, corn almost entirely takes the place of oats in many districts, and corn at two cents per pound is cheaper than oats at two cents. In Prof. Day's judgment, however, a mixture of corn and oats would be better than corn alone. When oats and bran are the same price per pound bran may be used as a partial substitute. In any case weight rather than bulk should govern in the grain ration of the horse.

Rye is not high in protein, but it is very low in fibre and is high in nitrogen free extract. At the same price per pound it is considered more valuable for stock than any of the other cereals except wheat and corn, and should be worth as much as corn. Buckwheat is worth more than oats for fattening, and for general feeding purposes barley is worth more than emmer.

Speaking of by-products of grain, Prof. Day says that oat hulls are not as valuable as good oat chaff; buckwheat hulls also have very little value, but buckwheat middlings, if true to name, have a very high value, especially for increasing the protein in the ration of the dairy cow. Gluten feed, a by-product of cornstarch factories, contains, in the highest grade, a high percentage of protein, but low-grade gluten is much less valuable. This should always be bought on guarantee of analysis.

Cottonseed meal is valuable for its high protein content, but should be used with moderation, even for dairy cows, not over two pounds per day, and for pigs or calves it had better not be used at all. It should also form only a minor part of the grain ration. Linseed meal is not so high as cottonseed meal in protein, but it is a safe feed, and tends to promote general thrift in the animal. There are different grades of cottonseed meal, and this, like gluten meal, should be bought on guarantee.

Buckwheat straw is higher in protein than other straws, but it is also much higher in fibre. Barley straw is about equal to oat straw in protein, but it is not so palatable, and the beards are objectionable. Chaff of oat or wheat straw is much more valuable than the straw itself, and the old practice of separation had a good deal to recommend it. Good corn ensilage Prof. Day considers worth twice as much as roots.

Cull apples are worth saving for stock feed, and apple pomace has considerable value.

PAINLESS CURE FOR BURNS.

New Mixture Wonderfully Effective in Cure of Liquid Fire Wounds.

Wonderful stories have reached this country of the remarkable success in curing burns from explosions and liquid fire through the medium of a mixture called amberine. In the World's Work, in a group of articles entitled "Wonders of War Surgery," the composition and application of this healing wax is described. Here is how it is applied:

A young soldier with his hands and forearms bandaged was led in by an orderly and seated on a stool. A nurse removed the bandages and the burned skin. She washed off the gas with a small rubber hose, and dried the flesh with an electric hot-air drier. Then she brought an atomizer filled with a hot liquid. This she sprayed carefully over the hand and forearm, so that they were soon entirely covered with a soft, white, waxlike covering.

While it was still hot she laid strips of thin cotton batting over it and painted this with the same liquid until the whole wound was sealed in under the drying liquid. Then she wrapped it up in thicker cotton batting, and went to work on the other hand.

Whatever the victim may have felt about it, this was a very simple case. I saw the hands a week later and they were covered with new, supple skin. It is not quite so simple a matter when the burns are deeper, but as the process is always the same and does not vary on account of the degree of the burn, before going on to describe other cases I had perhaps better describe the process.

The liquid which does the work is nothing more than a combination of paraffin and resin. It makes an airtight covering over the burn and, at the same time, soothes the wound and allays the pain.

Laid on with a brush it would be painful, but as it drops in tiny globules the patient does not even feel the fall of the spray on the flesh, and it is quickly covered with a waxy surface that becomes airtight as soon as the strips of cotton batting are laid over it and painted evenly with more of the same liquid.

The temperature of this liquid, when applied, is 70 degrees Centigrade, or 158 Fahrenheit. My attention was called to the heat first by the fact that a drop of it fell on the round skin of one of the patients on that he cried, "It is burning me!" As he had just had several cans of it sprayed and painted on his back this seemed curious to an amateur in medicine. But it was explained to me that he did not feel the heat on the flesh as he would on the skin. Great care is always taken to see that none of it touches the naked skin, and this, as a matter of fact, was the only occasion on which I saw anyone even squirm.

The whole thing seems so simple that it strikes one at once as remarkable that it is not the common process for healing burns everywhere. And when you see the size of some of the burns it cures a whole back, for instance—the reader at it grows!

Oriental Invasion.

England is experiencing to a limited extent an invasion of Oriental servants. Chinese and Japanese are landing there in greater numbers than usual and are taking the places of the native servants who have joined the colors, gone in for munition making or hied to the farms, where such good wages are now being paid. The Gurkhas are said to be proving popular because they make themselves more generally useful and even never to tire of work.

Bright Youth.

Caller—So your son Willie has started to work as an office boy. How is he getting on?

Proud Mother—Splendidly! He already knows when ought to be discharged, and is merely waiting to get promoted so that he can attend to it

OATS FOR WORK HORSES.

Experimental Farms Find Crushing of Oats Unprofitable.

The practice of crushing or grinding oats for horses is increasing. The best authorities have for years recommended that grinding oats for draft horses does not pay, and if the meal is made too dusty or fine it may often be injurious.

However, the practice of rolling or crushing has largely replaced grinding in many districts. Many large city companies are now using crushed grain and report favorably as to its economy. Advocates of oat crushing claim great benefits therefrom, such as:

1. Increasing the percentage of digestibility of oats for horses on hard work and having little time for feeding.

2. Greedy feeders are made to eat more slowly.

3. Horses with bad teeth are assisted to digest the grain properly.

4. That twenty-five per cent. of grain fed whole is not digested and is lost in the manure unless crushing is adopted.

5. Proper crushing leaves the grain free from dust and fine meal.

6. Crushing exposes the grain more fully to the digestive juices, thus aiding digestion.

7. That crushing even at a considerable cost is profitable in that grain is saved and that horses are healthier.

These and other arguments are used by advocates of crushing oats for horses. Considering the high cost of fuel and also of crushing, it has been considered advisable to conduct an experiment along this line. The results of this trial given herewith appear to answer conclusively most of the above stated claims.

Results of Experiment.

Five teams of horses were selected for this experiment and these were fed experimentally for eight months, starting in October, 1915. The object of this trial was a comparison of the same quantity by weight of whole and crushed oats, the horse from each team was started on crushed, and the mate on whole oats, thus insuring a fair comparison as to work performed on each feed. At the end of each month the feeds were reversed in each team. Careful records and weights were kept as to the feeds consumed. All horses received their usual supply of hay, water and salt. Horses were weighed each week.

As all experiments and practical trials have proven the value of some form of a grain ration the following mixture: oats 5 parts, bran 1 part, was adopted for both the whole and crushed oats.

The first week of each month, the transition period, was disregarded in compiling results. The following observations were made:

1. The gains and losses in the weights of the horses were closely related to general health and vigor.

2. No horses became fat but all remained in good condition in spite of extra heavy work in fall, spring and early summer and regular work in winter.

3. During the whole trial the gains or losses in weight were approximately the same for both whole and crushed grain.

4. The slight difference in weight was in favor of crushed grain but amounted to only 125 lb. gain for 10 horses, fed half the time on crushed grain during the eight months.

This is .15 lb. per horse per day. At the average charge of $2 per ton for crushing, such slight gains would cost 13 1-3c per pound. However no difference was apparent in health or general condition.

5. When bran was mixed with the whole oats the horses could not eat too rapidly owing to the dry, flakey character of the bran.

6. When horses were properly watered and not fed too much hay, whole grain was found in but very small quantities when at all, in the manure.

7. Both from the weights and appearance of the horses and the condition of the manure, crushing did not appreciably increase the digestibility of oats.

8. Whether fed crushed or whole grain, horses must have sufficient rest after meals to start digestion at least. If time is short, feed less rather than allow too rapid eating of the regular feed.

In conclusion, it seemed to be definitely shown that, to horses fed in the proper manner, the crushing of oats had little if any advantage and was unprofitable. In other words, the cost of crushing is wasted.

PROSPERITY IN IRELAND.

Flax Industry, Shipbuilding and Agriculture Never Better.

"Trade in all departments of Ireland's industrial life is so active and prosperous that it is difficult at times to realize in this favored island that we are in the middle of the third year of a great war," says Robert Colvill, president of the Bank of Ireland, in his annual report on banking and industrial conditions. He adds:

"The flax industry of the north is prosperous, and the exports of Irish linen for the past year were two million pounds sterling more in value than in the preceding year. Shipbuilding has also been carried on with energy, and our main industry, agriculture, is very prosperous. The prices for cattle, horses, and all ordinary live stock have been extraordinarily high, while the prices of oats, barley and wheat have been more than double the normal."

Life in the Navy.

"And what do you sailors do?" asked a visitor on one of our battleships.

"Well," responded the jolly tar, "we does what we please until we are told to do something else, and then we does that something else pretty darn quick."

Save the wood ashes and keep them in a dry place. They are a splendid fertilizer, especially for the orchard.

MURAD CIGARETTES

Everywhere Why?

The blending is exceptional

Anargyros

The AUTOMOBILE

General Trouble Rule For Balky Car.

Above all remove nothing from the engine except as directed in test rules.

1. Gasoline—Is tank full? Are pipes clean? Is carburetor clean? If carburetor needs adjusting do it, otherwise leave it alone. Does manifold leak?

2. Compression—To test: Open all petcocks except the one on cylinder to be tested; crank engine, noticing how strong the compression is in each cylinder.

3. Ignition—A. Test for a spark by taking the wire off any plug; hold wire about ¼ of an inch from plug; crank engine with switch on. Spark should jump to plug.

B. Are the batteries run down? Does the vibrator (if any) buzz? Is timer clean? Do timer points make good contact?

C. Are any wire loose, burned, wet, broken or short circuited? Are spark plugs clean and are points 1-50 of an inch apart?

D. Does magneto armature revolve? Is safety spark gap clean? Are interrupter points clean and adjusted right? Do all brushes make good contact? Is distributor clean? Is distributor rotor loose, broken, or making poor contact?

E. Check magneto wires as per "C."

Note—Loose wires and terminals and neglected batteries, also dirty gasoline, cause much trouble.

Note—To keep a gas engine running cooling and lubrication are needed.

Thoughtless Flooding

"How seldom one sees a private owner start his engine with the switch off, though the professional driver very often adopts this procedure when the motor is cold," says a writer in The American Motorist. "The average owner floods his carburetor, or pulls the choke switches on, and presses the starter button ineffectually five or six times. Then he opens the bonnet, perhaps, floods the carburetor again, and at last gets an explosion.

"It is obvious that the idea of flooding the carburetor is to obtain a temporarily enriched mixture, but the value of the flooding is lost if it is done when the cylinders and induction pipe are full of mixture, any petrol vapor left in this over night having long since evaporated. If the engine be turned over a few times with the switch off, the air is expelled, and a thin mixture of air and petrol inhaled in its place. Flooding then gives a temporarily rich mixture in the cylinders and the engine will start at the first trial."

CANNOT STARVE ENGLAND.

Ocean Borne Traffic Much Greater Than Before War.

"The returns of the port of London for the past eight months will not encourage the hopes of the Germans of starving London or ruining its trade by the depredations of submarines," says the latest report of the Port of London Authority on conditions at the great London docks.

The tonnage entering and leaving the port shows a substantial decrease as compared with the preceding year, but the quantity of goods actually unloaded shows a decrease of only three per cent., the tonnage being 1,829,000 this year, as compared with 1,885,000 last year. Prohibitions on the import of several classes of merchandise have been in force during this period, and have undoubtedly affected the figures appreciably.

The stocks of goods, especially foodstuffs, in the public warehouses, has actually increased 22 per cent., being 687,000 tons, against 564,000. The present stocks are the largest in the history of the docks of London.

As compared with pre-war times, the traffic of the port of London has increased from 1,549,000 tons in 1913, to 1,829,000 for the corresponding period this year.

The detailed report indicates increases in receipts of most articles of food. Wheat, sugar, rice, cheese, and cocoa, all show an improvement. Meat and tea show a decrease.

The supply of timber is of next importance to foodstuffs, says the report. Difficulty in handling has been acute in this respect, owing largely to the enlistment of one-third of the 200 lumber porters, who handle and stack the timber after it has been discharged by the stevedores.

The irregularity of the arrival of timber-laden ships has also been a trying factor. A few days ago fifteen timber vessels arrived at the docks on a single tide. But in spite of such difficulties, the stock of timber at the docks has increased from about 200,000 tons to more than 600,000 tons.

Much of the work of the docks is now being done by soldiers from some of the numerous dock battalions specially recruited from those of this kind here and in France.

Up in Zoology.

Teacher—What can you tell me about the rabbit?

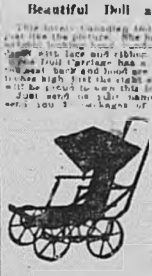
Pupil—It's hind foot is lucky.

To read the newspapers one evening a man must have a vocabulary of at least 2,000 words.

FREE TO GIRLS

We will give this beautiful prize free of all charge to any girl or young lady who will sell 40 sets of Easter Postcards at 10 cents a set or lovely hand-tinted colored photograph Brooches at 15 cents each

The Extension Bracelet is of rolled gold plate and fits any arm



Send us your name and we will send you the cards or pictures. When sold send us the money and we will send you the bracelet Address

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell.

Question—H. K.:—I have some thin land which is not producing profitable crops. Can I build it up by growing Soy Beans which I can cut for hay next summer? What variety of beans is best to use?

Answer:—Soy beans belong to the legume family. All legumes under normal conditions have little knots growing on their roots. In these knots there live a very low form of plant life known as bacteria, which draw their food from the growing plant and in return take some of the nitrogen out of the air that circulates in the soil, so that the growing legume benefits materially by their presence, and the ground is richer in nitrogen after the legume has been grown than before, provided that not all of the legume crop has been cut off and removed. Soy beans have frequently been profitably grown where clovers and other legumes killed out. The beans are seeded as soon as the ground is warm in spring. The amount of growth which you will get per acre varies of course with the fertility of the soil and the length of season, as well as with the vigor of the variety of bean used. If you turn the beans under in the fall, you will add not only nitrogen to the soil, but a considerable amount of valuable organic matter and thereby greatly assist in building up your soil. Speaking generally, if clovers can be grown in the place of soy beans, I believe you would get a larger quantity of organic matter as well as approximately the same amount of nitrogen.

The Purdue Agricultural Experiment Station, in Bulletin 172, reports an average growth of green tops and roots to a depth of 18 inches, determined at the time of the first frost, to have been 6.6 tons per acre, and an average of 89 pounds of nitrogen was contained in the tops and 13.8 pounds of nitrogen in the roots of the soy beans. As to varieties of soy beans, experimental tests have shown that soy beans produced at Guelph, known as O.A.C. No. 31, is the heaviest yielder. Early Yellow and Ito San are also good varieties.

Question—S. P.:—How much buckwheat should be sown to the acre? What time should it be sown? Does it do well on clay loam soil?

Answer:—The usual amount of buckwheat to sow to the acre is a bushel to a bushel-and-a-half. The buckwheat crop is not as particular about its time of seeding as some others. Satisfactory stands can be obtained by sowing any time in May or June. This crop should do well on clay loam soil.

The Dairy

Milking by machinery is less expensive in herds of fifteen cows or more. In smaller herds it is more expensive than hand milking.

If it pays to raise calves at all it pays to feed and care for them from the day they are born. Farm sanitation is the all important thing in the care of livestock on the farm.

Keep the cattle stables clean. Contagious abortion and tuberculosis and other diseases can only be kept in check in this way. There is no cure for contagious abortion, and although after cows have aborted three times they are usually immune from the disease they are still carriers of it and may give it to other healthy stock.

Silage furnishes a juicy food for winter, and thus helps to keep the digestive organs of cattle in good order.

Plenty of exercise and proper ventilation are essential for young and breeding stock.

For warts on cows' teats a good treatment is applying a mixture of two ounces each of tincture of iodine and castor oil. Paint the teats affected twice daily after milking, and about thirty minutes after painting grease with vaseline to keep the skin from getting tender or blistering.

Sheep Notes

At lambing time the ewes require the constant attention of the shepherd, especially if the weather is cold.

The young lamb must have nourishment from the ewe as soon as it is born; the sooner the better.

If a lamb is chilled take it at once to a warm place and plunge it in water as warm as the hand will stand, then rub dry and wrap in warm flannel.

As soon as revived, take it to the mother and see that it gets nourishment.

If lambs are due to arrive, the caretaker should visit the flock once or twice during the night. A little assistance at the right time may save a lamb, and oftimes the ewe.

The ewes welcome the presence of the regular attendant and are grateful for his help.

Hogs

Where suitable building exists for the proper protection of the sow and her young she should be expected to raise two litters a year.

Do not allow the feed to sour in the hog feed trough.

When the little pigs are weaned, put the sow out of their hearing for a while.

Almost any kind of milk is all right so long as it is good, clean milk. The hogs will make good use of it. When you once get your hogs on sweet milk or on sour, keep them there. The changing from one to the other is the way to trouble.

Skim-milk is the hog's natural food. Save it all.

Lack of exercise is one cause of soft pork.

A long rein has the frame-up for a bee. It is our work to put on the right kind of riding.

Horse Sense

Sprains, whether of muscle, tendon or ligament, are indicated by swelling, heat and tenderness of the part involved, and, if in a limb, lameness.

Give rest, place in position to afford as much ease as possible, apply heat and anodyne lotion as 1 drama acetate of lead, 2 oz. laudanum and 6 oz. water until acute soreness ceases, then apply liniment and bandage.

The stomach of the horse being small, he must be fed at regular hours, three times a day, at all seasons of the year.

Bran or linseed meal to the horse's ration aids in regulating the bowels, avoiding constipation and lessening the liability to disease.

An English veterinarian says careless or improper feeding is the prime cause of colic. The stomach of the horse being small, the digestion is limited, and if the horse is hungry and exerted, or is allowed to gulp down a big feed, colic is the result. Also, if musty hay or musty, sour feed is used, or if feed is grain wet with dew or rain is hastily eaten in large quantities, colic is often the result.

Scratches in horses will never occur when the mud has been allowed to dry and then brushed off without the application of water.

A remedy for scratches is oxide of zinc, 1 dram; vaseline, 1 ounce. Never apply water to the legs.

The brood mare needs liberal, but not excessive, feeding of well-cured hay, oats and bran.

Adopt a system in harnessing and unharnessing the horse so that he'll understand what you are doing.

Poultry

A smooth plumage indicates health.

Always practise absolute cleanliness in feeding.

The early-hatched pullet is the one which will lay next winter. You will desire some chickens out in April. It is now time to get the incubator and brooder room in order.

Anyone with a flock of more than 50 hens should have an incubator.

A hard floor on the brooder will cause the feet of the little chicks to "crumble" and make them cripples.

An incubator is less trouble than a dozen hatching hens, and the machine brings the chickens when you want them.

After the eggs begin to hatch in the incubator do not open the door more than once in every two or three hours to remove the chicks, and do it as quickly as possible, as the least draft upon a pipped egg may kill the chick within.

Geese only one year old are not mature as breeders. Such females lay fewer eggs, of smaller size, with a greater proportion usually infertile, than is generally the case with females two or three years old.

A gander and a couple of geese are sufficient to start with, for their eggs are usually very fertile and they are excellent sitters.

Experiments have been made at Epsom, England, on the growing of sugar beet during the summer and autumn, and samples of the crop are to be sent to a factory for the extraction of the sugar.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON MARCH 18.

Lesson XI. Jesus Saves From Sin (Temperance Lesson). John 8. 12, 28-37, 56-59. Golden Text John 8. 36.

Verse 12. This verse follows immediately on John 7. 52; the intervening verses, absent in the oldest authorities, are universally admitted to be no part of this Gospel. They are very precious and unmistakably authentic tradition, for all that. But they ought to have been printed at the end of the Gospels, separately; they interrupt the context here. I am—Yet he had said to his disciples, "Ye are the light of the world." The reconciliation lies in Gal. 1. 15, 16: we are the lamps in which God kindles the Light. Of life—So Jesus adds another of his titles: it is Life that thus shines.

21. Jews—The name prepares us for the unhappy sequel. They had not come right out from the hostile community, like the many of verse 30, who believed in him. These are different persons, sharply contrasted with those who made the great venture of faith. They believed him—They get as far as admitting the truth of what he had said. So do multitudes of nominal Christians to-day, who will wax warm about the infallibility of Christ and yet never surrender their souls to him. Hence his warning; they must abide in the word they heard. See James 1. 26.

Mr. Neville Chamberlain, the Director of National Service in Great Britain.

32. For the special thought attending this lesson, let us point out that Truth which delivers is not an abstraction found in books. It is a Person. There is a famous anagram of Pilate's question Quod est veritas? The answer is, Est vir qui adest: "It is the Man before you!"

33. An amazing assertion for men who when it suited them could say, "We have no king but Cæsar!" Savest thou—The pronoun is contemptuously emphatic. So soon has he got beyond the limits of their belief!

34. Sin is personified, as the article in the Greek brings out. The sinner is carving a beautiful image, and one day it will come to life and he will be her slave.

35. The parable is difficult because highly compressed. It turns on the fact that the slave is another's; the slave of the house does liable for ever there. The slave of the enemy is in God's house, by his forbearance, but he cannot stay there. The Son of that house offers him redemption, by which he may abide in the house, not as Sin's slave, but as God's freeman.

36. The universal truth is wonderfully illustrated by the experience of temperance work. There are peculiar inebriate homes which have had to close, as they only sustained a tithe of those on which they spent so much science. Not so the homes in which Christ is expected to break the chain!

37. The seed—See John 7. 1; these men, for all their confession to the truth of what he said, were still one with the party that waited its opportunity for killing him. His word had convinced them up to a certain point. But it was like a visitor in a park where he must keep to one path and that path only leads to a wall!

50. Rejoiced that he should see vindicated. This rendering and that of the text are equally possible, as we now know. But the next clause shows that this one refers to Abraham's rejoicing before God's promise was fulfilled: My day—For such indeed was the birthday of Isaac, the event in which all the peoples of the earth should be blessed. In the child of wonder and of "laughter," Abraham saw the coming of a descendent who was to save the world.

57. A second-century writer drawn the inference that Jesus was over forty. And strangely enough, remarkably strong facts have lately come to light in favor of B. C. 8 as the year of his birth, and A. D. 30 as that of his death. Whether we can possibly admit them cannot be discussed here. But it illustrates excellently what a difference there is between a Gospel and a biography! How little do such historical perplexities matter to us! The facts that matter are secure.

58. I am—The Name of God at the Bush is calmly assumed. Is the small doubt about the "blasphemy" in truth now the only defence?

Plan Yard Planting Now.

Early spring furnishes the best opportunity for planning to make improvements in farmhouse surroundings. Probably spirea Van Houttei has proved satisfactory to more people than any other single yard ornament, and it may well be included in the order which it is about time to send to the nursery. This shrub is inexpensive, has abundant bloom and fine foliage, improves with age, is graceful in form, free from insect pests, easy to transplant, and conspicuous without being too much so. As a plant to stand alone, it is unexcelled. Bending under its pile of showy flowers for weeks in the spring, it is a joy each season. If banked against the foundation of the house it supports and rounds out the architecture and conceals what is usually an ugly foundation or bare corner. For a hedge it has no superior. Planted in a straight row, three feet apart in the row, it needs no pruning and comparatively little attention. Thus it supplies a fence-like border, ornamental, permanent, dense and economical, which gives an air of privacy and refinement to any yard. The millionaire can find no better and the tenant can afford it.

THE CASH VALUE OF A FARMER

If a number of farmers were asked to name the most valuable asset of the farm, it is probable that each would have a different answer, and equally probable that each would be wrong. For it is not likely that one of them would think of himself in this connection. It is a fact nevertheless that the farmer himself represents the greatest value on the farm even on a purely cash basis.

Actuaries have calculated the present value of annuities of one dollar at all ages and have arrived at the conclusion that an annuity of a dollar at age 10, is worth on the average $16.51. Now, supposing a farmer, age 40, is able to produce by his thought and labor $1,000 per annum out of his property in addition to his own maintenance, he would be worth to his family one thousand times the annuity of one dollar or $16,510. The same values can be ascertained for all other ages.

Now it is strange, in view of the high money value of the farmer, that he frequently neglects to insure his life. The house must be insured, the barn must be insured, and the stock, but the farmer himself is unprotected. This is not fair to him nor to his family. If the head of the house were taken away the farm and stock would be left, it is true, but someone must be found to take charge of the business and work the farm, and adequate insurance would provide the money necessary to engage such a manager. It often happens that, depending on continued health and strength, and good crops, that the farm has been taken with an encumbrance on it, in the shape of a mortgage. Although farmers like a healthful life, yet they are not immortal and death is always a possibility. In the event of death, who will pay the mortgage? The widow with the added burden of providing help to work the farm? It would be impossible and foreclosure would be inevitable. Now let us suppose that this farmer had been wise, and had taken life insurance for the amount of the mortgage. At his death the liability would be discharged with the insurance money. It is evident then that every farmer should have his life insured.

Probably the most desirable is the Endowment Policy. Under endowment policies the amount is payable to the insured himself if he be living at the end of a certain term of years, say 15, 20, 25 or 30. Should he die during that time the policy is payable to his family. The endowment policy, therefore, is a savings bank account, and an insurance at the same time. It may be that the farmer may wish to accumulate a certain amount of money in order to enlarge his property or to make some suitable improvement, perhaps to build a house. The endowment policy provides a means whereby a fund can be accumulated for any such purpose, and it will be available in any case in the event of the death of the policyholder.

Of the endowment policies those on the participating plan are perhaps preferable. There are a number of ways in which an insurance company can "make money." For instance the number of deaths occurring may turn out to be less than the number used in calculating the premiums. Again the rate of interest earned may be higher than the rate used in calculating the premiums, or a sale of securities might be made to the advantage of the company. Participating policies by their terms share in the profits earned by the company. These profits are determined at regular intervals, and are allotted to the different policies. In the case of the participating policies the amount of the profits may be returned in cash, or it may be used to reduce the premiums, or again a substantial addition may be made to the amount of the policy. Policies on the participating plan, although they have higher premiums, in the end usually turn out to be cheaper than policies on the non-participating plan, because the profits earned are usually such that the net cost per $1,000, of the participating policy falls below that of the non-participating contract.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 75 Castle Frank Road, Toronto.

D. S.—1. The best novel on the war is said to be "Mr. Britling Sees it Through," by the noted English writer, H. G. Wells. A new book, just issued, by the same author, is also highly recommended. It is entitled "France, Italy and Britain at War." A splendid work. "The Children's History of the war," by Sir Edward Parrott, M.A. LL.D., is being issued from time to time. Three volumes have already appeared (price, $1.00 each) and they cover the progress of the war to the end of 1914. They are profusely illustrated with maps and pictures, and more intensely interesting reading it would be hard to find. When finished it will form a complete history of the war, and one which every household should possess. 2. It is said that Tennyson's greatest message and the one he wished most to be remembered is contained in these two lines from "Locksley Hall": "Love took up the harp of life and smote on all the chords with might; Smote the chord of Self, that trembling passed in music out of sight."

This seems to have been Tennyson's prophetic answer to the German "Hymn of Hate."

M. W.—1. Oil on the inside of your pantry or kitchen door makes a good job of molding, about six or eight inches long. In this molding fasten five screws from which to hang dish-cloths and time-saving devices. A skewer set, a pair of scissors, a writing tablet with pencil attached ready to jot down articles needed, a small round pincushion with a washable cover of cretonne, and a string holder, made of an ordinary tin funnel, painted in white enamel, holding the ball of cord inside, the loose end pulled through ready for use. 2. Keep hanging beside the stove a long loose linen mitten to slip over the hand and arm when turning or basting anything in the oven. It will save burns, and the spattering of hot fat on the sleeve.

B. B.—1. It is said that old potatoes if boiled in part water and part milk will not discolor. 2. To clean cane furniture first brush the dust out of the crevices. Made a suds by dissolving white soap in water and adding salt. This will prevent the cane from turning yellow. Apply with a scrubbing brush, first one side, then the other, thoroughly soaking the cane. Place in a shady spot to dry and the cane will be firm and tight. 3. Salt should not be added to a milk dish when it is boiling. If so it will be likely to curdle the milk. 4. When children's stockings wear thin at the knee, clip off the leg just above the heel, turn the back to the front and sew together. 5. In preparing a boiled icing, the sugar and water, while boiling on the stove, should not be stirred. If this is done the mixture will be sugary. 6. Crackers should never be broken into soup. 7. A teaspoonful of alum dissolved in water and snuffed up the nose will soon be relieved. 8. Silk waists should be pressed, while still damp, with a cool iron. 9. Table napkins will wear much longer if folded in thirds one week and in fourth the next.

F. D.—A gift may be sent to a bride at any time after the wedding invitations are issued. 2. Your embroidered centrepiece will make an ideal gift. When finished, lay it face downward on a Turkish towel and over it place a cloth which has been wrung out of boiled starch, and press dry with a hot iron.

From The Middle West

BETWEEN ONTARIO AND BRITISH COLUMBIA.

Items From Provinces Where Many Ontario Boys and Girls Are Living.

A total output of 2,500,000 pounds of butter is Saskatchewan's record for 1914.

The Edmonton School Board have asked for $400,000 for educational work.

The Lethbridge Patriotic Fund paid 124 soldiers' dependents $4,842 during January.

A "Home Fires" Club of soldiers' wives and mothers has been formed in Edmonton.

Saskatoon soldiers in the trenches may be allowed to vote at the next general election.

Lieut.-Col. G. B. McLeod, Edmonton, has been appointed commander of the garrison depot.

A resident of West Edmonton realized $27.50 from eggs laid by thirty one hens last month.

At the campaign in Moose Jaw, in aid of blind soldiers, $1,575 was realized in two weeks.

Poverty is threatened among the Indians of the north because of a shortage in fur this year.

The Dr. Robertson Chapter, I.O.D.E., of Saskatoon, report $13,638.26 having been received during the year.

The Yorkton Chapter of the Daughters of the Empire raised $1,600.00 for patriotic purposes during 1914.

Five thousand Slavs born in Galicia, but of Russian faith, who are now living in Western Canada, wish to join Canadian unit.

Lieut. S. W. Scott, of Moose Jaw, who was killed in action, is mentioned in recent despatches for distinguished conduct on the field.

Operated at full capacity, the flour and oatmeal mills at Edmonton at the present time could produce 1,000 barrels of their products daily.

F. M. Black, president of the Calgary Board of Trade, has been appointed a member of the Alberta Board of Public Utility in succession to John Stocks, who died recently.

Col. R. A. Mullins, chief inspector of supplies and transport for the west, has offered his services for five years free to supervise and instruct returned soldiers in stock raising if the Government would make that occupation practical for veterans.

The paper is made from the pulp of a tree growing in Formosa, and not from rice.

Owing to car shortage farmers and gardeners who contemplate using lime the coming spring should place their orders early, otherwise the time may not be received in time for use. The same idea applies also to fertilizers, 500,000 cars are required to move the fertilizers utilized in the United States, and as a rule railroads are compelled to move them in short six weeks time.

BEDTIME STORY

Hats Off To The Flag of The Tin Soldiers.

"Wake up, there, you fellows!" shouted Sergeant Pepper Pot to the Tin Soldiers in Toy Town. "We are going to war."

The Tin Soldiers scampered out of their beds and rubbed their sleepy eyes.

Outside the tramp of hurried feet could be heard and the shouts of the officers.

Colonel Cure Tassel was riding around on his beautiful white horse Pickles, his gold sword clanging at his heels.

Drum Major High Top was getting the band together and everywhere there was hurry and scurry.

Captain Mustard had his soldiers all ready at one end of Toy Town and the other companies were getting ready in a hurry.

"What is all this noise about?" asked the Big Boy Doll of the Clown Doll, who had just woke up.

"I don't know," said the Clown Doll. "Let's go and see."

So they scampered up on a high seat and peeked out as the sun came up.

"Oh, goodies," said the Boy Doll, "the soldiers are going to war! Hurry, hurry, let's wake up the other Dolls and wave to the soldiers as they march away!"

Soon all the Dolls were seated on the window seat, watching the soldier boys as they marched by. The Paris Doll told the other Dolls had their handkerchiefs and they were waving them as Drum Major High Top passed by, and when the Union Jack passed the Boy Dolls all took off their hats.

"I wish I were a soldier," said the Clown Doll.

"Oh, pshaw," said the Boy Doll, "you would run as soon as a gun was fired."

"Don't you believe it," said the Clown Doll.

When the Clown Doll was not looking the Boy Doll clapped his hands real hard and it frightened the Clown Doll so he almost fell off his seat.

"There, I told you so," said the Boy Doll, laughing.

Why Not?

If one mouse and one mouse
Together are called "mice,"
Then one spouse and one spouse
Together should be "spice!"

Many a poor man might acquire wealth by utilizing the time he wastes in borrowing his luck.

The force of a moving mass on a smooth hard road will move eight tons on a railway and 50 tons on a canal.

Unless clothing is white it should not be much heavier than in summer; put the weight into the outer clothing.

The larger part of Mexico consists of one elevated plateau, with mountains on the east and west. This plateau is of volcanic origin.

The Paisley Advocate

PAISLEY, MAR. 14th, 1917

Home from Peace River

Mrs Ed Bell, of Griffin Creek, Peace River District, arrived here last week on a visit at the home of her mother, Mrs Wm McKinnon, 10th Elderslie. Griffin Creek is 300 miles north-west from Edmonton, and Mr and Mrs Bell have just completed the three years' homestead duties on their farm at that distant point. Mrs Bell informs The Advocate that it is a fine rolling country, the land good and the climate agreeable. Their farm is now within thirty miles of the railway and when the line is extended will only be five miles from them, so that their homestead is well located. Mr Bell, who is a son of ex-councillor John Bell of Elderslie, taught school in the settlement while proving up his claim.

—Mrs Conn is agent for that new book, "The Woman—Bless Her." The Toronto Mail and Empire says of this volume by Miss McMurchy: "The country woman and the woman at home are admirably portrayed, and there is enough food for thought in the latter sketch to keep women studying for the rest of their home-keeping lives. So many excellent suggestions are contained in it that we feel tempted to ask the author to send a marked copy of this chapter to Departments of Trade and Commerce and Agriculture. In fact it would be a valuable aid to helping along a 'Made-in-Canada' campaign or 'Boost Home Products.' There is a wealth of material and suggestion in this condensed volume, any chapter of which might easily be enlarged to a book."

From the 160th Band

Sergt W Jack, leader of the 160th Batt Band, in a letter to his parents here, dated Feb 16th, says: "We were out to Lynchmere Common relieving trenches That is part of our training. We had a case of mumps and were quarantined for 16 days. Were out four or five days and had another case, and we are in now, so will not be out till week after next. The Battalion goes to Witley on Sunday morning, but they will have to leave us here. There are three or four here yet. We are going in the First Division as a unit if nothing turns up. There has not been a battalion since the 160th which has not been broken up, so we are very lucky. They have broken up the 95th band, and I will likely get eight or ten of the players. Laurence Putnam was up last night, and I guess he will come with the rest. This quarantine is very hard on the nerves. Just imagine 33 men in a hut, all full of life and hardly anything to do. We have morning and afternoon parades. We play the battalion out and that is about the only thing we have to do except practise, only Tuesday and Friday we usually have a route march of ten or twelve miles. I suppose you hear lots about the subs over there, but do you know, we do not hear so much here as you would expect. No one here has any doubt as to the result, and they all think the subs are the last stroke of the Kaiser. We have lots of fellows come in for visits and I can tell you it is like home when they come. Norman Allen was in to see Harry last night. Had a fellow from the 21st who knew Spot Rolston well. I had a visit from a man named Hopper, who was in one of the bands from the west, and originally came from Paisley. We were all much interested in the Paisley elections, and as band boys were pleased to see Jimmy Steele and Jack Logie elected, also the father of one of the other band boys who is now in France. The band is plugging along and is doing good work, both musically and as a stretcher section. We are small, only 22, but if I can get the men I am building up to 35 or more. We will stick as a band if the battalion goes to France as a unit. All the Paisley boys in the band are well, and are very grateful to the Paisley ladies for what they are supplying in the war of comforts and other things. They would be very much gratified if they could hear the boys when they get their boxes. Tobacco is the best thing to send, or cigarettes. Most of the boys have lots of Canadian socks, but I guess we will need them when we go to the front, where the wear and tear is much harder. We are all anxious to get away from Bramshott This is the muddiest camp in England, and we say worse than Salisbury. Witley is well drained and has good streets.

Big Crowds at the Stock-Judging Classes

Last Thursday and Friday were special farmers' days in Paisley. The stock-judging classes held at Craig's sale stable under the auspices of the Centre Bruce Board of Agriculture and the County Branch of the Department of Agriculture, brought hundreds into town. The old Farmers' Institute meetings, where addresses and charts and columns of figures were made the means of imparting information, are replaced by the more practical method of actual demonstration of live stock judges with a real animal in the ring. One of the delegates stated that this was one of the largest crowds he has attended both afternoon and evening, and he was only one of several district and the farmers are intelligent stock growers. Dr. Reed, of Georgetown, was the expert on horses, and gave points on what will be of value to even the most experienced horseman who heard him. Mr. John Standfield, of Weston, one of the best known breeders of Ontario, was the demonstrator on cattle, and the only one we had the opportunity of hearing. There was on at a time when good beef cattle were so scarce as at present, he said, because of the war. Referring to the fact that a lot of heifers have gone to the block instead of being kept for breeding purposes, he stated that the farmers were not altogether to blame, as, because of the high cost of feed, it is possible to make more out of them by selling for beef, and to make the most out of them is what the farmers are after. Nevertheless, he advised keeping all the good breeding animals on the farm that it is possible. Breeding stock is likely to be more scarce after the war. Mr. Gardhouse said that to one going into well bred stock it need not be so much a matter of what breed to take up on it is to get the good ones from whatever breed it is chosen to raise. Select the best grade females and breed them to pure bred bulls. No one can afford to use a scrub sire. Get the best possible in point of quality and breeding, and sure will have young animals worth putting labor and feed on. In mentioning the objections to crossing the different breeds, he said it was most likely to produce a complimentation of anything. He believes in using a bull of the breed the grade represents. He advised the study of breed type and character, so as to get to know a good animal. He gave a great deal of information as to system of judging, and mentioned the points to consider. The best way for farmers to get good animals is to raise them. There are advantages in fitting calves for three. The cost is less to the producer, and he gets a quicker return, and the country also gains, as more animals are produced. The prices are higher for two-year-olds. If well bred, and with natural tendency to beef, it should not be more difficult to have a steer ready at two years than at three. It should get 1,200 or 1,300 at two years. The proper kind of a grade shorthorn cow will produce a fair amount of milk as well as raise strong calves, but if milk production is desired the cows should be of the dairy breeds. A strong warning was given against buying the inferior cows that are brought in from other sections and sold at auction, which he termed a curse that useless for breeding purposes. Mr. H. King, of the O.A.C., Guelph, demonstrated to the sheep class, and his efforts should do something to stimulate the wool and mutton branch of the live stock industry hereabouts. Mr. N.C. Mackey, the district representative at Walkerton, is the chief organizer of the classes. He had the hearty assistance of R. J. Nelson, Secy of the C. H. Board of Ag., also Wm. Dryden and K. C. Teeple, the local committee.

NOTED MUSICIAN OF MONTREAL

Advises The Use Of "FRUIT-A-TIVES", The Famous Fruit Medicine.

MR. ROSENBURG

589 Casgrain St., Montreal.

April 20th, 1915.

"In my opinion, no other medicine in the world is so curative for *Constipation and Indigestion* as "Fruit-a-tives". I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of Intestinal Paralysis—with *Headaches*, belching gas, drowsiness after eating, and Pain in the Back. I tried pills and medicines of physicians, but nothing helped me. Then I was induced to try "Fruit-a-tives", and now for six months I have been entirely well.

I advise any one who suffers from that horrible trouble—Chronic Constipation with the resultant Indigestion, *to try "Fruit-a-tives"*, and you will be agreeably surprised at the great benefit you will receive". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

VILLAGE COUNCIL

A meeting of council was held on Thursday, 1st March, members all to attendance. Minutes of last meeting were read and adopted.

Mr H B Putnam addressed the council in reference to the sidewalk which he built in front of his dwelling.

Mr Jas S Dewar and John H Glover each applied for special water rates.

Petition was read from Hugh Nicoll and others for a sidewalk.

Communication read from secretary of firemen requesting the purchase of suction pander; from Sarnia Bridge Co, offering road drags; from township clerk of Saugeen, copy of resolution of council granting $50 towards improvement of road from Bruce and Saugeen townline down North St to Flora road; from chief officer of health, re the passing of a by-law for the sale of pure milk; from the Ontario Municipal Association re the regulating of rates of fire insurance; from Martin Burrel, Minister of Agriculture, re increasing food production.

By-law No 666, providing for the disposal of light weight bread after seizure, was read a first time, and on motion of Messrs Pearce and Logie read a second and third time, passed and executed.

Houston—Pearce—That the insurance on the town hall in the London Mutual Fire Insurance Co be renewed for three years from 21st March.—Carried.

Houston—Sparrow—That an expander be procured for use in connection with repairs of fire hose.—Carried.

Logie—Pearce—That Messrs John H Glover and Jas S Dewar each be given a flat water rate of $10 per annum, no water to be supplied on any Sunday. On week days pumping shall only be operated between the hours of 7 and 12 a.m.—Carried.

Houston—Sparrow—That the petition of Hugh Nicoll and others for sidewalk be laid over until other sidewalks are to be constructed.—Carried.

Pearce—Sparrow—That the clerk is hereby instructed to inform the Paisley Electric Light Co that better service must be given to the village, or a lower rate must be charged for the present inferior service.—Carried.

On motion of Messrs Houston and Sparrow cheques were authorized as follows: Murdoch Leitch $45, F C Wilkins $33.33, Weighing Inspector $11.10, Maurer $35, Paisley Elect Light Co $46.77, J C Gibson $5, Firemen's pay $18, Municipal World $9.58, London Mutual Fire Ins Co $60, Wm Sparrow 30c; John Stoddart $16.

DIED

PEACOCK—In Elderslie, on March 8th, the infant son of Thomas and the late Ida M. Peacock, aged 22 days.

HART—At Southampton, on March 3rd, Beulah, twin son of Mr and Mrs F E Hart, age 16 months.

BAGGS—In Toronto General Hospital, on March 8th, Richard Collins Baggs, of Paisley, aged 75 years, 2 months and 4 days.

IN MEMORIAM

In sad and ever loving memory of George Brown Bell, who departed this life March 14th, 1916.

"Till the day break, and the shadows flee away."

Family.

—The Red Cross workers of S S No 14, Bruce, shipped last month two boxes of supplies, viz: 4 sheets, 5 pillows, 6 pairs pyjamas, 12 Turkish towels, 15 hospital sheets, 34 flannel shirts, 30 pair socks, 4 pair wristlets.

Why "Anuric" is an INSURANCE Against Sudden Death.

Before an Insurance Company will take a risk on your life the examining physician will test the urine and report whether you are a good risk. When your kidneys get sluggish and clog, you suffer from backache, sick-headache, dizzy spells, or the twinges and pains of lumbago, rheumatism and gout. The urine is often cloudy, full of sediment; channels often get sore and sleep is disturbed two or three times a night. This is the time you should consult some physician of wide experience—such as Dr. Pierce of the Invalids' Hotel and Surgical Institute, Buffalo, N. Y. Send him 10 cents for sample package of his new discovery, "Anuric." Write him your symptoms and send a sample of urine for test. Experience has taught Dr. Pierce that "Anuric" is the most powerful agent in dissolving uric acid, as hot water melts sugar; besides being absolutely harmless it is endowed with other properties, for it preserves the kidneys in a healthy condition by thoroughly cleansing them. Being so many times more active than lithia, it clears the heart valves of any sandy substances which may clog them and checks the degeneration of the blood-vessels, as well as regulating blood pressure. "Anuric" is a regular insurance and life-saver for all big meat eaters and those who deposit lime-salts in their joints. Ask the druggist for "Anuric" put up by Dr. Pierce, in 50-cent packages.

STRENGTH AND BEAUTY

Come with Dr. Pierce's Golden Medical Discovery. This is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to manufacture rich red blood which feeds the heart, nerves, brain and organs of the body. The organs work smoothly like [illegible] kidneys running in oil. You feel clean, [illegible] and strenuous instead of tired, sick and faint.

ONTARIO FARMERS

Existing war conditions demand that you give the question of Seed special attention this year. Seed of desirable varieties and high germination power will be factors influencing yields.

If you have not secured your Seed, **let the Ontario Department of Agriculture help you.**

Farmers having Seed Grain or Potatoes for sale may forward samples to this office, stating varieties, price and quantity.

Farmers wishing to purchase Seed are also invited to communicate with this office, stating variety and quantity, and an effort will be made to put them in touch with farmers having Seed for sale.

To City, Town and Village Dwellers in Ontario

A Vegetable Garden for Every Home

IN this year of supreme effort Britain and her armies must have ample supplies of food, and Canada is the great source upon which they rely. Everyone with a few square feet of ground can contribute to victory by growing vegetables.

Four Patriotic Reasons for Growing Vegetables

1. It saves money that you would otherwise spend for vegetables.
2. It helps to lower the "High cost of living."
3. It helps to enlarge the urgently needed surplus of produce for export.
4. Growing your own vegetables saves labor of others whose effort is needed for other vital war work.

The Department of Agriculture will help you

The Ontario Department of Agriculture appeals to Horticultural Societies to devote at least one evening meeting to the subject of vegetable growing; manufacturers, labor unions, lodges, school boards, etc., are invited to actively encourage home gardening. Let the slogan for 1917 be, "A vegetable garden for every home."

Organizations are requested to arrange for instructive talks by practical gardeners on the subject of vegetable growing. In cases where it is impossible to secure suitable local speakers, the Department of Agriculture will, on request, send a suitable man.

The demand for speakers will be great. The number of available experts being limited, the Department urgently requests that arrangements for meetings be made at once; if local speakers cannot be secured, send applications promptly.

The Department suggests the formation of local organizations to stimulate the work by offering prizes for best vegetable gardens. It is prepared to assist in any possible way any organization that may be conducting a campaign for vegetable production on vacant lots. It will do so by sending speakers, or by supplying expert advice in the field.

To any one interested, the Department of Agriculture will send literature giving instructions about implements necessary and methods of preparing the ground and cultivating the crop. A plan of a vegetable garden indicating suitable crops to grow, best varieties and their arrangement in the garden, will be sent free of charge to any address.

Write for Poultry Bulletin

Hens are inexpensive to keep, and you will be highly repaid in fresh eggs. Write for free bulletin which tells how to keep hens.

WAR LOAN

DOMINION OF CANADA

Issue of $150,000,000 5% Bonds Maturing 1st March, 1937

Payable at par at Ottawa, Halifax, St John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary, Victoria, and at the Agency of the Bank of Montreal, New York City.

INTEREST PAYABLE HALF-YEARLY, 1st MARCH, 1st SEPTEMBER.

PRINCIPAL AND INTEREST PAYABLE IN GOLD.

ISSUE PRICE 96.

A FULL HALF-YEAR'S INTEREST WILL BE PAID ON 1st SEPTEMBER, 1917.

THE PROCEEDS OF THE LOAN WILL BE USED FOR WAR PURPOSES ONLY.

THE MINISTER OF FINANCE offers herewith, on behalf of the Government, the above-named Bonds for Subscription at 96, payable as follows:—

10 per cent on application;
30 " 16th April, 1917;
30 " 15th May, 1917;
26 " 15th June, 1917.

The total allotment of bonds of this issue will be limited to one hundred and fifty million dollars, exclusive of the amount (if any) paid for by the surrender of bonds as the equivalent of cash under the terms of the War Loan prospectus of 22nd November, 1915.

The instalments may be paid in full on the 16th day of April, 1917, or on any instalment due date thereafter, under discount at the rate of four per cent per annum. All payments are to be made to a chartered bank for the credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture and the allotment to cancellation.

Subscriptions, accompanied by a deposit of ten per cent of the amount subscribed, must be forwarded through the medium of a chartered bank. Any branch in Canada of any chartered bank will receive subscriptions and issue provisional receipts.

This loan is authorized under Act of the Parliament of Canada, and both principal and interest will be a charge upon the Consolidated Revenue Fund.

Forms of application may be obtained from any branch in Canada of any chartered bank and at the office of any Assistant Receiver General in Canada.

Subscriptions must be for even hundreds of dollars.

In case of partial allotments the surplus deposit will be applied towards payment of the amount due on the April instalment.

Scrip certificates, non-negotiable or payable to bearer in accordance with the choice of the applicant for registered or bearer bonds, will be issued, after allotment, in exchange for the provisional receipts.

When the scrip certificates have been paid in full and payment endorsed thereon by the bank receiving the money, they may be exchanged for bonds, when prepared, with coupons attached, payable to bearer or registered as to principal, or for fully registered bonds, when prepared, without coupons, in accordance with the application.

Delivery of scrip certificates and of bonds will be made through the chartered banks.

The issue will be exempt from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

The bonds with coupons will be issued in denominations of $100, $500, $1,000. Fully registered bonds without coupons will be issued in denominations of $1,000, $5,000 or any authorized multiple of $5,000.

The bonds will be paid at maturity at par at the office of the Minister of Finance and Receiver General at Ottawa, or at the office of the Assistant Receiver General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary or Victoria, or at the Agency of the Bank of Montreal, New York City.

The interest on the fully registered bonds will be paid by cheque, which will be remitted by post. Interest on bonds with coupons will be paid on surrender of coupons. Both cheques and coupons, at the option of the holder, will be payable free of exchange at any branch in Canada of any chartered bank, or at the Agency of the Bank of Montreal, New York City.

Subject to the payment of twenty-five cents for each new bond issued, holders of fully registered bonds without coupons will have the right to convert into bonds of the denomination of $1,000 with coupons, and holders of bonds with coupons will have the right to convert into fully registered bonds of authorized denominations without coupons at any time on application to the Minister of Finance.

The books of the loan will be kept at the Department of Finance, Ottawa.

Application will be made in due course for the listing of the issue on the Montreal and Toronto Stock Exchanges.

Recognized bond and stock brokers having offices and carrying on business in Canada will be allowed a commission of three-eighths of one per cent on allotments made in respect of applications bearing their stamp, provided, however, that no commission will be allowed in respect of the amount of any allotment paid for by the surrender of bonds issued under the War Loan prospectus of 22nd November, 1915, or in respect of the amount of any allotment paid for by surrender of five per cent debenture stock maturing 1st October, 1919. No commission will be allowed in respect of applications on forms which have not been printed by the King's Printer.

SUBSCRIPTION LISTS WILL CLOSE ON OR BEFORE THE 23rd OF MARCH, 1917.

DEPARTMENT OF FINANCE, OTTAWA, March 12th, 1917.

Dray Loads of Catalogues

One day last week there came to Paisley postoffice 53 sacks of catalogues from Toronto mail order house for delivery in the surrounding country within the 30 mile radius. The books were piled up like stove-wood, and would measure 2½ or 3 cords long. Some people will tell us that there was a useless waste of money, for sent out this bunch of printed matter are past masters in the art of attracting trade by the the use of printers' ink and are not expending thousands in this way without adverstising doesn't pay. The firm that adequate returns. We notice a merchant in a Bruce county town invites customers to compare his prices with those in the departmental catalogues. That's one way of meeting the city competition and should be effective.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXV.—(Cont'd).

He knew within his heart of hearts that she was too good for him, and yet he could not deny himself the pleasure or pain of putting the matter to the test.

Lady Merivale's rooms were not too crowded. Her ladyship had mercifully asked no more than her rooms would hold, and Fitz, as he entered rather early in the evening, could see that the Mildmay's party had not arrived.

"Just my luck," he murmured. "Of course, now I've plucked up courage, she won't come. Serve me right. I know she's far too precious for me."

He sauntered to a corner and sat down beside an Italian, who had a series of sketches to show and tried to get poor Fitz to speak to him.

But the Italian only knew "Yes" and "No" in English, and Fitz only knew "Marcaroni" in Italian, so thus the conversation did not afford much amusement to either party.

Presently, as the rooms grew fuller, a tall gentleman with white hair and wearing spectacles approached the two, and bowing to the Italian, asked permission to see the sketches.

He spoke in Spanish, a language as strange to Fitz as Italian, so after a few minutes, Fitz rose and left the Italian and Spaniard together.

The Spaniard looked up wistfully.

"Do you know that gentleman?" he asked.

"No," said the Italian.

"I do," said the stranger who stood near, and who was none other than the club newsmonger, Tommy Gossip. "That is Lord Boisdale, eldest son of Lord Lackland. He's engaged—or going to be—to Miss Violet Mildmay."

The Spaniard bowed, smiled and departed.

At that moment Violet entered on the arm of Howard Murpoint.

The Spaniard saw Lord Fitz approach and take her from Mr. Murpoint and frowned.

"Is it true?" he murmured to himself. "Is she going to marry him? Has she forgotten me?"

Then he sighed and sauntered on with a melancholy smile to a retired alcove.

He was not in the humor for the gay and talkative crowd, and wanted a little quiet.

He sank down in a cool corner of the velvet lounge and fixed his dark eyes upon the floor.

"Why did I come back?" he mused. "They think me dead; they have forgotten me—they have ceased to mourn for me, and others have stepped into my place, and I had better keep to the world which knows me no more, and try for a new life in some new land. I see the best and fairest—he whom I loved—has no thought, no faith that lasts more than twelve months. I see that the rogue flourishes. I am disgusted with the world, and I will leave it. That poor fellow, the escaped convict, has more gratitude and affection and faithfulness than all the rest put together. We will go together—he and I outcasts—and see the world no more."

He half rose in his bitterness as if to carry out his threat at once and leave the world, but at that moment two persons entered the alcove.

They were—Fitz and Violet.

Fitz led Violet to a seat, then, murmuring something about the draught, let down a heavy curtain before the couch on which sat the melancholy Spaniard.

Thus the muser was cut off from the others, a listener, and made a spy much against his will.

Before he could move to make known his presence Fitz spoke, and his tone, more than his words, transfixed the listener to the spot.

"Miss Mildmay," said Fitz, plumping into his task with a nervous precipitance, "I am so glad I can see you alone for a few minutes."

"Yes!" said Violet, looking up with a dreamy, calmly serene gaze, which had nothing of embarrassment and, therefore, nothing of love in it.

"Yes," said Fitz; "I have been longing for this opportunity for some time. Miss Mildmay, I am a bad hand at speaking what I mean, but you know I mean all I say. You know that, though I'm a poor, good-for-nothing wretch who oughtn't to be allowed to breathe the same air with one so good and clever as you, but you know that I love you—"

Violet's face grew pale and very sad and mournful.

She raised her hand to stop him, but Fitz had made the plunge, and now, like all nervous people, was reckless.

"Don't stop me, Miss Mildmay; let me go on and say my say. I've kept it within my bosom so long that I feel bursting with it. I love you with all my heart, and no man, let him be as clever as he may, can do more; and if I'm not worthy of you—which I am not—I am sure no one else is. Violet, look at me a little more kindly, you look so pale and sorrowful. Can—cannot you love me—only a little—just enough to say that you will be my wife?"

Violet turned her pale, sad face to him.

"Lord Boisdale—I—how can I answer love to give. It was thrown with all your heart and soul at my feet. You know that I have no heart for anything but my hopes in the sea; that sea which breaks beneath those awful cliffs at Penruddie. You see I can speak calmly. I can look back at that dreadful past bravely and without shame! I am not ashamed to say that I have no heart for anything but the memory of a vanished past."

There was a slight stir behind the curtain, but the speaker did not notice it.

"But," said Fitz, "you will not spend your life in utter mourning, you will not sacrifice your own happiness and my life to such a shadow as that memory—"

"It is no shadow to me," said Violet, softly, sadly, her voice dreamily distinct and low, her eyes fixed as if gazing upon something very far off. "Oh, until I see it all, day and night, I hear his last words—the man I loved—mingling with the roar of the sea upon the shore. I see that past life of mine ever, day and night, and I am wedded to it. You see," she said with a start, and evidently arousing from her reverie, and remembering, "that it is useless to ask me for love. You would not have me without, Lord Boisdale?"

"I would," said Fitz, his eyes filled with tears. "Violet, dear Violet, you need some one to watch over and guard you—you need some one who could and would devote his life to recalling the smile and the sunlight to yours. I am willing, I am anxious. Confide in me, Violet; trust yourself to me. My love asks for nothing at your hands but yourself and the right to guard you. Oh, Violet, I have loved you so long—I—I would have died for you."

"Do not speak of death!" said Violet, with a shudder and a hurried gesture of entreaty. "I cannot bear that! I will have no one speak of dying for me! I believe—the dread clings to me—that he—Leicester—came to harm through me. No, no; no one shall die for me!"

And she half rose, wild and pale.

"Be calm, dear Violet," implored Fitz. "See how wild, how frightened you have become. Confess now that you need some strong right arm to protect you, to save you from the terrible state into which you have fallen! Violet, I do not ask you to love me, I only ask that you will promise to try. Have pity on me! You have a little, you say, but remember how I have been hoping for so long, and say that you will promise to try and love me."

Violet closed her eyes, and seemed lost in thought, then she opened them and smiled sadly.

"I have been thinking of all you say, dear Lord Boisdale," she said. "I am grateful, very, very grateful. I know how good, how true you are, and I would implore you to give that noble love to some one more deserving of it, lest that I feel it would be an insult to do so. I know I am weak, perhaps that I am wicked. Oh, that I knew what was right!" she broke off wildly and with clasped hands.

"Say yes," pleaded Fitz. "You cannot trust yourself to any one who can understand you or love you better."

"Give me time, time," pleaded Violet. "I must have time to think."

"A week?" said Fitz.

"No, no; a month—a month!" said Violet, in a low, constrained voice.

"Well," sighed Fitz, "a month, if you will have it so long. Say a month. It's a very long time, but—" and he sighed again. "Well, a month! Try to say yes, dear Violet."

"I will," breathed Violet. "I will try to do what is right. I ought not to sacrifice you if—if you love me as you say, I am weak and feeble and selfish, but I will do what is right."

Then Fitz rose and looked down upon her, pale and struggling with her weakness.

"I will leave you now," he said. "I am sure you are tired and—and excited."

And he raised her hand to his lips.

And before he could kiss it the curtain was pushed aside and the tall, white-haired Spaniard came before them.

(To be continued).

PAINS AFTER EATING

WIND IN THE STOMACH—ACIDITY, HEADACHES—CONSTIPATION

ARE SIGNS OF INDIGESTION.

Indigestion—the complete or partial failure of the digestive processes—frequently throws out of gear the whole machinery of the body. You can't enjoy the vigour and vitality of good health unless your stomach, liver and bowels do their work regularly and efficiently.

MOTHER SEIGEL'S SYRUP

As a digestive tonic and stomachic remedy Mother Seigel's Syrup is esteemed in tens of thousands of homes, wherever the English language is spoken. If you suffer much or little from disorders of the stomach, liver or bowels, try the effect of taking 15 to 30 drops of this famous remedy in water, after meals, for a few days and note its beneficial effects.

ASSISTS DIGESTION

The new Slides contains three times as much as the trial size sold at 35c per bottle.

Use A Fertilizer—

Says Govt. Agricultural Dept.

Why fly in the face of Providence? The sound advice, contained in the bulletins of the Department of Agriculture, is based on the knowledge of the best agricultural experts in the country and the accumulated experiences of thousands of farmers.

Almost every soil lacks some element of the plant food necessary for a maximum crop, and each crop leaves the soil poorer. Therefore, those important sustainers of plant life—potash, nitrogen and phosphoric acid—must be put back into the soil in the form of a fertilizer.

Gunns Shur-Gain Fertilizer

is in growing demand amongst farmers who want the best. It gives much more satisfactory results than a home mixed fertilizer because the ingredients are scientifically proportioned to meet the requirements of both soil and crop and are blended into a perfectly balanced plant food. Expert chemists have prepared these formulas, checked by Government analysts and the mixing is done under careful supervision.

Gunns Shur-Gain Fertilizer is fresh ground, making it more economical to use and easier to spread. It will not burn or sour the soil, and is very rich in humus. There is a formula to fit the requirements of every soil and every crop. These are fully explained in our booklet, "Bumper Crops," and also general directions for their use. A copy is ready for you, if you will ask for it.

Gunns Limited, West Toronto

Increase Your Yields and Profits

Why envy others who reap larger crop yields than your land produces? Commercial fertilizers, properly selected, are increasing the war-time profits of growers everywhere. Is it not well worth your while to look into this great opportunity? Even if your land is producing big crops you can get bigger and better yields and make more money by using

Harab-Davies FERTILIZERS

These natural fertilizers stimulate the plant, without impoverishing the soil. They nourish both land and crop. They are made from blood, bones, trimmings, etc., and have no unnecessary filler in them. Every ingredient has proven fertiliser value. Every one of our twenty-five different fertilizers is a proven success.

Write for bulletins and booklet. We will promptly mail them to you free of charge.

About the House

Rice As Potato Substitute.

Rice is really our best starchy food. It contains also a small amount of protein, a trace of fat, and some mineral matter. Starchy foods supply heat and energy to the body, and are, therefore, really more valuable than meat, which produces muscle. It is four times as nourishing as potatoes.

Most of us in the past have only associated rice with eggs, milk, raisins as the principal ingredient of puddings. The majority of Canadians have still to learn the use of rice as a vegetable which our American friends, especially the Southerners, learned long ago. It is the most-easily-digested of all the starchy foods. It is readily absorbed and leaves little or no waste in the intestines. All starches in their final digested are converted into sugar.

Rice is about the most abused of all our foods in the cooking. "Just boil it," they say, but "just boiling" may result in a delicious appearing and tasting food or—a cross between paste and porridge. Let no housekeeper come out of the war days without learning how rice grains may quadruple themselves in the cooking and be the nourishing, delectable food that doubtless they were resigned to be.

Wash the rice in several cold waters. Have ready a large dish nearly full of rapidly-boiling water. Sprinkle in the rice slowly so as not to stop the boiling. Boil rapidly without the cover for twenty minutes. If the rice seems hard at the end of that time boil ten minutes longer. It must be dry and mealy, like potatoes, not wet. Drain it in a colander and pour over it there, quickly, a quart of cold water. Place the colander on a plate and toss the rice about with a fork from the centre to the sides. Stand it on the back of the stove or at the over door, where heat will pass through and dry it. Turn it at once into a shallow dish or platter, tossing it out with a fork, being careful not to break the grains. If these directions are followed each grain will have swollen to four times its natural size and no two grains will be sticking together. It should be as white as snow.

A nourishing meal for school children at noon is a plate of boiled rice with a slice of bacon on top, followed by apple pudding.

Household Helps

It is a mistake to soak fowl of any kind in water. It will destroy the flavor.

The ironing board which is thickly padded is the easiest to iron on.

Bone stock can be made from bones alone, with vegetables to flavor.

Mutton broth with barley and beans in it is a nutritious winter soup.

A delicious vegetable stew can be made from any kind of left-over vegetables, put together and cooked for a few minutes in white stock. When they are thoroughly heated through, thicken the gravy a little and serve.

Cream soups are always thickened; and sometimes made of vegetable and fish, with milk and cream and a little seasoning.

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

Redpath refining methods produce no second grade sugar. We make and sell one grade only—the highest—so that you will never get anything but the best under the name of Redpath.

"Let Redpath Sweeten it."

Canada Sugar Refining Co., Limited, Montreal.

Twenty-Five Cents a Day spent for the right kind of food will keep a man in good health, fit for any task. Two **Shredded Wheat Biscuits**, served with hot milk, make a complete, perfect meal at a cost of four or five cents—a meal that supplies in digestible form every element needed to build new tissue and furnish heat and energy for the human body. At twenty-five cents a day for three meals there is a margin of ten cents for fruit or green vegetables. Such a diet means a clean stomach, healthy liver, active bowels. For breakfast with milk or cream. Made in Canada.

THE COUNTRY SCHOOL.

Schoolhouse of Western Canada is a Community Centre.

Nations are built in the public schools. The ideals set up by the school teacher remain very largely the ideals of the pupil throughout life, and his conception of patriotism will be what he has been taught during his school years. It is not too much to say that the present world war is due to a difference of ideals fostered by different systems of education.

Great as is the importance of the public school in old and well established countries, this importance is even greater in the new lands which are being called upon to assimilate populations from the more congested countries. In such a country as Western Canada, the public school has to take on functions not usually associated with it in the older and more densely settled communities. The prairie schoolhouse is not merely a centre of education; it is also the religious and social centre of the district. During the week days the school teacher furnishes education to the children of the neighborhood, but on Sunday the missionary holds his services, which all attend regardless of creed or nationality, and on week nights the building is used for meetings of farmers, for the various community societies; for the Red Cross or Patriotic Club, and for purely social events such as debates, concerts and dances. To facilitate the latter, it may be noted that many country schoolhouses use removable desks which the willing hands of the farmers' boys quickly dispose of whenever there is a dance in prospect.

Another phase of community work associated with the rural school which has been coming into prominence during the last few years is the supply of books to settlers in the district. This work is encouraged and assisted by the central Department of Education, which provides catalogues of books suitable for such purposes, the actual selection being left to the teacher. The number of books allotted to a school district is based on the report of the inspector of schools. In the Province of Alberta, although this school library movement is only in its infancy, no less than 110,000 books were supplied for this purpose last year, at a cost of some $30,000.00. Educationists of the province look forward to the time when every school district will be a library centre, giving to the settlers the facilities now afforded to residents of cities and towns through their public libraries. The prosperity which has almost overwhelmed rural Alberta in the last two years, when farmers have been reaping enormous crops and selling them at the highest figures in history, promises to contribute still further to the importance of the rural school as a social centre. With every farmer driving his own automobile the opportunities for social gatherings are greatly increased, and the country school is the natural meeting place.

FAMINE THREATENS WORLD.

Prof. Leacock Says We Must Increase Our Food Supply.

Prof. Leacock of McGill University, addressing the Montreal Housewives' League at the Royal Victoria College recently, said:

"We are in sight of a terrible food famine, such as the world has never seen. We must take steps betimes if we wish to avoid national and world-wide disaster. We must at all costs increase our own food supply.

"We in Canada are fortunately placed. We have boundless resources in land to draw upon. We must see that every available acre and every available day's labor is turned to use.

"It is gratifying to learn that our Department of Agriculture and our National Service Commission are wide awake to the situation. We must put behind them the force of public opinion and the efforts of individual citizens."

ST. VITUS DANCE AFFECTS MANY CHILDREN

This Trouble Can be Cured Through the Use of Dr. Williams' Pink Pills.

St. Vitus Dance is much more common than is generally imagined. The trouble is often mistaken for mere nervousness, or awkwardness. It usually attacks young children, most often between the ages of six and fourteen—though older persons may be affected with it. The most common symptom is twitching of the muscles of the face and limbs. As the disease progresses this twitching takes the form of spasms in which the jerking motion may be confined to the head, or all the limbs may be affected. The patient is frequently unable to hold anything in the hands or walk steadily, and in severe cases the speech may be affected. The disease is due to impoverished nerves, owing to the blood being out of condition and can be cured by the use of Dr. Williams' Pink Pills, which enrich the blood, strengthen the nerves, and in this way restore the sufferer to good health. Any symptom of nerve trouble in young children should be promptly treated as it is almost sure to lead to St. Vitus Dance. The following is proof of the power of Dr. Williams' Pink Pills to cure this trouble. Miss Hattie Cummings, R. R. No. 3, Peterboro, Ont., says: "I was attacked with what the doctor said was St. Vitus Dance. Both my hands trembled so as to be practically useless. Then the trouble went to my left side, and from that to my right leg, and left me in such a condition that I was not able to go out of the house. I took the doctor's medicine without getting any benefit. Then I tried another remedy with the same poor results. At this stage I was advised to try Dr. Williams' Pink Pills and did so, with the result that they fully restored me to health, and I have not had the slightest symptom of nervous trouble since. I can recommend these pills to anyone who is suffering from nervous trouble, and hope they will profit by my experience."

You can get Dr. Williams' Pink Pills from any drug dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

RUSSIAN REFUGEES SUFFER.

Food, Clothing, Medicine Necessary to Ward Off Wholesale Deaths.

A report on the condition of the Russian refugees is given by Thomas W. Whittemore of Boston, who is now in Japan for supplies after long services in directing the work of the American Committee for the Relief of Russian refugees in Russia. The forced migration of the people of Little Russia into the heart of the Empire was described by him as one of the greatest movements of people in history. He said that the names of as many as 3,000,000 refugees were on the official list, and although the Russian Government is doing everything humanly possible to ameliorate their condition much remains to be done in the way of food, clothing, medicine and shelter. Thousands died in the flight. Barely fed, poorly clothed, masses were carried away by contagious diseases and the rest remained helpless, gathered in barracks and other public places vaguely and blindly waiting for occupation.

The Russian Government has finally distributed these refugees among different parts of the Empire, yet the problem, Mr. Whittemore said, was far from settled. The great need was for some form of organization which will provide them with labor and the means of living, and while that economic question is being worked out, food, clothing and medicine are necessary. He had come to Japan, he said, because the lack of shipping space from the United States made it practically impossible to get the necessary supplies from that country.

It is a question as to whether the kangaroo can cover a given distance in quicker time than an ostrich.

Old Fashioned Ideas

are being supplanted daily by newer and better things. This is particularly true where health and efficiency are concerned.

In hundreds of thousands of homes where tea or coffee was formerly the table drink, you will now find

POSTUM

It promotes health and efficiency, and the old time nerve-frazzled tea or coffee drinker soon gives place to the alert, clear-thinker who drinks delicious Postum and knows.

"There's a Reason"

No change in price, quality, or size of package.

TEETHING TIME A TIME OF WORRY

When baby is teething is a time of worry to most mothers. Baby's little gums become swollen and tender; he becomes cross; does not sleep well; is greatly troubled with constipation; colic or diarrhoea and sometimes even convulsions seize him. During this period nothing can equal the use of Baby's Own Tablets. They regulate the bowels and stomach and make the teething so easy that the mother scarcely realizes baby is getting his teeth. Concerning the Tablets Mrs. Arthur Archibald, New Town, N.S., writes: "I used Baby's Own Tablets when baby was getting his teeth and I found them an excellent medicine." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

CHAPLAINS BRAVE WORK EIS.

They Do Not Confine Their Services to Spiritual Needs of Troops

Writing on the work of the Canadian chaplains in France, Capt. Chas. G. D. Roberts sends an article to the Canadian Minister of Militia, in part as follows:—

The work of the Canadian Chaplain Service has been so successful, so rich in results, and conducted along such broadly human lines, that it is impossible to do it anything approaching justice within the space of a newspaper article. The cement of the whole structure has been a unity of purpose and a harmony in effort which are a constant influence for good among our men, and which may well serve as an example to the churches at large. The representatives of each church or creed are supreme within their own fold. The organization of the Canadian Chaplain service, as a whole, guards the interests of each communion, and guards them impartially. I have seen an energetic young Jewish rabbi coming to a canon of the Church of England for assistance to enable him more effectively to minister to his scattered Hebrew flock. All rivalries are strictly eliminated, except the high rivalry of zeal, self-sacrifice and courage.

It is not, by any means, to matters spiritual alone that the tireless energies of the C.C.S. are devoted. The service looks after the comfort, recreation and entertainment of the troops, by means of a highly-organized system of soldiers' institutes, canteens and cinema shows, which keep them out of mischief or boredom during the period when they come back from the trenches to the rest camps. This system is run on a merely nominal margin of profit, and the accounts are officially audited by the Paymaster's Department. Narrow as is the margin, it yields a handsome profit, which is returned to the men again in whatever form may seem to be most needed. No small part of it goes to the provision of free coffee—hot coffee—at all hours of day or night, for the men who are entering or leaving the trenches.

But it is when a battle is on that the Church militant peculiarly justifies its title. Where the wounded and dead are falling, there you will find the "padres." They are by no means confining themselves to their spiritual functions. They are helping and inspiring the stretcher-bearers, the ambulance men, the surgeons. Their activities are limited only by the needs of the situation. For instance, during the second battle of Ypres the padres in different quarters of the battlefield organized voluntary stretcher-bearer parties, guided them up into No Man's Land, and worked with them night after night in finding and bringing out the wounded. In this task one of the padres was taken prisoner. At the Somme, too, one of the padres organized a rescue party, led it up under deadly shell fire, and brought back ten wounded men who had been lying in a trench for four days. The trench was one cut off from our lines and occupied in part by the Germans. Another of our padres was wounded while rescuing Australian wounded at Mouquet Farm. Suffice to say that three C.M.G.'s and five Military Crosses have been awarded amoong the padres, while many more such honors have been amply deserved. It is significant to note that of the thirty padres who left Canada with our first contingent in September, 1914, there are now only nine remaining in the field.

Enlist At Such A Time.

A mustering officer, in the early days of the war, before England was aroused, met on the street of a coast village a strapping fellow about twenty-one years old. The officer hailed him.

"See 'ere, me lad," he said, "are you in good 'ealth?"

"I are," said the youth.

"Are you married?"

"I aren't."

"Ave you anyone dependent on you?"

"I 'ave not."

"Then your King and country need you. Why don't you enlist?"

"What?" he said. "With this bloomin' war goin' on? You must think I am a silly fool!"

If Stomach Hurts Drink Hot Water

If an apoplectic sufferer has gas, wind or flatulency, stomach acidity or sourness, gastric catarrh, heartburn, etc., would take a teaspoonful of pure calcined magnesia in half a glass of hot water immediately after eating, they would soon forget that they were ever afflicted with stomach trouble, and doctors would have to look elsewhere for patients. In explanation of these words a well known New York physician stated that most forms of stomach trouble are due to stomach acidity and fermentation of the food contents of the stomach combined with an insufficient blood supply to the stomach. Hot water increases the blood supply and bicarbated magnesia instantly neutralizes the excessive stomach acid and stops food fermentation, the combination of the two, therefore, being marvelously successful and decidedly preferable to the use of artificial digestants stimulants or medicines for indigestion.

National Service Cards.

The time for those persons who have not filled in the National Service cards, or have not properly filled them in, has been extended to the 31st day of March, 1917, and further cards have again been issued to the postmasters for distribution among those who have made default. It is understood that the returns from the 2nd Military District have been most gratifying. There are, however, even in this District a number who have not properly made their returns. The National Service Board hopes that everyone in the District will use his or her very best efforts in order to make the returns from this District as nearly perfect as possible.

Ask Sons To Surrender.

A Canadian just back in England from France says that German troops have been well fed hitherto, but that a great deterioration is shown in their food recently. Young Germans surrendering declare that their mothers asked them to do so. The weather at the front has been penetrating. Canadians feel it as much as they do the severe cold in Canada.

Minard's Liniment Co., Limited.

Gentlemen,—My daughter, 13 yrs. old, was thrown from a sleigh and injured her elbow so badly it remained stiff and very painful for three years. Four bottles of MINARD'S LINIMENT completely cured her and she has not been troubled for two years.

Yours truly,
J. B. LIVESQUE.

St. Joseph, P. O., 18th Aug., 1900.

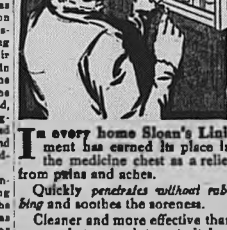
At Grips With a Leopard.

A correspondent in Port Elizabeth, South Africa, of the London Express, sent an account of a thrilling battle between a British officer and a full-grown female leopard in German East Africa. An expeditionary force was on the march when the animal was sighted, and Lieut. Bouwer dropped out to try a shot. The leopard suddenly charged the officer, and the best he could do was jam his rifle in the open mouth of the beast. Bundles of burning grass were thrown toward the animal to distract her attention from Lieut. Bouwer, who was badly hurt, and Dr. Ivor Haslem finally sent a dum-dum bullet home, which closed the career of that leopard.

Minard's Liniment Cures Diphtheria.

The Natural Comment

London children certainly get some quaint views of life. An instance of this recently occurred in a London East-End Sunday School, where the teacher was talking to her class about Solomon and his wisdom.



"When the Queen of Shaba came and laid gold and jewels and costly spices before Solomon, what did he say?" she asked, presently.

One small girl, who had evidently had experience in such matters, promptly replied.

"'Ow much d'yer want for the lot?"

A Texan is the patentee of a new harness to hold a rod for a fisherman and leave his hands free for other purposes.

Minard's Liniment for sale everywhere.

In every home Sloan's Liniment has earned its place in the medicine chest as a relief from pains and aches.

Quickly *penetrates without rubbing* and soothes the soreness.

Cleaner and more effective than mussy plasters or ointments, it does not stain the skin.

For rheumatism, neuralgia, gout, lumbago, sprains and strains use Sloan's Liniment. At all druggists, 25c. 50c. $1.00.

GILLETT'S LYE

King's Grape Vine.

The King's grape vine at Windsor, England, in the garden near Cumberland Lodge, was planted in 1768. It is 120 feet long and 20 feet wide. The most remarkable vine in Europe, however, is the famous vine at Hampton Court, from which this is a cutting. This was planted in 1763 and still grows abundantly.

When Your Eyes Need Care

Use Murine Eye Medicine. Non-smarting—Feels nice—Acts Quickly. Try it for Red, Weak, Sore Eyes and Granulated Lyelids. Murine is compounded by our Oculists—not a "Patent Medicine"—but used in our several Physicians' Practice for many years. Now dedicated to the Public and sold by Druggists at 50c per Bottle. Murine Eye Salve in Aseptic Tubes 25c and 50c. Write for book of the Eye Free. Murine Eye Remedy Company, Chicago. Adv.

Change Playmate.

"Willie, you must stop using such dreadful language," said his mother. "Where in the world did you learn it?"

"Why, mother," replied the boy, "Shakespeare uses it."

"Well, then," said the mother, "don't play with him."

Minard's Liniment Relieves Neuralgia.

The Useful Sunflower.

Grow sunflowers, not only for their gorgeous beauty, but as food for the hens. In the autumn the sunflower seed is a healthy stimulant and assists biddy in repairing her wardrobe, and clothing her for her winter duties. It is good exercise also for the hens to pick the seeds from the heads. There is a pitchy substance throughout the whole plant, which, when the stalks and heads are dry, makes good fuel, so that no part of the plant need be wasted.

In 25 years $8,000,000,000 in gold have been mined in the world.

ZAM-BUK

Purely Herbal—No poisonous coloring
Antiseptic—Stops blood-poison
Soothing—Ends pain and smarting, etc.

Guard Your Baby's Health

Cheerful, Chubby Children Make the Home Happy

Weak, puny babies are a constant care to tired mothers and are subject to many diseases that do not affect healthy children.

Keep your children in good health. See that their bowels move regularly—especially during the teething period. This is a distressing time in the life of every child and the utmost precaution should be taken to keep them well and strong.

By the consistent use of

Mrs. Winslow's Soothing Syrup

it is possible to avoid many childish ills now so prevalent.

It is a corrective for diarrhœa, colic and other infantile ailments. It soothes the fretting baby and permits the child to sleep well and grow healthy. It brings comfort and relief to both child and mother.

Mrs. Winslow's Soothing Syrup

Makes Cheerful, Chubby Children

Is absolutely non-narcotic. It contains no opium, morphine nor any of their derivatives. It is soothing, pleasant and harmless. For generations mothers in all parts of the world have used it and millions of babies have been benefited by it.

WHY WOMEN WRITE LETTERS

To Lydia E. Pinkham Medicine Co.

Women who are well often ask "Are the letters which the Lydia E. Pinkham Medicine Co. are continually publishing, genuine?" "Are they truthful?" "Why do women write such letters?"

In answer we say that never have we published a fictitious letter or name. Never, knowingly, have we published an untruthful letter, or one without the full and written consent of the woman who wrote it.

The reason that thousands of women from all parts of the country write such grateful letters to the Lydia E. Pinkham Medicine Co. is that Lydia E. Pinkham's Vegetable Compound has brought health and happiness into their lives, once burdened with pain and suffering.

It has relieved women from some of the worst forms of female ills, from displacements, inflammation, ulceration, irregularities, nervousness, weakness, stomach troubles and from the blues.

It is impossible for any woman who is well and who has never suffered to realize how these poor, suffering women feel when restored to health; their keen desire to help other women who are suffering as they did.

GLAMIS

Mr and Mrs Woods and Miss Alberta Kirkhtown left on Thursday for their home in the west.

Miss Nellie McBride, who was spending a few days at Mc Kirkhtown's, has returned to her home in Paisley.

Mrs Murdoch Mellis is spending a few days with friends in Cargill.

The Guild of St Paul's church held their monthly meeting at W J McKeeman's.

Miss Lillie McKenzie returned to her home in Kincardine after spending some time at the home of Mr Neil Curtle.

Clyde McKeeman returned to Toronto on Monday morning.

Mr John Gunn met with a painful accident on Friday when he slipped on the ice and broke his wrist.

Mrs (Rev) Buckbarrough's many Glamis friends will be sorry to hear of her accident. She fell at her home in Port Elgin and broke a limb.

Miss Mabel Stewart spent Sunday at Mr Jos Cunningham's.

Miss Lizzie Brown of Underwood, is staying at the home of her aunt, Mrs J A Pace, for a few weeks.

We are pleased to learn that Mrs Wm Brown, 6th con, is getting better.

Mrs (Rev) McNab of Underwood, is appointed to take Mrs Hogg's place as president of the Presbyterial W M S on account of the latter's removal

Mrs Allan McKinnon visited her sister, Mrs McPhail, for a few days lately.

Mrs R McGregor is at present very sick.

Mrs Jas McDonald, lately from Edmonton, is visiting her sisters here, Miss McDonald and Mrs Wm Rose.

Miss Porter visited her cousin, Miss Mabel Nelson, for a few days last week.

Mr and Mrs Alex Shipley are moving to their home on the 10th this week. We are sorry to lose such good neighbors.

Mrs Moreland and children, who spent the winter with her mother, Mrs Curry, 6th con, returned to their home in Alberta last week.

WILLOW CREEK

President Wilson is now said to be "real angry" at the Senate for not granting him "armed neutrality" powers. Perhaps he may become really angry at the Germans after they have pulled his nose and ceffed his ears a few more times, and thus waked up his Scotch-Irish temper.

We hear the question asked, "What has happened the township organization of Sunday schools?"

Mr Fred Schwittker entertained the Young People's Alliances at his home on Friday evening. About 30 were present and a very pleasant time was spent.

At the Bruce Telephone meeting on Friday the habit of rural listening was strongly denounced. A bill to punish listening, may be right in principle, but in some rural districts it will deprive life of one of its joys.

TWELFTH CON BRUCE

Better bring home a supply of groceries before the roads break up. The thunder and lightning Saturday night make one think of the good old summer time.

Mr and Mrs J A Howe and family, also Mr and Mrs J W Howe and family attended the silver wedding of their sister, Mrs Geo Wilson, on Saturday evening.

Mrs Donald McGillivray received a message last week that her son Neil had been wounded with barbed wire in the knee. We hope that he is not serious and that he will soon be like himself again.

Mr and Mrs John Dunlop have returned from a visit to friends in Owen Sound locality.

The box social in S S No 13 was a marked success. A splendid programme was rendered consisting of string band music by Mrs T Ellis, Miss Dudgeon, Messrs, Archer, Smart and Fraser, of Paisley; solos by Miss Emily McInnes, Miss Daisy Foster, Messrs L C Spofford, McLean Young and H I Thornburn; recitations by Miss Young and Miss Miller; mouthorgan duet by Lizzie Barnes and Kenzie Foster; and choruses by the school children. The chair was occupied by Reeve Jas Johnson. Auctioneer Rankin sold the boxes, some going as high as $6. A centrepiece donated by Mrs Archie Campbell was auctioned off at $5. and a pair of Wyandotte chickens donated by Mr Jas Archer were sold for $5. The total proceeds of the entertainment amounted to $174. There were a few present from Port Elgin, also one who came from Bentinck for the sole purpose of attending the social. The net proceeds will be devoted to Red Cross purposes.

A GREAT DIFFERENCE

ANGUS ARMOUR, Dorchester, Ontario says:

"I used the Homestead Bone Black Fertilizer on my oats last Spring, and am well satisfied with it. I purchased a ton from the local agent, which sowed about 10 acres of the 15 acre field, and I could see a great difference on what was fertilized from what was not. I have no hesitation in recommending it for oats or wheat as I sowed it with wheat this Fall."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

ELDERSLIE COUNCIL

Gillies Hill, Mar 5th, 1917

Council met on the above date, all the members being present. Minutes of last meeting read and adopted.

Children Cry
FOR FLETCHER'S
CASTORIA

EBENEZER

Mr J H McFadden attended the prohibition conference in Toronto last week.

Mr and Mrs Clarence Arwen, of Kenora, are visiting at Mr Wm Martin's.

Miss Eva Potts and Miss Emily Grant, of Ethel, visited friends here for a couple of days.

Miss Annie McKelvey has returned home after visiting friends in Guelph for a month.

Miss Irene Martin visited her sister, Mrs John Crone, near Hill.

Mrs C A Thomas is ill with an attack of quinsy.

The Women's Institute social in the rink on Wednesday night was a very successful affair, about 75 persons attended. The hockey match between Dobbinton and Ebenezer resulted in a rather one-sided score—16 to 1 in favor of the home players.

Mr C A Thomas went to Toronto last week to bring home the remains of his father-in-law, the late R C Bates.

—A bill to incorporate Lions Head village has been passed in the Legislature.

PINKERTON

Rev Mr Gale and Mr T Birrell attended the Presbytery meeting at Paisley last week.

Mr Walter Birrell, of Toronto, was in the village a few days last week, visiting his parents, Mr and Mrs Birrell.

We are all sorry to hear that Miss Ellen Gibb is under the doctor's care.

The Pinkerton Red Cross Society have made and shipped the following articles since their last shipment: three weeks ago: 13 suits pyjamas, 8 flannel shirts with collars, 10 flannel shirts without collars, 1 pair wristlets, 2 pillow covers, 9 pillows, 3 quilts, 68 pair socks.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

—At J L Shipley's sale in Bruce Tp on Tuesday some record prices were obtained by auctioneer Pearce. A pair of 3-yr-old steers brought $300, a calf 2 weeks old $22, and cows went as high as $102. The aggregate of sale was $3,500, which shows Mr Shipley up as a good farmer.

Everybody Dances

DON'T think of the New Edison Diamond Amberola just as a reproducer of topical songs or band selections. Its great value as a home entertainer is its *versatility*.

Take the present popularity of dancing. With a New Edison in your home, you may have a delightful dance as often as you like, with music that a millionaire could not improve.

You can have all the latest dances played by the finest bands and orchestras, with the tempo set by the masters of dancing so that you get the exact rhythm.

Or—if you prefer the regular waltzes and two-steps, you may choose from many when you have the New Edison.

Or—you may have a night at the opera—a vaudeville or musical comedy evening—and on Sundays enjoy "the hymns that live" as sung by soul inspiring quartettes.

There's a winter's entertainment and a winter's delight in

BRITAIN— CALLS TO CANADA—

THE FACTORY — THE FARM

She must have Food—

for her Armies in the Field—for her Workers in the Factory—in the Munition plant—in the Shipyard—in the Mine.

THERE'S DANGER IN SIGHT—BUT YOU CAN HELP

DO YOU KNOW— that the rapidly rising price of food stuffs means that the World's reserve supply is getting small?

DO YOU KNOW— that a world-wide famine can only be averted by increasing this supply?

DO YOU KNOW— that a "food famine" would be a worse disaster to the Empire and her Allies than reverses in the Field?

YOU CAN— help thwart Germany's desperate submarine thrust on the high seas.

YOU CAN— do this by helping to make every bit of land in Canada produce—the very last pound of food stuffs of which it is capable.

AND REMEMBER— that *no man can say that he has fully done his part*—who having land—be it garden patch, or farm, or ranch—fails to make it produce food to its utmost capacity.

THESE FARM PRODUCTS ARE NEEDED FOR EXPORT

WHEAT, OATS, BEEF, BACON, CHEESE, EGGS, BUTTER, POULTRY, BEANS & PEAS, WOOL, FLAX AND FLAX FIBRE, DRIED VEGETABLES

BRITAIN APPEALS TO CANADA

THE NEAREST PRODUCER OF STAPLE FOODS

—Messrs Warren McGill, Duncan Graham and son Peter, of Elderslie, left on Tuesday for Lorebore, Sask.

—The Red Cross Workers of S S. No 15 Bruce shipped this week the following: 29 feather pillows, 64 pillow slips, 18 flannel shirts, 22 suits pyjamas, 86 pairs socks.

—Miss G McBeath left for Milwaukee on Tuesday morning, having been summoned by news of the death of her sister, Mrs McKay, of that city.

—Mr and Mrs Archie McAllister and little daughter, of Red Grey, Sask., left for the west on Saturday after spending the winter with friends in Elderslie.

—The marriage of Miss Elma Dewar to Mr. Alfred Bell, of Wiarton, takes place this Wednesday evening at the home of the young lady's father, Mr. J. S. Dewar.

—Dr. and Mrs. A. H. Allen announce the engagement of their adopted daughter May Warren to George Elwood McInnes of Chatsworth, the wedding to take place in April.

—The Red Cross Society of the Flora road south made the following shipment on Thursday, March 15: 4 hospital shirts, 25 towels, 6 pillows, 1 quilt, 36 suits pyjamas, 60 pairs socks, 6 day shirts, 31 field shirts.

A windstorm on Tuesday night of last week did some damage to buildings in a section southwest of Paisley. We heard of one barn being unroofed, the property of a Mr McKay in Kincardine Tp., and the chimney on Mr Jas Rose's house, 8th Bruce, was blown over.

Soldiers Dies from Pneumonia

Pte M W Switzer was again reported in Tuesday's casualty list as dangerously ill, and on Wednesday morning a message to his parents brought the sad news of his death, at 30 Casualty Station, France, from pneumonia.

Veterinary for Overseas

Wm G Walks, son of Mr and Mrs D Walks, of Elderslie, is one of twelve graduates of the Ontario Veterinary College who have obtained commissions in the Canadian Army Veterinary Corps, and will leave in the immediate future to take up their duties overseas.

Enlisted with the Foresters

Mr Sam Babcock is getting into khaki again, having been accepted for the Foresters Batt. now training at Galt. Sam joined the 161th, but was rejected because of the lack of one eye, which he has been without ever since he was 14 months old. The loss was due to inflammation. He will be a mighty good man for the Muskoka unit.

Properties Change Hands

Mr E G Eckel has purchased the McDougall dwelling on Queen St south, and will remove his household to there shortly. Miss J Pettie has sold her home on Ross St. to Miss Maggie Bryce, of Dunblane. The sale of Mr J R Laidlaw's fine brick residence to Sir A Conmack is also announced, this being one of the largest transactions in real estate in town for some time.

Recruits Wanted for Production

Just as surely as lack of food is strangling Germany day by day, so plenty of food is winning the victory for the allies. The French armies, for instance, were never better fed than now, for France cannot forget the awful lesson of 1870—the failure of her food supply. To this she attributed the loss of that war.

To feed the French soldiers around Verdun, more than 25,500,000 pounds of food a week were required. This gives a faint idea of the colossal task of feeding an army. Canada and Britain have a huge army of fighting heroes on the line; every man MUST have plenty of food, in spite of a world shortage. Upon Canada's food production all principally rely.

The Farmers of Ontario Urgently Need Help

The Department of Agriculture appeals to men and boys to enlist in the farm help campaign. The Department appeals to men unfit for military service, or who find it impossible to enlist in the army. Do your "bit" by helping to increase production of foodstuffs. This is your hour of opportunity.

The farmers of Ontario need the help of retired farmers, of men following no occupation (retired), of business men who can spare a portion of their time. We appeal to all who can so arrange their ordinary affairs to plan to help some farmer friend, particularly in seed time and harvest.

Confer with your county District Representative of the Department of Agriculture, or write, "Farm Help Campaign," care Department of Agriculture, Toronto.

Ontario Department of Agriculture
W. H. Hearst, Minister of Agriculture
Parliament Buildings — Toronto

The advocates of church union are encouraged by the practical move of the churches of Northern Ontario, where a local union is looked forward to. The intention is for the Methodist and Presbyterian churches to co-operate, and according to plans formulated at a meeting at North Bay, a saving of $10,000 annually and thirty men will be effected.

—The threshermen held a convention at Sarnia recently, when it was decided to petition the Ontario Legislature to amend the "planking law" so as to compel municipalities to provide planks at each bridge, in order to obviate the necessity for threshermen carrying them on their outfits.

"SALADA"

Black—Green—or Mixed F204

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXV.—(Cont'd).

Fitz dropped Violet's hand with a nervous start.

Violet herself rose to her feet and stared wildly, but the Spaniard paused only for one moment, then, fixing his dark eyes upon her face, bowed low, murmured gravely "Pardon, senora," and vanished as noiselessly as he had appeared.

Violet, seated on a footstool at her aunt's feet, told her all that night, and Mrs. Mildmay, as in duty bound, informed Howard Murpoint.

In some way, before night fell, the world had got at it, and the clubs were rumoring that Lord Fitz Boisdale was engaged to Miss Mildmay.

In a few days a rumor still more exciting and relishing was produced, to the effect that Lord Lackland had accepted the wealthy millionaire, Mr. Wilhelm Smythe, as suitor for the hand of Lady Ethel Boisdale.

Bertie, at his club, heard the rumor, and dashed off in search of Fitz.

He found him seated moodily and dreamily in an easy-chair at the smoking-room of his favorite haunt.

"Ha, Fitz," he exclaimed, "is it true?"

"What?" said Fitz, flushing. "What have you heard? Don't say it's too good to be true; don't cast me down, old fellow; you don't know how my heart is set upon it!" he exclaimed, thinking that Bertie alluded to the understanding between Violet and him.

"What do you mean?"

"What do you?" asked Fitz.

"Why, this—this—false report that—that Ethel is to be married to that odious fellow, that miserable young money-bag?"

"I can't say I've heard," said Fitz, frowning earnestly. "If I thought that there was anything in it, I'd go for my big whip and thrash him!"

At that moment a waiter put a letter into his hand.

He opened it, and his face grew red with indignation.

"Read it," he said, and thrust it into Bertie's hand.

It was an intimation from the earl that Mr. Wilhelm Smythe had proposed and been accepted.

Bertie, in his passion, could not speak a word.

Fitz tore the letter into a hundred pieces, and threw the fragments into the grate.

"Cheer up! But," he said, "he shall no more have her than those pieces shall come together again. We'll show them that right is stronger than might in this case."

Bertie clasped his hand.

"You will come down with me?" he said.

"I will, and will put our plot into execution; no time must be lost."

"I'll go to-night," said Fitz. "You stay here and wait till I telegraph. "I'll put it carefully so that nothing happens. I'll telegraph that 'Wheat has gone up.' Then you'll know that you're to come down."

The two talked together for a few moments excitedly and eagerly, then Fitz went off, calling to servant to saddle a horse at once.

He started that night for Coombe Lodge, and appeared there the following morning as fresh and as light-hearted as usual, but with the determination to stand by his friend and save his sister at all costs.

Ethel was not up when he arrived, and she entered the breakfast-room without any expectation of seeing him.

"Fitz!" she exclaimed, the warm blood rushing to her face as she sprang to him.

He held her in his arms, but would not show any emotion.

"Hello, Eth!" he said, "why you've gone pale again! where's that summer rose? I've heard the news—don't tell me any more—I'll congratulate Mr. Smythe when I see him."

Her face went paler, and her eyes filled with tears.

She crossed her hands upon her breast.

"I have done right, Fitz, have I not?" she said. "The earl has told me all—how poor we are, and how necessary it is that you and I should sacrifice ourselves for the house. You will not sacrifice yourself, though, Fitz, will you? There need be no occasion. You will give your hand where you give your heart. Dear Violet."

Honest Fitz turned his face aside to conceal his emotion.

"No, Eth," he said, "that will be all right."

Then, to avert suspicion, he rattled away to the countess, as she came in, in his old style, and actually spoke of Mr. Smythe in a friendly way.

It cost him something to be deceitful, but he did it, and succeeded in blinding them all.

The next day he was particular in his attentions to the ladies, and allowed himself to be inveigled into a game of croquet—a game he detested.

In the afternoon he went into the servants' hall and nodded to Ethel's maid.

She came out into the garden, and a conversation took place between her and Fitz, which was concluded by Fitz dropping some gold into her hand.

That evening he was more merry than ever, and not even a letter from Mr. Smythe, saying that he should be down the day following, depressed his spirits.

That night, when the countess and Ethel were seated in the drawing-room, the former gloating over the approaching wedding, the latter inwardly shrinking from and shuddering at it, Fitz rode over to Tenby and telegraphed the few significant words:

"Wheat has gone up."

The following morning broke finely.

"What time is Mr. Smythe to arrive?" asked Fitz, cheerfully.

Ethel flushed, and bent her eyes to her plate.

"He will be here before dinner," said the countess.

"See that the horses are sent for him," said the earl from behind his paper.

"All right, I'll see to that," said Fitz. "Meanwhile, just to spend time, suppose you and I have a gallop, Eth?"

Ethel thanked him with her eyes.

"Then go and get your habit on at once," said Fitz.

On the staircase Mary, the maid, met her crying.

"If you please, my lady, my brother's broken his leg, and—and—and can I go home at once?"

"Certainly," said Ethel, softly. "I am sorry, Mary. You must not wait for anything. Fitz," she called down, "can you let Mary have the brougham?"

"Yes," said Fitz. "What does she want it for?"

Then when the sobbing handmaid told him all, he said, like the kind fellow he was:

"Yes, and tell William to put the pair of grays in for you. "They'll take you to the station fast enough to catch the train."

Mary went off gratefully, and Fitz and Ethel soon afterward mounted and started for their ride.

"I wouldn't heat him too much," said Fitz, who seemed to be saving his horse, to Ethel.

"We are not going far, are we?" asked Ethel.

"Oh, not if you like, though I think we had better take the opportunity. We may not have many more rides together, Eth."

Her eyes filled with tears.

"Let us have a long ride, Fitz, then," she said.

They rode on, Fitz saving his horse and showing no disposition to turn.

At last Ethel said:

"Don't you think we had better turn, Fitz? We shall not be in time."

"Let us go as far as that signpost," said Fitz. "Then——"

"We shall not be in time for—for Mr. Smythe," said Ethel, forcing herself to say the hateful word.

"Oh, yes, we shall, I think," said Fitz, with a twinkle in his eyes. "Hello, here's my horse gone lame!"

"Where?" said Ethel, but Fitz had jumped off.

"What shall we do?" said he, "he's dreadfully lame; I've noticed it for some miles, but said nothing. I can't ride him back, and you can't go alone."

"What shall we do? Where is a post town?" said Ethel.

"I don't know," said Fitz. "Here's a carriage!" and he pulled out his watch as he spoke, muttering, "Punctual, by Jove!"

Then he called the coachman:

"Can you tell us the nearest post town? We want horses or something."

"I'm going that way, sir," said the man. "My young fellow will take your horses on, and you can get inside."

Fitz, without giving Ethel time to consent, hurried her in and jumped in himself.

"Drive on, my man," he said. "We are in a hurry."

(To be continued).

Marmalade

I made it with my same old recipe but I used

Lantic Sugar

About the House

Fish Recipes.

Fish Soup (Russian).—This soup is very hearty. It may be made of one or several varieties of fish. Put two pounds fresh fish, including bones and head, in a saucepan, together with one sliced carrot, one onion, several stalks of celery cut into bits, sprigs of parsley, one bay leaf and six peppercorns. Cover with three quarts of water and boil gently one and one-half hours. Strain through cheesecloth into another saucepan, add six tablespoons rice and boil until rice is tender. Add one-half pound uncooked fish, skinned, boned and cut into small pieces, and simmer about fifteen minutes. Have ready one egg yolk beaten into one cup of cream or rich milk; add this to the soup; remove from fire without letting boil any more, flavor with salt, pepper and paprika and serve.

Salmon Mold.—Drain off the juice from a can of salmon and flake the fish, picking out every fragment of bone and skin. Mix with the fish one egg lightly beaten, the juice of a half lemon, a cupful fine dry bread crumbs, and salt and pepper to season. Pack in a buttered mold which has a tight-fitting tin cover, steam for two hours and cool.

Salmon Cutlets. — Chop rather coarsely the contents of a tin of salmon, and mix in an equal bulk of bread crumbs, seasoning the lot according to taste. Then, with the aid of beaten eggs, form a fairly stiff paste, which can be made into cutlets, and each coated with egg or milk and browned bread crumbs. Heat in a frying pan with dripping. This process will be found an economical one, as the fish lasts longer than if merely eaten as it comes from the tin.

Fish Patties.—Remove all bones from about half a pound of cold fish. Chop up a hard-boiled egg and add to this the fish. Add half a teacupful boiled rice, a dessertspoonful of finely chopped parsley and pepper and salt to taste. Mix all well together. Make half a pint of white sauce and add to the other ingredients. Mash half a pound of cooked potatoes and sufficient flour and dripping to make a nice pastry. Roll out, and line some saucers with this; then fill with the mixture. Bake till brown, after covering with the rest of the pastry.

Sugar Substitutes

We all need a certain amount of sugar, specially during the cold weather, because it is a carbohydrate, or heat and energy giver.

In the first place, we must remember that the refined white sugars, granulated, powdered and cube, are the most expensive, and that the brown is pure, wholesome and actually sweeter, besides being considerably cheaper; then there is a large amount of sugar contained in raisins and other fruits, and, as we all know, there is an enormous amount of sweetness to be had from maple sugar, honey and molasses. Besides these actual sugars the starchy foods have to be considered as heat-givers, because starch is changed to sugar during the process of digestion.

Layer Pudding.—Four ounces of dried apples, six ounces of bread crumbs, browned in the oven or made of brown bread; four ounces of brown sugar, three ounces of butter, nutmeg, cinnamon, one-half pint of hot milk. Soak the apples and stew very gently until quite tender. Grease a fire-proof dish and sprinkle a thick layer of crumbs on the bottom. Cover this with a layer of the apples sprinkled with sugar, nutmeg and cinnamon and add a few little dabs of the butter. Repeat these layers alternately until the ingredients are used up, keeping one of the crumbs for last. Pour the milk evenly over the top, sprinkle with sugar, put in a few more pieces of butter and bake in a moderate oven until a good brown.

Rajah Pudding. — One pound of bread crumbs, one-half pound very finely chopped or grated suet, a little lemon juice, one pound of molasses, one-half pound raisins. Chop raisins coarsely and mix them with the finely chopped suet, then add the bread crumbs and the lemon juice. Heat the molasses and stir well into the dry ingredients. Pour into a well-greased pudding mold and boil for seven hours.

How To Prepare Vegetables

One of the duties of every Canadian housewife at the present is to make every home a thrift centre. There are still avenues of waste in every home. One of the most unnoticed of these is probably our methods of preparing and cooking certain kinds of food.

Here are the rules for the cooking of vegetables: Old vegetables or those that are wilted should be soaked at least half an hour in clear, cold water before cooking. Particularly does this apply just now to old potatoes. Under no circumstances add salt to the water in cooking these, as it draws out the juices, hardens the fibre, and destroys the flavor.

All vegetables should be put over the fire to cook in rapidly-boiling water, and in uncovered vessels.

Vegetables containing starch—rice, potatoes, chestnuts—must be boiled until tender, but not a moment longer, or they will become heavy and soggy.

Old peas, beans, and lentils should be washed and soaked over night. In the morning drain, cover with fresh boiling water, boil half an hour, drain, and throw this water out. They are then ready to be cooked according to any recipe. This preparation is necessary in order to get full food value and to make them more digestible and palatable. It is important to remember this at the present time, as these foods are amongst our best meat substitutes.

Vegetables containing volatile flavoring, onion, cabbage, cauliflowers, and Brussels sprouts, should be boiled in salted water in an uncovered vessel, or they will emit a very unpleasant odor. The volatile matter contained in all these vegetables is rich in hydrogen and sulphur, both of which are valuable for the human system; so when this is allowed to escape by over-cooking or careless cooking, there is great food waste.

A safe rule to remember is: Top-ground, succulent, or green vegetables should be cooked in salted boiling water. Underground vegetables, the roots and stems of plants should be cooked in boiling, unsalted water. Salt should be added after they have been drained.

Housekeeping Hints.

A number of creamed soups can be made with the water in which vegetables have been boiled.

Very good wash cloths can be made from white stockings cut open. The edge can be crocheted with pink or blue.

Pantry shelves are cleanly and attractive painted white. Give them two coats of white paint, and lastly a coat of enamel. This is more satisfactory than paper.

Children and elderly people should have their evening meal of light and easily digested foods.

Cabbage, if cooked in boiling salted water, uncovered, will be more digestible and will not scent the house as it does when cooked tightly covered.

Soap that is allowed to dry and harden lasts twice as long as if used when fresh. Therefore it is cheaper to buy it in quantities and keep it in a dry place.

If a bit of piecrust is left over, roll it out rather thin, sprinkle it thickly with granulated sugar, cut into squares and bake in the oven until a delicate brown.

Jam turnovers are made of flaky pastry cut in little circles or squares. Turn up the corners or edges and put any sort of jam you fancy in the centre. Bake 20 minutes.

The Jolly Sailor.

A sailor who had landed after a long voyage, and having been paid off, called a cab, threw his luggage inside, and jumped on top himself. "Beg pardon, sir," said the astonished cabman, "but you should get inside and put your boxes on top." "Steer the craft ahead, sonny. Passengers always go on deck and luggage in the hold," was the reply from the top.

Herbert C. Hoover

of the Belgium Relief Commission, head of the great organization that works unceasingly to keep the souls of the Belgian people in their starved bodies. He has come to America once more to ask that the United States do her share in supplying a part of the $200,000,000 which Belgium must have or perish. "The situation in Belgium is the worst since the beginning of the war. I have come home to ask for more funds." This photograph was specially posed for and taken after his arrival in New York.

If Belgium Were "Next-Door" To Canada

—if the heavily-charged electric wires, that pen the people into a workless and almost foodless land, ran along our frontier

—if instead of reading of Belgian sufferings we heard the pitiful tales from the lips of escaped victims

—if we could see the long and hungry bread-lines of people as intelligent and once as prosperous and comfortable as ourselves

—if we could watch the thousands of emaciated children who are fed at the schools by the Belgian Relief Commission

—if what they are enduring, and their desperate need, were clear and vivid to us, instead of unreal and overseas

—then the great hearts of Canadians would be moved, and there would be no trouble in raising several times our present contributions to the Belgian Relief Fund.

Can we bring the urgent need of the hungry Belgian mothers and children home to YOU? Can we enlist YOUR active sympathy for those whose very lives depend on the prompt and continued help of people like yourself? Send your subscriptions weekly, monthly or in one lump sum to Local or Provincial Committees, or

MANY FRENCH ARE HELD IN BONDAGE

BARBAROUS CRUELTY AND IMPRISONMENT OF CHILDREN.

People in Territory Occupied by the Germans Are Treated Like Slaves.

Little by little the world is beginning to realize the [illegible] in which Germany understands and uses such phrases as "humane treatment" and "humanitarian objects."

It should, therefore, be a matter of little surprise to us to learn from the lips of those who have just escaped from a two years' thraldom, the bitterer because it has had to be endured in their own homes, that probably nothing can exceed the tyranny even now being exercised over the unfortunate inhabitants of Belgium and Northern France by the German invader, whose "desire to stem the flood of blood and to bring the horrors of war to an end" has recently been announced to an incredulous world.

Some eighteen months ago evidence was collected from some of these poor exiles on their return to France, and their stories of suffering and misery belong to the category of tragedies that "lie too deep for tears." Now, for the past few weeks, another sad procession of some 20,000 refugees from Northern France has been wending its way back "home" in a series of convoys at the rate of about 1,000 persons a day. Once more the warm-hearted and hospitable people of Switzerland have given them of their best; they have housed, fed, and clothed them, and sent them on their way rejoicing.

Terrible Conditions.

Once more neutral ears have been pained to listen to grim narratives of harsh treatment and starvation and worse, which appear to be inseparable from German domination in time of war. Some of these stories are told by an English correspondent as follows:

It matters little from which Province of invaded France the refugees are being repatriated, their condition is practically the same—broken in body and mind, but unconquerable in spirit. Some convoys say that they have not tasted meat for two years, others have had it in small quantities as lately as fifteen months ago; the most fortunate of all tell us that meat rations came to an end a fortnight before their departure. All food is at famine prices; candles cost 12 francs for a packet of eight; petrol is prohibitive. Yet, in spite of all this physical impoverishment, forced labor is the rule in town and village alike; the old men and women up to any age, and children as young as 13, are compelled to work in factories and fields, their wages varying from two to three francs a day, out of which they have to pay for their food about 50 per cent. of their total takings.

Driven Like Slaves.

To this rule there is no exception; one person in every household is allowed to stop at home to perform domestic duties, which include the washing of the German soldiers' dirty linen.

The discipline imposed scarcely differs from slave-driving in its palmiest days. At harvest-time work is obligatory all the week round, Sundays and feast days included; no one may stop work to go to mass. Two girls who went to church one Sunday morning were in prison the same afternoon; a child of 14 in the same village got four days' imprisonment for not doing a full days' work; a woman who gave an apple to a Belgian prisoner was condemned to 10 days' imprisonment; another woman's sentence was 42 days with hard labor for straying 20 yards beyond the boundary limit, and yet another, aged 77, received a fortnight's cells for going to see her sick daughter, who lived a short distance out of bounds. These are but a very few cases, typical of hundreds, which illustrate the bitter complaints against the behavior of the German troops and of officials in occupation of French territory.

AN INVITATION TO SICKNESS

Impure Blood Means a Breakdown in Your Health.

Impure blood is an invitation to sickness. The blood is at work day and night to maintain the health, and any lack of strength or purity in the blood is a weakness in the defense against disease. Anaemia is the doctor's name for lack of blood. There may be an actual loss in the quantity of the blood, or one or more of its constituents may be lacking. Its surest symptom is pallor. Anaemia is particularly common in young girls. It is not, however, confined to them alone, for it is this same lack of blood that prevents full recovery after la grippe, fevers, malaria and operations. It is also present in old age and in persons who have been under unusual mental or physical strain. If you are suffering from this trouble take Dr. Williams' Pink Pills for Pale People. They make pure, new blood with every dose and this new blood means health and strength. Thousands have proved the truth of these statements, among them Mrs. John Hyatt, Meldrum, Alta., who says:—"About a year ago I was in a badly run down condition, my blood was watery. I was very nervous, slept badly at night; suffered from frequent headaches and found my housework an almost intolerable burden, my appetite was poor, and I did not seem to assimilate the food I took, altogether my condition seemed serious. As there was no doctor in our neighborhood I decided to give Dr. Williams' Pink Pills a trial, and I have much cause to be thankful that I did so, as in a few weeks I could feel a great change for the better. I continued the use of the pills for some time longer, and found a complete cure. I feel better than I have for years and can therefore cheerfully recommend Dr. Williams' Pink Pills to all who are weak and run down."

You can get these pills from any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

BRITAIN'S WAR BREAD.

Tests Show That New Loaf Is Much More Nourishing.

Extensive experiments have preceded the settlement of the regulation for the future dilution of flour in England.

The new loaf must either contain at least 5 per cent. of the wheat "offals," or else there must be added to it at least 5 per cent., and it may be 10 per cent., of another substance, milled from rice, barley, maize or oats.

When the order comes into force on March 12 the browner loaves will be all wheat, while the whiter ones will contain from 5 to 10 per cent. of other cereals.

After counsel with expert advisers, the Food Controller, to decide the practicability of the scheme, had exhaustive tests carried out by a well-known firm of millers; and he has personally examined and tasted all bread made from the different varieties of the new flour. It was put to the proof still further. One of the largest army commands in the country was provided for a series of days with the new bread, and a leading London catering house also supplied it to numerous customers. The general verdict was that the bread was excellent, and that its dietetic value was higher than that of pre-war days.

In the official view the order may be said to have accomplished the desired objectives, namely, a wider area of selection for breadstuffs, with a consequent diminution of wheat; and a corresponding release of shipping tonnage. Also a more nutritious loaf is produced.

Foods Are Increasing In Price

But you can still buy

Grape-Nuts

at the same price.

This staple cereal in its air-tight, wax-protected package will keep indefinitely, yet is ready to eat at a moment's notice.

Grape-Nuts is full of compact nourishment with a delightful wheat and barley flavor.

The Most Economical of Prepared Cereals

CHILDHOOD AILMENTS

The ills of childhood come swiftly and too often before a doctor can be called in or medicine obtained the little one is beyond aid. The wise mother will always safeguard her little one by keeping Baby's Own Tablets in the home. This medicine always does good—it can never do harm. Concerning it Mrs. Napoleon Lambert, St. Ignace, Que., writes:—"Baby's Own Tablets are an excellent medicine for childhood ailments and I am well pleased with their use." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

CHILDREN AT WAR FRONT.

They Are Apparently Care-free Amid Danger and Carnage.

One wonders if Canadian schoolchildren have any conception of the lot of French boys and girls in the towns and villages along the battle-front, writes a Canadian soldier. Poor youngsters, in some places they and their parents have been obliged to live in the cellars of places under shell-fire. At one Belgian village Canadian ladies assisted in the care of such cellar waifs. Nowadays, though villages in close proximity to the lines have been denuded of their inhabitants, civilians still dwell in towns which the Hun does not scruple to bombard on occasion.

French boys and girls, during the past two and a half years of war, have grown accustomed to the rumble of cannon, and the crash of shells. The sight of ruined buildings in their native villages is a commonplace. At some towns along the Canadian front children after school hours take long walks into the fields, and on more than one occasion have had to be shooed away from the gun-pits. Forsooth, the guns were going into action! What memories of the war will not these war zone kiddies have, living right on the edge of it—practically at the front with the troops!

And yet, for all their acquaintance with war's dread realities, and the daily chances of being "blotted" by a shell, these youngsters are just care-free children after all, like boys and girls of their own age in Canada. I saw some of them, just out from school, singing at the tops of their voices, save others feasting their eyes on the toy horses, trumpets, drums and other attractions which hung in festoons in the quaint market square booths, presided over by Frenchwomen in hoods of black knitted wool.

It was some two hundred urchins just like these that Senator Mason of Toronto, visiting the front on Red Cross duty, helped to delight on Christmas Day, when he and other Canadian officers presented gifts from a tree. The joy of these children under that shell-smitten roof within loud sound of the guns is an experience the Canadian donors will never forget.

BECAUSE AND BECAUSE.

Give the Boys and Girls Accurate Answers to Their Inquiries.

It may seem to you an easy way out of a tight place when the little chaps at your house ask you hard questions, to answer: "Because." But really, it is hardly fair to them or to you. They want to know, and "because" sheds no light on the question.

The little folks are hungry for the truth, so take the trouble to tell them the truth. If you don't know, say so, but make it your business to find out and let them know as soon as possible.

Boys and girls pass on to their little neighbors what father and mother tell them. Be sure you are right before you give them any information.

The little fellows are just now storing up things for the days to come, and need every bit of help they can get; don't turn them off with a feeble "because." Give them something worth while, something which will make them better and more intelligent.

It does you good to think and study until you can answer the thousand-and-one questions your boys and girls ask you, so have the patience and the goodness of heart to make good and accurate answers to every inquiry.

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like; for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

MAKING BIG CHAINS.

Method is the Same as That Used in Olden Times.

In this day of machine manufacture it will perhaps surprise some to learn that the making of big chains is largely, if not entirely, confined to methods dependent on hand labor, says the Scientific American. There are probably no big chains being made by the use of machinery. There are various appliances employed, but these are hand operated or personally controlled. This situation appears to be due to two things. First, as the proverbial expression has it, "a chain is no stronger than the weakest of its links." A handmade chain is naturally made link by link. If the workmen are not only careful, but conscientious as to details, there is a considerable opportunity for attention equivalent to continuous inspection. The making of big chains is largely an old-time blacksmith's job.

Took Friend's Advice And Got Results

How M. C. Lindos Found a Cure in Dodd's Kidney Pills.

One of the Reasons Why Dodd's Kidney Pills Have Had a Phenomenal Growth of Popularity in the West.

Ellscott, Alta., Mar. 12th (Special.)

—The growth of popularity of Dodd's Kidney Pills in this section of the Great West has been phenomenal. They cure kidney disease. That much has been proved again and again. One of the latest proofs comes from M. C. Lindos, well known and highly respected here.

"Thanking Dodd's Kidney Pills seems a small way of expressing my gratitude," M. C. Lindos states. "I suffered from headaches and dizziness and was unable to find anything that would do me any good. I tried several medicines that were advertised to cure my trouble, but they did not.

"Dodd's Kidney Pills were recommended to me by a friend and I sent for a box and gave them a trial. The result is that I am feeling fine now. I shall always keep a box of Dodd's Kidney Pills handy."

Dodd's Kidney Pills cured M. C. Lindos because the trouble came from the kidneys. Lumbago, rheumatism, dropsy, heart disease, diabetes and Bright's Disease are other troubles that comes from sick kidneys. To cure them cure the kidneys with Dodd's Kidney Pills.

Just Boys.

The trait in a mother that all boys most admire is that which prompts her to proceed with the packing of a lunch basket for a picnic, although anyone can see that the clouds are gathering for a storm. There is one complaint that the neighbors of a family of boys never make, and that is that there is nothing going on in their neighborhood. A boy likes best the game that involves the most hard work, and the work that requires the least exertion. During a boy's career he encounters almost everything in the way of ailments except insomnia. There is not much hope for the boy who pleases his mother to the extent of keeping a pair of white stockings clean all day. If a boy had half the pride in the baby that his mother feels, he would shut it in the barn and charge three pins for admission.

He Did It.

The class in history had been called and the teacher asked her young pupil how many wars England had fought with Spain.

"Six," one little boy promptly replied.

"Six!" repeated the teacher "Enumerate them, please."

"One, two, three, four, five, six," said the little boy with cheerful confidence.

Minard's Liniment Relieves Neuralgia.

A Matter of Fractions.

"If I cut a beefsteak in two," asked the teacher, "then cut the halves in two, what do I get?"

"Quarters," returned the boy.

"Good. And then again?"

"Eighths."

"Correct. Again?"

"Sixteenths."

"Exactly. And what then?"

"Thirty-seconds."

"And once more?"

"Hamburg!" cried the boy impatiently."

Minard's Liniment Cures Garget in Cows.

Largest Watch.

Built for advertising purposes, the largest watch in the world is seventeen inches in diameter and weighs 115 pounds, while the smallest is only seven-tenths of an inch across and weighs less than an eighth of a troy ounce.

The Edmonton Library Board spent $272.89 on books during February.

Measures Fatigue.

The French inventor of a machine to measure fatigue says that 95 per cent. of corpulent persons are so because they have given in when they felt tired, and that it is practically impossible to tire out a fat person in good health.

Minard's Liniment Cures Dandruff.

Real Carefulness.

"What is your idea of a careful automobile driver?"

"One that not only avoids accidents that he would be responsible for, but also keeps out of those that wouldn't be his fault if they happened."

We have been using MINARD'S LINIMENT in our home for a number of years and use no other Liniment but MINARD'S, and we can recommend it highly for sprains, bruises, pains or tightness of the chest, soreness of the throat, headache or anything of that sort. We will not be without it one single day, for we get a new bottle before the other is all used. I can recommend it highly to anyone.

JOHN WALKFIELD.
Lallave Islands, Lunenburg Co., N. S.

Nora Doesn't Mind.

"Nora," began Mrs. Newlived timidly, "I don't suppose—er—that you would object to my getting an alarm clock?"

"Not at all, mem," replied the sleepy one, "them clocks never disturb me!"

MONEY ORDERS.

SEND a Dominion Express Money Order. They are payable everywhere.

Wanted to be Plous.

It was the grammar class, and the teacher had asked for words ending with "ous."

"Can anyone," she said, "give me a word like 'dangerous,' meaning full of danger; 'hazardous,' full of hazard?"

A boy in the back row put up his hand. "Please, miss," he said, "'pious,' full of pie!"

PATRIOTISM AND PRODUCTION

Greater production per acre is urgent whether for peace needs or war necessities. It is a matter of national concern that this year's crops be fertilized to increase yields and maintain fertility.

Fertilizers have an important place in farming every year—a double place this year. Prices and demands for farm products have doubled. Fertilize your corn and other spring crops to get larger yields and profits.

Let us help you with your soils and crop problems. Write for our free Soil Profit Bulletins.

Rheumatism

Is My Weather Prophet.

I can tell stormy weather days off by the twinges in my shoulders and knees. But here's an old friend that soon drives out the pains and aches.

Sloan's Liniment is so easy to apply, no rubbing at all, it sinks right in and frees the pain. Cleaner than musty plasters and ointments. Try it for gout, lumbago, neuralgia, bruises and sprains.

At your druggist, 25c., 50c. and $1.00.

Sloan's Liniment KILLS PAIN

The Paisley Advocate

PAISLEY, MAR. 21st, 1917

—Under existing regulations the Medical Officers of Health are appointed by the Ontario Department, this resident having been inserted to make health officers independent of local influences in the discharge of their duties. Some municipalities have found themselves powerless, when trouble arose, to dismiss the officer without the consent of the Provincial Board of Health. Wm McDonald, M P P for Centre Bruce, sought to remedy this by again giving municipal councils full power in connection with the appointments. Upon discussion of his bill in the Legislature it was shown that in rural municipalities difficulties had arisen, but comparatively few complaints had reached the provincial headquarters. Mr McDonald was requested to withdraw his bill, and consented. Premier Hearst promising that the Government would give the whole matter its best consideration.

—For thirty-one months there have been millions of men engaged in the strenuous and bloody occupation of making over Europe. Only now are the results of herculean efforts beginning to be evident, when the governmental structure of the big yet-empire peopled by white men assumes new shape. The Russian emperor has been tumbled unceremoniously from his throne, and hereafter the people will rule the land. The house of Turkey is badly shattered, and when the wrecking has been completed, the Sultan will never again hold sway in Europe. The German and Austrian royal rulers still retain the reins of power, but how much longer can they persuade their vassals to continue to fight against those innumerable host of freemen who have forsworn to never quit until they have overpowered Prussian militarism? And after this end has been accomplished who are going to run things in the Hun kingdoms, the kings or the commoners, the autocrats or the democrats, the royalists or the socialists? It is safe guess that by the time the last trench has been defended and lost, when Heine and Fritz realize what they have been fighting for and against, they will have fully decided to do it out Kaiserism and without establishing a people's government.

—There is a great deal of publicity being given to the subject of raising potatoes on every vacant city, town and village lot this year, to help out on the food problem. When we come to look at this item of production in Canada, however, there seems to be a greater need for a marketing system than extra efforts in potato growing. Canada has right now a surplus of two million bushels of potatoes over and above all that will be required for seed and food purposes before the next new ones are ready for the table. It's not scarcity that's making the price so high to those who happen to be unsupplied. The need of a workable marketing system is the trouble, and it is up to our governments to have the agricultural departments take hold of the problem. There should be some method of bringing the producers and the consumers together. It should be possible to have the surplus products such as potatoes, readily available for purchasers in those living in districts where the crop of tubers has been a failure. A commission authorized to buy where such products are plentiful and cheap, also to sell where they are scarce and dear, should fill the bill. Last fall New Brunswick farmers were selling potatoes at around 40c to 50c a bag, while Ontario people have been compelled to pay all the way from $1.50 to $2 a bag throughout the fall and winter. All that's want-ed to make this great discrepancy impossible in future is a government plan that will dispense with the speculative element in the market for such products. Our commercial system fails to meet the requirements, and should be improved upon.

—The proposition that Canadian soldiers who survive doing their bit at the front in Europe should be rewarded by being given grants of land, which they are expected to work and live upon, is one of the most unanswerable that could be made. Apparently the Dominion Government is somewhat doubtful of a land scheme being acceptable, as it is now understood they are having enquiries made overseas as to what the prevailing ideas are among the men themselves in regard to the arrangements that might be made for them after their return. This is a most sensible proceeding. If there are men who would prefer a grant of land, their preference should be considered, but so should all others have the same consideration in the matter. If the Dominion is going to provide for the soldiers after the war at all, it should be done in such a way as to be not only generous, equitable and fair to all, but also agreeable to each one. Why should a soldier be forced to accept a reward that he does not feel like taking? These heroic fellows are fighting for the preservation of the liberties of this young nation, and the nation should be willing to pay liberally for the great service rendered. Any rewards they are to receive should be of such form that each man is left free to resume civilian life in what ever line of occupation he chooses.

LOCAL AND DISTRICT NEWS

Brief but Pointed

Mr D McGregor, of this town, owns a farm up near North Bay, which he has rented to a habitant of that region. Last week he was surprised to receive from his tenant the following laconic epistle: "I am the man that lives on your farm. I was out the other day and the house burnt down. Will I build myself another?" Coming from out of the great solitude on the northern bounds of our civilization this little message expresses a depth of feeling that more words might obscure. This homeless bachelor in the thinly settled wilds has not much to draw comfort from in the midst of winter, and asks without any circumlocution, "Will I build myself another?" As with the soldier on the fighting front in France, standing in wet, muddy trench, where German shells are flying thick overhead and rats abound under foot, and sleeping quarters are at best cold and slimy, without fire to heat up, to be turned out of cabin home on a New Ontario farm is "no cinch."

Lecture on Consumption

The illustrated lecture given in the town hall on Sunday evening by Rev J H Dyke, Field Secretary for the Muskoka Free Hospital, was a most instructive one, well calculated to educate people in regard to a disease which is one of the most ruthless destroyers of human life. Consumption is not hereditary, but is queerly contracted by contact. It steals upon its victim slowly and gets a hold upon the system before danger is realized. The lungs are the battleground where the destructive bacilli becomes entrenched, and from there breaks down the whole physical frame. The disease can be combatted readily in its early stages. In too many cases the afflicted person has been slow in recognizing the first symptoms. For thirty years the medical profession has been investigating methods of fighting consumption, and it is found that complete rest, fresh air and plenty of nourishing food are the most effective. Good food provides the forces which overcome the bacilli. And there is no better place than in Ontario to effect a cure. No need of going to other countries. Flies are the greatest carriers of this as well as other diseases. One picture was thrown upon the screen showing the stork bringing a babe to a home and a fly carrying it away. Out of 32 consumptive patients who went to the Free Hospital for treatment, 31 were cured, and of another 52 there were 34 cured and 12 others had their lives prolonged several years by the disease being arrested. Out of 243 patients now at the Free Hospital only 40 are contributing anything and these only small amounts according to their means.

Death of John Rathwell

At the home of his son-in-law, Mr S A Fleming of lot 1, con 7, Arran, on Friday morning last, there passed away another of the well known old residents of this section, Mr John Rathwell. The deceased was in his 84th year. A native of Wexford County, Ireland, Mr Rathwell came to Canada with his brothers when he was a young man. He landed at Montreal, in which city he remained for some little time employed on the G T railway. He also lived in Ramsay Tp., Lanark Co and in 1865 he came up to this new country and bought a farm on the 14th of Brant, returned to Paisley ville where he was married to Elizabeth Culloram, and shortly thereafter they took up housekeeping on the farm he had purchased. There they continued to live until fifteen years ago they retired and moved to Paisley. For a few months past they were both in rather poor health, and have been at the home of their daughter. Mr Rathwell was a Methodist in religion, and Conservative in politics. Among his old friends and neighbors he was always respected, as an industrious, kindly man, with a native turn of wit that put him on friendly terms with everyone. Besides his aged widow he is survived by four sons and one daughter—George, of Ridpath, Sask; John W. of Allenford; Samuel, of Heward, Sask.; Jos. E. of Greenock, Mrs S. A. Fleming, of Arran. The funeral took place on Sunday afternoon to Stark Vale cemetery, Rev. Mr Crighton conducting the services.

The Late Richard C. Barss

The sudden death of Mr Richard C Barss at the General Hospital, Toronto, came as a shock to his family and friends. He had not been in his usual good health for a few months, having contracted throat trouble, and the doctors advising surgical treatment, he went to Toronto on Feb 26 h. and underwent an operation on Mar 6th. The patient was doing nicely until March 8th, when he took a turn for the worse, his heart becoming affected, and he passed away a few hours later. The remains were brought home and the funeral took place to Stark Vale cemetery on March 10th. Revs Crighton and Diehl officiated at the house and graveside. The deceased was born in Nova Scotia, but when a boy moved with his parents and other members of the family to Sullivan Tp, Grey Co. Here as a young man he followed the trades of wagon maker and carpenter, afterwards taking up farming. In his young days he took an active interest in public life, having served as councillor and trustee in Sullivan. Nineteen years ago he came with his family to lot 7, con 13, Elderslie, and continued farming until nine years ago, when he retired to Paisley, living on Queen St north. Mr Barss was a man of sterling character, upright and honest in all his dealings, one whose word was as good as his bond. In politics he was a staunch Reformer, and in religion a Methodist. In 1870 he married Catherine Sturgeon, of Orangeville, who, with their family of seven daughters and one son, survives him, also eleven grandchildren. The family are: (Almira) Mrs Chas G. Pratt, of Toronto; (Annie) Mrs C A Thomas, of Rheuezer; (May) Mrs Howard Henderson, of Chesley; (Belle) Mrs D H Sparrow, of Williscroft; (Maggie) Mrs J W Robb, (Ethel) Miss G G Couch, (Olive) Mrs H P Couch, all of Swan Lake, Man; and George T., of Altmont, Man. Three brothers are also living—William, of Chesley; Joseph and Thomas, of Michigan.

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

— 594 CHAMPLAIN ST., MONTREAL.

"For two years, I was a miserable sufferer from *Rheumatism and Stomach Trouble*. I had frequent *Dizzy Spells*, and when I took food, felt wretched and sleepy. I suffered from Rheumatism dreadfully, pains in the arms in my back and joints, and my hands swollen.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that 'Fruit-a-tives" is the only medicine that helped me". LOUIS LABRIE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

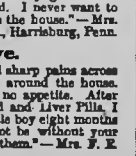
Women Once Invalids

Now in Good Health Through Use of Lydia E. Pinkham's Vegetable Compound. Say it is Household Necessity. Doctor Called it a Miracle.

All women ought to know the wonderful effects of taking Lydia E. Pinkham's Vegetable Compound even on those who seem hopelessly ill. Here are three actual cases:



Harrisburg, Penn.—"When I was single I suffered a great deal from female weakness because my work it compelled me to stand all day. I took Lydia E. Pinkham's Vegetable Compound for that and was made stronger by its use. After I was married I took the Compound again for a female trouble and after three months I passed what the doctor called a growth. He said it was a miracle that it came away as one generally goes under the knife to have them removed. I never want to be without your Compound in the house." Mrs. Frank Exner, 1642 Fulton St., Harrisburg, Penn.

Hardly Able to Move.

Albert Lea, Minn.—"For about a year I had sharp pains across my back and hips and was hardly able to move around the house. My head would ache and I was dizzy and had no appetite. After taking Lydia E. Pinkham's Vegetable Compound and Liver Pills, I am feeling stronger than for years. I have a little boy eight months old and am doing my work all alone. I would not be without your remedies in the house as there are none like them."—Mrs. F. E. Yost, 611 Water St., Albert Lea, Minn.

Three Doctors Gave Her Up.

Pittsburg, Penn.—"Your medicine has helped me wonderfully. When I was a girl 18 years old I was always sickly and delicate and suffered from irregularities. Three doctors gave me up and said I would go into consumption. I took Lydia E. Pinkham's Vegetable Compound and with the third bottle began to feel better. I soon became regular and I got strong and shortly after I was married. Now I have two nice stout healthy children and am able to work hard every day."—Mrs. Clementina Dunkerne, 34 Gardner St., Troy Hill, Pittsburg, Penn.

All women are invited to write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for special advice. It will be confidential.

GIRLS WANTED

For office work to fill the places of most who have gone or are going to the front. Young women can render the country real service by preparing to take positions in bank and business offices, and thus relieve men for active service.

Special courses of training in Bookkeeping, Shorthand and all other Commercial subjects now in progress.

Students admitted at any time. Illustrated catalogue free.

Northern Business College, Ltd.

A PROMINENT NURSE SPEAKS.

Many Nurses in Canada and Elsewhere Say the Same.

Chatham, Ont.—"Being a nurse I have had occasion to use Dr. Pierce's Favorite Prescription quite a lot. I always recommend it to my patients and it has been a wonderful help to many of them. I never knew of a case where it failed. I have a patient who is using it now and she is doing fine since taking it. I have taken it myself and got the very best results. I consider it the best medicine there is to-day for women who are ailing."—Mrs. Edith Moore, 30 Degge St., Chatham, Ont.

THAT WEAK BACK

Accompanied by pain here and there—extreme nervousness—sleeplessness—maybe faint spells, chills or spasms—all are signals of distress for a woman. She may be growing from girlhood into womanhood—passing from womanhood to motherhood—or later suffering during middle life, which leaves so many wrecks of women. At any or all of these periods of a woman's life she should take a tonic and nervine prescribed for just such cases by a physician of vast experience in the diseases from which women suffer.

Dr. Pierce's Favorite Prescription has successfully treated more cases in the past 50 years than any other known remedy. It can now be had in sugar-coated tablet form as well as in the liquid. Sold by medicine dealers or trial box by mail on receipt of 50 cents in stamps. Dr. Pierce, Invalids' Hotel, Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets clear the complexion.

Those who have not sent in that National Service card, have been given until March 31st to get it ready. Under the war measures act every male between 16 and 65 years must send in their card. Do it now!

From the Transport Line in France

Pte Earl Rolston, in a letter to Mr H P Savile, written on Feb 9th, says: "I guess things are pretty quiet in the old town. I suppose all the young fellows have enlisted. Well, they will find some difference between Paisley and this country here. I haven't seen any of the boys for over 3 or 4 months, and have lost track of them altogether. Just before we moved down here I saw Guy Purdy and Jack Hamilton. I only saw Leslie Shaw once. I see that the States have got a feeling that they would like to fight. Well, this is the place to come to do all that kind of thing. They sure have been putting some shells over. To-day all we can hear is a roaring of the guns. There was a plane over to-day, and they didn't do a thing but throw stuff at him, and they got him, too. We were all out watching the performance, and the shrapnel was falling just like rain. Our corporal was struck by a piece and knocked down, but not seriously hurt. I wish this wicked war was over, and I don't think there is one fellow over here but wishes the same. The weather is cold, and they say it hasn't been so cold for over fifty years. The boys up in the trenches sure have a hard time of it. I am in the transport, and when we go up with rations and stuff to the boys it is long enough to be there, especially when you have a pair of mules to look after under fire. The transport is not too bad to this kind of weather, but when the mud gets here deep it's no cinch, being wet to the skin every night. But we are toughing it through pretty well. I have had a little touch of rheumatism, but am feeling pretty good again. It was a hard crack on me to hear about Frank. I didn't believe it when I first heard it. But the way things were pounding that night it's a wonder any of them came out. Just two or three nights before that I was down at his billet and we had a great talk about the old town and things that happened when we were kids. . . I saw Frank's grave, which is in a burying ground they have for Canadians. There is a cross up, with his name, number and religion written upon it, also a verse of scripture. And around the grave was a row of empty shells turned upside down and driven into the ground to separate his from other graves. The most of them are done that way. They give as good a burial as they possibly can under the circumstances. Fear is buried in the same place, in the same way. Now Fear was up with a pack mule that night with ammunition, and he was going in with his last load when he was struck with a piece of shell that went clean through his head. He never knew what happened. He was in the transport with me, and I sure felt pretty bad for some days with two of our boys right from home cut off. We sure will miss them. Well, they died for their country, and for truth and liberty. If the war were over and we were on our way home I wouldn't care how soon or how fast. I suppose the rink is going full blast. I wish I were there to-night to hear the old organ going again. When a fellow gets a letter or a paper from home it cheers him up for a while.

D. A. McLACHLAN, Principal

Soldier Ill

Pte Herb Clarke, of Vancouver, a former Paisley boy, has been ill since last December, when he was gassed and took trench fever. He is a brother of Mrs D McArthur, Mrs Geo Fullerton and Mrs D McBeath.

The Shoe Bill is Big Enough

when the money is as wisely spent as it possibly could be.

It takes enough money, goodness knows, to shoe the household, without wasting any on experimenting.

Because you **are** experimenting, unless you are dealing in certainties.

Yes, there are such things as **Shoe certainties.** We can show them to you any day.

Shoes that are known to be such and such—because they are built that way.

You are wise, if you deal in shoe certainties, and to do that you have but to make a practice of coming here for all your needs in footwear.

"CHEVROLET"

'Four-Ninety' Touring Car, $495.00 F.O.B. Oshawa, fully equipped

VALUE

Value does not tell in the price that buys the car. Value counts in the cost that keeps it.

The Chevrolet Four-Ninety is built to meet this test. It succeeds.

This model arrives safely at the goal of value—through a short-cut. Its power-path is short and direct. Not one drop of gasoline is wasted by unnecessary twisting about corners. Direct from the carburetor to the valve-in-head—omitting all side chambers. Thence direct to the rear axle—by means of the Unit power plant type of construction.

You pour a gallon of gasoline into the Chevrolet tank and a gallon of power, comfort, smoothness and ease flows from the rear wheels.

Directness of action conserves gasoline. Directness of action conserves minutes of travel. More power, more energy, more life.

That is value. And that is what you will find in the Chevrolet Four-Ninety.

EFFICIENCY

The Chevrolet "Four-Ninety" is efficient. Otherwise its unrivalled records of economy, comfort and merit would have been impossible. And these records have been achieved simply because of the intensified purpose of the Chevrolet makers to produce a model unexcelled in its price class.

The best features of high-priced cars are embodied in this car. But this is not an imitation. Its chief pride is in the many exclusive features which make it different from any car in any class. It is a car of many patents applying to points of refinement far in excess of its popular cost. The Chevrolet is the only car that has shock absorbing front springs, self-lubricating clutch collar, hub-mounted rear wheel bearings, compound steering gear, Unit lever plant type of construction, and special brake arrangement.

Exclusive features reduce the Chevrolet system of direct action to last simplicity. They make the most of every drop of gasoline. That makes the most of every minute of your enjoyable ride.

That is efficiency. And that you will find in the Chevrolet Four-Ninety.

ONTARIO FARMERS

Existing war conditions demand that you give the question of Seed special attention this year. Seed of desirable varieties and high germination power will be factors influencing yields.

If you have not secured your Seed, **let the Ontario Department of Agriculture help you.**

Farmers having Seed Grain or Potatoes for sale may forward samples to this office, stating varieties, price and **quantity.**

Farmers wishing to purchase Seed are also invited to communicate with this office, stating variety and quantity, and an effort will be made to put them in touch with farmers having Seed for sale.

W. H. HEARST, Minister of Agriculture

Write to **N. C. McMAY,** Dist. Representative, **Walkerton**

Teachers' Pensions

Dear Mr. Editor,—

Kindly allow me space in your valuable columns to discuss a subject of interest to a number of your readers.

I notice for the last three years or thereabouts at our teachers conventions the question of teachers' superannuation has been discussed.

A year or more ago a draft act was prepared by the Government and submitted to the teachers for their verdict. The draft met with considerable opposition especially from the younger teachers. The School Board who were to be assessed one per cent of the teachers' salaries for the superannuation fund also showed opposition.

The Government changed the bill, taking the one per cent. off the School Boards the teachers and the Government making up the deficiency by contributions of 3½ per cent. each of annual salaries. This draft was submitted to the teachers some months ago to be voted on.

On Saturday, 10th inst., the teachers' superannuation committee met the Government to obtain the results of the vote.

The poll of the profession was anything but conclusive. It showed about 8000 votes out of 12000 teachers in Ontario with those favoring the bill having but one thousand of a margin—a verdict that showed considerable lack of unanimity.

After considerable discussion the conference broke up after Hon. Mr. Hearst had promised to have the returns analyzed to determine where the opposition and support came from, etc. Members of the committee pointed out that the vote was not a sure guide that 6000 new teachers had gone out to teach in the last three years. Many of these were young girls who were not expecting to make teaching a life work and accordingly objected to paying anything towards a superannuation fund. Can we blame these young ladies for not taking kindly to this scheme. Why should they be forced to pay as it is were the other fellow insurance premiums.

It seems to us to be rather an unreasonable proposition. As a rule the man or woman who stays in the teachers' profession for 40 years draws a good salary and should be able to provide for his or her own future. They have this privilege of insurance endowments, etc., or if they do not prefer that they have the Government annuity scheme. Why should all teachers be compelled to support a fund that 98 per cent of them will never get any return from. If the teachers want a superannuation scheme why not make it optional whether a teacher joins in the scheme or not and pay out annuities according to the amount each member has paid into the fund.

We do not see why any government should interfere with a teacher or body of teachers and say just how they shall spend their salary or part of salary. If they earn their money why should each one not be allowed to decide for herself or himself what to do with it. We are supposed to be living in a free country. Would this superannuation bill not be interfering with the liberty of our teachers. We would like to hear the argument on the other side of this question.

Thanking you for your space.

An Observer.

GREENOCK COUNCIL

Knox's Hotel, Pinkerton, March 17th, 1917

Council met as per adjournment, all the members present, the reeve in the chair. Minutes of last meeting read and adopted.

The following accounts were presented for payment: J C Cunningham, postage for chair, $2; Jos Young, 170½ rds gravel at 8c per rd, less half inspection on cost 8, $12 15; Jas McDonald, 11 days inspecting Young's contract, $10; Wm Matthews, 12 rods fence wire for Wynne bridge, $6 60; A E Kent, room for noon-tl meeting, $2; John W Wilson, breaking road on 1 A con 11, $2.

Campbell—Sawyer—That the foregoing accounts being found correct, be paid, and that the reeve be instructed to sign cheks for same.—Carried.

Gilchrist—Sawyer—That the grant of $20 made at last meeting to the Women's Patriotic League of Cargill be been increased to $50, to help expend the grant from Brant council.—Carried. Check for $30 for above grant was issued in favor of Mrs Wm M Cameron, of Cargill.

Gilchrist—Sawyer—That the clerk be instructed to draft a by-law to regulate and enforce statute labor for the current year.—Carried.

By-law No 853 was drafted and read a first time for the purpose of regulating and enforcing statute labor.

Sawyer—Gilchrist—That the clerk be instructed to draft by-laws for the purpose of appointing pathmasters, poundkeepers and fenceviewers.—Carried.

By-law No 854 was drafted and read a first time appointing pathmasters as follows: Div 1 T Gamble, 2 H McIntosh, 3 J R McCormick, 4 J Dashes, 5 A McFarlane, 6 J Fraser, 7 W Lowden, 8 A Nesbitt, 9 H Thompson, 10 W Hadley, 11 S Hamilton, 12 W Armstrong, 13 G Bannerman, 14 J G Moore, 15 D S Campbell, 16 A Cassavettes, 17 J Gilmour, 18 J Lane, 19 P Weland, jr., 20 J Hutchinson, 21 W H Stephens, 22 G Ritchie, 23 J Keller, 24 J Strader, 25 F Zeile, 26 A Wanchuer, 27 John Wanchuer, 28 W J McConkey, 29 A McKinnon, 30 A Dietrich, 31 N O'Hagan, 32 T O'Hagan, 33 T Hanley, 34 W Keirs, 35 J Young, 36 J Appleby, 37 J Annett, 38 W Cunnamon, 39 W Palmer, 40 G Lippett, 41 A Pelin, 42 J Hirth, 43 Ad Schmidt, 44 N Rieth, 45 G Bagnell, 46 W D Cargill, 47 H Lambertus, 48 J Kenny, 49 A Latourne, 50 P Dolan, 51 A Campbell, 52 W Patterson, 53 G Baxter, 54 A Forrester, 55 W J Wilson, 56 D Pinkerton, 57 W J Taylor, 58 D Metzler, 59 G Needham, 60 A Bagnell, 61 W T Stewart, 62 G Webb, 63 G Smith, 64 J Wilson, 65 D Cargill, 66 W D Bell, 67 H Scott, 68 R Kinnaird, 69 W Ritchie, 70 W Johnston, 71 W J Rose, 72 N McLean, 73 G J Hayward, 74 A Watson, 75 G Jackson, 76 A McIlree, 77 C Parker, 78 W Megraw, 79 R Pollock.

By-law No 855 was drafted and read a first time appointing fenceviewers as follows: Div 1 Pole Valad, jr., 2 J Keller, No 77 Hahn, 4 John Graf, 5 D Hipkins and W T Stewart, 6 C Webb, 7 Lamb, 8 Mahon-f and 9 Pollock, 7 A Kirkham, 8 G Hassell.

By-law No 856 was drafted and read a first time appointing fenceviewers as follows: Div 1 J Larkin, 2 C Sharpe, 3 J Park, 4 A Cunningham, 5 G Carter, 6 A Retell, W Palmer, A Hainbertz, G H Wells, F Pugsley, G Schnabilzer, 7 G Meisle, W H Medlar, A Reid, S W Megraw, R Temple, W J Rose, 7 A Kirkpatrick, W Pinkerton, F A Dales, 8 A McFarlane, D McDonald, T Hobbs.

Sawyer—Campbell—That By-laws Nos 853, 854, 855 and 856 be now read a second and third time and finally passed.—Carried.

By-laws duly read and finally passed.

Sawyer—Symons—That this council do now adjourn to meet at Hepworth on Monday, April 16th, for general business.—Carried.

THOS H PURDY, Clerk

The Spring Overhaul.

Tires may be bruised or cut, in which case proper care should be given them before it becomes too late for repairs. The smallest cut will allow water to enter and rot the fabric, and if the cut is into the fabric, sand will work under the rubber and loosen the tread. The edges of small cuts should be smoothed with a sharp knife, then roughed with sandpaper, after which the cut should be thoroughly washed out with gasoline and a patching cement applied. After the cement has dried, the hole should be filled with a compound which the tire companies furnish for this purpose. In case of a large cut or blowout the casing should be vulcanized.

Rust should not be allowed to accumulate on the rims, and painting with a preserver, such as ordinary stove polish, will prevent that condition.

The front axle and steering assembly should receive a careful inspection. Excessive play in the front axle assembly can be easily detected by grasping one of the wheels and jerking the axle back and forth. If play has developed in any of the sockets or connections, the turning of the steering wheel will not have immediate effect. If there is play in the radius rods the studs should be tightened and the ball cap filed if necessary.

If inspection shows that the bushings, which constitute the bearing surfaces of the steering post bracket, spindle arm, spindle bodies, and spring perches, are worn to such an extent that play has developed, it is advisable to replace them. If the steering gear has become loose it can be tightened by disconnecting the two halves of the ball socket which surround the ball arm at the lower end of the steering post and filing off their surfaces until they fit snugly around the ball. If the ball is badly worn it is best to replace it with a new one. The sockets on the steering gear connecting rod should also be filed down if it is found that the ball has any play in the socket. In replacing the nuts be sure to put back the cotter pins, otherwise the nuts may work off the bolts and cause considerable trouble. It is advisable to go over the chassis frequently in order to see that these adjustments are maintained.

The wheels should be removed and the balls and cones inspected. If the bearing surfaces of the cones are rough or considerably worn or if any of the balls are chipped they should be replaced, as the cost will be slight compared to the possibility of trouble developing on the road. The old grease should be removed from the hubs and replaced with new. In replacing the wheel see that it has no side play whatsoever and tighten the adjusting cone as much as possible without causing the wheel to bind. This can be determined by spining the wheel, and if it comes to rest with the tire valves directly underneath the hub it is obvious that the ball-bearings are not binding. The rear wheels should be tightened by setting up the lock nuts on the axle shafts as close as possible without stripping the threads, so that the wheel hubs will be tightly wedged on the tapered ends of the axle shafts. It is advisable to remove the hub caps occasionally throughout the season to see that these adjustments are maintained. If this is not done, play may develop which will in time cause trouble.

It is well to pry the spring leaves apart near the ends with a screwdriver and force lubricating oil or graphite between them. This has a tendency to make the springs more flexible. The nuts on the spring clips, spring perches, spring tie bolts, spindle arms, and spindle bolts should be tightened and cotter pins put in so that the nuts cannot work loose. In fact, it is a good idea that the entire car be gone over at this season and all bolts and nuts tightened.

The circulating system should be flushed out by disconnecting the inlet and outlet water connections and allowing water under ordinary pressure to enter the filler neck, flowing down through the tubes into the bottom tank and out of the radiator. The water passages in the cylinder castings may be cleaned out in like manner by a flow of water from the cylinder head to the side inlet connection.

The carbon should be removed and the valves ground, as after a season's use there is no question but what the efficiency of your engine can be improved by cleaning the carbon and grinding valves.

The dirty oil should be drained from the crank case and the case cleaned by the following operations: Remove plug and drain off oil. Replace the plug and pour in a gallon of kerosene oil through the breather pipe. Turn the engine over by hand fifteen or twenty times so that the splash from the oil will thoroughly cleanse the engine and transmission parts. Remove the plug and drain off the oil. In order to get all the kerosene out of the depressions in the crank case the car should be pushed up a little incline about the height of an ordinary street curbing. This operation should be repeated approximately every 1,000 miles.

The spark plugs should be removed and the points cleaned with gasoline. After cleaning, the points should be adjusted so that the gap between them is one-thirty-second of an inch, or about the thickness of a smooth dime.

Examine the commutator and replace the case and fibre assembly if the contacts do not appear in good condition. If the roller is badly worn, that part should also be replaced. If the commutator is dirty, or if there is congealed oil on the parts, it may be cleaned with gasoline.

The wiring should be carefully inspected to see that insulation is not badly worn and that there are good connections at all the terminals. If the wiring does not appear to be in proper condition it is best to replace it.

The sediment bulb underneath the gas tank should be drained to remove any water or foreign matter that may have accumulated.

If the engine is in such condition as to require extensive adjustments it will be advisable that such work be left to an experienced mechanic.

NOT USED TO THE RAILWAY.

Curious Mistakes Made By Japanese On First Train Ride

Of course everyone rides on the trains in Japan nowadays, for there are seven thousand miles of railways in the country, and every considerable town is at least connected with the railway by electric car or automobile. Not so very long ago, however, the train was a curiosity, and many ludicrous incidents occurred with persons taking their first rides.

On third-class cars in country districts there is still a broad white line painted across the middle of each car window. That was done originally to keep the country folk who had never seen a glass window from bumping their heads against the glass in the effort to look out. In the early days there were many serious accidents from that cause; hence the white lines.

A party of ladies who were taking their first ride on the train once had trouble with their shoes. A Japanese on entering a house always leaves his shoes at the door; so when these ladies got aboard they politely left their clogs on the station platform. Great was their consternation later to find that their shoes had been left miles behind.

Life Preserver.

A new style of life preserver, recently patented, is designed to keep the wearer in an upright position in the water under all circumstances. It consists of an ordinary cork life belt, to which is attached a combination breast piece and chin rest. These, like the belt, are made of cork, in sections, covered and hinged by canvas. The chin piece is so attached to the upper part of the breast piece that it serves as a head rest and at the same time allows the wearer to bend forward or backward. It can be seen that in cases of extreme exhaustion such a life preserver would keep the person wearing it in an erect position without effort on his part.

GREAT MEDICAL DISCOVERY.

Among the Wonders of War Surgery Is Method of Irrigating Wounds.

There have been many surgical triumphs achieved since the outbreak of war, especially in hospitals near to the trenches in France. In The World's Work several of these cures are discussed under a general title, "Wonders of War Surgery." Perhaps the most remarkable is the method for the intermittent irrigation of wounds perfected by Dr. Carrel, the famous French surgeon, who formerly carried on his investigations at the Rockefeller Institute in New York.

Before going out to the Carrel Hospital behind the trenches, the writer of the article, Mr. Lewis R. Freeman, was taken to see a cinema film showing the workings of the famous method. As the clicking of the machine began the picture of an operating room appeared on the screen, or perhaps it was only a bed in a hospital ward. I had no eyes or mind for anything but a great, raw, gaping wound—literally a foot or more of churned, angry flesh—which covered the whole side of one thigh of the inert body of a man, a soldier (as the caption informed us) who had been struck by a fragment of shell.

Presently two black-gloved hands appeared—those swiftly deft and gently cruel hands that one who has even once had experience of them always afterwards associates with surgeons and surgical nurses—and began to thrust a wriggling sheaf of rubber tubes into the wound, kneading and manipulating the raw riven flesh as a butcher skewers up a roast for the oven.

"No nerves, no sense of feeling at that depth, explained my companion, in response to my involuntary start and exclamation. "Although that poor chap has had no anæsthetic he probably feels almost no pain at all."

Suddenly another pair of black-gloved hands—hands which, in spite of the fact that the face of their owner was not visible, fairly radiated personality and force—flashed into view, whereupon the first pair instantly relinquished the leading role and "stood by" as auxiliary.

"Dr. Carrel's hands!" exclaimed my companion, leaning forward with quickening attention. "There is not another such a pair of hands in all of France; perhaps in all the world."

Fairly twinkling in their swiftness, the deft fingers distributed the little tubes evenly through the soft mass of the torn flesh. Then a stop-cock was turned which, releasing a flow of some healing liquid to permeate every corner of the great wound, washed it as one would wash a sponge by holding it under a tap of running water.

That was about all there was to the main operation of "La Methode d'Irrigation Intermittente Carrel," perhaps the one most valuable discovery (from the standpoint of humanity) that has eventuated during, and incidentally as a direct consequence of the war. Several subsequent views merely showed the astonishing progress in healing of a wound which, under the most approved practice of a year ago, if it had not resulted fatally, would at least have left the unfortunate soldier who received it a life-long cripple.

Drink Hot Water With Meals To Stop Stomach Disorders

A Physician's Advice

Thousands of unfortunate people suffer almost daily from dyspepsia, indigestion, fermentation, sour acid stomach, flatulence, gases or distress after eating. If they would only form the agreeable habit of slowly drinking with each meal a glassful of hot water [illegible]

British scientists are studying a mineral found in Wales that emits a faint light in its natural state.

TORONTO WINNIPEG

A ROYAL REGIMENT OF BOYS.

Incidents in Boyhood of a One Time Heir to British Throne.

In the great war in Europe boys are playing an important part. Lads in their teens, often in their early teens, are serving as soldiers in the field; not a few as officers. Outside the fighting lines in most of the belligerent countries, the Boy Scouts are giving valuable service of varied kinds, often arduous and responsible. They are a body of recent origin; but more than two centuries ago there was a drilled and organized company of boys, less serviceable and more military, who were taken seriously by their commander and themselves, if not by the nation at large. They were the boy soldiers of Prince William, the little Duke of Gloucester.

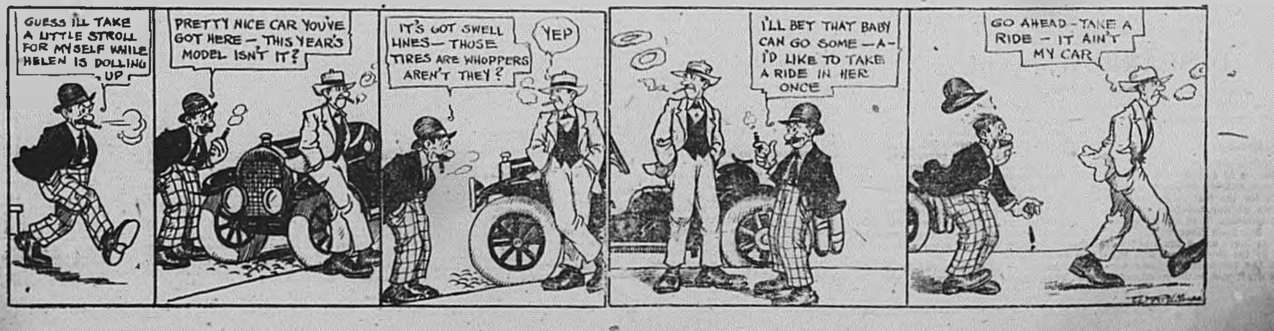
He was the only one to survive babyhood of the seventeen children of Princess Anne—later Queen Anne—and her consort, Prince George of Denmark. King William and Queen Mary, having no children of their own, looked on him from the first as the heir to the throne, and the greatest pains were taken to educate him as befitted a sovereign and commander. He was a frail and sickly child, but he was loyal, generous and spirited, and very proud of his company of boy soldiers, organized for him as soon as he was old enough to walk. Boy sentinels were posted at his door; tattoos beaten on the drum signalized the summons to various drills and exercises in the long court corridors; toy fortifications were erected, stormed and demolished,—sometimes even at his bedside,—and mock fights and manœuvres occasionally became real fisticuffs, in which his tutor had to interfere. Once, when King William paid a state flying visit to his young namesake, he was amused and gratified to be received with full military honors.

"Have you any horses yet?" he inquired politely of the youthful commander.

"Yes," replied the little duke promptly, "I have one live one and two dead ones." The dead horses were, of course, wooden ones.

"But soldiers always bury their dead horses out of sight," said King William, laughing.

That was enough. No sooner had he gone than a burying squad was ordered out to inter the "dead" wooden horses in the garden. They were buried deep, and their bereaved little master only so far relented as to compose for them a highly eulogistic epitaph—which commanders in the field usually do not pause to do. Somewhat later, when there were rumors of a plot against King William's life, young William sent him an address of fealty, signed by himself and every one of his boy soldiers. It began:



"We, Your Majesty's subjects, will stand by you while we have a drop of blood—"

Poor little duke! He died at eleven. He had the spirit, if not the stamina, that makes a good soldier; whether he would have made a good king is less easily guessed. But in the college libraries at Oxford there exists a faded, yellowed, childish composition in his careful handwriting, which at least shows that he knew what a conventional moralist would say. It is on tyrants:

"A Tyrant is a savage [illegible] beast. Imagine that you see a certain monster armed on all sides with 600 horns on all sides dreadfull [illegible] with humane intrails [illegible] with humane blood this is the fatal mischiefe whom they call a Tyrant."

Ethel—I was taken in to dinner by that western gentleman you introduced to me. He was quite gallant and remarked upon my birdlike appetite. Her Friend—Well, he should be a good judge on that point, dear; he [illegible] an ostrich farm in South Africa.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—W. K.:—I have a meadow seeded down last spring, but, owing to the extreme wet, followed by a drought, there is only half a catch. The clover mostly lived but the timothy is nearly all dead. Should I plow them up in the Spring, or would it be advisable to go over the ground with a drag harrow and sow timothy by hand?

Answer:—If the clover has lived through the winter in sufficient quantities I would advise re-sowing timothy seed in the spring and at the same time top-dressing the seeding with well-rotted manure or about 200 pounds of fertilizer. The fertilizer should be high in ammonia. I think you would do well also to add three pounds of meadow fescue grass per acre. This is a rapid-growing grass and should make a valuable addition to your meadow. After this has been applied I believe it would be advisable to harrow the seeding lightly, making sure to harrow it with the grain drill rows instead of across it. If the spring is normal this should get you a good catch and make a satisfactory seeding.

Question — M. L. S.:—I purchased a farm on which only 6 acres were plowed and part of this was done two years ago and left to grow to weeds. A small part of the field was planted to potatoes, but it also is very weedy. The land has had very little manure in the last five years. Plowing for spring crops must be done this spring as we were unable to do any plowing last fall. We purpose sowing barley and oats, and would like to know whether it is advisable to seed this land with clover this spring or plow the stubble after the grain is harvested and seed to rye, and then sow the clover a year from this spring. We have no barn-yard manure to apply to the land.

Answer:—In my opinion it would be well to seed your barley and oats with clover this spring. The soil is evidently run down and you should, as soon as possible, establish a system of cropping where you could plow under a second crop of clover. This will add organic matter, or humus, to the soil and will also make some addition of nitrogen. In order to make sure of a satisfactory catch of clover and at the same time greatly assist your barley and oats seeding it would be well to apply 200 to 300 pounds of fertilizer to your acre at the time of seeding the crop, since you have no barn-yard manure to apply to your land. This fertilizer should carry at least two to four per cent. ammonia and from six to eight per cent. available phosphoric acid. It will not only help the grain crop but will do a great deal to insure a satisfactory stand of clover.

Their Fathers are Fighting For Right, SHALL THEY STARVE?

Here are two little Belgian refugees, two of thousands upon thousands whose fathers have answered the call of duty and are fighting with their Allies for the liberty of peaceful nations. Those fathers did not wait to count the cost or to find out how much help they were going to receive from outside their borders. They perhaps believed that great nations like Britain and France would not stand by and see them crushed, and that the people of these wealthy and friendly countries would not allow their children and their wives to starve while they were away. But all that they really knew was that they heard the call of duty and rallied to their King.

Of course their faith in the nations who guaranteed their neutrality was not misplaced unless they had faith in Germany. Great Britain and France did rally to their side and with them are putting an end to the Teuton dream of World conquest. And their children and their wives have not been allowed to starve. The two shown in the picture, healthy and happy enough, are in England, at Stretham. So are many others, and it is comparatively a simple matter to care for them.

But there are left in Belgium more than have been or can be taken to England.

What of them? The Belgian Relief Committee has answered that question most efficiently. It has fed them ever since they were driven from their homes to shift for themselves. It has been enabled to do this through the response of Canadians, with the people of the Motherland and the United States, to the call of the Belgians' need.

The Committee's needs grow greater rather than less as long as Germany rules the occupied parts of Belgium, and so long as the need lasts the friends of freedom-loving Belgium are asked to open their hearts and loosen their purse-strings. Contributions should be sent direct to the Central Beligan Relief Committee, 59 St. Peter Street, Montreal, or to the branches in each locality.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondences for this department to Mrs. Helen Law, 78 Castle Frank Road, Toronto.

E. F. A.:—1. Vegetables are more wholesome and better flavored when steamed than they are when boiled or fried. Besides, there is much less waste than in boiling, as much of the nutrition of the vegetables is thrown away with the water in which they are boiled. The water should be saved and used in soups. 2. If linen is moistened along the line the threat is to be pulled, the task of pulling threads is easier. 3. A large pair of scissors is a convenient kitchen tool, especially in preparing lettuce and other vegetables. Of course, they must be thoroughly washed, as are other utensils, after every using. 4. When plaster cracks, add enough vinegar to plaster of paris to make a mixture like thick putty, fill the crack, and smooth off with a knife. If water is used the plaster hardens too quickly. 5. Before storing a stove pipe away for the summer, rub it well with coal oil, stuff the ends with newspaper to keep out any moisture, and there will be no rust in the autumn.

R. S.:—1. There is a clear amber shade between yellow and brown that would be excellent for the walls of your living-room with the Northern exposure. Have the ceiling of a deep ivory tone, dropped down to meet the picture molding which should also be deep ivory. Plain oatmeal paper is best for walls which are to serve as a background for pictures. With plain walls one may have figured madras curtains, but hemstitched scrim in ecru or cream would make very suitable curtains for this room, and scrim weave and laundries better than madras. Do the ecru curtains in strong tea and dry in the shade. A suitable rug would have the amber shade of the walls mingled with blue and terra cotta. 2. Subdued colors are always most restful. I would not advise papering any room in red as it is considered by physicians to be very trying on the nerves. 3. Yes, Nottingham curtains are satisfactory, especially if you possess curtain stretchers. They do not iron well.

4. The tendency is towards simplicity in house furnishings now; as few draperies, cushions and ornaments as possible, and all articles are intended for use and not merely for show. It certainly lessens the housewife's task of cleaning, and is conducive to the family health.

H. D.:—1. The trenches on the western front extend about 750 miles. 2. Probably "The New Housekeeping," by Mrs. C. Frederick, will supply the information you require in household matters. 3. The Provincial Board of Health of Ontario will furnish you gratis a booklet, by Dr. Helen MacMurchy, entitled "A Little Talk About the Baby", which you will find valuable.

W. W.:—1. The new collars are nearly all of the sailor variety and of very sheer materials such as linen, and georgette crepe. They are hemstitched or edged with lace or silk braid, and some have tucks or insertion set in. 2. Handbags are seldom of leather, but are elaborate affairs of silk, or beads, or are knitted or crocheted in bright hues of crochet silk. You might make a round bag of a strip of silk like your dress with a circle of cardboard covered with silk at form the bottom, and then crochet on a top of a contrasting color about an inch wide, through which to run a silk cord.

D. V. C.: When your time is limited, it is best to plant flowering shrubs rather than annuals. Once carefully planted in good soil, the shrubs require little attention and are beautiful and permanent additions to the home grounds. Some of the best shrubs are: Spiraea van Houeetii, Flowering Almond, Japan Quince, Tartarian Honeysuckle, Syringa, Lilac, Snowball, Hydrangea, Rose of Sharon.4 These will give you a succession of bloom from May to October. Flowering vines, such as Clematis, Wistaria, Dutchman's Pipe, Trumpet Flower, and Climbing Roses, are easily reared for. It is best to buy large three-year-old plants.

Poultry

The hen that gets cold feet through exposure these raw days is apt to give her master cold feet when it comes to marketing her eggs. Keep the hens in till the ground is warmer.

When you turn chickens out for a run during mild days, throw some meat scraps, which are too large for them to swallow, within their reach. The ones that are lucky (?) enough to secure a morsel will be chased by the others, thus affording abundant exercise for all.

The egg-laying season among geese practically begins in March, although frequently eggs will be dropped in January and February—much depending upon the age of the geese and the condition of the weather.

An abdominal pouch of great size indicates great age, a pointer well worth remembering in purchasing breeding birds.

If you want to know what hen manure will do for fruit, plant some plum trees in the yard where hens run. Trees that bore very few plums, and none that were sound, have been made to bear bushels of fruit, just by letting hens run around them at will.

The Dairy

A pound of meal before the cow freshens is worth as much as three pounds after she freshens.

Water basins, with a supply of water always before the cows, means less labor in milking and a greater quantity of milk in the pail.

Cows fed a ration composed largely of silage produced 17 per cent. more milk and 28 per cent. more butter fat than those given a ration consisting mainly of grain.

Let your cows know you and study their wants. A finely bred dairy cow is a sensitive and high-strung animal and quick to respond to kind and considerate treatment.

So far as possible turn the water out of your barn-yard, so that the cows may not slip and bring on trouble.

A wire barn-yard fence is pretty cold comfort for a cow on a raw March day. Cold and comfort are not on speaking terms in the dairy.

The sire which has brought you good calves is worthy of the best care you can give him.

Sheep Notes

If a ewe loses her lamb, keep her milking as a foster-mother.

If she objects to mother a strange lamb, put her in a narrow stall, specially prepared, until she becomes reconciled. With gentleness, a ewe will soon take kindly to the situation.

One night out in a cold March storm may cost you several lambs and perhaps take the vigor out of a nice ewe.

Are the droppings hard and like bullets? —A little more laxative food and not quite so much timothy hay will correct this. The best physic for sheep is wheat bran, with frequent rations of vegetables.

The humble sheep is getting a great deal of attention just now. Scarcity of wool means higher-priced clothing.

Horse Sense

Chronic swellings, puffs, etc., which are usually a sequel to some acute disease or injury, have their beginning in enlargement, either hard or soft, without pain or heat.

The remedy is either repeated blistering or the use of absorbents, as the daily application with smart friction of a little of a liniment made of 4 drams each of iodine and iodide of potassium and 4 oz. each of alcohol and glycerine.

Begin fitting the work horses for the heavy spring tasks before the work begins.

After a winter of comparative idleness it is unwise and unprofitable to put a team in heavy work without preparation.

Now that heavy plowing is about to start, remember that prevention is the best cure for sore shoulders in horses.

If it doesn't do the horse any good to have you say a kind word to him as you pass, it does you good.

Plenty of sunlight and abundance of fresh air are two prime requisites in any stabling proposition.

The horse's feet should be washed occasionally with soap and water.

Bone spavin can often be traced to working the colt at too tender an age, or fast driving over roads that are slippery, or too suddenly stopping or jerking the colt.

For growing colts there is no better grain ration than equal parts of corn and oats ground together. This feed supplies the elements required for the production of fat, bone and muscle.

Hogs

Bowels in good working order lead to a good time at farrowing.

Pigs have short legs and not much strength. They can't wallow around in long straw. Run the straw through the cutting box and then scatter it about the pen, good and deep.

A sow that has just brought her pigs to town doesn't need much. If anything, eat for a while. When she acts as if she was getting hungry, make her a nice soup of wheat middlings, bran and oats. But we need to be careful not to give too much at once; better to feed often.

Bad results sometimes come when pigs are due, because of disturbances in the vicinity of the sow's quarters. So far as possible give her a chance to be quiet.

Hogs fill a very important place in the economic world, and will doubtless long continue to do so, the more especially when we succeed in reducing the death rate in the hog kingdom to a reasonable figure.

Newly planted hotbeds will run high in temperature when the sun shines and the plants within the frame will become spindling unless enough air is given to keep the temperature down. During bright days and at other times when the temperature is high, lift the sash a little at the bottom to keep the heat below 90 degrees. In ventilating at this season be careful not to permit the cold air to blow directly in upon the plants, otherwise they will be checked in their development.

POTATO SEED SELECTION AND DISEASE CONTROL

The Fourth of a Series of Five Special Articles by Henry G. Bell, Agronomist.

To the British nation potatoes constitute one of the great articles of diet. History records the disaster of the great potato crop in Ireland, and the present shortage gives the Britisher of to-day an idea of the importance of this common but very valuable crop.

Few Canadians realize that almost one acre in 40 under tillage in this province is normally planted to potatoes. The value of the 1914 crop totalled nearly $12,000,000.

When the Canadian potato grower considers the yield per acre he is obtaining as compared with yields in England, Scotland, Holland, Northeastern United States and other parts of the world, he must be impressed with the opportunity he has in increasing yields.

The average yield for Ontario is less than 160 bus. per acre, while England is growing over 200 bus. per acre, Holland 290 bus., and Maine over 250 bus. per acre.

One of the reasons that these other parts of the world are exceeding Canadian yields is that they are selecting good potato seed, and not relying on small nondescript stock.

There are three grades of seed selection in potatoes. Field choice is first. By field selection I mean simply watching the growing crop to see that it is a pure variety. First start by planting a pure variety and then save seed from all the plants having the same colored flowers and the same characteristic spread of potato vines. Dig the pure stock first and cull out the small inferior potatoes. Discard these and do not plant them for seed potatoes. You don't save the calves of the small, weakly heifers in order to build up your herd. Don't plant small inferior stock and expect to get good, strong, heavy yielding crops.

Plant selection is the second step in potato improvement. While the crop of pure variety potatoes is growing, go through the field and mark off the strongest best plants by putting a stick in beside the growing hill. When the crop is ripe dig the marked potatoes separately. Save for seed only those which have the largest number of well-formed tubers. Keep these for next spring's seed. Plant only the best potatoes from these.

Individual tuber selection is the most effective means of improving and purifying potato seed. Tuber selection starts with seed of a good variety if possible. Choose a number of potatoes of good marketable size. Cut each of these tubers into four pieces and plant each four pieces from one potato in a hill or plant the four pieces of the same potato in a row. When the crop is ripe, dig these sister hills or plants in groups of four. Save only the potato "families" that yield the largest number of good marketable stock. Keep the "families" separate and plant a drill of each the second year. Choose again the best yielding, good quality stock and a good selection is started. A Michigan potato grower found a difference of 110 bus. per acre in the crop from selected stock compared with the crop from mixed seed grown on the same ground. The selected crop yielded 360 bus. per acre and the mixed stock produced 250 bus. per acre.

The methods of seed improvement outlined apply equally to early and late varieties. The Ontario Experimental Union has tested a great number of varieties throughout the province. Prof. Zavitz reports that as an average of 40 tests with two leading varieties he finds Davies Warrior to yield 131.95 bus. per acre and Extra Early Eureka 126.59 bus. per acre.

Before planting the selected seed, it should be dipped in a mixture of one pound formalin and 30 gals. water for 2 minutes. This treatment will kill scab spores or seeds which may be attached to the seed tuber. After this treatment if the selected stock is planted on ground where potatoes have not been grown for some time, it is likely no scab will appear on the product.

Special seed stock should always be grown on good, well prepared ground, and should receive careful attention while the crop is developing.

Much can be done to protect the growing crop from blight and other diseases, but this subject of disease control must be treated in a succeeding article.

HENRY G. BELL.

Keep Dairy Records.

Your cow that stands in the third stall may have deceived you. When she freshened last June very likely she gave about thirty-five pounds of milk a day, and you thought her possibly the best cow out of the eighteen you own. But she may have dried off rather early and you overlooked that fact in the light of her good flow in June; you remember she was 9 years old and a fine-looking, quiet cow, easy to keep.

Now think of Eliza Jane, homely, eleven years old, who never made any big record for a day or a week. But recall the fact that she stuck to the job splendidly and gave a fairly good mess per day right through her ten months.

Two actual records in an Ontario herd received by the Dairy Division show that, with milk at $1.60, cow No. 3 brought in $72.66 from her 4,541 lb. of milk and 148 lb. of fat; but cow No. 14 brought in from her 6,076 lb. of milk and 225 lb. of fat, just $106.80.

What About That Silo?

From time to time we have pointed out the advantage of having a silo. Experiments have shown that cows receiving some sort of succulent feed during the winter will give several pounds more milk than those fed dry roughage. Succulent feed is not only better digested than if the feed were dried before feeding, but it aids in the digestion of the other feed that is fed as well. We must have succulent feed for profitable milk or beef production, and the question is what kind of succulent feed is best. In the Old Country roots have been the standby, but many farmers over there now are learning from their American brethern and considering the advisability of putting up silos.

In this country there is no question which is the cheapest feed to grow. At Central Experimental Farm, Ottawa, in the season of 1913, 17 tons of mangels were grown per acre as against 12 tons of silage. The mangels cost $2.14 per ton to produce, whereas the silage only cost $1.84 per ton. On an average there is no reason why 15 tons per acre of silage should not be produced. In good years as much as 20 tons per acre should be produced. A silo is a paying proposition.

Fresh milk is shipped long distances in Brazil in perfect condition in sealed cans with insulated walls, blocks of frozen milk being placed in it to keep its temperature down.

This is a good season to make labels and stakes and paint them. They will be wanted during the season when the garden occupies the full time of the gardener.

Pruning young apple trees during the dormant state is effected at less expense in vitality of the trees than the removal of twigs and branches during the growing season. Moreover, summer pruning does not, according to experiments, hasten fruit bearing.

The Sunday School

INTERNATIONAL LESSON MARCH 25.

Lesson XII.—Jesus The Way, The Truth, And The Life (Review).

Read John 14. 1-14. Golden Text John 14, 6.

1. The way. That Jesus is the way to eternal life for the individual has long been the confident conviction and the triumphant experience of the church. We are now engaged in discovering the same thing for human society. Men have ever thought an ideal community life. They have called it the brotherhood of man, the cooperative commonwealth, the kingdom of God, and through many ages have looked for the way that led there. For this also Jesus is the way, even as for the individual. Following his teachings, men come to the land of their desire. The world wants peace, but it developed nationalism where he taught international brotherhood; it followed gain where he taught service, and in such a world there is no peace. A prominent Hebrew recently declared: "We shall never get out of war except by following the teachings of Jesus." Following those teachings in a new treatment for the criminal has turned the enemies of society into its friends and helpers. When the nations of the earth are willing to follow the same principle of loving their enemies, of returning good for evil, will not the same transformation occur in the external enemies of the state?

2. The truth. To the world of Jesus's day the truth was an abstraction. "What is the truth?" said Pilate with a sneer, thinking [illegible] fore him only another splitter of logical hairs, but instead he had the truth incarnate—a very different thing to face. The Logos—the eternal truth—says John, became flesh, that men could touch it and understand it; so that we might have with it the kinship of common experience. Does the world doubt that it is possible to walk in the way that Jesus showed, that to we might come to righteousness and brotherhood and peace? He himself walked in it. Are his teachings a vain dream? He himself lived the truth that he taught. Does he say that impossible thing, "Love your enemies," and turn them into your friends? Listen to him upon the cross: "Father, forgive them, they know not what they do." The truth here is not a cold formula, but a living force. When the nations seek after a better world-life, they can walk not alone by faith, not simply by reason, but by sight.

3. The life. In his immortal story John Bunyan made his pilgrims run away from the city of destruction, crying "Life, Life, Eternal Life." That is what the race needs even as the individual. The great lack of to-day in the world is not more technique, for better living, but more power; not more machinery, but more dynamic. There is knowledge enough to build a better world to-morrow, but not to animate it. On paper to-day you can draw a better community life than now exists in your neighborhood, but can you get it to-morrow to walk and act in the market place? This is what makes Jesus the great hope of the race. He does put power into life for better living. His contact with the Father, the source of all energy, is such that he is able to transmit that eternal power to human life as none other ever has done it. The mystery is greater than our definition. "Do the will," he says, "and ye shall know the truth." He did the will and found the power. So also he gives the power. Those who will live with him and with the Father, doing the will in all faithfulness—they shall know—men and nations—that he is the life eternal.

GLAMIS

Don't miss the war sale, Paisley Town Hall, Tuesday, April 3rd. Proceeds to invalided soldiers.

Nurse McKay, of Salem, spent a few days at Mr W Graham's

Mr Thomas Thompson is in Guelph hospital for treatment.

Dr Patterson, of Lucknow, and J L MacIntyre, of Guelph, were in the village on Thursday, and called at J C MacIntyre's.

Mrs Colwell, of the 9th of Kincardine, is spending a few days with her daughter, Mrs David Robertson.

Pte Clyde McKeeman is home again on furlough.

Mr John L McKay and daughter Annie, of Port Arthur, are spending a few days in Glamis renewing old acquaintances.

We are sorry to report the illness of Mrs Wm Graham. She is confined to the house again.

Mr Alex McSween intends having a sale soon and will leave for the west about the first of April.

Sad indeed was the message that flashed over the wires on Tuesday of last week when word came that Miss Beth McKay had passed away, and that they were leaving Port Arthur with the remains. Beth was born here and spent the most of her life in Glamis. Three years ago she, with the rest of the family, moved to Port Arthur. She was always a healthy, robust girl until a few weeks ago, when she took sick and all that medical skill could do for her was done, but of no avail. She passed away on Monday morning after great suffering. Beth was a lively girl and a general favorite with all who knew her. Her sad death at the age of nineteen came as a great shock to her friends. She bore her sickness with great patience, never murmuring or complaining all through her suffering. She taught in the Sunday school and was a willing worker in the young people's society. She was laid to rest beside her mother, who predeceased her about eight years. Two brothers are overseas—her twin brother Dougl las and Capt Alf Ired McKay. Her father, Mr John L McKay, also sister Annie accompanied the remains

SECOND CON ELDERSLIE

Don't miss the war sale, Paisley Town Hall, Tuesday, Apr 3rd. Proceeds in aid of invalided soldiers.

Mrs Thos Patterson, who has been under the doctor's care, is able to be out again.

Henry Priebe is engaged with A Dawson.

Mr and Mrs Thos Nichol and family moved on Monday to their new home at Gillies Hill.

The South Elderslie Willing Workers have donated to the Red Cross the sum of $70. Tickets to the value of $50 were sold for a quilt. The lucky ticket winner gave the quilt back to the society, so it can also been passed on to the Red Cross.

A prayer meeting will be held he Tuesday evening, March 27th, at ton home of Mr and Mrs W J Allen.

Miss Mary Green spent the week end with friends in Chesley.

Mr and Mrs J Caldwell visited Paisley friends last week

Mr and Mrs W Young entertained a number of their friends and neighbors at their home on Thursday evening, when an enjoyable time was spent by all.

Jim Walke was on the sick list last week.

The high winds on Saturday afternoon broke a large plate glass window at the home of Mrs D Allen.

A large number from this con attended the St Patrick's entertainment in Geneva church on Friday evening.

The sympathy of this community is extended to Mr and Mrs David Keith and family in the loss they have sustained by the death of Mr Keith's mother, which occurred at Ottawa on March 9th. Mrs Keith was well known here in the early settlement days She also lived in Paisley for a number of years, but of late had made her home in Ottawa with her son John. The remains were brought here on Monday accompanied by her son and also grandson George. The funeral on Tuesday from the home of Mr and Mrs D Keith, interment being made in the family plot in Paisley cemetery.

CASTORIA

For Infants and Children

In Use For Over 30 Years

PINKERTON

Don't miss the War Sale, Paisley Town Hall, Tuesday, Apr. 3rd. Proceeds to invalided soldiers.

Mr Robert Gale, of Alma spent Sunday at the Manse.

Mrs Adam Reid returned home from Toronto last week.

A number from here attended the carnival in Paisley on Friday night.

Mr and Mrs N. Nelson and babe, and Miss Clara Clark returned to the west on Saturday after spending the winter at the home of Mr Jas Clark.

At the weekly meeting of the local Red Cross Society, another consignment of boxes, 32 in number, was sent to the boys from this district, who are either in France or England. The women in this vicinity are doing especially good work in the knitting and sewing, but the sending of the boxes of "eats" is an important side line.

Miss Florence Diehl spent Saturday and Sunday at her home in Paisley.

BRUCE TP

Don't miss the War Sale, Paisley Town Hall, Tuesday, Apr. 3rd. Proceeds to invalided soldiers.

Ross Gottschalk, son of Mr and Mrs Fred Gottschalk, and Ed Smith, son of Mrs John Smith, are leasing for the west shortly, the former having taken up land in Alberta. On Friday night last, a farewell social gathering was held at the Gottschalk home, about 75 people being present. The evening was spent in games and amusements, and a presentation was made to the young men. Both intend remaining in the west.

Pte Wm Schmallbach, of Toronto, was visiting at the home of his grandfather, Mr Wm Geier, sr, and other friends, before leaving for overseas.

Mr John Metcalf had a very successful sale last week. Mr Metcalf has been obliged to give up active work for the present on account of failing health. It is hoped that by taking a rest he may be restored to his wonted strength.

TWELFTH CON. BRUCE

The winter is hanging on good. The rain seemed to catch cold again.

Mr and Mrs Morris have returned home after spending the winter in Chicago.

Miss Eunice Greaves is suffering from an attack of pleurisy. We hope to see her around again soon.

Mrs Donald McGillivray was called to Port Elgin to see her sister, who is ill.

Miss Hattie Barnes is home from Guelph for the summer.

Mr and Mrs Dan McDougald have moved to their new home. We wish them success.

Miss Jennie Luttrell spent the week-end with her cousin Miss Cumming.

Mr and Mrs Adam Byers, of Bognor, attended the silver wedding of her cousins, Mr and Mrs John Dunlop, on Friday, March 16th.

Miss Bertha Moulton was laid off duty for the past week with la grippe.

BUILD UP THE FARM

R. HODGETTS, Lambeth, Ontario, says:

"I used Homestead Bone Black Fertilizer on part of my oat field. The previous owner of the farm paid me a visit this Summer and in walking over the farm we came to the oat field. My friend asked me why the oats on a part of the field were of much greater length and quality than the rest. I informed him what I had done, and he said he could not have believed it if he had not seen it, that Homestead Fertilizer could give such results. I recommend it highly to anyone wishing to build up their farm and grow big crops."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

WM. ARMSTRONG, R.S.

WALKERTON

A Greenock township merchant, who ordered a barrel of salts for cattle beef, it seems, a barrel of salt-petre shipped to him instead, and not discovering the mistake the merchant retailed it to his farmer patrons for the harmless salts, with the result that there is considerable destruction among the cattle in that section, no less than six head being reported killed to date. A quantity of the stuff had been sent away to be analyzed and investigation is being made into the affair.

Mrs Richard Guinn, who resided for many years on the Elmhurst road east of Walkerton, died at the home of her son, Rev. Jos. Guinn, Methodist minister at Lancaster, on Tuesday of last week, after a month's illness of nephritis, aged 62 years and 2 months. The deceased, whose name was Isabella Lafferty, was born in Grenville, Penn., and was married in Brant upwards of forty years ago to Mr. Richard Guinn of that township, the couple farming continuously in the vicinity of Walkerton until the death of Mr Guinn about three years ago, when Mrs Guinn left to reside with her daughter, Mrs. G. H. Switzer, at Norval. She was an affectionate mother and wife, a good neighbor and much esteemed citizen. She leaves one son, Rev. Jos. Guinn of Lancaster, and five daughters, (Bertha) Mrs Fred Baer of Handel, Sask.; (Sadie) Mrs G. H. Switzer, of Norval; Miss Ethel Guinn, teacher, of near Hamilton; (Jessie) Mrs. J. A. Logie of Paisley; (Nellie) Mrs. J. P. Worthington of Guelph. Her eldest daughter, Etta, who was the wife of Mr David Henderson of Franklin, Sask., died about six years ago. Service was conducted at Lancaster on Thursday afternoon by Rev. M. J Wilson of Hamilton, a former pastor of the Methodist church here, after which the remains were brought to Walkerton where the funeral was held from the depot upon the arrival of the G. T. R. noon train on Friday, the obsequies at the grave being performed by Rev. Mr Cosens of the Methodist church here, of which deceased was long a faithful member and worker.—Herald and Times.

Bruce Telephone Subscribers' Meeting

On March 9th the annual meeting of subscribers to the Bruce Telephone System was held at Underwood, a good number being present. Mr D McNaughton, president of the Board of Commissioners, occupied the chair. A detailed report of the finances was submitted and fully explained by the commissioners, who announced that, on account of the increased cost of material, operating, etc, it has become necessary to raise the rates for phones on the system. A general discussion followed, and a motion was passed unanimously, authorizing the commission to raise the rates. It is expected the rate will be $14 per phone. The feeling seemed to be that this would not be too high for the excellent service given on the system. Connection with the Bell system is left in abeyance, according to report made by commissioner McLean. The old Board of Commissioners were re-elected, viz: D McNaughton, A McLean, J J Hunter, J B Struthers and J G McKay.

Keep up the Food Supply and Help Make Victory Sure

"I AM assured that my people will respond to every call necessary to the success of our cause—with the same indomitable ardour and devotion that have filled me with pride and gratitude since the war began."

HIS MAJESTY KING GEORGE

OUR soldiers must be fed; the people at home must be fed. And—in spite of Germany's murderous campaign to cut off the Allies' Food supply, by sinking every ship on the High Seas—an ample and unfailing flow of food to England and France must be maintained.

This is National Service—
Not to the Farmer only—
But to YOU—to everybody—
This appeal is directed

WE must unite as a Nation to SERVE—to SAVE and to PRODUCE. Men, women and children; the young, the middle aged and the old—all can help in the Nation's Army of Production.

EVERY pound of FOOD raised, helps reduce the cost of living and adds to the Food Supply for Overseas.

PLANT a garden—small or large. Utilize your own back yard. Cultivate the vacant lots. Make them all yield food

WOMEN of towns can find no better or more important outlet for their energies than in cultivating a vegetable garden.

Be patriotic in act as well as in thought.

Use every means available—
Overlook nothing.

The People's Popular Store

The Paisley Mercantile Co. are having Bargain Counters This Week!

IN going through our stock, after the winter season's business, we find that in all departments we have many broken lines and short ends of goods, and these we are placing on tables for 3 days this week---Thursday, Friday and Saturday, Mar. 29, 30 and 31, and will be sold at prices that should appeal to the buying public.

On these tables you will find Footwear for young and old. You will also find Underwear, Hats, Caps, Shirts, Vests, Socks, Braces and Neck-Ties for Men and Boys. You will find Underwear, Sweater Coats, Raincoats, Hosiery, Gloves and Ends of Dress Goods, for Ladies and Girls. You will also find Ends of Tweed, Flannelette, Shirting, Wrapperette, Cotton and Curtain goods. We will also have on our bargain tables some odd pieces of Crockery and a few specials in Groceries.

We have been able to secure a quantity of Tea in bulk at a price much below its value now, which will be on our bargain tables at 4 lbs. for $1.00.

Bargain Table Goods must be paid for in either CASH or PRODUCE, so bring us your Butter and Eggs on Thursday, Friday and Saturday and get some real snaps from our bargain tables.

THE PAISLEY MERCANTILE CO.

Favor Conscription

The Brant Tp branch of the Bruce Peacedoesn League, composed of farmers, are urging the Government to give on conscription and enforce the measure, as under the voluntary system patriotic families are giving more than they can spare while other selfish ones are staying at home and reaping the benefit of the extra demand for labor caused by such shortage.

The executive committee of the Brant organization is composed of John Clancy, Reeve Willoughby, John M Hopper, John L Hetton, W J McNally, F Reanie and Jas A Lamb.

Admission—Ladies 25c, gentlemen 50c; extra for dancing, 50c for gentlemen. Everybody come and have a grand social evening for the benefit of the patriotic cause. In the Town Hall, Paisley.

Matron of Hospital in England

The Advocate has received a post card photo of the Canadian Convalescent Hospital at Bearwood, England, of which our correspondent says, "Miss Fletcher of your town, is now in charge as matron. The patients are all Canadians." The hospital is a large building, of splendid appearance, and surrounded by beautiful grounds. Sister Fletcher is a daughter of Mrs Fletcher, of Inkerman St. With this Paisley lady in command at Bearwood, Bruce boys who are rendered hors de combat will hope to reach that haven in their convalescent stage.

Fine Horses Shipped

Three car loads of horses were shipped out last week by Mr Geo. Craig. Among these was one exceptionally large animal bought from Mr Richard Webb, of Saugeen. This steed weighed 2240 lbs the last time he was put on the scales, was 5 years old, bred from Lansdowne, and the price paid was $350. Mr Craig tells The Advocate that this is the heaviest gelding he has ever bought, and others who saw him pronounce him to be the most magnificent specimen they have ever seen. Other fine animals in the shipment were a team bought from J. B. McBride at $350, a mare from John Gowanlock for $275, and a gelding from Wm Grant for $235.

Memorial Service

Following the news of the death of Pte M W Switzer in France, arrangements were made for a memorial service, which was held in Knox church on Sunday evening, with all the other churches closed. The family being Methodists, the sermon was preached by Rev Mr Crighton, pastor of that church, with the other three ministers of the town taking part in the service. The music was provided by the Methodist choir, assisted by a number from other choirs. The service was appropriate and impressive throughout. Pte Switzer was the eldest son of Mr and Mrs Thos Switzer, of con 1, Saugeen, and was 29 years of age. He had been in the west since boyhood, and was engaged in the hardware business for a number of years at Canora and Swift Current. After enlisting and going into training he took a heavy cold and was given a few weeks' leave in which to recuperate, and he spent most of the time down here at his home of his parents. After going into the fighting line in France he was stricken with trench fever, and following his recovery from that took pneumonia, which caused his death at 30 Casualty Station. During the time he was home on leave Pte Switzer made many friends among those who met him, and all join in extending sincere sympathy to the parents and family in their bereavement

Keep hens this year

EGG and poultry prices, the like of which have seldom or never been experienced, certainly make it worth anyone's while to start keeping hens. By doing so you have fresh eggs at the most trifling cost. At the same time you have the splendid satisfaction of knowing that you are doing something towards helping Britain, Canada and the Allies achieve victory this year.

Increased production of food helps not only to lower the high cost of living, but it helps to increase the urgently needed surplus of Canada's food for export. It saves money otherwise spent for eggs and poultry at high prices, and saves the labor of others whose effort is needed for more vital war work.

The Ontario Department of Agriculture will give every possible assistance by affording information about poultry keeping. Write for free bulletin which tells how to keep hens (address below).

"A vegetable garden for every home"

Nothing should be overlooked in this vital year of the war. The Department earnestly invites everyone to help increase production by growing vegetables. Even the smallest plot of ground, when properly cultivated, produces a surprising amount of vegetables. Experience is not essential.

On request the Department of Agriculture will send valuable literature, free of charge, giving complete directions for preparing soil, planting, cultivation, etc. A plan of a vegetable garden, indicating suitable crop to grow, best varieties and their arrangement in the garden, will be sent free to any address.

Ball—Dewar

The marriage of Miss Elma Dewar and Mr Alfred Ball, of Wiarton, was celebrated quietly on Wednesday evening last, at the home of the bride's father, Mr Jas. S. Dewar, in the presence of only a few friends of the contracting parties. Rev. Mr Neilson officiated. Mr and Mrs Ball have gone to take up their residence on the groom's farm at Adamsville, a few miles from Wiarton. The best wishes of the bride's many Paisley friends go with them.

Village Property for Sale

THE Hardwell property. Comfortable brick 2½ storey, good stable, and about 3½ acres of fine garden land. Will be sold as a bargain. Apply to E B PULMAN.

Spring Breakup

The sunny weather at the end of last week melted the snow and soon filled the streams to high flood-tide. The ice was very heavy, but Old Sol reduced its thickness and strength, and it moved out quietly.

FIVE ROSES FLOUR
for Breads-Cakes
Puddings-Pastries

THRIVING children prefer the bread you make with Five Roses Flour. It is stored with the flavor, vitality and easily-digested nourishment of prime Manitoba wheat.

Keeps Well

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXV.—(Cont'd).

"Fitz," said Ethel, who had been looking out of the window, "do you know anything of this man? He is taking the horses in another direction."

"No," said Fitz, but was spared any other falsehoods by the approach of another carriage which pulled up, as did theirs.
